TO THE

CONGRESSIONAL RECORD.

Report of Chemicals and Dyestuffs Committee to New York Section American Chemical Society.

EXTENSION OF REMARKS
OF

HON. SAMUEL WALLIN,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 10, 1914.

Mr. WALLIN. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a report of the chemicals and dyestuffs committee to the New York section of the American Chemical Society.

The report is as follows:

[Reprint from the Oil, Paint, and Drug Reporter, issue of November 9, 1914.]

REPORT OF CHEMICALS AND DYESTUFFS COMMITTEE TO NEW YORK SECTION AMERICAN CHEMICAL SOCIETY.

The New York section of the American Chemical Society held its regular monthly meeting on Friday evening, November 6, at the Chemists' Club. After a paper entitled "Bee Hive Versus Recovery Oven," by J. R. M. Klotz, of the Barrett Manufacturing Co., and one regarding methods of measuring the densities of the vapors of certain ammonium salts by Prof. Alexander Smith, had been read, the report of the committee on chemicals and dyestuffs was called for. This committee had been appointed immediately after the October meeting of the section and began at once to investigate existing conditions in the chemical and dyestuff industries. The report, which is printed in full below, was discussed by Drs. L. H. Baekeland and T. J. Parker. Dr. Baekeland pointed out that an increase in the production of certain chemicals in the United States could not be brought about in a short time and that previous efforts to market such products as phenol of American manufacture had not been successful. He felt that a domestic market for the by-products of coal-tar distillation was an essential requirement for the success of the coal-tar chemical industry in this country.

Dr. T. J. Parker moved that the report of the committee, together with its recommendations, be adopted and ordered printed in the journal of the association. This motion was unanimously carried. The full text of the report follows:

COMMITTEE'S REPORT.

To the New York Section, American Chemical Society:

1. At the meeting on October 9, 1914, the chairman of this section was authorized to appoint a committee to investigate into the feasibility of expanding the chemical and dyestuff industry in the United States and to report to this section on November 6, 1914.

2. The undersigned committee was appointed October 15 and at once proceeded. It addressed letters of invitation to cooperate to those who have been most active in the public prints in urging expanding of the chemical, and particularly the dyestuff industry in the United States. Further, an invitation was extended to the maker of the motion, which resulted in the appointment of this committee. The assistance from these is nil.

3. A request was addressed to trade publications in the city of New York and to some of the metropolitan dailies; in all nine such publications were requested to publish a suggested notice for the purpose of inviting cooperation; the object of this committee was set forth, and request was made that suggestions be mailed to the chairman of this committee. All but one of these publications have complied with that request. No help has been obtained by this committee from any suggestions mailed to it as a result of this publicity.

4. Your committee has carefully considered all the public suggestions as to methods of improvement and has searched through the governmental regulations of the belligerent nations as to embargo and as to contraband of war in order to construct therefrom a list of chemicals, inclusive of dyestuffs, which have thereby been shut off from the United States, in the hope of thus being placed in a position to make specific recommendations of value.

5. It can be fairly stated that, in general, the chemical industry of this country is efficiently exploited and is making full use of all the opportunities presented to it under the normal conditions existing prior to the state of hostilities. Some of the chemicals which are imported from abroad are made in considerable amounts in this country as well, and the amount imported under normal conditions depends upon the ordinary normal fluctuations of business conditions both here and abroad. With the stoppage of this foreign supply the domestic production was not at once capable of making up the deficiency, but in a number of instances the American manufacturers have taken steps to increase their capacity, and the strain in the market of those particular things will exist no longer than it will require to extend the manufacturing facilities to the proper extent.

Among these are ammonia salts, barium chloride, barium nitrate, bleaching powder, sodium cyanide, yellow prussiate, sodium nitrite, sodium hydrosulfite, zinc dust.

6. If, however, it be desired and if public necessity requires the introduction of the manufacture of explosives and further chemicals and dyestuffs into our home industry, such as coal-tar product explosives, pharmaceuticals, medicinals, and other intermediates and finished coal-tar dyes, then alterations of our tariff law are inevitable, and the consumers in the first place and the public in general must share in the burden thus imposed. If conditions of national defense in case of attack by a foreign power require us to manufacture our own explosives, and to be in that regard independent of all foreign nations at all times, or if our textile industries or any other of our industries requiring coal-tar chemicals, such as dyestuffs, shall forever be protected and made independent of foreign nations for the supply of those materials, then the Nation as a whole must bear the burden incident to such expansion. Under existing circumstances private enterprise and private capital have gone their limit. They have reached the limit for two reasons:

I. The explosive, dye, and similar industries abroad just referred to are in a state of high development and of refined organization and are financially the best suited to carry on an offensive campaign against any nation attempting to take business away from them.

II. Domestic manufacturers are prohibited by law from making use of cooperative commercial devices, such as pools, trusts, manufacturing and selling agreements, and the like, whereas such devices are wholly lawful abroad and are encouraged by the respective Governments. In other words, the American chemical industry is expected to cope with the foreign industry while both its own arms are tied behind its back and its opponents have full and free use of their arms.

ANTIDUMPING CLAUSE.

7. The remedies required would be an effective antidumping clause that would certainly prevent underselling of domestic manufacturers in the United States by unfair methods. What the form of such clause shall be is a problem with which your committee is unable to cope; it is strictly a lawmaking and law-enforcing problem, and is allied to the usual problem of determining undervaluation as heretofore carried on by our Treasury Department; it, however, is a much more refined problem than the older problem of proving undervaluation. Nevertheless, your committee believes that with such a mechanism in our law that much would be done toward encouraging our chemical industries.

TO CREATE COAL-TAR CHEMICAL INDUSTRY.

8. According to the best information that your committee can gather such an antidumping clause alone would not be sufficient, however, to create complete and independent domestic coal-tar explosives, dyestuffs, and medicinal industries. It has been conclusively demonstrated during the past 30 years that the present tariff rate of 30 per cent on dyestuffs is not sufficient to induce the domestic dyestuff industry to expand at a rate comparable with the consumption of dyestuffs in this country, and that therefore all dyestuffs made from coal tar, whether they be aniline dyes or alizarin, or alizarin dyes, or anthracene dyes, or indigo, so long as they are made in whole or in part from products of or obtainable from coal tar, should all be assessed alike, namely, 30 per cent ad valorem plus 7½ cents per pounds specific, and that all manufactured products of or obtainable from coal tar, themselves not dyes or colors and not medicinal, shall be taxed 15 per cent ad valorem and 3¾ cents per pound specific.

TARIFF TO AID DYE INDUSTRY.

9. The best information and judgment your committee can obtain is that the above manufactured products of coal tar, not dyes and not colors and not medicinal, should carry one-half the duty of the finished coal-tar dye and that the above rate of 30 per cent ad valorem and 7½ cents specific would probably be sufficient to encourage and enable domestic manufacturers to expand their operations to such an extent as to supply a very material increase in, if not the whole of, these commodities consumed in this country. The reason for a specific duty is to protect the domestic manufacturer in the manufacture of the relatively cheap dyes, such as the cheap scarlets, the cheap yellows, and the like, whose prices abroad are in the neighborhood of from 12 cents to 20 cents per pound. With dyes of that type 30 per cent ad valorem would not offer so serious an obstacle to importation and underselling thereof as does the 7½ cents per pound specific; on the other hand, on dyes whose prices are $1 and upward per pound the function of the 7½ cents specific more nearly approaches zero. That is, with the cheap dyes the chief function lies in the specific portion of the duty, and with the expensive dyes the chief function lies with the ad valorem portion of the duty.

This is said to be the price the Nation will have to pay to have a complete self-contained and independent coal-tar chemical industry. However, it must be remembered that if such an industry be created and importation of coal-tar products, inclusive of intermediates and dyes, is restricted, its ultimate effect upon the Federal revenues will

have to be considered. It will therefore be necessary to determine carefully if the advantages to be gained are equal to the price to be paid.

PATENT LAWS.

10. This committee is a unit in the belief that an alteration of our patent laws aiming at compulsory working or compulsory licensing would not be any substantial benefit to this industry or to the country as a whole. Twenty-nine countries have attempted compulsory licensing clauses and 56 countries have attempted compulsory working clauses, and the best information your committee can obtain is that in none of these attempts has there been any appreciable measure of success. While it may be true that under extraordinary conditions, such as now exist, compulsory licensing might have some advantage, yet it is equally true that in normal times the disadvantage due to compulsory licensing or compulsory working would more than overbalance any advantage at all likely to be obtained under stress of unusual conditions.

11. In none of the countries where there have been working or licensing clauses, or both, coextensive with the existence of the coal-tar chemical industry, has there been established any real coal-tar chemical industry, and your committee does not feel that an alteration in our present patent laws could be made which would be effective against foreigners and at the same time not be onerous and a hardship to domestic inventors. Your committee believes that in the long run and in the final outcome our present system with regard to working and licensing is as efficient as that of any other country. In the dyestuff industry in particular, there are so many nonpatented commercial products and so many commercial products once patented now free from patent restraint that their production alone would form a basis for a very considerable industry, and your committee feels that the way to encourage that industry, if the establishment of that industry in this country be a national necessity, is through a change in the tariff and the additional antidumping feature in the administration of the tariff, and not through any change in the patent laws. Once established, such an industry could develop and ultimately cope with any foreign combination upon fair and equal terms. Over 90 per cent of the tonnage and of the individual dyes used in the United States will be free from any patent restraint within the next four years; over 75 per cent of the dyes are now in that condition.

AVAILABILITY OF RAW MATERIALS.

12. The best information your committee has so far been able to gather is that this country can produce so-called coal-tar raw material in amounts sufficient for the needs of a complete domestic coal-tar chemical industry, inclusive of explosives and dyes, provided there is a certainty of outlet as to volume and continuity. Those engaged in manufacture here do not want to expand unless the dye users are willing to make corresponding contracts. In other words, it is a closed circle. If the dye users will contract sufficiently with the dye makers, the dye makers will contract with the coal-tar distillers and the industry will take a start. The initiative rests wholly with the users; if they can not afford to contract, the dye maker and the distillers can not afford to make their contracts and additional investments.

COAL-TAR PRODUCTS.

13. Benzol, toluol, and the like are produced in sufficient amount in present installations of by-product coke ovens to provide all of these things that would be needed for a coal-tar chemical industry of a magnitude sufficient to supply the United States market; the separation of these materials from the gas that carries them is dependent upon the market and the demand therefor. There is no inherent defect in our coke industry with regard to the actual making of these things; the only question involved is whether it be more profitable to burn the benzol, toluol, and the like, contained in the gas, as a fuel than to separate them and from each other for purposes of sale. Ample supply can be provided before any plant that could use benzol and the like for dyestuff making could be erected in the United States, and thereafter the supply of these materials can readily be kept up to any requirements.

14. The materials of the preceding paragraph are the ones used in the coal-tar explosives industry, as well as in the coal-tar medicinals and dyestuffs industries. Each of these three industries cooperates with the others to make full use of those materials; alone none can fully make use thereof nor succeed; the correct and proper utilization of these materials requires successful coexistence of all three industries in one and the same country.

15. Naphthalene and anthracene are contained in the tars produced in the United States in an amount sufficient for the needs of a domestic dyestuff industry, and it is merely a question whether it is more profitable to leave them in the creosote oil, where they now occur, or to separate them out of such oil and refine them for purposes of dye manufacture. Ample supply of either of them could be produced and provided at the same time or shortly after any plant could be erected in the United States for the use of these things in the production of dyes.

16. What has been said with regard to the supplies of naphthalene is also true of the supplies of cresol.

17. All the creosote oil contained in the total amount of coke-oven tar now made is separated from it and used. Increased production of creosote oil requires a greater production of tar, and a greater production of tar is dependent upon increased installation of recovery coke ovens.

18. Phenol or carbolic acid supply is primarily dependent upon our deliberately selected method of coal treatment; to change that treatment so as to get more phenol would entail abandonment of other advantages which would not be compensated for by the increased amount of phenol so produced. Under present circumstances freights and haulages play an important part. At isolated plants, separated by considerable distances from each other, small amounts of phenol are produced, and the separation of the phenol at such individual places would be economically unprofitable, and in order to concentrate this amount of phenol to or at a point where separation could be conducted profitably would entail freight haulages much in excess of the value of the phenol that would thus be transported.

19. The only source of phenol in sight is that produced synthetically from benzol by means of sulfonation and subsequent melting with caustic soda; this depends in turn upon our benzol supply, and would be profitable only so long as the United States market is not killed by the dumping of foreign phenol thereon, whether such phenol be synthetic or distilled.

20. Salicylic production depends upon availibility of phenol, and the production of benzoic acid depends upon the availability of toluol, which has heretofore been discussed.

21. Phthalic acid made from naphthalene by means of bichromate can not successfully compete with the mercury and sulphuric acid process, which is protected by patents having about three years more to run.

MISCELLANEOUS CHEMICALS AND RAW MATERIALS.

22. Acetic anhydride can be made without trouble in this country, and will be made in this country so soon as the domestic demand is large enough and steady enough to warrant the installation of a suitable plant.

23. Nitric acid: All countries, with the exception of possibly Norway and the countries importing from Norway, are dependent upon Chile for the raw material for making nitric acid. It will not be profitable to make nitric acid from air in the United States until the value of the electric horsepower reaches a level of $3 or $4 a year, as it is in Norway.

24. Ammonia and its salts all depend upon recovery coke ovens, and such recovery plants are increasing as fast as circumstances will permit.

25. Barium chloride and other compounds of barium may be made from domestic barytes. A number of attempts have hitherto been made, but with indifferent success. Factories established within the last year promise to be successful.

26. Magnesium chloride of a sufficient purity to be used in the production of flooring is almost generally made from magnesite found in Greece, which is the only deposit known having sufficiently high purity. There are reports of suitable deposits in California and in Lower California, and with the completion of the Panama Canal the question of freights, which seems hitherto to have stood in the way of developing these deposits, may be eliminated. Other sources, less remote from centers of consumption and using other materials, e. g., brine waste, are about to be successfully operated.

27. Manganese in the form of pyrolusite is not known to occur in paying deposits in the United States; these are practically all in the Caucasus.

28. Potash: I view of the great exertions that have been made for a number of years, both on the part of the Federal Government through a number of its departments and a great many different groups of capitalists, there is nothing to be said in this report that would be of any value with regard to increased production of potash either as fertilizer or as a chemical.

29. Yellow prussiate and sodium cyanide can be and have been made from domestic materials in such an amount as to provide practically the entire consumption or a great portion thereof in this country so long as there was a sufficient duty on them; the present duty is not enough to protect the American manufacturer, and those who were engaged therein have in large measure withdrawn from the business, but some are reported to be taking up manufacture cautiously and in limited amount.

30. Hydrosulphites in solution can be made from domestic materials without interference with any patent rights. The production of solid salts and derivatives are, however, still protected by patents that have a few years more to run.

31. Sodium nitrite is produced more cheaply as a by-product in Norway than it can be produced anywhere in the world; unless the price of the electric horsepower in this country sinks to a $3 or $4 level per year, as in Norway, this product can not be manufactured in the United States.

32. Oxalic acid is and has been made to some extent in this country, and the information coming to your committee is that suitable efforts are being made to expand the capacity of existing plants.

33. Tartaric acid and citric acid: To make this country independent of others with respect to tartaric acid and citric acid would call for radical changes on the part of our grape growers and our lemon growers as to the policy of their business.

It is probably true that edible grapes do not produce argols (the crude material for tartaric acid) very largely, and that our domestic lemons do not produce as large yields of juice (the crude material for citric acid) nor as high an acidity as do the Italian lemons; therefore an independent supply of the raw materials produced in the United States for tartaric and citric acids is in the first instance an agricultural problem and in the second instance a market problem.

GENERAL REMARKS.

34. Finally, it should be pointed out that the United States is by no means the only country whose chemical and allied business has been strained or upset by the European war. Each and every other country has felt the strain. British committees have gone into this same subject of expanding British chemical industries; and not only that, but also into the question of making their very basic necessities, and the reports have so far been adverse as to any immediate relief by domestic manufacture. The Boston Chamber of Commerce, through its committees, has arrived at the same conclusions for this country.

35. It is further clear that the stability of a complete domestic chemical industry, in so far as it depends upon foreign supplies, is bound up to a successful merchant marine and to an efficient foreign banking condition just as is all our foreign business.

FINDINGS.

36. Your committee finds as follows as to the facts:

I. Prior to the hostilities domestic chemical industry was utilizing and exploiting every reasonable opportunity to its full extent.

II. Since the outbreak of hostilities domestic industry has increased its output just as fast as physical means could be provided and physical obstacles overcome.

III. Since the outbreak of hostilities domestic plants that had theretofore been shut down or partly dismantled because of disastrous foreign competition are said to have resumed operation with caution.

IV. That a 30 per cent duty on some coal-tar dyes for over 30 years has not produced a real coal-tar dye industry in this country.

CONCLUSIONS.

37. Your committee submits its conclusions as follows:

A. To prevent the unfair underselling alleged to be practiced by foreigners in this country, the adoption of an effective antidumping clause.

B. The so-called coal-tar "intermediates" which are the basis of the coal-tar chemical industry, inclusive of explosives, medicinals, and dyestuffs, should be assessed one-half of whatever the finished dyes are taxed for tariff purposes; all coal-tar dyes, without exception, to be taxed alike, namely, 30 per cent ad valorem and 7½ cents per pound specific.

C. Changes in the patent laws such as by compulsory licensing or compulsory working clauses are wholly ineffective, do more harm than good, and should not be attempted.

Your committee recommends that this report be submitted to the appropriate committees of Congress. Further, that this report be forwarded to interested organizations.

Respectfully submitted.

BERNHARD C. HESSE, *Chairman.*
J. B. F. HERRESHOFF.
H. A. METZ.
I. F. STONE.
D. W. JAYNE.
J. MERRITT MATTHEWS.
ALLEN ROGERS.

[Editorial from the Oil, Paint, and Drug Reporter, Nov. 9, 1914.]

THE DEVELOPMENT OF OUR CHEMICAL AND DYESTUFF INDUSTRIES.

The exceptional opportunities for the development of the chemical and dyestuff industries in this country since the war forced the realization of the extent of our dependence upon foreign sources have been the occasion of widespread publicity, most of which has been of a superficial and chimerical character, and it was not until a meeting of the New York section of the American Chemical Society on October 9 that the subject resolved itself into concrete and tangible form by a consideration by the best representative trade and expert interests of the questions involved in the attainment of the desired ends and the appointment of a committee to study the various conditions and to report the results at a meeting scheduled for last Friday night. The personnel of the committee bespeaks the most convincing and creditable accomplishment of its purpose, consisting of such well-known representatives as Bernhard C. Hesse, chairman; J. B. F. Herreshoff, H. A. METZ, I. F. Stone, D. W. Jayne, J Merritt Matthews, and Allen Rogers, all native citizens of many years' active and intimate associations with both the commercial and technical phases of the chemical and dyestuff trades. Frequent meetings have been held and the research work so systematized that in less than a month the committee was able to prepare its report of such masterly and comprehensive consideration and treatment as readily to constitute the most practical and definite step toward the development in this country of the industries in question. The Reporter has been able to obtain a copy of the committee's report so as to present it in full in the current issue, and we urge it for the particular attention and study of our readers concerned in the breaking of our European chemical and dyestuff bondage.

The report treats in logical order the various questions concerned in the establishment of our industries and gives assurance that our natural resources are ample to cover the needs of a complete domestic coal-tar chemical industry, inclusive of explosives and dyes, provided there is a certainty of outlet as to volume and continuity, which can be assured only by the closest cooperation between the dye users, the dye makers, and the coal-tar distillers, with the initiative on the users. Much stress is laid upon the enactment of an effective antidumping clause in the administration of the tariff to prevent the underselling of domestic manufacturers by unfair methods alleged to be practiced by foreigners. Another specific recommendation is the assessment of a duty on the so-called coal-tar "intermediates," which are the basis of the coal-tar chemical industry, by one-half of whatever the finished dyes are taxed, and the taxing of all coal-tar dyes, without exception, on a uniform basis of 30 per cent ad valorem and 7½ cents per pound specific, since the experience of 30 years had conclusively demonstrated that the present rate of 30 per cent on dyestuffs was not sufficient to induce the domestic dyestuff industry to expand at a rate commensurate with the country's consumption. Once established through a change in the tariff and the additional antidumping feature, the industry could develop and ultimately cope with any foreign combination upon fair and equal terms

The subject of patent laws in the relation to the development of more capable home industries is convincingly treated, and the conclusion of the committee is emphatic that proposed changes in the law, such as by compulsory licensing or compulsory working clauses, are wholly ineffective and are calculated to work more harm than good.

The committee's report covers so thoroughly and convincingly every phase of the subject intrusted to its care that definite action on the conclusions would seem to be in order without further research work. The committee takes the further step of recommending that the report be submitted to the appropriate committees in Congress, as well as forwarded to the interested organizations in the country. The latter can undoubtedly take up the cause from this point and exert their best efforts in helping to perpetuate the work so advantageously launched by the chemical and dyestuff committee of the New York section of the American Chemical Society.

The authoritative value and significance of this report can be well appreciated by the following outline of the careers of the various members of the committee:

Dr. Hesse was for 10 years a research chemist with the Badische Aniline & Soda Fabrik at its German works and in New York, and for the last 10 years has been a consulting chemist in New York, specializing in coal-tar dyes and the patents relating to them. He was a consulting expert to the Bureau of Chemistry, United States Department of Agriculture, in respect to the formulation of the regulations relative to coal-tar dyes in foods under the Federal food and drugs act. He was secretary of the Eighth International Congress of Applied Chemistry.

Mr. Herreshoff, whose family has been prominently identified with yacht building, is one of the pioneer and most successful chemical engineers in the country. He has been engaged in chemical manufacture in and about New York since 1876 and is well known for his successful invention in roasting sulphur-bearing ores, in the manufacture of nitric and hydrochloric acid and of sulphuric acid, both by the chamber and contact processes. His method for the electrolytic refining of copper, which is used practically all over the world, has been one of his most notable achievements. He is intimately identified with a great number of leading American chemical undertakings, among them being the General Chemical and the Nichols Copper Cos. He was the first recipient of the Perkin medal, the highest chemical honor in the United States.

Mr. METZ is one of the leading representatives of the dye and dye material industry in the United States and at present is at the head of the Farbwerke-Hoechst & Co., formerly H. A. Metz & Co. He is a member of Congress and on the House Committee on Patents.

Mr. Stone has been prominently identified with the manufacture of coal-tar dyes in this country and is president of the National Aniline & Chemical Co. and vice president of the Schoellkopf, Hartford & Hanna Co., which since 1879 has been engaged in the manufacture of coal-tar dyes, making the company a pioneer in the industry in the country. Mr. Stone read a valuable paper on the "Development of coal-tar colors in this country" at a meeting of the New York section of the American Chemical Society on October 9, which was published in full in the Reporter on October 12.

Mr. Jayne, as manager of the Barrett Manufacturing Co., at Frankford, Pa., has been in close connection with the coal-tar industry of the United States for many years. He is the successor of his father, the late Dr. Harry W. Jayne, who was recognized throughout the country as an authority on coal tar and its treatment.

Dr. Matthews has been for many years professor of chemistry at the Philadelphia Textile School and is a well-known consulting expert to the textile trades. He has specialized in the treatment and dyeing of fabrics and all textile manufactures and is the author of many standard reference and textbooks on finishing and dyeing and coal-tar dyes.

Dr. Rogers, as professor of chemistry at the Pratt Institute, Brooklyn, has developed a very practical and thorough system of instruction in industrial chemistry both by lectures and in practical laboratory operations. He is the coauthor with Prof. Auder of the well-known reference book, Industrial Chemistry.

Petition from the South Bend Grocers and Butchers' Association.

EXTENSION OF REMARKS

OF

HON. HENRY A. BARNHART,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 15, 1914.

Mr. BARNHART. Mr. Speaker, some days ago I received in my mail the following petition, signed by the South Bend Grocers and Butchers' Association, urging me to vote for the so-called Gardner resolution to appoint a commission to investigate our preparedness for war, evidently meaning instead our alleged unpreparedness for war:

SOUTH BEND., IND., *December 8, 1914.*

Hon. H. A. BARNHART,
Washington, D. C.:

At a meeting of the South Bend Grocers and Butchers' Association, held December 7, the following resolution was adopted:

"Whereas statements have been publicly made in the United States House of Representatives, and not denied, to the effect that the United States is unprepared to defend itself in case of attack: Therefore be it

"Resolved, That the South Bend Grocers and Butchers' Association urges the Congress of the United States to adopt the Gardner resolution (H. J. Res. 372) providing for a national security commission to inquire into the question of the preparedness of the United States for war.

"Resolved, That a copy of this resolution be forwarded to the United States Senators representing this State and the Congressman representing this district."

THE SOUTH BEND GROCERS AND BUTCHERS' ASSN.,
Per DETMAR F. BAER, *Secretary.*

The whereas and the petition proper were printed in blue ink, and the date, personal reference, and insertion of the name of the organization were in different type and lavender ink. The resolution looked so much like an effort by some one to manufacture sentiment and thereby create alarm that I thought it my duty to investigate, which I did, by writing the following letter:

WASHINGTON, D. C., *December 10, 1914.*

Mr. DETMAR F. BAER,
South Bend, Ind.

DEAR SIR: Your communication, under date of December 8, forwarded on authority of the South Bend Grocers and Butchers' Association, in favor of the Gardner resolution asking an investigation of our unpreparedness for war, received. In reply I can not agree that the United States should be carried off its feet by any emotionalism like some Members of Congress exhibit from time to time. I think the United States ought to preserve peace if it can possibly be done, and if we commence organizing a great standing army, spending millions and millions for battleships, as GARDNER would have us do, we would simply be inviting the suspicion of the warring nations, and might invite war. You do not want our country involved in war, and neither do I, and if you will read the President's message, which I herein inclose, I think you will agree that this is no time for the United States to commence acting like we want to fight. War is an awful thing; it costs untold millions in money, it inflicts grief and trouble in every home in the land, and the outcome of it all is that prosperity and happiness and civilization are generally set back a generation or two. If your organization wants war, I can not agree with you, and if such is your desire, following such alarmists as GARDNER will surely hurry such a calamity upon us.

Another thing, I would like to know from what source you received the blank petition which you filled out and sent to me. I think it is important that the country know where this agitation in behalf of a warlike attitude of our country is coming from.

Very respectfully, etc.,

HENRY A. BARNHART.

By return mail I received an envelope sent out under the frank of A. P. GARDNER, Member of Congress, in which were inclosed the following letters, together with a copy of the Gardner resolution and a copy of his speech in the House of Representatives under date of October 16, 1914.

WASHINGTON, D. C., *November 25, 1914.*

MY DEAR SIR: May I call your attention to the inclosed resolution (H. J. Res. 372) providing for a national security commission to in-

vestigate into the question of the preparedness of the United States for war? This resolution was introduced into the House of Representatives on October 16, 1914, and is receiving the support of a very large part of the press of this country.

Should your organization approve of this resolution, I should appreciate it if you would communicate with your Senators and Representatives.

Yours, truly,

A. P. GARDNER,
Sixth District of Massachusetts.

SOUTH BEND, IND., *December 12, 1914.*

Hon. H. A. BARNHART,
Washington, D. C.

MY DEAR SIR: Your esteemed favor of the 10th at hand. As I personally opposed this resolution in our meeting your reply affords me great pleasure. In sending this resolution to you I was performing the duties of my office as secretary, as the majority rule in matters coming before us.

I contended that those representing us at Washington were in much better position to know circumstances and conditions than we, and were also in a position to know what the finances of the Government were and what expenditures they would stand.

I still believe my theory correct, and your decided stand along the same line is indeed approved personally and I think it is by all conservative men if they will but give a moment's consideration to the subject.

Our blank resolution seems to have come from the Hon. Mr. GARDNER himself. Am inclosing papers we received at the time from him.

Sincerely, yours,

DETMAR F. BAER, *Secretary.*

These documents are given to the House and to the country merely to show the process of inciting emotionalism, which is sometimes paraded on this floor and by the press as public sentiment to the misconception of public duty and to the misfortune of safe and sane legislative procedure, especially in passing appropriation bills.

Cotton.

EXTENSION OF REMARKS
OF
HON. RUFUS HARDY,
OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 10, 1914.

Mr. HARDY. Mr. Speaker, when I went home the last of October I made a talk to my home people on the subject of our cotton and business problems. The Corsicana Sun in its issue of November 2 gave an unusually full and accurate account of the speech, and with the hope of contributing something of value to the discussion of those problems, which I regard as belonging more properly to the States than the Nation, something which may be of value in future like emergencies, if not in our present distress, I ask leave to extend my remarks in the RECORD by printing that newspaper account.

The SPEAKER. The gentleman from Texas [Mr. HARDY] asks leave to extend his remarks as indicated. Is there objection? The Chair hears none.

The matter referred to is as follows:

JUDGE HARDY HEARD BY LARGE NUMBERS—DISCUSSES PLANS FOR RELIEVING COTTON SITUATION—FAVORS STATE BONDS TO BUY COTTON.

A large gathering of representative business men and farmers assembled in the district court room on Saturday afternoon to hear Judge RUFUS HARDY, Congressman from this district, discuss the cotton situation. Although district court was in session and a civil suit of importance was on trial, Judge Daviss not only introduced the speaker but adjourned court for the afternoon that Judge HARDY might have the use of the district court room. Introducing the speaker, Judge Daviss said he was proud of the privilege of introducing our distinguished neighbor and home citizen. While the court was in the midst of a much-litigated damage suit, he felt that the discussion of conditions such as we are all conscious of was of greater importance than a trial that could be heard at another time, and he had therefore given way to hear the discussion of the cotton situation by one of the foremost, wisest, cleanest thinkers of our time. "I have known Judge HARDY since I was a boy intimately and pleasantly. The fact is, my professional existence is by virtue of his signature. He signed the commission which entitled me to practice law. I know of no man who has made a more honest and thorough effort to at all times be in touch with his people, and no man in Congress has been more useful."

Judge HARDY said in part:

"I must first thank Judge Daviss for his generous words and then express my appreciation of this opportunity to talk to my home people after being almost two years continuously at Washington trying to represent them, and I do not propose to discuss politics. I wish, however, to make one personal observation. During my absence you have had a primary election to nominate a Democratic candidate for governor. Since my return some friends of mine have told me that I made a mistake in sending a telegram saying that if I were at home I could not indorse Mr. Ferguson's land-rent platform and would vote for Mr. Ball. Let me say that I had no desire to intrude my views on our people in that campaign, but I received a telegram asking me if I indorsed that rent plank. I forget just how it was worded. It was up to me to be a man and answer or to sneak around the corner and say nothing. I am not in the habit of sneaking, and so I answered. Let me add that I have always rented what lands I have for the third and fourth, and have never asked or taken a bonus in my life; but whether I am right or wrong, I do not believe we will ever fix by law the rents and charges for farm lands or other lands any more than we will fix by law the wages for a day's labor. The primary is over. Mr. Ferguson was nominated, and when I met him in Washington the other day I told him sincerely that no man in Texas more earnestly desired to see his administration a splendid success than I. He impressed me as a man who would be devoted to our State's best interest, and I believe he will give us a wise administration.

"I would like to tell you something of the general work of the wonderful Congress that has just adjourned. It has enacted more constructive and far-reaching legislation than any other Congress in history. It has passed a tariff law which not only eliminated the worst features of our former tariff, but will be the model for all future tariff-reform measures, by which the inequalities and favoritism of taxation will be finally swept away. It passed an income-tax law, which will shift much of the heavy burden of taxation from the shoulders of the poor to shoulders better able to bear it, and which ought in justice to bear it. The Federal banking and currency act is legislation which has been sorely needed, but which the Republican Party has feared to attempt, though realizing its urgency for 20 years. I firmly believe the law we passed, which will finally go into operation November 16, creates the best banking and currency system known to the world. But I must refrain from talking of these things, important as they are and will continue to be after the special problem or problems that confront us to-day are passed away. I am here to talk and counsel with you about the great problem that confronts us now, and that came upon us without warning and in a nighttime. The sun set clear in the evening; it rose with the darkness and roar of an almost world-wide war in the morning—that war the most stupendous crime that has been committed by man against man since human life began in the Garden of Eden. I will not go further and lay that crime at the door of any man or set of men, because America is and would be friend to all the nations involved, and I would not violate the proper requests of our President as to our conduct as a neutral Nation. The United States, and especially the cotton-growing States, are suffering from that war's consequences. It found us with our industries resting on peace conditions, and it found us living under existing constitutions, the restrictions of which, whether wise or not, bound and still bind our hands in our efforts to solve its difficulties. We were stunned, dazed, at the magnitude and menace of the impending blight to our financial and industrial being. Misguided, extreme, and conflicting opinion found voice. It was of all others a time when cool, wise guidance was needed, but when there was very little of that kind of guidance. Farmers, merchants, bankers, all had advice to give, but most of it ignored our constitutions and the character, convictions, and interests of our people as a whole. In Congress our cotton conferences, seeking to frame relief measures, were restricted to Members from cotton districts. We ought to have been broader from the beginning. We ought to have known that the South was not an Ishmael against whom every man's hand was raised. We had friends in Congress from the North and East and West and in all parties. We ought to have called a conference of all Members from all sections who were with us in sympathy and anxious to help us every way they could under their oaths as Congressmen, and from their counsel evolved some measure which they could and would support."

In this connection Judge HARDY read a reply he had written to a letter from an old friend, Mr. Carroll, of Kerens, as follows:

WASHINGTON, D. C., *September 16.*

Mr. JOHN W. CARROLL, *Kerens, Tex.*

MY DEAR MR. CARROLL: Now, as to general conditions I am afraid the whole South is in hard lines. My opinion is that the national administration is ready and anxious to do everything within its power to aid us. Through laws and amendments to laws passed by the Democratic Congress money can be obtained as a loan upon cotton securities. The banks can take the farmer's note secured by warehouse cotton receipts and the Treasury will loan upon such note 75 per cent of its face value. If Navarro County raises a hundred thousand bales of cotton, they

would be worth, at $30 per bale, $3,000,000. Now, notes by the producers for that amount would enable the banks to obtain $2,250,000 if our whole cotton crop was put up as collateral. I have talked with the Secretary of the Treasury, and, of course, he does not expect any such stupendous sum to be demanded. My recollection is that he told me the banks of Navarro County, on the basis of the capital and surplus, could obtain something like $700,000 of additional currency. My own opinion is that that amount of currency, together with what the banks have on hand, will be amply sufficient to meet every possible demand for actual money, so that in my opinion the real trouble we are and will be up against is not scarcity of money but the right use by the banks and the people of what money they have and can get. If the banks should be extortionate in their rates of interest or illiberal in their amounts or terms of loans, or if the people should be unreasonable in their demands and expectations, or if bankers, merchants, and farmers should fail to cooperate and work in thorough harmony and in dead earnest for our common good, it seems to me we are likely to meet and suffer immeasurable disaster and losses.

I have reached the conclusion that there is no absolute necessity for our people to suffer extreme hardship if they will act earnestly, intelligently, and unanimously. No man or class of men ought to seek to profit out of conditions now existing. The money furnished by the Government on cotton securities should be regarded as a trust fund. The banks ought to desire to realize no profits from its handling and to make no charge by way of interest or otherwise, except as would be sufficient to secure them against loss and very moderately compensate them for their services for handling the trust fund. The cotton producer ought not to seek to borrow this money except for the purpose of paying his debts and his necessary current expenses, and the merchant or other creditor to whom the producer pays money ought to redeposit the money in the bank at once.

Now, if the banker, producer, merchant, and other creditors will agree to act together in every community and all over the South along the lines I have just indicated, there will not only be no scarcity of money, but there will be no necessity of any forced sale of our cotton. I feel absolutely sure that if on to-morrow morning it were thoroughly and undoubtingly understood that no bale of cotton in the South would be sold for less than 10 cents per pound for middling grade, there would be a rush of buyers to get it at that price. There would be more cotton sold in the next 30 days at that price, or above it, than there is likely to be in the next 3 months as conditions now stand. Cotton buyers now hold off, each and all of them, not because cotton is not worth 10 cents per pound and more, but because of the present absence of a market. In our acknowledged surplus of supply over demand, they do not know how much lower cotton will go before the bottom is reached. The truth is, the ship of our cotton industry is wrecked. There is only one lifeboat which will give us safety, and that lifeboat is the thorough, complete cooperation of all our people which I have tried to describe. The people of the South are not alone interested in this matter, nor is it to the interest of any section that our cotton raiser should be crushed. The mill owner in the east may have great supplies of cotton goods already manufactured; if so, he has paid 12 to 15 cents per pound for cotton and even higher prices, and therefore he would not if he could reduce the price of cotton goods so greatly as to involve himself in loss on stock he has on hand. It might be possible that the cotton manufacturer would see a great opportunity to enrich himself and endeavor to beat down the price of cotton while maintaining, or even raising, the former price of cotton goods, because while the supply of cotton will be greater than the demand, the supply of cotton goods by reason of decrease in its manufacture is likely to be less than the demand. The mills of England, France, and Germany, I am sure, will reduce their output in the aggregate by more than one-half. The warring nations have taken from us annually at least one-half our cotton crop and made it into cotton goods. One-half of that amount, or say one-fourth of our cotton crop, will not be worked into cloth within the next 12 months. On the other hand, the demands for cotton goods for army uses and for cheaper clothing perhaps, taking the place of wool and other costlier cloths in great quantities, will very likely be fully as great as it ever was. The ultimate consumer, the general user of cotton goods, the vast masses of the people both here and abroad, will find no profit in the low prices to the cotton farmer. That much, I think, is certain.

There is another thought I wish to express, and that is as to the value of our cotton seed. Grain foodstuffs of all kinds are going high, are high now, yet I have been told that cotton seed are selling low. Why is this? It seems to me that cotton seed, since it is one of the most valuable foodstuffs, if not the most valuable, considering all its uses, ought to be higher now than ever before. Certainly our people will not sacrifice their cotton seed for a song. This leads me to another line of talk. How much longer the European war will last is pure guess. There is so much at stake, however, on the part of each contending nation, so much to be demanded by the ultimate winner from the loser, that personally I can not see any hope of its speedy termination. If the allies win, Germany must pay a fearful reckoning. A $1,000,000,000, the amount she demanded in 1871 as indemnity from France in addition to the two Provinces she took, would not even compensate little Belgium for the pecuniary loss she has sustained. You remember France did not even get into Germany; she destroyed none of her property, yet she paid this indemnity; but not only has Germany now overrun all Belgium, but she has overrun the north half of France with what destruction no one can say, and so France must be compensated for her losses, and perhaps would inexorably demand not only the return of Alsace and Lorraine, but also of her formerly paid indemnity of $1,000,000,000, and at least reasonable compensation for her injury and expenditures in this war.

What England and Russia would demand would certainly be no less than what Belgium and France demanded, so that Germany must realize that ultimate and final defeat means to her almost, if not quite, ultimate and final destruction. On the other hand, without going into details, before England and Russia and France would submit the final defeat, I think they would sacrifice the lives and fortunes of more than half their people. From these considerations I look for this war certainly to last 12 months unless by continuous successes both the Russians on the north and the Belgians, French, and English on the south should grind Germany to powder and leave her so helpless that she couldn't even presume to protest against anything they did. So then, considering the war will in all likelihood last at least 12 months, what further should our people do besides hold the surplus of their present crop? Unquestionably, it seems to me we must find a way to heavily decrease our planting for next year. We ought to cut it half in two. We ought to plant more corn, more wheat, oats, potatoes, and every other thing which we can see our way to utilize.

I have written you more fully than I intended, but not more fully than your question deserves. I believe that when it is seen that we are ready and fully determined to help ourselves in a right and reasonable way, the sympathy and cooperation of every section of our country will be ours. I think the North, the East, and the West will join hands to help us. I believe the farmers of Texas and the merchants of Texas, if they appeal, will not appeal in vain to the farmers and merchants of the great Middle West and the North and the East. I believe they will join us heartily if appealed to for personal aid along such lines as the buy-a-bale proposition, and they will urge their Representatives in Congress to join us in supporting any possible rational governmental protection or assistance that can be given us.

In conclusion, let us not take too gloomy a view. Let us all sit steady in the boat. Be patient and each help the other, and we will make safe landing, and I trust within 18 months be more prosperous than ever before.

Continuing, Judge HARDY said:

"Gentleman, I did not write that answer at once; I did not write the whole letter in a day. I was studying the question, hoping to find a satisfactory solution. I give it to you and to Mr. Carroll now as being what I was thinking then, on the 16th day of September. Some of my then hopes are ashes now. Some of the things I then thought are still more sure now.

"Because it has been sometimes urged, let me say a word about valorization. Brazil did valorize her coffee crop and double its price to the people of the United States in about four years; but let me tell you about it. First, the Province of Sao Paulo, the biggest coffee section of Brazil, tried it in 1906 and completely failed. Then the Federal Government of Brazil in 1909 took it up. She found it necessary to raise cash money, and to do this she placed the financing of the enterprise in the hands of strong capitalists in Europe and America. She took over bodily and arbitrarily the whole coffee industry, forbidding and penalizing the further planting of coffee trees, and rigorously enforced these penalties; then she bought ships to transport the coffee; then she bonded the industry by issuing against it $75,000,000 of bonds, which were taken by the big capitalists in Europe and the United States. Under her agreement the capitalists selected a manager and selling agent, who fixed the price and quantity to be sold in every country. The manager stimulated the use of coffee in countries where it was not generally used by extensive advertising and very low prices. He made it up by very high prices where its use was established. That was particularly so in the United States, and in 1912 we were paying at wholesale not only twice what we paid in 1909, but twice what was being paid even in 1912 in other countries. To aid this plan Brazil imposed an export tax on coffee to provide a guaranty and sinking fund and current expenses for the business, and the management built warehouses and appointed agents everywhere. Besides this, Brazil's bonds, running, as I remember it, 10 years and bearing 6 per cent interest, were sold at 85 cents on the dollar.

"The expenses to do all these things that have been done, with endless commissions and special charges, no doubt, besides the full payment of the face of the principal of her bonds and interest, must all be met by Brazil before the coffee producer reaps any profits, and I don't believe I risk losing your good opinion if I say I don't believe the coffee grower of Brazil has been benefited by the transaction. But it is enough to say that a valorization law would not find 10 supporters, perhaps not 1, in Congress. Quite a number of cotton growers' organizations united upon and urged what came to be known as the Henry bill, which in its first form was, I think, a proposition that the Government loan to individual producers of cotton 12 cents per pound and hold the cotton till it could be sold for enough to pay back the Government all that might be due. This bill assumed so many different forms that I hardly feel justified in saying just what was its primeval or intermediate form, but its final form provided for the advance by the Government to growers of tobacco and cotton of $250,000,000 at 4 per cent interest, through banks who were to have no responsibility in the matter but be compensated for their services, and this was to be done under rules to be prescribed by the Secretary of the Treasury which were hardly vaguely hinted at in the bill. For all that appears in the bill, the Secretary might authorize the loan of the money deposited in the banks on cotton at any price and for any time, and there was no time fixed when the money should be paid back by the borrower to the Government; in fact, there was no requirement that it should be paid back at all. That was the final bill indorsed and insisted on by the majority at the last cotton conference I attended, and known in subsequent discussions as the Henry or cotton conference committee bill. At that conference some of us tried to get a substitute adopted known as the Howard bill. This bill provided that the Government should issue $250,000,000 of greenbacks and deposit it in such banks in the cotton-growing districts, designated by the Secretary of the Treasury, as would agree to accept it, on condition that it should be used only to loan to cotton producers, such banks being required to give such bond or indemnity for repayment to the Government as

would be required by the Secretary, and in addition thereto to deposit the notes and cotton receipts upon which its loans were made. These banks were to be permitted to loan not over three-fourths of the value of the cotton, warehoused and insured for the full amount of the loan, and at a rate of interest not over 5 per cent. The bank having received such currency was required to pay 1 per cent to the Treasury to cover the Government expenses. It was provided that whenever any cotton on which there was a loan was sold the entire proceeds should be paid over to the Government up to the amount due on the loan secured by it, until in this way the currency issued under the act was paid off and retired. This was simply additional security to the Government that every dollar of its deposits should be repaid. At our conference it was practically admitted on all sides that, regardless of merit, no bill for direct loans by the Government to individuals had a ghost of a chance to pass, while those of us who stood for the Howard bill had assurances that his measure or one like it might be supported by many Members from the West. We believed that if we would all get behind a bill of that kind and work for it, we could pass it. Friends of the direct loan persisted. They began a regular system of filibustering and obstruction, tying up other legislation, and delaying and prolonging a Congress whose Members were worn out with nearly two years' continuous attendance, and, properly, were anxious to get home to meet their opponents in the campaign. At the last moment a bill was proposed in principle like the Howard bill, and the direct-loan men stood with us for it, but it failed. It might have had a better fate had it had a better chance.

"There was another proposition known as the Hoke Smith bill. It proposed that the Federal Government issue bonds for $250,000,000 in denominations ranging from $10 to $500, due on or before three years and bearing 4 per cent interest; that these bonds be used to buy cotton at 10 cents per pound on basis middling, the bonds being given in exchange for the cotton. The cotton was to be held at least till January, 1916, and until January, 1917, if it could not be sold before that for 11 cents or better. If not sold before the last-named date, it would be sold thereafter at whatever price could be obtained for it. The bill provided that a tax of 1 cent per pound should be levied on all cotton grown in 1915 and thereafter to meet the loss, if there was any, to the Government. Section 26 of this bill, roughly stated, levied a tax of 2 cents a pound on cotton grown by any person in 1915 in excess of 50 per cent of the amount grown by him in 1914.

"This measure came to a vote in the Senate and was defeated by 21 to 40. I do not believe many of those who voted for it liked it just as it was. At least two Senators who so voted told me they did not approve section 26 of it. With section 26 in it I should have voted against it, but with that omitted I would have voted for it, if it had been voted on in the House; but, my friends, I would have done so with fear and regret. I would not under any terms put the farmers of my State in the hands of the Federal Government to be penalized for planting 1 acre or a hundred acres of cotton, with the Federal surveyor measuring his land and the Federal taxgatherer and court official on his back; but my people were in distress, and every heartbeat of mine was with them. This Federal bond proposition was not unconstitutional. It stood on a par with our issue of bonds to build the Panama Canal. It would have done the work needed. It would have taken 5,000,000 bales of cotton off the market. It would have removed our enormous surplus and enabled us to sell the remainder at something near its real worth. Amendments offered to the Smith measure showed what evils might come of it. One amendment proposed an issue of $500,000,000 to buy up grain and raise its price, another to buy copper, another for naval stores, and so it went. Anyone could see that if the Federal Government once bought one commodity to save a market for it every industry in the land would be at the doors of Congress clamoring for relief. I am sure I see a troop of evils that would have followed.

"That question, however, has been taken away from us. The all-sufficient answer to all discussion of it is that it never can pass either the House or the Senate. Even a cow blind of one eye can see enough and has sense enough when an impenetrable fence stands between her and green pastures to quit bruising her head against the fence at that point and to walk farther around in search of some opening or weaker point of attack.

"What, then, is there left? I want to say right frankly that I left Washington intending to urge when I got home two things—one a bond issue by the State and the buying of half our cotton and the other a stay law to hold us in statu quo to prevent our people being all bankrupted and their property sacrificed while waiting for the State to take the steps required to issue bonds. Since I got here I have changed my mind about the latter proposition, because I am told on all sides that there never was before such a temper shown as prevails universally here to-day on the part of creditors. They are not crowding their debtors; they are not demanding that they sell and sacrifice their cotton; they are telling them to hold it and that they will wait. A stay law could do no more. This temper of creditors here reminds me of two articles I have in my pocket. One written by Mr. W. L. Sanford, of Sherman, urging farmers who owe any debt to sell their cotton at any price, and pay all it brings on their debts. He declares that cotton is worth no more under any circumstances than it will sell for. He ought to know that any court of equity in the world would pronounce that statement false and would intervene to prevent the sacrifice of property by a sale where or when there was no market. And then this gentleman, who seems to have 'no bowels of compassion,' attempts to justify himself. He tries to show that cotton production costs less now than when we sold it at 7 cents. He strings out a list of items that cost less now than then. He names nine items, giving a line to each, when he knows that a farmer does not buy $5 worth of them all put together in a year, and all the big items he gives as articles sold by the farmer at increased price, such as wheat, oats, hay, horses, and mules, that really do amount to something, he knows or ought to know, are articles that the cotton farmer rarely sells and generally has to buy. This man urges the merchants generally and his customers especially to press the farmer to sell his cotton and sell it now. Time and breath are worth too much to discuss this article further. It is the spirit I feared when I thought of advocating a stay law.

"The other article is that of the leading bankers of Texas, published in the Dallas News of the 27th." Judge HARDY read this article, and said: "This article makes me proud that I belong to the human species. When banks are anxious about their own reserves and balances and obligations these bankers met to consider not their own situation alone, but the situation of people of Texas. They pledged themselves to cooperate in placing the price of cotton at 8 cents. They resolved to help raise a fund sufficient to take care of this year's surplus by loans on reasonable terms and for long enough time to permit the gradual marketing of our crop at that price or better. They cited the strong reasons existing for faith in the early success of measures now maturing, both by banks and business men and by the Government, and they urged that cotton be held by the farmers for 8 cents, while wisely urging a 50 per cent reduction in cotton planting for next year and diversifying our crops. It was this article and the spirit I found here that caused me to change my views about the stay law. I believe now our people can work and live, at least for a while, and yet the State of Texas can and ought to take action. I believe Texas and every other cotton-growing State ought to issue bonds sufficient to buy one-half of the cotton crop of 1914 at 10 cents per pound basis middling and take it off the market.

"The bonds ought to be issued in denominations of $5, $10, $20, $100, and $1,000, those less than $1,000 bearing no interest. These bonds ought to be paid out to the cotton producer in exchange for his cotton through the county judges of the State. The smaller ones received by the small producer would pay his debts to the merchant and the banker. The merchant would gladly take them at par for any debt due him by the farmer, and the banker would gladly take them at par for any debt due him by the farmer or merchant; isn't that true? These smaller bonds would pass from hand to hand as money and settle thousands of dollars of small and even large debts, and when the bankers got a good quantity of the small notes or bonds let him be allowed to exchange them for the larger or interest-bearing bonds. Under our Federal banking and currency system which will be in full operation by November 16, he can deposit them with the Federal reserve bank of his district and secure 90 per cent of their face value, in currency of the United States. Every dollar of currency needed by the banks can be gotten in this way and many of these bonds would find their resting place in the vaults of eastern banks in settlement at full face of balances due from our banks. These bonds ought to be payable on or before 10 years, and the $1,000 bonds ought to bear 4 per cent interest. A dollar, or perhaps two dollars per bale, ought to be charged to the producer who sells his cotton in this way to the State to pay the State's expenditures in the operation and for the sinking and interest fund. Our legislature ought also to levy a special tax of one-half cent per pound on all cotton grown in Texas in 1915 and each year thereafter to pay any loss accruing to the State. That tax might also be used to aid our people in initiating other crops besides cotton, under proper conditions and restrictions. All this is paternalism pure and simple. Yes; but I believe that all forms of government

ought to exist only for the purpose of best serving and conserving the interest and welfare of the people governed, and any form of government ought to be changed whenever better service comes with the change. I do not believe another government exists in the world that would sit down calmly and do nothing if its people were in the condition of the people of the cotton-growing States to-day. There is a point I want you to mark and mark well. When we amended the Vreeland emergency-currency law, so as to permit banks to borrow from the Government 75 per cent of the face value of cotton-secured notes, we fondly hoped the increased facility of the banks would permit them to obtain all the currency needed and cause them to loan it freely to the cotton farmer. The banks, or many of them, got the currency, but somehow it got hung up on the way and never reached the farmer. It may have gone to settle bank balances; it may be resting in the vaults of the banks that got it. I don't know. I'm not censuring the banks. I only know it didn't bring the relief we hoped for. All the relief measures passed by Congress proposed that the money flow from the Government down through the banks to the people. The measure I propose intends that the relief shall flow up through the people to the banks. This measure reverses the operation; it begins at the bottom and works upward, carrying its debt-paying and healing effects with it from the lowest to the highest. I do not claim credit for discovering the remedy. It was proposed by Mr. Harding, one of the members of the Federal Reserve Board, a great banker and thinker of Alabama, selected by the President to organize the greatest banking system in the world. It seemed good to me.

"Oh, but I am told, our constitution stands in the way. Well, then amend the constitution, and do it the shortest way. Oh, but that will take too long. Well, then we will wait just that long. Under the spirit of live and let live that is witnessed by the Dallas bankers' address to Texas, by the St. Louis $135,000,000 cotton loan pool, and by the statements I have heard everywhere since I came home, we can hold on that long. Besides that, we must wait, anyhow, and taking steps to amend our constitution will not hurt or hinder any other movement to aid us. If we perish, we perish; but I'd rather perish doing or trying to do something than trying to do nothing. If Texas will lead the way, other States will follow. South Carolina has already passed a law, to be submitted to her people, to issue $24,000,000 of bonds. The very knowledge that the people of five or six big States were heart and soul under this State bond proposition and were marching to the goal of its accomplishment would raise our cotton prices. You all know the story about the larks in the wheat field. As long as the farmer was sending over to his neighbors to come and help him harvest his wheat the old lark knew it was not necessary to move her nest and her little ones. They were safe. But when one night the little larks told her they had heard the farmer tell his sons that day to get up early in the morning and they would cut their own wheat the wise old bird said it was time to move. When Texas starts to help herself, then those who have stood around waiting and hoping to pick our wealth from the lifeless hands of our dead prosperity will move and our great commodity will find its market. I'm not given to taking votes, but just now let me see how many of you agree with me that Texas ought to issue bonds and buy half her cotton, as I have proposed. All who do please raise your hands. [Here the speaker paused.] I see nearly all of you do agree with me, and I think those who have not raised their hands are thinking.

"My countrymen, I do not like to say I know, and yet I believe I do know that if Texas would do what I urge there would not be another bale of middling cotton sold of the crop of 1914 after it was done for less than 10 cents.

"My friends, beyond the idea of relief to my people there is another not much less dear to me. We are fast driving to a concentration of all the power and functions of government in the Federal Government. The dream of the fathers of separate and sovereign States is fast fading from the minds and will soon be fading from the memories of men, and yet I love that dream. If we can find relief—find healing for our wounds—I'd rather a thousand times that relief, that healing, came from the States than from Washington. If the States could themselves in this time of trial work out the salvation of their people, it would do more to rebuild the proud prestige once held by the States as real sovereigns, supreme in all matters of local government and local interest, than ten thousand eloquent speeches of a Calhoun, a Jefferson, or a Wilson.

"Texas and her sons and daughters and the sons and daughters of Navarro County deserve the noblest devotion that a public servant can give a people, and so help me God, without fear or faltering or political regard to the future, I have studied these questions and given you my convictions."

The National Government's Obligations and Powers.

EXTENSION OF REMARKS

OF

HON. CYRUS CLINE,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 15, 1914.

Mr. CLINE. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a speech delivered before the National Rivers and Harbors Congress by our colleague Mr. TEN EYCK, of New York.

The speech is as follows:

THE NATIONAL GOVERNMENT'S OBLIGATIONS AND GOVERNING POWERS.

Mr. President, Fellow Members, National Rivers and Harbors Congress: Three or four weeks ago, on my way to Washington, my heart was gladdened to see tied at the docks at Poughkeepsie, N. Y., a trans-Atlantic steamer with a cargo of lumber that had been shipped through the Panama Canal from the State of Oregon. The dock to which the vessel was tied is a new dock built by a syndicate who are interested in lumber on the Pacific slope. This location was chosen on account of the channel in the Hudson River at this place being deep enough to permit a trans-Atlantic steamer to dock. From here will be distributed lumber from the Pacific slope throughout the Middle and Eastern States.

This question is too broad to treat as a local or State issue. Therefore I am going to discuss it as a national and an international project for the progress and the extension of trade not only with ourselves but with all the other nations, both on the Eastern and Western Hemispheres. I believe in conservation of our natural resources, but conservation without utilization will cause stagnation of business and commerce. This not only holds good of our forests, our coal and mineral lands, but our waterways for power and transportation purposes. The United States is nothing more than a big corporation run by the stockholders, who are the citizens; the legislative, judicial, and executive branches are the same as a board of directors in a large corporation.

All corporations have overhead charges; all corporations have what is known as an account called "Betterments or improvements." This is the account that I intend to deal with to-day. The legislators or the legislative branch must put the soft pedal on the continuous changing of the Constitution and by-laws of this great corporation and look to the promulgation of proper laws to govern our betterment account, and see that out of the moneys expended each year a sufficient share is allotted to betterments, which, if properly expended, will tend to increase the business of the country without increasing the expense account.

One of the greatest controlling forces of business and commerce is the transportation facilities of any nation—the railroads, the waterways, and the highways—all of which bear the same relation to a country as the veins and arteries to the human body. Commerce is its blood, and particular care must be taken that it is not contaminated or its flow interfered with by cutting or severing of its veins or arteries. If we do, the business of the country will die the same as the body will die if the veins and arteries are permitted to wither. I intend to treat with the waterways of this great country, not in antagonism to railroads but in cooperation and conjunction with them.

The great Empire State, which has won its name and rank because of its commerce, wealth, and population, has constructed entirely at its own expense the longest and greatest artificial canal system in the world, which has done its share toward making this country the first nation among nations in wealth and commerce. One State can not improve itself materially without having a beneficial effect upon the entire Union of States. The United States can not be benefited or improved without having a beneficial effect upon the nations of the world. Our interests are so entwined with each other that the waves of prosperity in one country vibrate and extend so far that they are felt at the uttermost parts of the earth. The Government of the United States is obligated to its people, to the various States and Territories, and to itself. It is bound to maintain peace throughout its borders, and it is bound to look after the prosperity of its people in times of peace. To accomplish this, it is called upon to construct, regulate, govern, and improve enterprises which are too large for one State to build, control, regulate, and improve—projects which pertain to the entire United States rather than to any one State.

The authors of the Constitution of the United States, through the great article of particulars, delegated to the National Government certain obligations and governing powers, and within its jurisdiction are its navigable streams.

The great changes which are taking place in our rivers, due to the alterations in the topography, the clearing of the lands of timber, and the cultivation of the lands in the various watersheds, by the increasing population in the different sections, demands increased facilities for water and railway transportation and flood protection. Most of these navigable rivers are used for interstate trade; most of these rivers drain a number of different States. Therefore the flood protection and the improvement for transportation are National rather than State projects. The same is also true of our great streams which are adaptable for power purposes. It is therefore imperative that the National Government control these emergency measures and construct, improve, and pay for such improvements out of the National Treasury wherever the expenditures are too large for any one State or when the State is prohibited from making these improvements itself on account of constitutional restrictions.

The State of New York, which I have the honor of being one of its Representatives in Congress, is laboring under the embarrassing position of being willing and also able to take care of this worthy project in which the people of the United States are so much interested and which will be so valuable to the general public good. It is this project which I intend to discuss here to-day, and I wish to assert that when this project is constructed, which it will be, it will not only be beneficial to the people of New York State but of the greatest service and benefit to the entire United States, and will also render the greatest service to all civilization. We are, however, prohibited from improving this navigable river on account of constitutional limitations among the States, as the Federal Government has entire control, by its constitutional rights, over all navigable streams.

The total receipts of the United States from all sources during the fiscal year 1914 amounted to the enormous sum of $380,800,893.96. Of this amount the State of New York furnished $62,116,763.34, or 16.34 per cent of the entire amount. I merely bring this to your attention as a reminder that it should have all consideration when it requests that some of this money be returned to it in the form of a betterment for the use of the people throughout the entire Union of States.

The deepening of the channel in the Hudson River, which will make of the capital district of the State of New York a seaport, which capital district represents a population of half a million people, will also prevent the devastating floods each year from overflowing its banks and destroying property to the value of millions of dollars annually.

New York State will expend approximately $150,000,000 in the construction of this unexcelled canal system, including terminal facilities at points of vantage, also including damage claims. This great artificial waterway was not built by the State of New York for the exclusive use and benefit of the people of the State, but it was constructed for the use and benefit of all the people of America, not only for domestic and interstate commerce, but for the coastwise, trans-Atlantic, trans-Pacific, and South American commerce. Every State and every congressional district bordering on the Great Lakes is more interested in this waterway than the Empire State. It gives me the greatest pleasure to list below the States and the congressional districts which border on the Great Lakes. If their Representatives have not already taken an interest in this project in the past and in the various projects in the rivers and harbors act, they will realize their obligations in the future.

Names of Representatives of congressional districts in New York State bordering on—

Hudson River:	
Twenty-fifth district	Benjamin I. Taylor.
Twenty-sixth district	Edmund Platt.
Twenty-seventh district	George McClellan.
Twenty-eighth district	Peter G. Ten Eyck.
Twenty-ninth district	James S. Parker.
Champlain:	
Thirty-first district	
Barge Canal:	
Thirtieth district	Samuel Wallin.
Thirty-third district	Charles A. Talcott.
Thirty-fifth district	John R. Clancy.
Great Lakes:	
Forty-third district	Charles M. Hamilton.
Great Lakes and Canal:	
Thirty-second district	Luther W. Mott.
Thirty-sixth district	
Thirty-eighth district	Thomas B. Dunn.
Thirty-ninth district	Henry G. Danforth.
Fortieth district	Robert H. Gittins.
Forty-first district	Charles B. Smith.
Forty-second district	Daniel A. Driscoll.
Proximity:	
Thirty-fourth district	George W. Fairchild.
Thirty-seventh district	Edwin S. Underhill.
New York City:	
First district	Lathrop Brown.
Second district	Denis O'Leary.
Third district	Frank E. Wilson.
Fourth district	Harry Howard Dale.
Fifth district	James P. Maher.
Sixth district	William M. Calder.
Seventh district	John Joseph Fitzgerald.
New York City—Continued.	
Eighth district	Daniel J. Griffin.
Ninth district	James H. O'Brien.
Tenth district	Herman A. Metz.
Eleventh district	Daniel J. Riordan.
Twelfth district	Henry M. Goldfogle.
Thirteenth district	George W. Loft.
Fourteenth district	Jefferson M. Levy.
Fifteenth district	Michael F. Conry.
Sixteenth district	Peter J. Dooling.
Seventeenth district	John F. Carew.
Eighteenth district	Thomas G. Patten.
Nineteenth district	Walter M. Chandler.
Twentieth district	Jacob A. Cantor.
Twenty-first district	Henry George, jr.
Twenty-second district	Henry Bruckner.
Twenty-third district	Joseph A. Goulden
Twenty-fourth district	Woodson R. Oglesby.

Senators: James A. O'Gorman and Elihu Root.

Congressional districts bordering on Great Lakes.

Minnesota:	
Eighth district	Clarence B. Miller.
At large	John Manahan.
Wisconsin:	
Eleventh district	Irvine L. Lenroot.
Ninth district	Thomas F. Konop.
Sixth district	Michael K. Reilly.
Fifth district	William H. Stafford.
Fourth district	William J. Cary.
Second district	Michael E. Burke.
First district	Henry A. Cooper.
Michigan:	
Twelfth district	H. Olin Young.
Tenth district	Roy O. Woodruff.
Ninth district	James C. McLaughlin.
Eighth district	Joseph W. Fordney.
Seventh district	Louis C. Cramton.
Sixth district	Samuel W. Smith.
Fifth district	Carl E. Mapes.
Fourth district	Edward L. Hamilton.
Third district	J. M. C. Smith.
Second district	Samuel W. Beakes.
First district	Frank E. Doremus.
At large	Patrick H. Kelley.
Illinois:	
Tenth district	Charles M. Thomson.
Ninth district	Fred A. Britten.
Eighth district	Thomas Gallagher.
Fifth district	Adolph Sabath.
Fourth district	
Third district	George E. Gorman.
Second district	James R. Mann.
First district	Martin B. Madden.
At large	Lawrence B. Stringer. William E. Williams.
Indiana:	
Thirteenth district	Henry A. Barnhart.
Tenth district	John B. Peterson.
Ohio:	
Ninth district	Isaac R. Sherwood.
Thirteenth district	John A. Key.
Fourteenth district	
Twenty-first district	Robert J. Bulkley.
Twentieth district	William Gordon.
Nineteenth district	Ellsworth R. Bathrick.
At large	Robert Crosser.
Pennsylvania:	
Twenty-fifth district	Milton W. Shreve.
At large	Fred E. Lewis. John M. Morin. Arthur R. Rupley. Anderson H. Walters.

Vermont, which borders on Lake Champlain, is connected with the Barge Canal and Hudson River by the Champlain Canal.

Vermont:	
First district	Frank Lester Greene.
Second district	Frank Plumley.

SENATORS.

Minnesota: Knute Nelson and Moses E. Clapp.
Wisconsin: Robert M. La Follette and Isaac Stephenson.
Michigan: William A. Smith and Charles E. Townsend.
Illinois: James Hamilton Lewis and Lawrence Y. Sherman.
Indiana: Benjamin R. Shively and John W. Kern.
Ohio: Theodore E. Burton and Atlee Pomerene.
Pennsylvania: Boies Penrose and George T. Oliver.
Vermont: William P. Dillingham and Carroll S. Page.

In addition to these, all the people in the States bordering on the Atlantic and Pacific Oceans and their tributaries and in the congressional district which border thereon are vitally interested in a deeper Hudson River and the Barge Canal, which is the connecting link between our coastwise trade and the Middle and Northwestern States. Therefore it gives me much pleasure to list those States, omitting the congressional districts which border on the Atlantic Ocean, the Gulf of Mexico, and the Pacific Ocean: Maine, New Hampshire, Massachusetts, Rhode Island,

Connecticut, New York, Pennsylvania, New Jersey, Delaware, Maryland, Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, the Canal Zone, California, Oregon, Washington, Alaska, and the Philippine and Hawaiian Islands.

It is estimated by competent authority that the freight carried on the Hudson River after the completion of the Barge and Champlain Canal system will exceed the freight which passes through the Panama Canal. Freight from Duluth, Chicago, Cleveland, and Buffalo on the Great Lakes can be transported by water to San Francisco or Seattle from $1 to $2 a ton cheaper than by rail across the Rocky Mountains to San Francisco or Seattle, and where it has to be retransported to Alaska the saving is double this amount. On account of the natural topography of the Hudson River Valley and the simplicity of construction of this project it should be improved at once. The Hudson River as far north as the Government dam at Troy is an arm of the sea extending into the interior for one hundred and fifty-odd miles, and the tide rises and falls 3½ feet at the Federal dam at Troy; the mean level of the surface of the water in the Hudson River at the dam is only 1½ feet higher than the mean level of the surface of the water in the harbor at New York City. This natural transportation and commercial route of water, rail and wagon, from the Great Lakes through the Genesee, Mohawk, and Hudson Valleys, has made its terminal, New York City, the greatest market of exchange in the world, as it connects one of the richest producing localities of this continent with ocean transportation. As the demand grows upon this market for greater facilities, greater space, and for more economy in exchange, this demand will have to be met by improving the natural resources, which in its crude form in years past started this growth. When the United States Government restricts the State of New York by its constitutional right from making its own improvements, it must reply to the demand of the people of the State of New York by making the improvements which they request. You must keep in mind that when the people of New York State unanimously request the Government to assist and aid in this project it is a request of approximately one-tenth of the population of the United States, who pay approximately one-fifth of the revenue, which is their proportion toward any amount expended for any improvement within their own State, as well as one-fifth of the amount expended for any improvement toward any and all of the projects, whether it be railway, waterway, roadway, or any other project in any of the other States which compose the Government of the United States.

This project is of the utmost importance and will be directly beneficial to 80 per cent of the population of the whole United States and will serve those people who pay 90 per cent of the total revenue which pays the expenses for the operation and running of the Government. This waterway route through the Empire State is the one real competitor of the Canadian canals and St. Lawrence waterway system for export trade. Canada through its proposed improvements and construction of the Welland Canal, Georgian Bay Canal, Trent Canal, and Lachine Canal, in junction with the improvements of its harbors at Toronto, St. Johns, Montreal, where they have spent millions and contemplate spending millions more for this trade which they believe it is imperative to hold, and to hold and increase it, they believe it is imperative upon them to increase their waterway facilities and thereby cut out competition with the United States.

The foreign commerce of the Great Lakes has reached the enormous sum of approximately 20,000,000 tons annually. Quoting from an article in the Saturday Evening Post, "Peru has four and a half million people and has a coastal length equal to the distance from Maine to Georgia; Chile has 3,000,000 people, and its coastal length would measure from California to Alaska; Colombia has 4,000,000 people, and is the size of the Louisiana Purchase; Mexico has 16,000,000 people, and if transposed on the map would cover the German Empire, France, and Great Britain; Cuba, with her 2,000,000 people, would just nicely cover the area of Pennsylvania; Argentina, with a population the same as Canada, is the size of half of the United States; Bolivia equals the area of all of the Rocky Mountain States together; Brazil, having a population three times that of Canada, has the area and resources of the United States with Germany thrown in. Here in South America are Republics with three times the area of the United States and with 70,000,000 people just beginning to realize their size, as the United States began to feel her strength and growth 20 years ago, and we are getting a bare third of that continent's enormous commerce. Germany and England, Japan; yes, even Canada, so far as investments in Brazil and Mexico are concerned, are in the field reaping the profits of South American trade to which the United States was indifferent prior to the construction of the Panama Canal."

There will be built at either or both of the terminals of the Panama Canal a city which will rival our greatest seaports on the Western Hemisphere. This city, or cities, will be the market of exchange for all the packet cargoes of South America, both on its Atlantic and Pacific slopes, the packet cargoes of the western slope of the United States, the Hawaiian and Philippine Islands, Australia, New Zealand, Japan, China, and Africa. Who will be the purchasers other than Europe? It will be the great wealth of the population of the United States, principally that portion bordering on the Great Lakes and which live adjacent to and connected by this waterway system with the markets in New York City.

With only a depth of 5 feet, the Erie Canal, before it became obsolete, carried as high as 6,442,225 tons of freight in one year, and as late as 1906, with a greater depth, it carried 3,540,907 tons of freight after the State of New York had decided to change the entire water traffic by the construction of the Barge Canal, which of necessity changed the class of boats plying on these waters, so that practically all the tow lines which operated on the canal stopped extending, which permitted Canada's competition to become more formidable and take that tonnage which we hope to again secure.

The following data will give you some idea of the Barge Canal, which does not include the various terminals which have been built by the State and are therefore public terminals, at Buffalo, Rochester, Syracuse, Troy, Albany, and New York, with a number of smaller terminals interspersed:

Erie branch—miles	323.3
Number of locks	35
Oneida Lake, forming part of the route—miles	19
Spurs to Syracuse and Rochester—do	10.26
Champlain branch—do	61.5
Number of locks	11
Oswego branch—miles	22.8
Number of locks	7
Cayuga and Seneca branch—miles	27.3
Number of locks	4
Cayuga and Seneca Lakes, connected with Barge Canal, miles	65
Width of channel, land line, surface section, bottom, minimum—feet	75
Width of channel, land line, water surface—do	123 to 171
Width of channel, land line, lock section, bottom, minimum—feet	94
Width of channel, river line, bottom, general—do	200
Depth of channel, land line and minimum river line, feet	12
Locks, length between gates—feet	328
Locks:	
Various lifts—do	6 to 42
Triple lock at Troy, distance between outer gates, feet	450
Available length, regular locks—feet	310
Width of chamber—do	45
Depth of sills—do	12
Dams:	
New	28
Old, with new crests	6
Old, without change	5
Boats:	
Capacity utilizing full lock width—tons	3,000
Built for two to pass in most restricted channels, and two for traveling tandem, to be locked at one lockage—tons	1,500
Appropriation:	
Erie, Champlain, and Oswego Canals	$101,000,000
Cayuga and Seneca Canals	$7,000,000
Approximate amount expended on terminals	$20,000,000
Approximate damage claims allowed	$11,000,000
Approximate future damage claims	$11,000,000
Total length—miles	529.16
Total number of locks	57
Total number of dams	39
Total carrying capacity—tons	25,000,000

Running time, between Buffalo and Albany, four to five days.

The descent from Lake Erie level to the Hudson River level is 565 feet. The original canal was constructed with a depth of 3 to 3½ feet and was built to accommodate 30-ton barges which carried less freight than the ordinary railroad freight car does to-day, while the present canal is constructed so as to accommodate barges of 3,000 tons capacity, one hundred times greater than the original canal boat. Approximately 90 per cent of the population of New York State lives within 25 miles of the navigable streams and waterways so that they all are within its commercial advantages. This population occupies one-half of the total area of the State.

The representatives of the people of the National Government should make it their paramount interest to cheapen both the cost of our natural and manufactured products to the consumer. The merchandise of the Pacific Ocean from the Orient, North, South, and Central America, and the west coast of the United States and Alaska should be brought into close touch with our Atlantic coast and the great interior of the United States.

I am going to give you a list of articles which will be shipped from the Pacific coast via Panama to the capital district to be redistributed throughout the Middle Northwest and the Great Lakes, whereby the cost will be reduced materially to the consuming public in these localities on account of an all-water freight rate: Lumber, asphaltum, coal, oil in tank boats, guano for fertilizer, railroad ties from Japan, various woods, rubber, manila, ivory, sulphur, saltpeter, furs, skins, hides, meats, tallow, tropical fruit, canned fruit, sugar, coffee, tea, spices, rice, wines, perfumery, rugs, silks, hemp, flax, pottery, gold and precious stones; including packet cargoes reloaded at San Francisco and Panama from Alaska, British Columbia, the west coast of the United States, Central and South America, China, Japan, Hawaii and the Philippines, Australia, New Zealand, Java, Asia, Oceania, Africa, including the coastwise trade from Canada, and cotton, wool, and lumber from the Southern and Gulf States. The boats returning will be loaded with cargoes from Canada, the northern New England States via the Lake Champlain Canal, and from the Great Lakes and Middle West via the Barge Canal, insuring enough exchange freight to reload all vessels docking in the capital district with the following articles: Cotton goods, clothing, boots and shoes, carpets, iron from the Great Lakes and Champlain districts; grain and apples from the Middle West; flour from western mills; starch from Iowa; cement from the capital district; agricultural implements, electrical appliances, stoves, automobiles, locomotives, steel, firearms, explosives, enameled ware, and other manufactured articles from the States of New York, Ohio, Illinois, Indiana, Michigan, and Wisconsin; salt, gypsum, molding sand, condensed milk, bicycles, books, steel bridges, canned goods, castings, copper ingots, drugs, chemicals, furniture, minerals from our mines, corn, wheat, barley, oats and hay, all classes of manufactured iron products, railway cars, and food products from the great West.

All of the articles which I have mentioned are being produced and are now being exchanged by a number of different combinations of transportation companies, which seems to be the most expedient at the time of shipment.

With a port at Albany there will be a saving of 150 miles by railroad for all points reached by the New York Central, the Rutland, the Boston & Maine, the Delaware & Hudson, the West Shore, and the Boston & Albany Railroads. Quoting from an article in the New York Herald, Monday, December 7, 1914:

"SHORTER TRAVEL ROUTES.

"The canal," it says, "has shortened travel routes between New York and Yokohama by 3,700 miles; between New York and Shanghai, about 2,000 miles; between New York and Australia, about 3,000 miles; and between New York and western South America by from 3,500 to 7,000 miles. It also reduces the distance from Europe to western South America by more than 5,000 miles. International commerce doubled in the 30 years following the opening of the Suez Canal, and business and personal interrelationship between the Occident and Orient was increased in like proportion.

"FACTORS IN TRADE.

"Highways of travel on the ocean are influenced by surrounding conditions just as are those on land, so that the shortest distance between two given points is not always the best. Plentiful freight supplies, interchangeability of the products of the countries forming the termini of the routes, 'way stations' on such routes, plentiful coaling stations and cheap coal of a quality suitable for steamship engines, and even favorable winds and ocean currents are among the factors contributing to the success of routes of travel upon the ocean.

"WIDE SPHERE OF INFLUENCE.

"The sections of the world which may be considered as probably within the 'sphere of influence' of the Panama Canal are the eastern and western coasts of America, the eastern coast of Asia, and the islands of the Pacific. All of western America is nearer to Europe than formerly, and all of western America and most of eastern Asia and Oceania are nearer to the eastern coast of America.

"Study of the production and consumption of the various countries lying within the canal's sphere of influence shows that their various products are thoroughly interchangeable. A study of distances also shows that both New York and New Orleans are now so much nearer to all of western America than is Liverpool that we may expect an increasing share of the trade of that section to fall to the lot of eastern North America; that the eastern ports of the United States are considerably nearer to Yokohama, Melbourne, Sydney, and Wellington than is Liverpool by her shortest route, but that Liverpool is still nearer Hongkong and Manila than either New York or New Orleans via Panama."

In conjunction with this I wish to give you a table of distances from New York and Albany, the distance from New York being via the Pennsylvania Railroad and the distance from Albany being via the New York Central.

Cities.	Distances to—		Difference.
	New York.	Albany.	
	Miles.	*Miles.*	*Miles.*
Chicago	908	837	71
Buffalo	411	296	115
St. Paul	1,318	1,247	71
Duluth	1,391	1,320	71
Detroit	759	547	212
Cleveland	579	479	100
Cincinnati	751	743	8

Terminals and ocean distances.	Miles.
Liverpool to Boston	2,854
Liverpool to New York	3,053
Liverpool to Philadelphia	3,172
Liverpool to Albany	3,023
Liverpool to Newport News	3,024
Liverpool to Baltimore	3,328
Liverpool to New Orleans	4,525
Liverpool to Galveston	4,719
Hamburg to New York	3,577
Hamburg to Philadelphia	3,712
Hamburg to Albany	3,727
Hamburg to Newport News	3,745
Hamburg to Baltimore	3,869
Hamburg to New Orleans	5,068
Hamburg to Galveston	5,262

Wheat, being one of the principal articles of export trade which is carried by this waterway, I take pleasure in giving you below the export, both from the United States and Canada, in 1901, in 1913, and 1914, as follows:

United States and Canadian exports of wheat.

1901.	Bushels.
United States and Canada, exports of wheat (largest)	150,173,000
Of this amount New York exported	30,202,000
Of this amount Montreal exported	13,582,000
Of this amount St. John exported	1,085,000

1913.		
United States and Canada, exports of wheat		195,774,000
Of this amount New York exported	49,019,000	
Of this amount Montreal exported	33,252,000	
Of this amount East St. John exported	8,236,000	
In bond through United States	70,850,000	
		112,338,000
Balance of United States wheat shipped from American ports		83,436,000

From the Great Lakes in August the shipping prices for wheat were substantially as follows:

Export wheat conditions to Oct. 3, 1914.

	Bushels.
Montreal, exports of wheat since opening of navigation, May 1 to Oct. 3 (on account of ice she could not ship from Jan. 1 to May 1; she is what is termed a seven-months port)	46,264,000
New York, exports of wheat, Jan. 1 to Oct. 3	26,533,000
Galveston, exports of wheat, Jan. 1 to Oct. 3	19,804,000
New Orleans, exports of wheat, Jan. 1 to Oct. 3	18,793,000
Baltimore, exports of wheat, Jan. 1 to Oct. 3	16,456,000
Philadelphia, exports of wheat, Jan. 1 to Oct. 3	12,471,000
Boston, exports of wheat, Jan. 1 to Oct. 3	11,430,000
Total exports of United States and Canadian wheat to Oct. 3	166,264,000
Exports same time 1913	145,696,000
Increase of exports of wheat to Oct. 3, 1914	20,568,000

1914.	Per bushel.
Lake freight, etc., Duluth to aboard ocean-going steamer at Montreal, Canada	3¾c.
Extra ocean freight, tramp steamers to Montreal, United Kingdom, or Continent; over same, New York to United Kingdom or Continent	1c.
Extra, marine insurance (St. Lawrence route)	¼c.
Total cost, Duluth to f. o. b. ocean carrier at Montreal, Canada	5¼c.
Chicago to Buffalo lake freight on wheat	.87c.
Inland freight, Buffalo to New York	5.50c.
Charge for putting grain f. o. b. vessel in New York Harbor	.90c.
Total	7.27c.
Cost of shipping via New York	7.27c.
Cost of shipping via Montreal	5.12c.
Showing cheaper cost of shipping via Montreal route	2.15c.

From which you can see why all of us that are gathered here to-day, representing the country geographically as well as com-

mercially, are all commercially interested in this project of deepening the channel in the Hudson River to 27 feet, about which I have had the pleasure to speak to-day, as it is the connecting link with the Barge Canal between the Great Lakes and the Atlantic Ocean. It is of paramount interest not only to the producer but to the consumer, not only the exporter but the importer, as this project is the one scheme of all others that connects the most westerly city of Lake Superior—Duluth—as well as Chicago, Cleveland, and Buffalo, with a 40,000-mile water route around the world via the Barge Canal, the Hudson River, the Atlantic Ocean, the Gulf of Mexico, the Caribbean Sea, the Panama Canal, Pacific Ocean, the Indian Ocean, the Red Sea, the Suez Canal, the Mediterranean Sea, the Straits of Gibraltar, the Atlantic Ocean, back through the Hudson River, the Barge Canal, and the Great Lakes, which waterway washes the shores of approximately every civilized nation of the world and forms the greatest interstate and international waterway route known to man.

The Colombian Viewpoint.

EXTENSION OF REMARKS
OF
HON. J. HAMPTON MOORE.
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 18, 1914.

Mr. MOORE. Mr. Speaker, in July last I laid before the House an interesting historical statement prepared by Mr. Wilfred H. Schoff, of Philadelphia, with reference to the negotiations then pending between this Government and the Government of Colombia and to the proposed payment by the United States of $25,000,000 to "do justice to Colombia," as Secretary Bryan said, for the taking of Panama. It will be remembered that a controversy had arisen as to whether the United States was not making concessions to Colombia which were approaching close to "an abject apology," the attitude of the Secretary of State being that since an "estrangement existed which this country must deal with," we must "resolve the doubt against ourselves and in favor of Colombia."

Usually there are two sides to every question, but in this instance, from the viewpoint of the Secretary of State, there was nothing for the United States to do but to pay what Colombia demanded. Since then, however, additional information has been brought to the United States which indicates that there was some bartering over and above the mere matter of $25,000,000. It now appears from official data translated and forwarded to me by Mr. Schoff that the Colombian Government asked for $30,000,000 plus $250,000 per annum for 100 years; that this was countered by an offer of $20,000,000 from the United States; and that finally, in order to "blot" the estrangement entirely from memory, the compromise figure of $25,000,000 was substantially agreed to.

The construction of the Panama Canal has already proven a heavy drain upon the resources of the United States, and its maintenance, especially in the event of war, will continue to draw heavily upon the people of this country. It is interesting, therefore, to contemplate the early probability of another outlay of $25,000,000 to "salve" the wounded feelings of Colombia.

Yet "Peace hath her victories no less renowned than war."

TRANSLATIONS FROM COLOMBIAN REPORTS.

Mr. Schoff's statement and translations from Colombian records, giving that country's viewpoint with respect to its claims and achievements, is appended herewith:

The official report of the Colombian minister of foreign affairs of Colombia, just received from the national printing office at Bogota, contains some interesting details about the treaty now pending in the United States Senate and shows the United States, as already publicly charged, to have been placed in the position of an abject apologist for the events of 1903.

The report opens with a copy of the message of the Colombian President, Carlos E. Restrepo, Bogota, May 1, 1914, when he called the Congress together in extraordinary session to consider this treaty. At this session was submitted, first, a letter addressed by the American minister at Bogota to the Colombian minister of foreign affairs, of which the following is a translation:

LEGATION OF THE UNITED STATES OF AMERICA,
Bogota, October 1, 1913.

To His Excellency the MINISTER OF FOREIGN AFFAIRS OF COLOMBIA.

Mr. MINISTER: The Government and people of the United States sincerely desire that everything that may have altered, or that may appear to have interrupted, the close and ancient friendship between the United States and the Republic of Colombia may be blotted out and forgotten.

My Government, therefore, desires to end once for all the differences that have arisen between it and the Republic of Colombia concerning the matter of a suitable reparation for the losses, both moral and material, suffered by the Republic of Colombia because of the circumstances that attended the acquisition of the rights now possessed by the United States on the Isthmus of Panama.

I am instructed, therefore, to offer the sum of $20,000,000 for the complete termination of all claims and differences now pending between the Government of Colombia and the Government of the United States and between the Government of Colombia and the Government of the Republic of Panama.

I hope that this offer will be considered acceptable by your excellency's Government, and I request your excellency to accept the renewed assurance of my most distinguished consideration and personal esteem.

THADDEUS A. THOMSON.

To this letter the Colombian minister of foreign affairs made a reply, of which the following is a translation:

REPUBLIC OF COLOMBIA,
MINISTRY OF FOREIGN RELATIONS,
Bogota, October 6, 1913.

His Excellency the ENVOY EXTRAORDINARY AND MINISTER PLENIPOTENTIARY OF THE UNITED STATES OF AMERICA.

Mr. MINISTER: I have the honor to refer to your letter of the 1st instant, in which your excellency has been pleased to inform the Government of Colombia that the Government and people of the United States sincerely desire that everything that may have altered or that may appear to have interrupted the friendship between the two nations may be blotted out and forgotten; that, therefore, the Government of your excellency desires to terminate the differences that have arisen between it and that of this Republic with respect to the reparation for the moral and material losses which Colombia has suffered by reason of the circumstances that attended the acquisition of the rights now possessed by the United States on the Isthmus of Panama; and that in consequence your excellency offers, in the name of your Government, the sum of $20,000,000 for the complete termination of all claims and differences now pending between our two Governments and the Government of the Republic of Panama.

I have received instructions from the President of the Republic to inform your excellency, as I now have the honor of doing, that the Colombian Government duly appreciates the concepts and aspirations of friendship and justice expressed in the aforesaid note of your excellency.

In order to cooperate on its part in favor of the just and friendly conclusion that your excellency's Government desires, my Government will proceed to express to your excellency, with the diligence and also the reflection that the matter requires, its ideas about the bases of a possible suitable agreement. One of these bases is the indemnity corresponding to losses and damages, which will be duly considered in relation with the other conditions that the Republic esteems necessary for the final solution of the claims and differences to which your excellency refers.

The Colombian Government in joining spontaneously with that of the United States in favor of the direct termination of this business desires that it may be possible and effective, and that in this way it may not be necessary for its part to continue working for the adoption of other means proposed by Colombia and which are now pending.

On expressing to your excellency these ideas and purposes of my Government, I take pleasure in reiterating to your excellency the assurances of my most distinguished consideration.

FRANCISCO JOSÉ URRUTIA.

According to the report of the minister of foreign relations, these letters were followed by personal discussion of details, interrupted by the return of Mr. Thomson to the United States, and ending in the presentation by the chargé d'affaires of the United States, Leland Harrison, December 22, of a general project for a treaty, of which the main headings were as follows:

"ARTICLE 1. Expression of regret by the United States and acceptance thereof by Colombia.

"ART. 2. Concession to Colombia of rights in the Panama Canal and Railroad as follows:

"(1) Free transport of troops, matériels, and vessels of war, even in case of war between Colombia and another country, without payment of dues.

"(2) Passage of Colombian products and manufactures through the canal on the same terms as those of the United States.

"(3) Colombian citizens passing through the canal to be exempt from every charge not imposed on citizens of the United States.

"(4) In case of interruption of canal traffic, the troops, matériels of war, products, and mails of Colombia to be carried by the Panama Railroad at the same rate as similar freight of the United States.

"(5) Coal and sea salt produced in Colombia passing from the Atlantic coast to Colombian Pacific ports, and vice versa, to be transported over the railroad free of charge, except actual cost of transport, which shall not exceed half of the freight ordinarily collected on products of the United States in transit.

"ART. 3. The United States to pay within six months of ratifications $20,000,000 in gold.

"ART. 4. Independence of Panama to be recognized as an accomplished fact, and the dividing line drawn between Cape Tiburon and a point midway between Cocalito and Ardita."

During Mr. Thomson's stay in the United States the Colombian Government submitted the following counter proposal, delivered at the American legation in Bogota February 3, 1914, and through the Colombian legation in Washingon February 7. The Colombian proposition was in substance as follows:

"ARTICLE 1. Expression of regret by the United States and acceptance thereof by Colombia.

"ART. 2. Concessions to Colombia of rights in the Panama Canal and Railroad as follows:

"(1) Free transportation at all times of Colombian troops and vessels of war, even in time of war between Colombia and another country, without payment of any charge to the United States. Colombian merchant vessels to use the canal on the same basis as merchant vessels of the United States.

"(2) Colombian products and manufactures, also mails, to be exempt from all charges other than those imposed on similar goods and mails of the United States. Colombian products and manufactures to be admitted to the Canal Zone without payment of other duties than those imposed on similar products of the United States.

"(3) Colombian citizens passing through the canal to be exempt from all charges other than those imposed on citizens of the United States.

"(4) During interruption of canal traffic Colombian troops, war materials, products, and mails to be carried on the railroad on payment of the same charges imposed on similar articles of the United States. Officers and employees of the Colombian Government to be transported on the same terms as those of the Government of the United States.

"(5) Petroleum and sea salt produced in Colombia passing from the Atlantic to the Pacific coast of Colombia and vice versa to be transported on the railroad free of charge, except actual cost of transport, etc., in no case to be more than half of the charges ordinarily imposed on similar products of the United States passing from one to another port of the United States.

"ART. 3. United States to pay within six months following exchange of ratifications the sum of $30,000,000. United States to pay also for 100 years from the same date an annual payment of $250,000.

"ART. 4. Colombia to recognize Panama as an independent nation, the boundary being drawn from Cape Tiburon to Cocalito, Colombia, however, declining all responsibility for acts done at any time within the territory of Panama."

Minister Thomson returned to Bogota March 3, and brought with him a counter proposition from the American Government, of which the following are the main:

"ARTICLE 1. Expression of regret by the United States and acceptance thereof by Colombia.

"ART. 2. Colombian Government to enjoy the following rights on the Panama Canal and Railroad:

"(1) Transportation at all times, even in time of war between Colombia and another country, of its troops, materials, and vessels of war, without paying any charge to the United States.

"(2) Colombian products and manufactures, also mails, to pass through the canal without charge other than that imposed on similar articles of the United States. Colombian products and manufactures to be admitted to the Canal Zone without payment of other duties than those imposed on similar products of the United States.

"(3) Colombian citizens passing through the canal to be exempt from all charges not imposed on citizens of the United States.

"(4) During interruption of canal traffic Colombian troops, war material, products, and mails to be carried by the railroad on payment only of the same charges imposed on similar articles of the United States. Officers and employees of the Colombian Government to be transported on the railroad on the same terms as those of the United States Government. These dispositions, however, not to apply in case of war between Colombia and Panama.

"(5) Coal, petroleum, and sea salt produced in Colombia passing from the Atlantic to the Pacific coast of Colombia, or vice versa, to be carried on the railroad free of charge, except actual cost of transport, in no case to be more than one-half the ordinary freight charged for similar products of the United States passing by the railroad in transit from one to another port of the United States.

"ART. 3. United States to pay within six months of the exchange of ratifications $20,000,000.

"ART. 4. Colombia to recognize Panama as an independent nation, the boundary to run from Cape Tiburon to a point midway between Cocalito and Ardita."

The difference in the terms of concession under article 2 was based on an agreement between United States and Great Britain in 1909 under which Great Britain consented to such concession.

This counter proposition was answered by a memorandum from the Colombian Government proposing certain modifications and concessions and repeating the request for $30,000,000 and annual payments of $250,000 for 100 years. This memorandum was answered by another from the American minister raising the indemnity to $25,000,000 without annual payments, on condition of acceptance by Colombia or the remainder of the proposition of the American Government. This was answered in turn by another Colombian memorandum relinquishing annual payments, but requesting in addition to the $25,000,000 a lump sum of $5,000,000 to be employed for the improvement and sanitation of the ports of Buenaventura and Cartagena. The money question was finally fixed at $25,000,000 on receipt of a cablegram from the Colombian minister in Washington, dated March 30, 1914:

"Convinced that Congress will refuse more than $25,000,000."

The treaty was thereupon drawn up and signed, and on the assembling of the Colombian Congress referred to that body for its consideration. The report of the committee of the Colombian Senate, submitted May 6, favored its ratification, and from that report the following passages are translated:

COLOMBIAN SENATE COMMITTEE REPORT.

"The secession of the Department of Panama, which occurred November 3, 1903, created for Colombia a political and commercial situation that the Republic can not contemplate with indifference, such that there is no record in the case of any people that has allowed time to pass impassively on a calamity of this kind. Once the territorial reduction of the nation was effected it became indispensable to think and work in search of the most suitable and efficacious means for one of two things—either to recover the separated Department or to obtain from the causer of the separation such reparation of a moral and material kind as may be just and possible.

"The first is impossible for Colombia in the case of Panama, recognizing that it has been received by the other nations as an independent State and, again, the enormous power of the Nation which has and does exercise guidance of that entity in its birth and subsequent existence.

"The second, that is to say, reparation adequate and possible, lends itself to various plans and methods. The first means that occurs is that of arbitration of the differences existing between the United States and Colombia because of the separation of the Isthmus. This means was proposed by Colombia and refused by the United States. This, on the other hand, and by its nature is always subsidiary to a direct agreement either between nations or between private parties. Further, arbitration can not comprehend in deed of compromise all the points which may be included in a direct agreement, *because questions referring to national honor are not ordinarily included*, and it would be difficult, if not impossible, to submit to a court of arbitration moral satisfaction, as that might probably include rights, privileges, prerogatives, and franchises of a commercial nature, all of which would remain unsolved. On the other hand, every *international arbitration, being long drawn out and costly, with problematical results, the most elementary discretion suggests that the sure is better than the doubtful, and that cash in hand may not be postponed for more to come.* Supposing an arbitral decision favorable to ourselves and humiliating to the United States; that result would be far from being accompanied by the good will of that powerful nation toward Colombia, while a direct agreement would be arrived at in a spirit of conciliation and friendship. This last consideration largely justifies the treaty of April 6, 1914, because it is a friendly agreement made directly between Colombia and the United States, with the previous condition fixed in the initial notes of the negotiation, that in case the treaty does not become effective the anterior situation shall subsist, and the last proposition submitted by Colombia remain in force, which was that of an arbitration applied to a difference existing between two nations. The treaty has therefore before all an important political aspect—political properly understood, not of local or party politics—with respect to the United States, with respect to great Colombian interests, and with respect to the territory of Panama. In the first case the treaty restores relations of our country with the most powerful Republic in the world and in history, whose friendship we can not view with indifference if we wish to live with foresight, and because of our situation in the New World; the influence of the United States on all the Latin-American peoples obliges us to hold our gaze straight toward that nation. It is true that the resentment caused by the separation of Panama deprives these relations to-day of the fervor of enthusiasm, but love and hatred, rancor or sympathies, which often determine the conduct of mortals, do not determine that of nations whose conscience and patriotism obliges them to think of the permanence of their being, which, being perpetual, may not be subordinated to temporary resentments. *It is true also that the powers of Europe might be looked to as sources of guardianship of a favor corresponding to our defense and to our advancement, but experience teaches us two things—that up to the present we have not received such defense, and that the powers of Europe neither jointly nor separately have approached the United States in our behalf nor in that of any other American people.* [The reference to Germany is obvious. England, through the Hay-Pauncefote treaty, had left the United States a free hand on the Isthmus. France, threatened with abrogation of the 10-year extension of the canal franchise (for which the Colombian Government had demanded and received $1,000,000), and with confiscation of the canal property, had considered defense of its rights by force (statement by Minister Delcassé, Nov. 23, 1903). Germany, according to press dispatches, was approached unofficially by prominent Colombians, who hoped to induce her interference by Isthmian concessions. The American ambassador at Berlin made inquiry and reported that "the question of an interference on the part of Germany did not exist." (S. Doc. 474, 63d Cong., 2d sess., pp. 359–360.) W. H. S.]

COLOMBIAN-JAPANESE ALLIANCE DISCUSSED.

"Also it is true that the recent appearance of a powerful Empire, modernized in its culture, at the borders of Asia has led some to think that from that remotest West might come to us such support under the form of a friendship so strong that it would resolve all our difficulties satisfactorily, including that now pending with the United States, but that is an illusion, because neither the effective power of Japan, nor the changes and necessities of its politics, nor the great diversity of its ethnic, social, and commercial circumstances permit us to consider that that country might seriously and probably be the means of our resolving to repulse the decisive and inevitable influence of a most powerful mass with which we are in immediate relation by the attraction of another distant mass, heterogeneous and incomparably inferior. * * *

"The probable success of the treaty with respect to the difficulties to be resolved and the needs proposed to be satisfied is also a thing to be considered, as shown by the analysis of its various stipulations. Such success depends naturally on obtaining the two parliamentary indorsements to the treaty, here and in the United States, which will be so much the more probable as may be understood the conjuncture of circumstances and the opportunity of the present moment. *It is known, in effect, that the agreement between Colombia and the United States accepted and even proposed by the Anglo-American Government is not a matter favored in the same degree of probability at any date, because these probabilities are in relation or bound to the predominance of certain political parties, not in our Government but in the Congress of the United States. Therefore from this firm and evident conviction, and not from immoderate eagerness,* nor from less patriotic desires, nor from the wish to close this agreement with a determined party or parties, nor for any reason less respectful as toward the sovereign Congress; thence we say, after having informed ourselves scrupulously of all the documents forming the antecedents and circumstances of the negotiations of the treaty, thence comes the time limit set for the saisfactory sessions of the legislative body. This time, short in truth, recognizes this undeniable hypothetical fact: If the treaty is good, we should work for its approval; and *in order that this approval may be effective, it should be realized in time to meet with probable ratification by the Senate of the United States* * * *."

COLOMBIAN HOUSE COMMITTEE REPORT.

The report of the committee of the House of Representatives on the treaty likewise recommended its ratification, and from that report the following passages are translated:

"For the celebration and appreciation of any treaty with the United States or with Panama we must begin necessarily with the lamentable occurrences on the Isthmus in November, 1903. The study of the facts in relation to Colombia and international law in relation to all nations of the world, situations created by virtue of these occurrences, are things definitely completed. Your committee judges, therefore, that it need not concern itself with them, except as their consequences affect the future of the nation. To remedy this situation as far as possible, Colombia might have recourse to one of these three means: War, which would be impossible for us for a thousand considerations of material kind; arbitration, openly refused by the United States; or direct agreement, which, initiated by that same Nation, has resulted in the treaty of April 6.

"The envoy extraordinary and minister plenipotentiary of the United States, Mr. Thaddeus A. Thomson, through the note which you know, began the negotiations to arrive at a treaty which might put an end, as he said, to the differences arising out of the events brought to pass on the Isthmus of Panama in November, 1903.

"The dangers of our national integrity, owing to the abnormal situation in which Colombia has been without determination of its boundaries or of the territorial partitions of the rebel department, the forthcoming opening of the canal to interoceanic commerce which will so favorably affect Colombia, the circumstance of the present existence in the Government and people of the United States of a sentiment of justice toward Colombia, and *the possible contingency of a change of international politics of that country with a renewal of the membership of its Senate, which might very well be inspired by other opinions*, indicate both the convenience and opportunity of celebrating the treaty.

SATISFACTION, INDEMNITY, AND PRIVILEGE.

"With these antecedents the negotiations should and did refer to three principal points—*moral satisfaction, indemnity for injuries suffered as consequence of the separation of Panama, and preferential terms for Colombia on the interoceanic routes* and in the commerce of

the regions adjacent to them, derived from its special character as possessor of the territory which was snatched from it.

"The treaty fulfills all these three aspirations.

"The initiation of the negotiations by the United States, the location thereof in Bogota, and the general tendency of the treaty satisfy in a *full* manner and, so to say, comprehensively the first of the points enunciated, which is especially satisfied by article 1 of the treaty, which says: 'The Government of the United States of America, in its own name and the name of the people of the United States, expresses sincere regret for whatever thing may have occurred to interrupt or alter the relations of cordial friendship which for so long a time existed between the two nations.' *A satisfaction could not be expressed in a more final manner in laconic diplomatic language, and the honorable Senate of the Republic so considered it when it unanimously approved this article and the preamble.*

"For the rest the order observed in the sequence of the articles of the treaty shows that the principal intention of the Colombian negotiators was moral satisfaction. This was also the most delicate part of the negotiation in its relation to the sentiments of the Colombian people. * * *

"The indemnity wipes out, on the other hand, the attempted excuse for the despoilment of Colombia in the name of universal civilization. If this had been the case, why the indemnity? So that even the stipulations *of this article contain their share of moral satisfaction.*"

This official report contains also replies to certain inquiries of Senator Mendez with respect to the dealings of the Colombian legation in the United States, and particularly the following:

"Whether the firm of the lawyer Taylor has intervened in the present negotiations, and if it has done so with the assent of the Government by contract with it or on what conditions, and what part in these events has been taken by Mr. Hall, and if that gentleman is counselor of the Colombian legation?"

Replies of the Colombian minister of foreign affairs to these questions are as follows:

"We do not know any firm of the lawyer Taylor. Mr. Betancourt, the Colombian minister in Washington, has consulted in this matter without previous contract, which is not customary in such cases, and with the knowledge of the Government, the illustrious Hannis Taylor, author of the well-known work of repute on international law, former minister plenipotentiary of the United States in Spain, and an enthusiastic friend of Colombia. Mr. Taylor is so esteemed in Washington that he figured as the first candidate to take the place of Mr. John Bassett Moore as counselor of the State Department. The negotiations have taken place here, and when there was anything to do with them in Washington the minister of Colombia has intervened officially, which does not prevent that he should have availed himself of the influence and counsel of good friends of our cause.

"Mr. Hall, with his book 'The Story of Panama,' his efforts before the committee of the House of Representatives of the United States, and his many publications, has made himself entitled to our gratitude. He has been lending services to the legation in the way of propaganda, receiving moderate fees and without having the character of counselor or any other similar title. His services, like that of Mr. Taylor, can not be received free, but they are and will be remunerated by our legation in Washington with the ordinary funds designated for that purpose and taken by the Government from those which the law of estimates assigns for such expenses as have been deemed indispensable.

"To the names of Taylor and Hall might well be added others, such as Bacon, Rainey, Dubois, Chamberlin, MacVeagh, etc., who have lent their pens and their authority to the cause of justice and right, which they esteem also as the cause of American honor."

The report includes also a statement by the chairman of the committee on foreign affairs. This is likewise a favorable report on the ratification of the treaty at this time containing one or two observations of particular interest as follows:

VIEWS OF CHAIRMAN OF FOREIGN AFFAIRS COMMITTEE.

"For Colombia it is sufficient that the most powerful nation in the world expresses *regret for whatever thing may have been able to alter the mutual good relations, because in these expressions are included all the deeds or events brought to pass in Panama in November, 1903. * * * The phrase 'cualquier cosa' [whatever thing] used in article 1 has been criticized because it is stated that a more appropriate expression would have been 'todo lo que' or 'todo aquello que' [all that], but 'cualquier cosa' [whatever thing] is here equivalent to 'toda cosa' [everything].*" [These words of the chairman of the Colombian house committee on foreign affairs give, of course, the direct denial to the official English translation in the published text of the treaty, wherein the Government of the United States * * * "expresses * * * sincere regret that anything should have occurred." As a matter of fact, the correct translation of this treaty makes the Government of the United States express regret "for whatever thing may have occurred," and by direct implication includes all the deeds of the American Government in 1903 and 1904.]

"Article 2 of the treaty grants Colombia the sum of $25,000,000 without implying by this payment a sale of territory, because one can ill sell what one has not, and the recovery of it is impossible. The payment referred to is for indemnity for the moral and material losses occasioned or caused to Colombia by the separation of Panama. The note initiating the negotiations and the preamble of the treaty clearly set forth such indemnity, because they state as the purpose of the agreement the restoration of the old friendship, the regularizing the rights and interests of the parties, and the blotting out once for all of the dissensions and controversies arising from the events of November, 1903, in Panama.

"The indemnity has been the occasion of much censure, first, by those who object that the treaty of April 6 does not follow that offered by the Anglo-American Minister Dubois at the beginning of 1913 to our Minister, Dr. Urrutia. This offer was, according to the opponents of the treaty, $25,000,000 in cash, preferential franchise and rights in interoceanic transit, moral satisfaction, and the arbitration of the reversionary rights in the railroad. But those who thus argue forget: First, that the proposition of Mr. Dubois was informal and simply an outline; second, that it was disavowed by the Secretary of State in Washington, who qualified it as a proposition beyond the instructions of the minister and incapable of producing any other result than of the display of blindness and unwarranted pretensions on the part of Colombia, according to Secretary Knox; third, that the same Mr. Dubois in effect disavowed his proposal because in public interviews recently made in the United States, he reduces the bases of an arrangement with Colombia, in his private opinion, merely and simply to the payment of eighteen millions; and, fourth, that the same distinguished diplomat—to whom in truth the Colombians owe their gratitude for his display of friendship toward Colombia—states in a letter of November to Dr. Urrutia that he would have been very pleased to sign the treaty which Mr. Thomson was to sign."

The Recall of Judges.

EXTENSION OF REMARKS
OF
HON. CLAUDE WEAVER,
OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, December 19, 1914.

Mr. WEAVER. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD I will print an address delivered by Hon. Charles B. Stuart, a distinguished lawyer of my State, in December, 1912, before the State Bar Association of Oklahoma on the subject of the recall of judges.

The speech is as follows:

THE RECALL OF JUDGES.

My brethren of the bar, the recall of judges, the subject assigned to me by your worthy committee, is one which has been the subject of recent and wide discussion throughout many of the States. The late expression of California in favor of judicial recall and the likelihood that Arizona will follow in the same train emphasizes to a marked degree the pressing importance for a calm, dispassionate, and unprejudicial consideration of this question and the field that it covers by this honorable body. It has been well said that lawyers are the true constituency of the bench, because every opinion of every conscientious judge is "written under the eye and subject to the review and criticism of a scrutinizing and intelligent legal profession." Any proposed change, therefore, either in the selection or in the removal of judges quickly challenges the attention and enforces the consideration of the practicing lawyer.

The chief glory of the English and American bar, especially when acting in the aggregate, has been the conservatism and the independence with which it has met and debated great public questions. Realizing that in the march of progress government, both in theory and in practice, must undergo modification in order to meet the exigencies of the times, the thoughtful lawyer, who is the natural enemy of revolution and the vigilant and ever-active guardian of the sacred rights of person and property, views with deep concern any sudden and radical change.

The recall of judges, as understood and pressed by those who favor the doctrine, is offered as a panacea for nearly all our ills, both State and National. Many of those who condemn the doctrine declare that its acceptance and practical application will result in the dislocation of the joints and articulations of government. Viewed in either light, the remedy offered by the recall is extreme. It is important, therefore, that we pitch this discussion above politics and above party, and with an eye single to the discovery of truth examine this strange propaganda.

The subject has already been approached and reviewed by wise and just men from nearly every angle. In this paper, therefore, I shall state little that is new, and I shall be compelled to state much that is old. Ancient truths and ancient creeds which were uttered and embraced by the fathers of this Republic who conceived and constructed the Federal Constitution must be uttered and examined once again. I shall be compelled to speak the words of the dead oftener than those of the living, and with toleration and respect for the views of others, I shall endeavor to bring in rapid and condensed review before you the character of this proposed change, its wisdom, and its effect as tested by the approved principles of American constitutional Government. I shall express no opinion as to the validity of the law in question, if it should be enacted after proper methods by this new Commonwealth, because that, in my judgment, is not within the scope and purview of this paper. I may be permitted to say, however, in passing, that I am one of those who believe that the people are and must continue to be the source of all power in real republics and that the charge that the proposed recall would make the State adopting it unrepublican in character and, therefore, inimical to the guaranty of the Federal Constitution is not tenable. I believe, with Madison, that—

A government is republican which derives its powers directly or indirectly from the great body of its people and is administered by persons holding their office during pleasure, for a limited period, or during good behavior.

Mr. Justice Wilson spoke correctly when he said, in Chisholm against The State of Georgia:

My short definition of a republican government is one constructed on this principle, that the supreme power resides in the body of the people.

The question here is not whether the people can in a proper way adopt the judicial recall, but whether they ought to adopt it. Our present concern is not whether the proposed change would be valid, but whether it would be right; not whether it would run the gauntlet of the Constitution, but whether the people can afford it. It has seemed better to me to discuss this question in an inverse way to that in which it has generally been presented. First, then, we shall consider the leading objections and criticisms which have been urged against judicial conduct of the present day as justifying the doctrine of recall.

In what have the judges offended? Where and in what manner have they abused public confidence? With what dereliction of duty or revolutionary action do they stand charged to call for a readjustment of the American system of government? Complaints are made and have gone to the people, and, speaking as one lawyer to a convention of lawyers, they must be confessed or answered. The lawyer who will not defend judges when they are unjustly assailed, and who will not shiver a lance for an upright and brave judiciary, is not worthy to sit in the sacred halls of justice.

It is claimed, first and foremost, that the people demand this change because the judges, both State and Federal, have declared, and continue to declare, congressional and State legislative acts unconstitutional and void, and that they are exercising this function without constitutional warrant, either expressed or implied. Let us see if in this modern day, after more than 100 years of judicial history, this complaint is justly lodged. You all do know that in the early days of this Republic the power of the Supreme Court of the United States to declare a law of Congress unconstitutional was bitterly contested. The controversy touching this matter was one of the most acrimonious in our history. On one side were arrayed Marshall and his followers, and on the other Jefferson and some of his disciples.

The proposed grant of power to the courts to declare in advance the validity or invalidity of a law of Congress was several times submitted to the convention which framed the Constitution and was as many times rejected, but the principle, although utterly unknown in England even to this day and unrecognized in continental Europe, even in those countries having written constitutions, was not new to the American people. Prior to the Philadelphia convention in 1787, which framed the Federal Constitution, the Supreme Court of New Jersey in 1780, in Holmes against Walton, expressly declared that a statute in conflict with the written constitution of New Jersey was void. In 1782 the Virginia court, in Commonwealth *v.* Caton (4 Cal.), held the same doctrine. Rhode Island in 1786, in Trevett against Wedden, and South Carolina in 1792 announced, in substance, the same rule. The truth is, this power of the court of last resort of the Federal Union to guard the Federal Constitution against legislation and Executive encroachment was a live issue from the time of the Declaration of Independence in 1776 to the meeting of the Constitutional Convention in 1787. Hamilton, in the thirty-eighth article of the Federalist, said:

> The complete independence of the courts of justice is peculiarly essential in a limited constitution. By limited constitution I intend one which contains written specified exceptions to the legislative authority, such as, for instance, that it shall pass no bills of attainder, no ex post facto laws, and the like. Limitations of this kind can be preserved in practice in no other way than through the medium of courts of justice, whose duty it must be to declare all acts contrary to the manifest tenor of the Constitution void. Without this all reservations of particular rights by the people would amount to nothing.

Marshall, in the Virginia convention of 1788, while it was considering the adoption of the Federal Constitution, declared:

> Can they (Congress) go beyond the delegated powers? If they were to make a law not warranted by any of the powers enumerated it would be considered by the judges as an infringement of the Constitution which they are to guard. They would not consider such a law as coming under their jurisdiction. They would declare it void.

Quotations, practically without limit, of a similar tenor could be made from contemporary writers and speakers. This view, however, was urged by such men as James Wilson, Gouverneur Morris, Edmond Randolph, and James Madison, all shining names in the country's history. It was no secret that this power of the courts would be asserted. All these discussions occurred prior to the action of the several State conventions upon the Federal Constitution.

At this time, be it remembered, Mr. Jefferson was in France, and was therefore not only not a member of a convention having under consideration the adoption of the Constitution, but took little or no part by letter in the discussion. Marshall, in 1798, had declined the position of Associate Justice of the Supreme Court, offered by President Adams on the death of Justice Irdell. He, however, was finally prevailed upon to accept the Chief Justiceship, and was accordingly appointed on the 31st day of January, 1801. A few weeks before John Jay had declined this same office after the Senate had confirmed his reappointment. In his letter of declination to the President he based his refusal on the ground that the system was so defective that the court would never acquire that public confidence and respect to which it was entitled as a separate department of the Government. But a new man was at the helm, a man of firmer temper, firmer purpose, and higher intellectuality than Jay. The views of the new Chief Justice were well known. He had concealed nothing, because he had never played double with living man. Between Marshall and Jefferson the most peculiar antagonism existed. It must have been in some sense personal, because a mere political difference, based upon divergent views as to the theory and powers of government, would not have permitted Jefferson to carry his resentment against Marshall to his grave. Mr. Jefferson came to the Presidency almost immediately after Marshall's appointment as Chief Justice. He brought with him no good feeling toward Adams, the retiring President, or any of his appointees. In this Mr. Jefferson was amply justified, because immediately before his retirement Adams had dealt him a blow, which we shall consider hereafter in another branch of this discussion, which was both ungenerous and unkind. Among other matters which were left incomplete, as you well know, were some signed but undelivered commissions. One of these was to Marbury. Jefferson refused to permit Madison, his Secretary of State, to deliver the commission. This enraged the Federalists, and Charles Lee, Adams's old Attorney General, was immediately employed by Marbury to bring suit in the Supreme Court of the United States asking for mandamus against Madison to deliver the commission. This suit was brought at a most unfortunate time, when the passions of party were running high and when the control of government had just been wrested from the hands of the Federalists, who had long been in power.

I am one of those who believe that if the first controversy before the Supreme Court touching the power of that body to declare a law of Congress unconstitutional had been one in which the personal equation as to the President and the retiring President had not entered, history would not have recorded the bitter feeling which was engendered by the decision in Marbury against Madison. Mr. Jefferson's opposition to this decision knew no bounds. Marshall's "obiter dissertation," as Jefferson called it, was roundly denounced. As late as 1819, after he had retired from the Presidency and only a few years before his death, he said in a letter to Judge Spencer Roane:

> My construction of the Constitution is very different from that which you quote. It is that each department is truly independent of the others and has an equal right to decide for itself what is the meaning of the Constitution in the cases submitted to its action.

But Marshall, notwithstanding criticisms, pursued his steadfast purpose to have the people respect his court and consider it the guardian and conservator of their fundamental rights as reserved and expressed in their fundamental law. It is useless, and it would be a trespass upon your time, to consider now the original question whether the Supreme Court was impliedly authorized by the Constitution to strike down a law believed to be in conflict with its terms or whether this power was assumed by the court. Suffice it to say that Marshall's theory has received not only the approval of a great majority of our people, but the principle asserted in Marbury against Madison has become so thoroughly embedded in our system of jurisprudence, both State and Federal, that it is no longer open to question or dispute. This power of the courts of the country to declare acts of the legislature in conflict with the Constitution void stands alone in the history of the world's jurisprudence, and it is this power of the judiciary which has most excited the admiration of statesmen and philosophers of the Old World as well as the New. "It lies," said a great jurist, "at the very root of our system of government." Prof. Dicey, of England, in his Oxford lectures, said:

> This system, the American system, which makes the judges the guardians of the Constitution provides the only adequate safeguard which has hitherto been invented against unconstitutional legislation. The glory of the founders of the United States is to have devised or adopted arrangements under which the Constitution became in reality as well as in name the supreme law of the land.

Mr. Bryce, in his American Commonwealth, declares time and again that English lawyers and statesmen have lamented that this power to move against an act of Parliament can not be exercised by the English judges. Rufus Choate, in his address to the Harvard Law School in 1845, said:

> I do not know that I can point to one achievement in American statesmanship which can take rank for its consequences of good above that single decision of the Supreme Court which adjudged that an act of the Legislature contrary to the Constitution is void and that the judicial department is clothed with a power to ascertain the repugnancy and pronounce the legal conclusion. That the framers of the Constitution intended this to be so is certain, but to have asserted it against Congress and the Executive, to have vindicated it by that easy, yet adamantine,

demonstration than which the reason of mathematics shows nothing surer, to have inscribed this vast truth of conservatism upon the public mind so that no demagogue not in the last stage of intoxication denies it, is an achievement of statesmanship of which a thousand years may not exhaust or reveal all the good.

De Tocqueville said:

The power vested in the American courts of pronouncing statutes unconstitutional forms one of the most powerful barriers ever devised against the tyranny of political assemblies.

Shall we go back, therefore, and reconstruct, or shall we rest content as to this feature of judicial power which is being daily exercised by the courts of the States and of the Union, which has been for more than 100 years acquiesced in and accepted by the people and which has passed beyond the realm of legitimate debate? Is there a lawyer in this body who would now say that the legislative body of a State shall be the exclusive judge of the constitutionality of its own action? Is no principle ever settled? Discussion as to these matters ought to be settled by the voice of the centuries, and yet there are those in this new day who declare that a judge who holds a legislative act unconstitutional is deserving of impeachment, and that on account of the tardiness of that remedy he ought to be summarily recalled.

Another objection which I shall briefly notice is that the Federal judges, including members of the Supreme Court, ought to be subjected to the recall, because their construction of powers of the Federal Government is such that finally a consolidated Federal Government will be the result and the reserved rights of the States will be ancient history. It may be assumed for the sake of argument that Marshall's rule of construction that the Federal Government possessed not only the express and affirmative power conferred by the Constitution but had every implied power necessary to promote and give effect to the objects for which, in his judgment, the Federal Government was established was too latitudinous; and he did carry this doctrine to an extent which alarmed the philosophers and statesmen of this hemisphere. Jefferson was so incensed that he called Marshall a thief of jurisdiction and said that Story absorbed jurisdiction like a sponge. He denominated judges as "bold speculators on the patience of the Union." He said that the Chief Justice was a crafty man who sophisticated the law to his mind by the turn of his own reason. But this tendency of Marshall was soon to receive a check. After he, through this canon of implied powers, had built up a Federal structure which was not only grand and imposing but well-nigh imperial, another figure appeared upon the stage of public action to stop the advance of a doctrine which, if pushed to its last analysis, might become dangerous to the Republic.

Roger B. Taney was appointed Chief Justice of the United States on the 15th of March, 1836, to succeed John Marshall. A great legal scholar has said, "If Marshall saved the Federal Government from dying of inanition, Taney saved the States from death by absorption. It is due largely to the genius of these two great Chief Justices that an indestructible Union of indestructible States is had." When Taney assumed his duties as Chief Justice three cases of immense importance were upon the docket: The State of New York against Miln; Briscoe against The Bank of the Commonwealth of Kentucky; and The Proprietors of the Charles River Bridge against The Proprietors of the Warren Bridge.

The argument in these cases had been made while Marshall was still on the bench. They were reargued before Taney, and these cases, according to the highest American authorities on American jurisprudence, marked the dividing line in judicial opinion between the power of the Federal Government on the one side and the reserved rights of a State on the other. In the Miln case, in which Story dissented and said that if Marshall were present he would agree with his dissent, the majority of the court held that the act of the Legislature of the State of New York requiring every vessel arriving in the port of New York from any foreign port or from any port or ports of the United States to report in writing within 24 hours after its arrival the names, ages, and so forth, of every person on board the vessel during the voyage was not a regulation of interstate commerce, but was clearly within the police power of the State, and that it was not covered by the great case of Gibbons against Ogden, nor that of Brown against Maryland. In the case of Briscoe against The Commonwealth of Kentucky, the majority of the court held that the power of Kentucky to incorporate a bank was an incident of its sovereignty, and that the bills issued by the bank not being bills of credit within the meaning of the Constitution the State might exercise its inherent power. This case has time and again been affirmed, although it was in direct conflict with Marshall's opinion delivered seven years earlier. Story again dissented and said that if Marshall were present he would concur in his dissent. In the Charles River Bridge case the doctrine of the reserved powers of a State was announced with greater and more acute precision. Here the celebrated Dartmouth College case was discredited, and it is said that here for the first time Mr. Webster met defeat before the Supreme Court upon a constitutional question. The language of Taney rings like the blast of a trumpet.

We can not deal thus with the rights reserved to the State and by legal intendments and mere technicalities take away from them, the States, any portion of that power over their internal police and improvement which is so necessary to their well-being and prosperity.

These cases have all been followed without break by the Federal courts and by the high courts of the States of this Union. Story's lament over these majority decisions was pathetic. He wrote a letter to Justice McLean, in which he said:

There will not, I fear, ever in our day be any case in which an act of a State or of Congress will be declared unconstitutional.

This lament, however, was unfounded, for within a reasonably short time afterwards that same court, Taney concurring, declared three statutes of different States unconstitutional. Marshall and Taney were both Federalists and had been bred and deeply grounded in that faith. Through the commanding genius of these two men the power of the Federal Government and the reserved rights of the States were made ample and secure. I make bold to say that since 1866 the judges, the great men who have sat upon the Supreme Bench of the United States, reconciling and enforcing the rules laid down by both Marshall and Taney have held the balances between the Federal Government and the States in as perfect poise as they could be held in this country of dual sovereignty. Is there, then, any room for apprehension that the Supreme Court will consolidate the Government and center all its power in Washington? It is true that the inferior Federal courts have, in rare instances, struck down State laws in decisions which received and ought to have received the condemnation not only of the legal profession but of the people. Logically, the powers of the United States courts to safeguard the Constitution must be coextensive with legislative action, but this does not mean that the will of the people shall be subordinated to the arbitrary judgment of a judicial dictator. The whole trouble is that some of those judges in passing upon the validity of State laws substitute their ideas of policy for those of the legislature and make their decisions depend not upon the letter of the law but upon the advisability and the expediency of the law; not upon the will of the people as expressed in the law but upon their theory of government and economics. I believe that aggravated cases of this character are very few; but, as I shall try to show hereafter, the remedy is not by the revolutionary method of recall but by drastic congressional action, within proper channels.

Another reason assigned for the summary recall of judges, and especially Federal judges, is that the appointing power from time to time has packed the courts to meet the political views of the President of the United States. That this has perhaps been done in this Republic of ours is much to be deplored, but that this evil has been much lessened and is now no longer existing is shown by the public history of the country. At an early date in the Republic it was considered fair party play. When Adams retired from the Presidency he had filled every office with a Federalist, and Congress by the passage of a judiciary act had created a large number of Federal judicial districts for the purpose of putting the judiciary in the control of the Federalists. No sooner did Jefferson come into power with his Republican Congress than he immediately had repealed the judiciary act creating these judges, and therefore legislated them out of office. He also removed Adams's other appointees as fast as he could reach them. Jefferson, who was a tremendous hater, never fully forgave Adams. On June 13, 1824, in writing to Mrs. Adams, he said:

I did consider his last appointments to office as personally unkind. It seems but common justice to leave a successor free to act by instruments of his own choice.

But Jefferson got even. Six years afterwards he wrote to Gallatin:

At last, then, we have a chance of getting a Republican majority in the Federal judiciary. For 10 years has that branch braved the spirit and the will of the Union.

When Taney delivered his celebrated opinion in the Dredd Scott case, Seward and Lincoln both made the charge that Taney had an understanding with President Buchanan as to how the decision should go, though Seward afterwards wrote a letter of apology to the Chief Justice, recalling his hasty words. It was charged that President Grant filled the Supreme Court with men favorable to the Government's theory in the Legal Tender cases. Speaking for myself, I may be permitted to say that I have never felt that this charge had been sustained, and I am not prepared to say that the voluminous and exhaustive opinion of Mr. Justice Strong, who was one of the new ap-

pointees, did not state the law of the case. Justice Bradley's theory of "Federal inherent powers" does not satisfy my judgment, but I have little quarrel with the result of the decision.

It is also charged that the court was again reconstructed by another President for the purpose of striking down the income tax. This accusation, too, has never been admitted or proved, and probably had its birth in high party spirit.

The man who now occupies the high station of Chief Magistrate of this Republic—President Taft—ought to have set at rest in the mind at least of every lawyer the baselessness of this fear. Whatever else may be said of our President, he was a great judge and he is a great lawyer. In reconstructing the Supreme Bench he has named a Democrat and a large slaveholder in ante bellum days Chief Justice of that great court. He has taken two more men, both of them of opposite party from himself and both of them having theories of government in some sense distinct from his own. Surely this does not augur danger to the people nor to their institutions, and I submit to you candid men that this fear does not justify the recall.

Another objection is that the injunctive process has been abused. My answer is that this can be quickly remedied by Congress, which, as the agent of the people, ought to make legislation reflect their will.

Having reviewed briefly, therefore, the main charges in the indictments which have been preferred against judges and judicial action, it becomes necessary now to inquire whether, even if these charges are true, the recall can be justified as consistent with our theory of government or as a matter of wise and expedient legislation. The Government of the United States is distinctly representative, and this feature has always been regarded as essential to the stability of free institutions. The pure democracies of the world where the people have attempted to act in mass in the making of laws have been dismal failures. Our statesmen and philosophers of the early days, when they put their heads together to find the best government, examined in detail, in public speech, in contributions to the press, and in the solitude of their own homes, every age and place where people had attempted to exercise the right of self-government. Every system from the early Greeks down to Holland and Belgium and the Swiss Cantons was exhaustively searched and considered. It was found by them, and it appears to be the consensus of opinion of the modern world, that the representative idea was the only practicable one for popular government. On page 176, in the first volume of Montesquieu's Spirit of Laws, which was the work most widely read by our fathers, and which made perhaps the deepest and most profound impression upon their minds, I find these words:

> As in a country of liberty every man who is supposed a free agent ought to be his own governor—the legislative power should reside in the whole body of the people; but since this is impossible in large States, and in small ones is subject to many inconveniences, it is fit the people should transact by their representatives what they can not transact by themselves.

The same idea was seized upon by the makers and builders of our Government. Mr. Jefferson, in a letter written in 1823, in the ripeness of old age, said:

> Modern times have the signal advantage, too, of having discovered the only device by which these rights can be secured, to wit, government by the people acting not in person but by representatives chosen by themselves. The small and imperfect mixture of representative government in England, embarrassed as it is by other branches, aristocratic and hereditary, shows the power of the representative principle toward improving the condition of man.

Woodrow Wilson, one of the most pungent and captivating writers in this day, and who in a recent article declares strongly against judicial recall, says:

> A government must have organs. It can not act unorganically by the masses. It must have a lawmaking body. It can no more make law through its voters than it can make law through its newspapers.

Government, my brethren, is a great and serious business. It can no more be successfully operated without selected and responsive agencies than can the business of the merchant or the banker. I shall assume, therefore, that this is an admitted postulate of free government. If the people must be represented in the three departments of government in order that their will shall be intelligently expressed, protected, and executed, then it behooves them to select for those high offices men of integrity, of ability, and of courage. Any system of government or any change in present conditions which will cripple the efficiency of that representation must, of necessity, be misconceived and unwise. I assume that no man will be bold enough to say that courts of justice are not necessary adjuncts or departments of government. Somebody must make the laws and somebody must execute them; but between the making and the execution it is admitted that there must be a balancing power known as the judiciary. This judiciary must, in order to preserve this peculiar balance in government, be, above all things, independent.

The judges must be like fixed stars, separate and apart, burning not with borrowed and fitful fire, but with a steady and undimmed radiance. They must be "the living voice of the Constitution, the unfolder of the mind of the people whose will stands expressed in that supreme instrument." This prerogative of independence is considered by all thinkers everywhere to be necessary to the proper discharge of high judicial function. A great American in a public address said:

> American experience has made it an axiom in political science that no written constitution in government can hope to stand without a paramount and independent tribunal to determine its construction and to enforce its precepts in the last resort.

John F. Dillon, a great lawyer and a deep student of our governmental system, said:

> It is not much to say that a stable and independent judiciary is the strongest hope of our Government.

Again, he says:

> The deserved confidence which the whole world feels in justice which is distributed by the English courts is almost wholly due to the character of the English judges. They are selected from the most eminent of the profession. A stable and permanent tenure secures their independence, which is essential to a good judicial system and to the fearless administration of justice.

Who among you, my brethren, whose blood does not tingle and who does not feel a sense of high pride in his profession when he hears once again the noble words of great judges in times of great extremity? Listen to Mannsfield, who was being threatened by the mob with violence because he had reversed the outlawry in Wilkes's case:

> I will do my duty always. What am I to fear? The lies of calumny carry no terror for me. I trust that the temper of my mind and the color and conduct of my life have given me a suit of armor against these arrows. The last end that can happen to any man never comes too soon if he fails in support of the law and liberty of his country, for liberty is synonymous with law and government. Once for all will it be understood that no endeavors of this kind will influence any man who at present sits here. No libels, no threats, nothing that has happened, nothing that can happen will weigh a feather against allowing this defendant upon this and every other question not only the whole advantage he is entitled to from substantial law and justice, but every benefit from the most critical nicety of form which any other defendant could claim under the like objection.

A great mass of people were surging and swearing and threatening at the very door of justice. If these same people had been able to apply to Mannsfield the method of removal which the advocates of this new doctrine propose, he would have been recalled and the incalculable services of this great jurist to his country and to the civilized world wherever law and justice are administered without fear or favor would have been lost.

When Marshall sat in the trial of Aaron Burr, who was believed by the people to be an arch traitor and whose conviction was earnestly hoped for and, as far as compatible with propriety, sought for by President Jefferson and his brothers in office, he exhibited that fine patience and courage which have become a part of the heritage of the legal profession. Burr had killed Hamilton, Marshall's dear and valued friend. Public pressure was pushed almost to the very portals of the temple, yet Marshall discharged the defendant in an opinion which was instinct with the very fire and spirit of liberty. He was burned in effigy. All through the streets of Baltimore and Richmond people surged full of anger and resentment. Listen for a moment to his words:

> That this court does not usurp power is most true; that this court dares not shrink from its duty is not less true. No man is desirous of placing himself in a disagreeable situation. No man is desirous of becoming the peculiar subject of calumny. No man might he let the bitter cup pass from him without self-reproach would drain it to the bottom, but if he have no choice in the case, if there be no alternative presented to him but a dereliction of duty or the opprobrium of those who are denominated the world, he merits the contempt as well as the indignation of his country. Who can hesitate which to embrace?

Ah, my friends, "there the ardor of a great soul broke forth and the eye of the eagle flashed as it looked toward the sun." If the system which the advocates of this new doctrine urge had been in force at that time, it is not improbable that Marshall would have been recalled, at least there would have been more than enough to have put him to the test. Think of bringing disgrace in this way upon a man whose services to his country can never be justly measured.

When the President of the United States, during a period when the passions of men were deeply stirred, suspended the sacred writ of habeas corpus, listen to the words of Taney:

> I have exercised all the power which the Constitution and laws confer on me, but that power has been resisted by a force too strong for me to overcome. I shall order all the proceedings in this case with my opinion to be filed and recorded in the Circuit Court of the United States for the District of Maryland and direct the clerk to transmit a copy under seal to the President of the United States. It will then remain for that high officer in fulfillment of his constitutional obligations to take care that the laws be faithfully executed.

With an unerring hand the Chief Justice balanced evenly the scales of justice, and when the naked sword of the soldier had

dashed the balance from his hands, realizing that the law could not be vindicated by an appeal to carnal weapons in this unequal strife in which the bandages had been torn from the eyes of justice with which to bind her hands, with dignity worthy of his high office and a blameless life he in the noble words above spoken answered the challenge.

Is independence like this to be sacrificed by the adoption of a system which, in my judgment, has neither reason nor justice to support it? What man of self-respect who has given his days and nights to the law, who loves his profession and who loves justice, would accept a judicial position which might in a moment of popular hostility against some correct, but honestly misjudged, opinion be driven in disgrace from his public station? Men are men after all. The power to hold out against unfriendly criticism, against vituperation and slander, against threats of removal and disgrace, however righteous a man may be, is difficult to assert and maintain. A recall existed, in a mild way, in some of the States prior to the Constitution. Livingston proposed in the New York convention in 1788 to amend the Federal Constitution by providing for a recall of Senators. It was badly defeated. Listen to the words of Hamilton; they are prophetic:

> The amendment will render the Senator a slave to all the capricious humors among the people. The Senator will perpetually feel himself in such a state of vassalage and dependence that he never can possess that firmness which is necessary to the discharge of his great duties to the Union.

If a certain percentage of dissatisfied people can put a judge of a high court in this land upon the rack and hold him up to the execration of his fellow citizens, how shall we get good men to go upon the bench? If weak ones go there, the liberties of the people are lost, because this weak man having his ear constantly to the ground listening for every sound of popular displeasure at a decision which he had made or which he intends to make will lose and surrender all independence of judgment, and the great safeguards of property and of personal security will be swept from the earth as with the besom of destruction. The success of the litigant will be measured by his personal popularity. The rich and unprincipled suitor who has been unsuccessful will seek out the weak and venal and will endeavor to corrupt the electorate. The poor man without friends and without influence will be doomed. Partisan politics will control the judges, and courts of justice will become the prey of reckless demagogues and the scene of wicked and unholy strife.

It is not claimed by the advocates of this doctrine that the judges, either State or Federal, are corrupt. It is not claimed that they are doing things which, under existing law, could subject them to impeachment in an orderly and lawful fashion. It is claimed that their decisions do not suit a portion of the people, and that therefore this alone justifies this heroic and summary remedy.

I say to you, my brethren, that this doctrine will not only rob the bench of its best and most upright men, but will destroy the independence of the American judiciary, which, as I have shown to you, is the brightest jewel in Liberty's crown. If it works this result, it ought to be rejected, and what thoughtful man can doubt that it will.

I oppose this new doctrine for the further reason that in its practical application it is un-American and subversive of those fundamental rights of person and property without which free government must cease to exist. This recall is to be put in motion by a certain percentage of citizens who point their finger at the judge and say to him, "Stand forth and defend yourself." Under the present system of impeachment he is entitled to a trial by a body assumed to be familiar with the principles and forms of law. Under the recall system he answers his accusers by written statement. He is not permitted to call a witness, he is not permitted to adduce proof, oral or documentary. Those rules of evidence which bear the impress of the sages of the law and which have for centuries been regarded as necessary to the discovery of truth and to the proper protection of life and liberty are not invoked or applied. A man's character, which is the very essence of his life, is taken away without a trial. Can this be just? Does this disclose a spirit of righteousness and fair play? The very thought of it develops in the breast of the lawyer not only opposition but resentment.

I oppose this new doctrine because, in my judgment, it is an invitation to the people to destroy that which is most precious in our theory of government. It invites them to withdraw and nullify that constitutional restraint which is the lifeblood of minorities, and which Jefferson in his first inaugural said must be the subject of constant care and vigilance. America, for the first time in the history of the world, adopted restraining written constitutions. These written constitutions, each and every one of them, contain limitations upon the power of the people themselves. The people who adopted these constitutions knew the necessity of self-restraint. The truth is, the science of government, as well as the science of life, consists in self-subjugation. No man is complete master of himself. This is doubly true of men in the aggregate, when acting under the influence of passion or prejudice. To use the language of a great thinker:

> To deny that the people are frequently led into the grossest errors by misinformation and passion would be a flattery which they themselves would despise.

The tyranny of the majority was the one great fault of democracy which young De Tocqueville, the brightest foreigner, perhaps, who ever touched these shores, thought would destroy our institutions. He claimed that our Government carried in its bosom this germ of death; but our fathers, who were the representatives of the people, and the people themselves, safeguarded against this disaster. As Chief Justice Fuller said in one of his public addresses:

> It commemorates the advent of the first written constitution of civil government, that first attempt of a people in that form by self-imposed fundamenal law to put it out of their own power to work injustice.

The truth is, the supreme idea of self-imposed limitations was that the "courts of the country must be made independent of public feeling and invulnerable to the attack of majorities. Having their origin in the sovereignty of the people, they are the bulwark of the people against their own unadvised action. It saves them not only from their enemies but from themselves."

Edmund Burke, whose words are a well of wisdom undefiled, has beautifully said:

> Society not only requires that the passions of individuals should be subjected, but that even in the mass the inclinations of men should be thwarted and their will controlled. This can be done only by a power out of themselves. In this sense the restraints on men as well as their liberties are to be reckoned among their rights.

Unless the people had by written constitution put this restraint upon themselves and upon their representatives as a part of their fundamental law, personal liberty, personal security, and private property could no more exist in this country, as Lord Brougham said in defense of Queen Caroline—

> Than the blossom which is severed from the tree which gives it strength.

The Constitution as originally adopted had no bill of rights, and it would not have been adopted in its original form unless the promise had been made that amendments would soon be added giving expression to those great rights and privileges which the English barons had wrested from John at Runnymede. The people knew that they could not at all times trust themselves. The paramount reason for these limitations was to protect the minority against the sudden and hasty action of the majority. As said by President Taft in his splendid message to Congress upon the recall:

> But all have recognized that the majority of a people unrestrained by law, when aroused and without the sobering effect of deliberation and discussion, may do injustice to the minority or to the individual when the selfish interest of the majority prompts. Hence arises the necessity for a Constitution by which the will of the majority shall be permitted to guide the course of the Government only under controlling checks that experience has shown to be necessary to secure for the minority its share of the benefit to the whole people that a popular government is established to bestow. No honest, clear-headed man, however great a lover of popular government, can say that the unbridled expression of the majority of a community converted hastily into law or action would sometimes make a government tyrannical and cruel. Constitutions are checks upon the hasty action of the majority.

Again he says:

> But the judicial branch of the Government is not a representative of a majority of the people in any such sense, even if the mode of selecting judges is by popular election. In a proper sense judges are servants of the people; that is, they are doing work which must be done for the government and in the interests of all the people; but it is not work in the doing of which they are to follow the will of the majority, except that which is embodied in statutes lawfully enacted according to constitutional limitations. This power conferred on the judiciary in our form of government is unique in the history of government. It has attracted and deserved the admiration and commendation of the world. It gives to our judiciary a position higher and stronger than that of the judiciary of any other and more effectively secures adherence to the fundamental will of the people.

My friends, the people have declared in their organic law that no man shall be convicted of an infamous crime except upon the unanimous judgment of 12 good and lawful men. They have said that no man shall be deprived of his property without due process of law. They have said that the writ of habeas corpus shall never be suspended. If in a moment of passion or resentment against an unpopular or undesirable citizen the judge is asked by a certain portion of the people to deny or abridge those great rights, can the people who made the judge, when he put on the ermine of justice, swear that he would preserve those rights expect him to throttle them and still hope to maintain the blessings of lawful government? The people have said to the judges, "Thus far we have restrained ourselves, and

thus far you must make that restraint effective." Yet this new doctrine would permit the people to say to the judge in a given case, "The restraints which you swore to impose and enforce are in this case suspended," and thus the litigant will be destroyed by the arbitrary will of the majority. Gentlemen, this is putting the dagger to the very vitals of constitutional government.

Our State judiciary is personally everywhere above reproach. No man here believes that the taint of corruption has ever touched their judicial lives. They have usurped no unlawful power. They deserve and have won the confidence of the people. Then, if no cause exists, why clamor for change when such change is viewed, at least by a large proportion of the thoughtful men, as attended with no good and it may be with disaster. Jefferson, after his retirement from the Presidency, wrote to Samuel Kerchival, in which, speaking of the work of the fathers, he said:

I knew that age well. I belonged to it and labored with it. It deserved well of its country. It was very like the present, but without the experience of the present. Forty years of experience in government is worth a century of book reading, and this they themselves would say were they to rise from the dead. I am certainly not an advocate for frequent and untried changes in laws and constitutions.

Instead of 40 we have now more than a hundred years of experience in government. Have we learned well the lessons which those years have taught? There was a time when the lawyer was a Levite among the people. A great Englishman has said, with reference to our bar, that their influence is still great when any question arises on which the profession stands together. Their influence strengthens the respect of the people for the Constitution. As a lawyer, then, speaking to lawyers, and having an abiding confidence in the wisdom of the people when they have rendered their thoughtful and final judgment upon public questions, it is my deliberate conviction that this is not the day and the hour is not yet struck for experimenting with our legal institutions. These are not the days to encourage individuals or the masses to snatch the reins from the constituted organs of government. There was never a time in our history when there was less need of change in our governmental system. It has stood the strain of a growing and rapidly expanding country. It has held within lawful bounds terrific energies of our citizens. It has stood the shock of civil war. It has proved the sagacity of its constructors and the stubborn strength of its fabric. Under its beneficent operation labor has attained the dignity and independence unexampled in the history of nations. Unrestricted suffrage, government's best gift to man, has filled the offices of the country with an overwhelming percentage of men who have come straight from the ranks of the plain people, the majority of the judges, municipal, State, and National, as well as nearly all the other officers, having come from the humble walks of life, and have fought their way through poverty and hardship to the bench. The people then ought not to apprehend danger from the very men whom their environment and civilization have developed. Let us then hold fast to that which is good. Let us, as one man, endeavor to reconcile the jealousy of freedom to the independence of the judiciary.

Rural Credits.

EXTENSION OF REMARKS

OF

HON. ROBERT J. BULKLEY,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, December 19, 1914.

Mr. BULKLEY. Mr. Chairman, under leave given me to extend my remarks, I append:

First. Resolutions on the subject of rural credits adopted by the National Grange at its annual meeting, held at Wilmington, Del., in November, 1914.

Second. All that part of the annual report of the legislative committee of the National Grange which deals with the subject of rural credits.

Third. All that part of the annual address of Oliver Wilson, Master of the National Grange, which deals with the subject of rural credits.

Fourth. Resolutions adopted at a conference of officers of several State granges and of the farm press, held at Washington, D. C., November 23–25, 1914.

Fifth. A digest of the more important European farm-mortgage systems, showing relation of the various Governments thereto, by Mr. F. J. H. von Engelken, of East Palatka, Fla., who served as a member of the American commission which traveled through Europe studying agricultural systems in the spring of 1914.

Sixth. Statement issued by the legislative committee of the National Grange on Monday, December 21, 1914.

Seventh. All that part of the annual report of the Secretary of Agriculture for 1914 which deals with the subject of rural credits.

1. NATIONAL GRANGE RESOLUTION.

Whereas at the last national meeting of the grange it indorsed the principle of Government aid in establishing a system of farm credit suitable to the needs of agriculture; and

Whereas after a year of official investigation it has been proven that in the long-founded practice of all the great nations of the earth Government aid of farm credit is a necessary factor in aid to Government, to efficiency of food production, and deliverance from high cost of farm loans, which is now operating to discourage investment in agriculture; and

Whereas a farm-credit bill emanating from a joint committee of the House and Senate, known as the Bulkley-Hollis bill, contains but a modicum of Government aid, hardly in compliance with the request of the large body of Americans: Now, therefore, be it

Resolved, That the legislative committee and officers of the grange throughout the country are instructed to insist on behalf of this body that more substantial Government aid to steady interest rates and uphold the market for farm-mortgage bonds shall be included in the bill finally passed by Congress; and

Be it further resolved, That no farm-credit bill which places in the hands of private capital the power to make interest rates on mortgage bonds without limitations by Federal law will meet either the needs of agriculture or the just demands of the National Grange.

2. REPORT OF NATIONAL GRANGE LEGISLATIVE COMMITTEE.

The question that attracted most attention, and probably of most far-reaching effect upon agriculture, was what is commonly known as "rural credit." For a good many years it has been generally believed by the well informed that the farmers of this country were not receiving the same consideration at the hands of the bankers as did the commercial interests, and that the banking laws needed reform in that particular. It is impracticable for us to go into the history of this matter fully in the limited space of this report; and, besides, the widespread discussion of the subject during the last few months makes it unnecessary.

In December the secretary of your legislative committee made a statement before the joint Committees on Banking and Currency of the House and Senate. In January he made a further statement before the joint subcommittee of the House and Senate in support of the Bathrick bill, which he had some part in drafting, contained in the resolutions adopted by the National Grange. After the introduction of the Moss-Fletcher bill the joint subcommittee summoned the secretary of your committee, with others, to appear before it on a certain day and give testimony for or against said bill. We may say in passing that the Government paid the expenses of our trip to Washington. After careful study of the Moss-Fletcher bill we took a position against it upon the ground that it was in effect a bankers and money lenders' and not a borrowers' bill. We made our argument against it upon that theory. As a result of these hearings the joint subcommittee of the committees of the House and Senate repudiated the Moss-Fletcher bill and reported, S to 2, a bill which was introduced in the Senate by Senator HOLLIS, of New Hampshire, and in the House by Congressman BULKLEY, of Ohio, now known as the Hollis-Bulkley bill, which recognized in a limited way the principles set forth in the resolution adopted by the National Grange at Manchester.

Through some influence this bill was held up from Thursday until the following Tuesday in an effort to induce the committee to eliminate from the bill the principle of Government aid which it contained, but the committee stood firm in spite of the pressure put upon it, and the bill was finally introduced in both Houses of Congress on the afternoon of the day on which the Democratic caucus decided, at a night session, that "rural credits" should be stricken from the congressional program. The whole matter then went over to the next session of Congress. Your committee had favored the postponement of the matter, but there seemed to be a determination to rush it through until it became known what kind of bill the subcommittee would report, when there was a mighty hurry in the caucus to strike it from the program.

Later your entire legislative committee met in Washington and, after a conference with Senator HOLLIS, Congressmen BULKLEY and BATHRICK, and many other Congressmen and Senators, we decided to indorse the Hollis-Bulkley bill; not because

we believed it to be perfect or all we ought to have, but in the spirit of compromise, and because it recognized the fundamental principles for which we were contending. Our experience having taught us that all legislation is the result of compromise, and, being practical men, we accepted the best we could get without sacrificing a fundamental principle. The whole matter is now in the hands of Congress, and, whatever the final result, the grange has won perhaps the most notable contest it has ever made before the National Congress. We have at least gained time for further consideration of this tremendously important subject and it is now up to this body for whatever action it may wish to take.

3. Extract From Address of Master Oliver Wilson.

In my annual address last year I said "The time has come when the National Grange should be heard upon this most important question," but when this body sought to assist the farmers by advocating a Government aid farm credit there were some who hesitated and murmured something about class legislation, paternalism, and kindred terms. Since that time, however, precedent has established beyond dispute that our official decision then has stood the test of assaults and careful examination. A joint committee of the House of Representatives and Senate for months scoured the world for expert testimony, and practical men from all climes gave evidence which sustained our demand for a Government aid bill.

Energetic workers in Congress who saw the drift of farm credit toward private interests and a new control of the farmers' debts sounded the alarm, and drawing from the best practice of the leading nations of Europe, spread broadcast the facts showing that Government aid farm credit was the best. While the plans of private capitalists and profit-seeking money lenders were buttressed by lobby and shrewdly concealed effort, the legislative committee of the grange appeared before committees, sent out literature, and interviewed legislators, presenting facts, fair, open, aboveboard argument. The legislative committee of the Farmers' Union effectively sustained our efforts and the American Federation of Labor adopted our resolution verbatim. The result of our initiative and the effort of our State masters, together with the ready response of subordinate officers and members, has brought about a great change in the sentiment of the country.

The joint committee of the House and Senate has reported a bill which contains the principle, if not the exact form, of Government aid we asked for. As it stands it is a triumph for the grange. It is not all that we should have; it is not all that we hope to get. The problem now is to get the best we can, that the abnormal and oppressive terms and interest rates which have so long obstructed agriculture in many sections may be changed for the better.

Considering our progress and advancement since the meeting of last year in this important legislative work, there seems no step to take that could be wiser than to reaffirm our attitude upon the principle of Government aid and instruct our legislative committee to continue to press the claims of the millions of American farmers by this, the most substantial and practical means of improving farm credit. Government aid to the shipping interest; Government aid to Alaska; Government aid to the banks; Government aid to the railroads will encourage the country toiler to expect, when all the people must eat and he must provide the food, that his great aid to the Government will secure assistance for him to perform this service to the best advantage of all, whether they work in the factory, the counting house, or at the difficult task of coaxing from the soil the sustenance of the nations.

4. Resolutions Adopted by Conference of State Grange Officers and Agricultural Editors.

REPORT OF COMMITTEE ON RESOLUTIONS.

[Majority report. Presented by Mr. Quick, chairman.]

Your committee begs leave to report and move the adoption of the following resolutions:

1. That it is the judgment of this conference that some effective system of land-mortgage credits is necessary in order to place agriculture upon a level with other forms of industry, and that Federal legislation is essential to the establishment of this result; we also believe that effective State legislation along the same lines is possible.

2. We approve the general principle of rural credits based on farm mortgages.

3. We are opposed to the principle of direct loans by the Government.

4. We approve the widest possible field of operations as furnishing the largest source of credit, the widest market for bonds on mortgage loans, and as tending to lower the rates of interest on such loans.

We therefore favor the regional program of selling agencies as opposed to the system of local marketing of bonds.

5. We approve the provision of section 30 of the so-called Bulkley bill providing for purchase of bonds by the Government.

6. We do not approve the proposition that land banks may receive deposits for commercial uses.

7. Believing that rural-credit land banks should be controlled in the interest of the borrower rather than of the lender, we recommend that the cooperative principle be preserved in the organization and administration of such banks.

8. We call attention to the value of a uniform system of registering land titles in all States as a condition favorable to the successful development of a land-mortgage system of rural credits, and recommend this proposition to the several States.

9. We believe the need for a more effective system of rural personal credit is equally as great as the need for better land-mortgage facilities, but that the fundamental differences between these forms of credit make it impossible to administer both principles in the same system of bank organization.

We are not prepared to recommend any specific plan. We do, however, recommend to Congress such further investigations of the subject as may develop informed opinion and lead to effective legislation.

A minority report will be submitted by Mr. Hobbs, a member of the committee on resolutions.

(Signed) Herbert Quick, *Chairman.*
Weston Starr, *Secretary,*
Westover, Md.
J. D. Ream, *Broken Bow, Nebr.*
H. Harland, *Payette, Idaho.*
John A. McSparran, *Furniss, Pa.*

The foregoing report was adopted by the conference.

5. European Farm Mortgage Systems.

[By F. J. H. von Engelken.]

A DIGEST OF THE MORE IMPORTANT EUROPEAN FARM MORTGAGE SYSTEMS, SHOWING THE RELATIONS OF THE VARIOUS GOVERNMENTS THERETO.

Under the number S. 5542, introduced into the Senate by Mr. Hollis, and H. R. 16478, introduced into the House by Mr. Bulkley, a measure has been placed before Congress by a subcommittee of the respective Committees on Banking and Currency, to "provide capital for agricultural development, to create a standard form of investment based upon farm mortgages, to equalize rates of interest upon farm loans, to furnish a market for United States bonds, to provide a method of applying postal savings deposits to the promotion of the public welfare, and for other purposes," drafted by those having in charge the preliminary work of providing for the agricultural interests of the country a system to facilitate the handling of their long-term credit requirements; this in conformity with the plank incorporated in the Democratic platform providing for action in the matter of rural credits.

With one exception the measure as it now reads requires little discussion, inasmuch as it is molded in conformity with business methods already known and accepted in this country. The exception referred to is a provision calling for certain governmental activities to aid and uphold the system when established.

It is to be expected that interest and discussion will largely center upon this particular provision. The American people have in the past looked with none too kindly an eye upon governmental support of enterprises not in themselves directly within the scope of governmental affairs, but it may well be pointed out that there seldom, if ever, has been before the people of this country for consideration an enterprise to provide a workable plan for which there has been so little in our own business history to guide us. Furthermore, it must be remembered that the system which this measure proposes to create will, directly or indirectly, affect the people of this country individually and collectively, since the benefits it will provide will have a direct bearing upon the food supply.

Since it is quite possible that the success or failure of the rural-credit legislation awaited by this country will depend largely upon the decision arrived at as to whether or not the system created thereby shall be supported by the Government, and as our own history provides nothing to aid us in arriving at a decision on this point, this article presents to those interested a summary of the various kindred systems in Europe showing, in each case, just what relation the respective Governments bear to them.

It will be noted that European Governments have recognized to the fullest extent the importance of their agricultural interests; they have recognized the need of assisting their farmers in solving their financial problems, and in doing so they have not lost sight of the fact that extraordinary measures are justified to insure the success of systems provided to meet this need,

since the failure of such a system, once inaugurated, would inflict upon the farmers hardships in excess of those under which they labored before measures were taken for their relief.

As will be seen, European Governments almost invariably have been in active partnership with their farmers in solving the problem of their financial requirements. Some have assisted directly by providing funds; others more indirectly, either by placing the strength of the Government behind the securities, or, as in the case of France, by appropriating outright a large sum of money to be used in purchasing a portion of the securities as issued.

Such governmental partnership would in this country be termed "subsidy"—a term which custom has brought to mean financial assistance on the part of the Government. That the issue may not be clouded by this accepted meaning of the word, since it will be frequently used in the discussion of the measure now before Congress, it may be pointed out that governmental subsidy, or aid, may take even more potent forms than mere financial assistance. For the purpose of intelligently considering the data which follows, governmental aid, whatever may be its form, must be considered as coming within the meaning of the word "subsidy."

While believing that the provision incorporated in section 30 of the bill referred to above is a vital one, the writer is not prejudiced in favor of governmental assistance to the system which this measure proposes to inaugurate. It may, under our peculiar conditions, succeed without it; it may succeed only with it; it is in the hope that some slight assistance may be rendered to those upon whom will devolve the making of this important decision that the following digest is presented:

GERMANY—THE PRUSSIAN LANDSCHAFTEN.

Unquestionably the most important system of land-mortgage credit in existence at the present day is that which is known as the Prussian landschaften. Its importance lies in the fact that it is the system to which belongs the credit of being the first successful institution of its kind; in the fact that the results achieved by it have been a potent factor in bringing into life organizations of various kinds throughout the world having for their object the supplying of mortgage credit to farmers upon reasonable and workable bases; and, finally, in the fact that it was brought into life by governmental mandate.

As originally created by Frederick the Great (1770 to 1788), the landschaften were compulsory associations of all large or manorial landowners within a Province, the estates of all such proprietors, whether borrowers or not, being compulsorily involved in the guaranty of the bonds of the association of that Province. (Cahill.)

This unceremonious but practical governmental aid was unquestionably the foundation upon which the subsequent success of these associations rested. Instead of itself offering or supplying the additional security over and above that provided by the value of the actual property mortgaged, which supported the bonds issued, the Government created by mandate a further artificial but real support by forcing nonborrowing landowners to join in assuming the obligations of the borrowers. It is not surprising that bonds issued by the landschaften associations rank high, nor is it to be wondered at that the system was successful.

While the Prussian landschaften associations still maintain the same principles upon which they were originally created, they have been strengthened from time to time by extensive privileges granted them by the State, among which is the right to seize mortgaged property without adopting legal procedure.

PEASANT BANK OF WEST PRUSSIA—MIDDLE CLASS BANK OF WEST PRUSSIA.

These two institutions are founded under the law of 1909, enacted in West Prussia and in the Province of Posen. The State placed at the service of these two banks 225,000,000 marks (approximately $60,000,000) for the purpose of regulating the farmers' debts and to preserve German property in German hands. The results obtained have been very satisfactory, not less than 7,600 peasant farms and 165 large farms having been dealt with.

PRUSSIAN CENTRAL LAND CREDIT JOINT-STOCK COMPANY.

Created in 1870, this organization was founded to meet a financial situation in which the landschaften, with their exclusive character, offered no sufficient help. While receiving no direct financial assistance from the Government, the bank was granted the right of issuing bearer bills, was freed from the pressure of the customary regulations under which like institutions had labored, and was further preferred to private mortgage banks by receiving a royal commissioner appointed for its special control.

BAVARIAN AGRICULTURAL BANK.

The Bavarian Agricultural Bank was incorporated in 1896, after the by-laws had been approved by the Bavarian Government. This bank has the legal status of a private bank, but it is endowed with State funds, of which 1,000,000 marks have been advanced to the bank free of interest, besides a further loan of 4,000,000 marks on which 3 per cent interest is charged. This subsidy naturally gives the Government a wholesome right of inspection and supervision.

The working capital and current expenses of the bank are supplied by members' shares, the two above-mentioned loans advanced by the State, and the issue of mortgage bonds and notes.

AGRICULTURAL CREDIT ASSOCIATIONS—GRAND DUCHY OF BADEN.

Agricultural credit associations of the Grand Duchy of Baden enjoy the most powerful support of the Government, which has not only placed at the disposal of the central institution a credit of about 1,500,000 marks at a low rate of interest, but has granted considerable amounts from the State treasury for the payment of the expenses of the federation and the work of inspection.

LAND BANK OF WIESBADEN—NASSAU.

The Land Bank of Wiesbaden was established 70 years ago to furnish small farmers with money on mortgage. It is a national bank and under the control of the administration of the provincial government. The government guarantees the payment of bonds issued against farm-mortgage security.

AGRICULTURAL CREDIT ASSOCIATION—SAXONY.

The Agricultural Credit Association of Saxony was founded in 1865 on a cooperative basis by agricultural estate owners. The association was endowed with particular privileges by the royal Saxon Government, which at the outset provided it with capital to the amount of 1,000,000 marks to meet its first financial needs.

AUSTRIA.

In Austria no single financial institution deals exclusively with the needs and requirements of mortgage credit. The savings banks and the mortgage institutions especially created for this purpose participate in extending such facilities.

At present the principal part of the business of making loans on real property is in the hands of the savings banks. These banks, guaranteed by the city administrations, began to get a foothold in Austria at the beginning of the last century.

Institutions especially created for agricultural purposes are the Galician Realty Credit Society, founded in 1865, the Austro-Silesian Realty Credit Institute of Silesia, founded in 1869, as well as 15 others in the different Provinces. These institutions have very little working capital, which is raised by the issue of mortgage bonds. These are secured in the first instance by the mortgage itself, next by the assets of the institution, and, finally, by the guaranty of the provincial government.

HUNGARY.

The Hungarian Land Mortgage Institute was founded in 1863, to control land mortgages of the larger estates. Toward its establishment the treasury contributed $200,000, and later on the legislature endowed it with very valuable privileges and favors, i. e., special rights with reference to executions, exemption of bonds from taxation, etc.

In 1879 an institution similar to the Hungarian Land Mortgage Institute was created for the benefit of smaller landowners. The State contributed to it a capital sum equal to that appropriated to the Hungarian Land Mortgage Institute, and it was granted the same privileges and favors.

BOHEMIA.

The Land Mortgage Bank of Bohemia was founded in 1864. It is a Government institution, and bonds issued by it are guaranteed by the Government. A clause to this effect is inserted in the bonds. A further privilege accorded it is the authority vested in it to seize land in case of nonpayment without recourse to a lawsuit.

SWITZERLAND.

The Canton banks of Switzerland are Government institutions, and have been established in at least half the Cantons. (A Swiss Canton corresponds to a German Province or an American State.) These banks make loans upon real estate and dwelling houses with building lot and garden up to two-thirds of their value; upon land alone, up to three-fourths its value; upon factories, up to one-third their value.

The capital of these institutions is furnished by the Canton governments. It is supplied either from the treasury direct or is secured by the government by an issue of bonds. The debtors for these bonds are the Cantons, but the interest payments are taken care of by the banks.

As an illustration, the Zurich Canton Bank was established in 1870 with a capital of 6,000,000 francs, this sum having been received from the Canton treasury. In the course of years this paid-up capital was increased through the issue of bonds by the

Canton government, until it now amounts to 30,000,000 francs. The interest which the bank pays the Canton does not exceed, on the average, 4 per cent.

ITALY.

Land-mortgage credit in Italy is handled by two classes of institutions—the savings banks in northern Italy and the Government banks (the Bank of Naples and the Bank of Sicily) in southern Italy.

The savings banks are public-utility corporations—institutions without shareholders and, consequently, with no distribution of dividends. The capital of these institutions was obtained by donations made by the communes and Provinces and by benefactors' foundations.

The credit facilities offered the farmers by the Bank of Naples and the Bank of Sicily, through the intermediary institutions, cover the entire field of agricultural credit—short-term and long-term mortgages, as well as warehouse credit. (The last mentioned provides for loans up to three-fourths the value of crops deposited by farmers in warehouses.)

Local rural-credit institutions had their beginning in southern Italy about 1895. After floundering along rather aimlessly and with little success, in 1901 the Bank of Naples and in 1906 the Bank of Sicily were authorized by law to open special branches for their assistance. A special law passed in 1907 authorized a special tax which by 1911 had in the case of the Bank of Sicily aggregated 4,000,000 lire. This fund is used for agricultural credit purposes only.

Interesting is the land reclamation in the Roman Campagna. A law passed in 1910 gave the Government power to expropriate by compulsory sale the lands of owners refusing to take the necessary steps to carry out this reclamation. Capital necessary for reclaiming lands is supplied to landowners direct by the Government at 2½ per cent interest.

74870—14348

HOLLAND.

In this country the problem of systematizing the land-mortgage business has been only in the last few years receiving attention. In 1908 the administration established the Mortgage Bank of Eindhoven. It was incorporated as a stock company, with a capital of 1,000,000 florins.

The only financial assistance rendered by the Government so far to this and kindred institutions is by lending "subventions" in order to help them meet expenses of supervision and inspection over branch banks, and by giving "subventions" to branch banks to defray the expenses of establishment. It is now being investigated, however, in how far the postal savings bank and the State insurance bank can assist these institutions by placing some of their reserves on notes of the rural mortgage banks and, in the case of the postal savings bank, by lending them money for long terms at reasonable rates of interest.

NORWAY.

The original capital of the Mortgage Bank of the Kingdom of Norway was furnished by and belongs to the State. Repayment of this capital can not be called for until and unless the bank has fulfilled all its undertakings and has ceased to exist.

On the capital furnished by the State the bank pays 4 per cent interest, which is taken from the surplus receipts after the payment of all interest due and all costs of management. If in any year the surplus is insufficient to pay to the treasury the whole amount of interest due, it is supplemented out of the reserve fund. Should the reserve fund in turn be insufficient, the treasury is credited with the money owing and payment is made as soon as the profits permit. Such a debt, however, carries no interest.

FRANCE.

Land-mortgage credit in France is handled by the Land Credit Bank (Crédit Foncier), which institution was founded in 1852. The bank's capital was fixed at 25,000,000 francs. The Government granted the bank a subsidy of 10,000,000 francs, to be invested in proportion to the amount of loans effected. This subsidy was invested by the Government in successive accounts, and the total amount of 10,000,000 francs was not utilized until in 1864, at which time the loans effected by the Crédit Foncier had reached the sum of 200,000,000 francs. The 10,000,000 francs subsidy never has been included in the bank's capital.

The Crédit Foncier enjoys a monopoly of the land-mortgage business in France.

RUSSIA.

In an attempt to solve its landlord-and-tenant problem the Russian Government established in 1882 the Peasants' Land Mortgage Bank. The institution at first gave assistance to groups of peasants—that is, villages and communities—to come into possession of land. About 1895 this policy was changed, and since that time the endeavor has been to discourage the community life and encourage the peasants to live on their farms. To further this movement the bank was given the power to purchase entire estates from landlords, subdivide, and assist peasants to be owners of the small farms thus created. Special capital for this purpose was supplied by the Government.

6. STATEMENT OF THE LEGISLATIVE COMMITTEE OF THE NATIONAL GRANGE, DECEMBER 21, 1914.

The farmers of this country are not satisfied with the progress of farm-credit legislation and the delay caused by those who demand the last ounce of concession to the power of the money-lending interests, and to tightly laced theories of government which have not been so rigidly applied in other cases of legislation.

No one asks in farm-credit legislation what has not been done before in greater measure by the Government. The policy of the Government has been to encourage transportation that our commerce might flourish and agriculture be extended. To this end we have given many millions of acres of rich land to the railroads and have guaranteed their bonds. The farmers helped to pay those bonds, pioneered the land, paid high freight charges and extortionate interest rates to a horde of mortgage sharks.

Recently an increase of railroad rates was granted, which is a tax upon agriculture and consumption. This may be just, but the farmer will pay his share of the increase.

An appropriation of $35,000,000 was made to develop Alaska mines and farms. All of our farmers will be taxed to pay this.

A ship-purchase bill would call for more millions. The farmers as well as other taxpayers will go down in their pockets to pay this.

The Government to meet an emergency has gone into the marine insurance business. Any loss which may occur would call for the farmer to pay his share.

Government money is available for the bankers to loan at a profit. Government money, in part, comes from taxes paid by the farmer. But cheap money to the bankers still means high-cost money to the farmers. While the new Federal reserve bank act "empowers" national banks to loan on farm mortgages, the conditions are still such that it is more profitable for the banks *not* to loan on mortgages, and little, if any, relief will follow from this law. To say that the Federal reserve bank act constitutes a remedy in lieu of a proper farm-credit law is the veriest nonsense and will not fool the farmers. It was not considered a proper remedy by anyone at the time the banking law was made. The advocates of farm credit then were put off with a promise that if they would keep it out of that bill they would be given a real farm-credit law last session. Many Congressmen of all parties, and the farmers generally, expected this promise to be fulfilled, but farm credit was cut out of the program at the last moment and the Committee on Banking and Currency ceased to work on the bill. We had hoped it would be taken up this session and pushed to a finish, but the President in his message says, "It can not be perfected now."

We have made investigation of the reason why this may be true:

First. The President objects to the Government-aid feature of the Bulkley-Hollis bill.

Second. A part of the Members of Congress seem to desire to have a summer to themselves and want the session to end on March 4.

Third. There is a strong element of influence of various money-lending interests which are fearful that interest rates may be generally lowered and their profits curtailed.

Turn where you will in the practice of our Government and there is fresh proof of the inconsistency of those who object to the proposed safe and practical Government aid in farm credit. The experience of every leading nation on earth in far more helpful forms of Government aid proves that there can be no risk to taxpayers; that at no period of the transaction would any taxpayer be called upon to pay a cent toward this form of Government aid to agriculture. The aid we have proposed for farm credit is in sharp contrast to other instances, cited above, which do tax the people.

The National Grange proposes only such aid as will insure a low and steady rate of interest and uphold the market for farm-mortgage bonds.

The grange is opposed to any measure which will give private capital the power to make interest rates on farm-mortgage bonds without limitations by the Federal law.

The Bulkley-Hollis bill was a compromise tentatively conceded by our organization with the hope for immediate relief to millions of mortgage-overburdened farmers.

The grange first proposed the Bathrick bill, which would have been far more effective as to speedy results, and which was modeled after long practice of some other nations. In

deference, however, to certain powers in legislation, and hopeful of getting something done, the grange receded from some of the details of the Bathrick bill but retaining its principles. It now seems after we had shown this spirit of compromise that we are facing a policy of delay and an insistence upon the last tribute to unyielding opinions of others. In the meantime, a bad condition of agricultural decadence is going on to the discouragement and ruin of many and the profit of a few. We do not claim that better farm credit is all there is to be done, but it is a necessary thing that farmers can not do effectively without proper legislation.

We have very little patience with those who contend that the helpless should help themselves. It is palpably one means of preventing anything being done to suggest that a farmer, struggling in the grip of an 8 to 10 per cent mortgage, which the best proceeds of his farm can not pay, shall help himself.

We have less cattle, less sheep and hogs, and less of many other food products per capita than we had 10 years ago. We have less population on the farm in proportion to the whole population than then. We have more mortgage per farm and less acres per farm upon which to grow food and pay the mortgage. Farm tenantry is rapidly and progressively increasing, and as this increases the production per acre is sure to decrease. These and other facts prove that this question is a problem of great importance to the man in the city as well as to the man in the country. We therefore appeal to the general public, not to the farmers alone, for an aroused sentiment in this matter.

Our farms are our sources of food supply and the success of agriculture is vital to the Government and all our citizens. We ask much less than the condition demands, and in no respect does our request put to hazard the resources of any class of our citizens, unless it may be the very few who have made their cash of greater profit in high interest rates than comes to the laborer and small capital of the average farmer.

OLIVER WILSON, *Master*,

Legislative Committee of the National Grange.

Warehouse Bill.

EXTENSION OF REMARKS
OF
HON. JOSEPH W. BYRNS,
OF TENNESSEE,
IN THE HOUSE OF REPRESENTATIVES,

Monday, December 21, 1914.

Mr. BYRNS of Tennessee. Mr. Speaker, I had hoped to have full opportunity to discuss this measure on the floor of the House, but since the motion to suspend the rules and pass the bill has served to shut off debate, I avail myself of the privilege of expressing my views on the measure by extending my remarks in the RECORD.

I regret that it became necessary to pass this bill under a suspension of the rules of the House, for it has the effect of not only shutting off a full discussion of the measure but also prevents the offering of any amendment. This makes it necessary to vote for or against the bill as it is drawn. I had hoped to have the opportunity of offering an amendment to the bill specifically designating tobacco as one of the staple and nonperishable agricultural products to which it shall apply. I am sure the bill in its present form applies to tobacco, but I preferred to see such an amendment as I have suggested adopted so that there would be no necessity of securing the consent or approval of the Secretary of Agriculture. The chairman of the Agricultural Committee, who will be a member of the conference committee, has assured me, however, that if the bill is passed in its present form he will see to it that tobacco is added in the conference between the two Houses, and I therefore cheerfully vote for the motion to suspend the rules and pass the bill, because this is the only way in which the bill can be passed at an early date.

This bill authorizes the Secretary of Agriculture to issue licenses to warehouses in which are stored staple and nonperishable agricultural products whenever the owner or operator of such warehouse applies to him for a license. Such warehouses as are licensed will thus become subject to supervision by the Secretary of Agriculture and products stored therein will be subject to inspection and classification.

Legislation of this kind is needed not merely as an emergency relief measure, but as a permanent system of marketing our crops. The difficulties which have confronted the cotton and tobacco grower on account of the unfortunate war conditions in Europe have only served to emphasize the importance and necessity of providing a better method of marketing our farm products. When war was declared by practically all of the nations of Europe the cotton and tobacco growers found that the foreign markets were closed to them and that it was impossible to move the immense amount of cotton and tobacco which is produced annually in this country and sold in the markets of Europe. With a great portion of last year's crop unsold and the large crop of this year nearly ready to be gathered, it became apparent at once that proper legislation had not been enacted to provide adequate and safe storage facilities. It is true that many of the States have upon their statute books laws making provision for the licensing and regulation of warehouses, but national legislation is particularly needed in order to bring our system of storing and marketing farm products into closer relationship with the national banking system of the country. The critical situation thus suddenly thrust upon the cotton and tobacco producer has emphasized the necessity of providing some means whereby the farmer can more readily and easily secure a fair and adequate advance or loan upon his crop when he finds himself unable to dispose of it at a fair value, and thus enable him to tide over present difficulties without being subjected to the necessity of sacrificing the product of his year's toil to the speculator, who is able to buy and hold for a profit.

The new currency law, which, in my judgment, is one of the greatest constructive measures passed by this Democratic Congress or, indeed, by any Congress since the Civil War, provides that national banks may rediscount the notes of farmers based on agricultural products. For the first time, under this law, agricultural products have been recognized as a proper basis for credit. It is therefore important that proper legislation shall be passed which will give to the farmer all the possible benefits and advantages which can be derived from this provision of the law. Undoubtedly warehouse receipts or certificates issued by a bonded warehouse, operating under a Government license will have a recognized standing in the business world and will be more readily accepted when offered for sale or tendered to the banks as security for an advance of money. No bank would hesitate for a moment to make a loan which was secured by a Government licensed warehouse receipt for such staples as tobacco, cotton, or grain, and which showed on its face their grade and value. If this bill is passed, a producer of tobacco or of cotton or grain can, if he desires to do so, store his product in a licensed warehouse, have it classified and graded, and use the certificate issued therefor either to borrow money from his bank to tide him over present difficulties or sell it outright or use it in payment of his obligations.

The bill as originally introduced in the Senate by the Senator from Georgia applied to cotton alone. By unanimous consent the Senate amended it so that its provisions should also apply to tobacco. Every Senator realized that the reasons which made a measure of this kind necessary for cotton just as strongly showed its necessity for tobacco. The bill then came to the House and was referred to the Agricultural Committee. That committee has presented a substitute, making the provisions of the bill apply specifically to cotton and grain, and to quote its language "such other agricultural products designated by the Secretary of Agriculture to be staple and nonperishable." I have not the slightest doubt but that the Secretary will promptly and readily designate tobacco as such a product. But I am at a loss to know why the House committee should have deliberately omitted specific mention of tobacco, which was put into the bill by unanimous action of the Senate, and in its place substitute grain, which was not considered by the Senate when the bill passed that body. I can only explain it on the ground that tobacco is grown in a comparatively limited area of the country, four-fifths of the entire crop being raised in the five States of Kentucky, North Carolina, Virginia, Tennessee, and Ohio.

I find that there is no Representative from any one of these States on the committee, whereas the grain and cotton sections are very ably represented, and I have thought that possibly the members of the committee did not fully appreciate the importance and value of this great staple which represents the wealth of hundreds of thousands of citizens of our country. I have no quarrel with the committee for adding grain to the bill. On the contrary, I approve its action in this respect. But I do object to the elimination of tobacco as one of the specific products legislated for in this bill. One million two hundred and sixteen thousand one hundred acres of tobacco were planted in 1913. There was produced 963,734,000 pounds, which was worth more than $122,483,000. This great and valuable crop was grown on more than 300,000 farms, and, as I have said, four-fifths of it was produced in five States of the Union. In these sections it is the chief money crop. Its production

involves a vast amount of labor, which only those who live in the tobacco-producing sections and who have worked in it in all of the various stages of its growth and preparation for the market can appreciate. I dare say there is no one crop produced in this country of which a greater percentage is shipped abroad or which brings more gold to this country in proportion to the value of the whole crop. Particularly is this true of the tobacco produced in the district I have the honor to represent on this floor, and in the neighboring counties of Kentucky and certain sections of Virginia, which constitute what is known as the dark-tobacco belt or district. Fully 80 per cent of this tobacco is exported and sold to Germany, Austria, Italy, and some other European countries, most of which exercise a Government monopoly in its purchase and sale. In addition to this, tobacco brings in a Government revenue nearly equal to its value. Our Government now derives more than $70,000,000 every year from this source. This can be said of no other agricultural product. Are not those millions of loyal and splendid citizens who are dependent upon the production of tobacco for their comfort entitled to the same consideration and treatment accorded to others?

As I have said, I have not the slightest doubt but that the Secretary will promptly designate tobacco; but why should the House not follow the unanimous lead of the Senate and do so? Why leave it to the discretion of any one man? Neither cotton nor any other agricultural product affords a safer security or, in my judgment, one quite so safe. It is as good as gold itself. In normal times there is an active and pressing demand for it in foreign countries as well as a great demand for certain types for domestic consumption.

When properly prized into hogsheads it will last for many years without danger of spoiling or deteriorating in value. There is an even greater and more pressing necessity at the present time for this bill to apply to tobacco than to either cotton or grain, for which there is a great demand for domestic consumption. In the case of grain, the demand is certain to be increased rather than lessened by the war in Europe. I am aware that there is also a great demand for tobacco of certain types for domestic consumption, but, as I have said, this is not true of tobacco which is grown in the section from whence I come, for our market is to a great extent confined to the countries now at war with each other, and on that account our market is for the time being entirely cut off. And I venture the opinion that the situation has proven to be as bad for those types of tobacco for which there is a greater demand for domestic consumption, for we know that it is the custom of home manufacturers to keep on hand a supply of tobacco sufficient to last them for a year or two.

And let me say just here that much has been said here and elsewhere about the distressing effect of the war upon the cotton grower. I do not minimize in the least the necessity of such relief, but I assert that no class of our citizens were harder hit by the unfortunate conditions in Europe than the tobacco grower. There is a greater necessity to provide for tobacco than there is for cotton, if it be possible for a greater necessity to exist. There is, as I have said, at least a certain domestic demand for cotton which will bring relief to a limited extent. But four-fifths of the tobacco to which I refer is exported, and there is absolutely no domestic demand for it. Relief is not so vital to those who grow grain and other breadstuffs. They will always find a great market here, and there will doubtless be an increased demand for their product in the war-ridden countries, because their productivity is in a great measure cut off. But it is not so with tobacco, and those who have last year's crop and this year's crop on hand should receive the very fullest consideration on the part of Congress and our Government.

But, Mr. Speaker, permit me to repeat that I do not look upon this as an emergency measure. It is not a measure which is to serve its purpose for a day. I regard its passage as being of permanent importance to the farming classes of the country. Whenever conditions, arising from whatever cause, are such that the farmer can not sell his crop for a price sufficient to pay a fair return for his labor, then it becomes important and essential that he be afforded such facilities as will enable him to secure advances upon his crop until it can be sold for a fair price. Otherwise he will be compelled to sell it at a sacrifice to those who are able to buy and hold it for a profit, and thus see himself deprived of the just fruits of his own hard labor and honest toil. And let me say that in such a case the situation is not purely local. The farmer needs the money on his crop to pay his creditors and provide for his family and his next year's work. His creditors need it in turn to pay their creditors, and so any relief which may be given will do a vast and general good.

There is nothing compulsory about the pending bill. No warehouseman is compelled to apply for a license. It is left entirely optional with him as to whether he shall do so. He may apply or not as he chooses. But I do believe that if this bill is passed its advantages will be quickly recognized, and it will serve to bring our banking interests into a closer and more effective working relationship with the marketing of our farm products. And let me say just here, no legislation can be more important to the farmer than legislation which will serve to improve the system and method of marketing farm products. The farmer does not need so much to be told how to grow his crops as he needs to be given information as to where he can find the best markets and secure the best price for the product of his toil. I introduced a bill in Congress some time ago seeking to establish a bureau of markets for this very purpose. And I am glad that Congress, in an appropriation act, has authorized the establishment of such a Bureau of Markets. I am sure it will accomplish great good in helping to establish both at home and abroad the best and most available markets for our farm products. It seems to me that it is this information and aid which the farmer most needs, and I am glad that the Agricultural Department is now giving this problem of the farmers its best study and attention.

I do not contend that this bill will by any means offer complete relief in times when the prices of our farm products are depressed for any cause. But I do regard it as an eminently wise and proper measure in behalf of the farmer, and if the privileges granted by it are taken advantage of, it will afford opportunities for relief which are not now obtainable. It is, I believe, a distinct and necessary step in the interest of the farmer. When he finds himself unable to dispose of his product for a fair price and is not able to carry his crops indefinitely, it will afford him a better opportunity to obtain a loan on reasonable terms, thus enabling him to hold it until a satisfactory market can be obtained. In that way he will derive the profit from his labor which is his due, rather than the speculator, to whom he must otherwise of necessity sell it. We spend much time passing legislation for the benefit of our great commercial and manufacturing interests, which is right and proper. Mr. Speaker, here is an opportunity to enact legislation for the benefit of another class of our citizens, the farmers, the product of whose toil is the very foundation upon which the stability, the wealth, and the glory of our Nation rests, and I hope that there will not be a dissenting voice against the passage of this bill.

All the tobacco grower needs is a little relief which will enable him to tide over his present difficult situation and hold his crop until a fairer and better price can be obtained. To him it represents a year of hard, honest toil. It represents the capital necessary to make a crop next year. In many instances it represents clothing and comfort for his family and schooling for his children. These comforts and advantages will be denied in large part if he is forced to sell his crop now. The Government ought not only to encourage him, but, as far as possible, it ought to assist him to hold his crop until his markets are again made available and a better price can be obtained for his tobacco. This bill is undoubtedly a step in the right direction. While it affords no pecuniary relief, it does provide a storage system, which will give the farmer's paper, based on his product, a more dependable status in the business world and enable him to use it more effectually as a basis of credit with which to provide for present needs.

The present situation, Mr. Speaker, emphasizes more clearly than ever the importance of cooperation and organization among the farmers. They can best help themselves and aid each other by mutual cooperation. There are those who contend that both the cotton and tobacco grower should restrict their acreage next year. I do not dispute the wisdom of such a proposition. A fair, just, and uniform restriction would, it seems to me, result in a common benefit to all; but this can not be done by the legislatures of the States either so well or so harmoniously and effectually as it can be done by the farmers themselves through the instrumentality of their organizations. If this unfortunate, useless, and causeless war continues, as it bids fair to do; if Europe continues to exhaust her resources and paralyze her power of production; if her rivers continue to run red with the lifeblood of the best and most virile of her citizenship, then there will undoubtedly be a great and unprecedented demand for our foodstuffs. And I do not doubt that for these reasons many who have heretofore devoted their entire energies to the growing of cotton and tobacco will turn a part of their energy to the growing of more foodstuffs in order to meet this demand. This in itself will result in a certain restriction which will insure a better price for these staples.

I am happy to believe, Mr. Speaker, that present conditions can not and will not last indefinitely and that it will not be a very great while before some relief will be afforded by the opening of the old markets. The State Department has already re-

ceived assurances that tobacco is not regarded as a contraband of war by any of the belligerent nations and that shipments may be made on neutral vessels and to Germany by way of Rotterdam, in Holland.

The supply on hand at the outbreak of the war must be soon exhausted, and those nations which formerly received their supply from us must give their attention to procuring more in order to afford comfort and solace to their war-ridden peoples. I believe that this country agriculturally, industrially, and commercially is about to enter upon an era of unparalleled prosperity if we will only exercise patience and take advantage of the opportunities confronting us. Only a few days ago I noticed a statement of the Chief of the Bureau of Foreign and Domestic Commerce to the effect that our foreign commerce was rapidly increasing in volume. If this be true now, what will be the result when trade conditions adjust themselves to the new order of things? The war now going on in Europe, with such frightful loss of life and enormous destruction of property, must in the very nature of things bring paralysis to her trade and power of production, a paralysis from which she can not fully recover for years to come. Our country must supply the trade in other countries formerly supplied by Europe. The great markets not only of South America and of the Orient but also of Europe are open to the development of our trade and commerce. Fortunately we have the resources and ability to supply them. We have resources unlimited and a soil capable of producing not only enough to feed and clothe our 100,000,000 people but also to feed a great portion of the entire world. Above all, we have a strong, virile, and enterprising citizenship, the best in the world. That we can measure up to the enlarged opportunity for an extension of trade there can be no question. The opportunity exists. The trade is there if we will only go after it. I repeat that while we must suffer temporarily everything points to an increased prosperity in which all the people of this great Nation will share. Congress should do its part by recognizing the possibilities before us and pass all proper and needed legislation which will help to bring about more speedily this beneficent result.

National Prohibition.

EXTENSION OF REMARKS

OF

HON. JAMES A. FREAR.

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 22, 1914,

On the joint resolution (H. J. Res. 168) proposing an amendment to the Constitution of the United States prohibiting the sale, etc., of intoxicating liquors for beverage purposes.

Mr. FREAR. Mr. Speaker, the question on which we are about to vote is born of an earnest purpose of a highly respectable portion of our people to prohibit liquor traffic throughout the country.

Conceding for the moment all that may be said as to the evils and economic loss connected with intemperance, the question to be determined at this time is what action shall be taken in response to a sudden demand by the resolution for Federal force, and what is the effect of the amendment?

By terms of exception this resolution permits the unlimited manufacture of liquor in all States, including prohibition States, but seeks to prevent its sale by law, irrespective of controlling local sentiment. It is contended it does not submit the question to the will of the people, locally or otherwise, but forcibly takes away from the State an opportunity to express its will by popular vote; shifts responsibility on Congress and State legislatures; asks, in effect, to disfranchise the people directly interested; and takes away rights of State governmental control never before questioned. In other words, that it affords the shadow and not the substance of a referendum.

This is not the argument of so-called liquor interests, but the conclusion of some of the ablest men in the country, including foremost temperance advocates in every party.

Republican leader MANN, author of the most important moral uplift legislation of recent years, Senator BORAH, and other eminent men of the minority party have offered many objections against the Hobson resolution, based upon its actual and not its intended effect.

Of equal significance we are advised directly on this subject by Eugene W. Chafin, the last Prohibition candidate for President, who unqualifiedly opposed the Hobson amendment when he said in his speech of October 14, 1913:

Of all foolish and impossible schemes devised to destroy the liquor traffic, this is certainly the worst.

Again he says:

Our good friends throughout the United States, who have announced themselves in favor of the constitutional amendment scheme, I venture to observe, have not a single one of them had before them the facts when they committed themselves to such policy.

Secretary Bryan, a leading temperance advocate, in an editorial in the Commoner, says:

A national contest for this amendment would simply divert attention without advancing the prohibition movement.

A great student of government and the country's foremost public official, President Wilson, also says on this subject:

Every self-governing community, which constitutes a social unit, should have the right to control the matter of the regulation or the withholding of license.

During this debate leading temperance advocates on this floor have challenged the wisdom of the amendment and have stated they intend to vote against it. Aided by this array of authority we must base our judgment on the facts submitted.

Notwithstanding national prohibition planks have been repeatedly rejected by party platforms, the prohibition question was presented in practically every district and State in the country less than 60 days ago, and less than 2 per cent of the total vote was then cast in favor of a national prohibition ticket.

When submitted to popular vote, 14 States out of 48 have passed prohibitory laws, indicating sentiment in such States, but these 14 States possess less than 20 per cent of the proportionate population of the remaining States. Under existing laws every nonprohibition State to-day has a complete right through its electorate, by popular vote and without intervention of Congress, to prohibit the manufacture and sale of liquors in all communities within such States.

At general elections where national policies are determined and administrations chosen the result is decided by popular vote based on the same constitutional ratio of population in every State. That principle governs the selection of representatives from the several States; it is a fundamental right of suffrage. Yet the resolution proposes to change law which has been accepted for over a century by securing action of State legislatures on the subject without regard to the will of the people who will be required to enforce the law.

We are advised its effect will be to permit Arizona with a popular vote of 23,722 to have equal power with New York, and yet protesting New York casts over a million and a half votes, or sixty times the vote of Arizona. The resolution permits Nevada with 20,115 votes to offset objecting Pennsylvania, which casts 1,220,000 votes.

Illustrations of its effect are striking when we learn that New York's popular vote equals the total vote of nearly a score of smaller States, each of which under the resolution would have an equal voice with New York in determining the law for New York. Again, with over a million votes, Ohio has recently decided prohibition overwhelmingly in the negative by a total popular vote more than double the combined vote of Arizona, Florida, Delaware, Mississippi, Nevada, North Dakota, South Carolina, and Wyoming; yet every one of these States under the resolution would have an equal influence in reversing that decision and changing the law for Ohio.

Even Wisconsin casts more votes than the eight States named; but under the amendment Wisconsin has only one-eighth of their combined legislative influence in determining the law for Wisconsin, although Wisconsin is expected to enforce any law determined by these other States.

Ordinarily no one will question a State's right to confiscate property, destroy revenues, or change men's habits, if the public good as represented by the will of the people expressed at the polls demands such action. But the proposed amendment takes away a citizen's right to determine. It empowers legislatures of some States that cast less votes than the average congressional district to measure power equally with the largest in the country—to compel a surrender of local or State control over men and revenues to minor Commonwealths vastly disproportionate in size or in national importance, and yet it gives them all equal legislative power, without responsibility for the enforcement of their legislative action.

We have been shown by many speakers the demoralizing effect of repealing excise laws where prohibition is not enforced. Will the passage of the resolution aid or retard the cause it seeks to serve? On this point the opinions of several leading men have been quoted.

Enforcement of law can only be insured through supporting popular sentiment. This is the experience of every officer who has to deal with courts, witnesses, and juries.

What will be the effect if small States, through legislative action, attempt to control the habits of men living in populous States where such rights have never been questioned, where the entire State machinery for enforcement is controlled by opposing interests, and where unlimited manufacture is permitted?

Every Representative desires to honestly and conscientiously serve his home constituency and his country, as required under his oath of office. From the standpoint of an abstainer and prosecutor of excise violation in past years I believe an unavoidable duty rests with every citizen, if he desires prohibitory laws, to ask from the electorate of his State for such laws through the ballot. Laws are of no value unless enforced, and without supporting public sentiment sumptuary laws fail in their purpose and invite contempt for all law.

With 34 States, containing over 80 per cent of our population, living under nonprohibition State laws, it is suggested that a constitutional amendment might be passed to prevent any State from enacting prohibitory laws and to thereby nullify the acts of 14 States on that issue. That proposal is subject to the same objection offered against the Hobson amendment, and although it presents the problem in reverse shape, I do not believe it has been seriously offered.

Any cause will eventually be rightfully determined without invoking ineffective means to force results. Any action that takes away from the people of the State a right to determine their own laws governing methods of State administration becomes a two-edged sword. This amendment asks us to take away the right of self-government, and may thwart the very right we are chosen to protect. The highest constitutional officers in the country, chosen by popular vote, in effect declare this proposal to be unprecedented and dangerous in character. The same conclusion is reached by many able advocates of temperance, who believe the amendment would lead to more harm than good, invoke a new and dangerous principle of government if adopted, and would serve to injure the cause it seeks to advance.

In the absence of any referendum vote or other accurate expression from the people of our districts or States that they desire to substitute the will of other States for that of our own, we are called upon to rightly represent our constituents, and I am convinced no greater offense could be committed than by taking away their right of self-government without the consent of those who are asked to relinquish that right.

Proposed Maritime Death Liability Bill.

EXTENSION OF REMARKS

OF

HON. JAMES W. BRYAN,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, December 23, 1914.

Mr. BRYAN. Mr. Speaker, the "twilight zone" between State and Federal authority has been so narrowed by recent laws and public sentiment that special interests do not find so safe a retreat within its boundaries. The authority of the Federal Government under the commerce clause of the Constitution is finding expression and enforcement in Federal statutes that effectively interfere with the operation of some of those who have prospered most as denizens of this zone.

There is another area over which the authority of the Federal Government is unquestioned that has become a refuge, a sort of bad man's realm, where privilege stalks unbridled and unrestrained. Big business in interstate commerce has been made to yield to Federal control. The great railroad system, with its 350,000 miles of road and its $20,000,000,000 of stocks and bonds, has been humbled before the majesty and power of the law, and that gigantic organization must await the order of the people through the Interstate Commerce Commission. A Federal employers' liability law took from the railroads their defenses against liability for the injuries of employees, and before long we will have a Federal workman's compensation law that will further protect the employees, or in case of death their dependents, in case of injuries in interstate commerce on land.

But there is another area, "The Mighty Main," that has become a haven of privilege. The moment one becomes an employee on a launch, a barge, a tugboat, a steamship, or an ocean vessel, or in any navigable waters, he must look to the admiralty court and the Federal law, if there is any, for his protection. Of course, if there is no law governing his case, he can resort to State law under certain conditions. There being no Federal statute enforcing liability for the negligent death of another, in all inland waters and on the high seas, so far as American law goes, the State statutes alone are resorted to for relief. I believe it will be profitable to consider the status of the laws of the several nations on this subject.

In France there seemed for a while to be some doubt, but later judicial interpretation of the marine ordinance of Louis XIV and of the Code Napoleon settled the matter. Its provisions established liability for every act of man which causes injury to another.

The Italian Code establishes full liability and especially repudiates the "pecuniary liability" doctrine so faithfully preserved in the bill now under consideration.

In Holland, Scotland, Germany, Austria, Spain, Portugal, Belgium, and the Republics of South America, which get their laws through Spain and other European codes, all have had provision for this death liability—so long and so unequivocally that the doctrine of death liability has all along been deemed a part of the general body of maritime law as practiced in the entire earth except as to Great Britain.

In England there was a rule of procedure which provided for the death of a personal action with the person—"actio personalis moritur cum persona." That expression was read one day in Latin to an English judge, sitting in wig and gown, by a lawyer all togged out in similar vestments, and there being an important question, probably some shipowner's liability, at stake, this judge said, "Yes; actio personalis moritur cum persona; that's the law of this court, and the claim for damages is denied." Then that decision was cited to another judge, and another, and so on, until all the judges in England were deciding that there was no surviving liability for an injury resulting in death.

NO COMPENSATION FOR DEATH THROUGH NEGLIGENCE.

If an employer through negligence injures an employee so as to maim him or cause him pain and suffering, he must pay such damages as are assessed by due process of law; but if an employer through negligence kills an employee, there shall be no recovery. What do you think of that kind of law? It does not make any difference what you think. "Actio personalis moritur cum persona." That settles it. 'Nuff said—and in Latin, too.

An injured workman or individual might linger on a bed of pain and torture, become an invalid, a cripple, or otherwise suffer through negligence of another, but if he would get damages he must get his suit through all the courts before death come, or his widow could pay the bills, or go to the poorhouse, or, as it used to be, to jail for the debt.

In referring to this judge-made abortion in the common law the court, in Green against Hudson River Railroad Co., says:

> It is of no practical utility to search for the reason of the rule. It remains somewhat obscure.

To the time "beyond which the memory of man runneth not to the contrary" that has been the common law of England. It was the law in the United States until statutes were passed creating a right of action in favor of dependents for loss of life through negligence. Louisiana, in a sense, is an exception to the rule, for that State has never been subjected to common law; but it has ample death liability statutes.

But this judge-made law, which had come to be known as the common law, was unsatisfactory. It was not justice, so the English Parliament passed the Lord Campbell act in 1846, creating a personal liability for death through the fault of another, and providing for its survival to dependents.

The American Colonies were subject to the common law, and when the American Republic was formed the common law continued until altered by statute. The Lord Campbell act did not affect us, of course. The States of the Union very soon began to pass statutes like the Lord Campbell act, and to-day it is the law of all the States under the varying terms of the statutes. The States have jurisdiction until Congress acts contradictorily, on all the inland waters, the Great Lakes, and out in the ocean to the 3-mile limit. These State laws at first were no stronger than the Lord Campbell act, and the steamship owners with their lobbies at State capitals were able in cooperation with representatives of other industries to control enactments so as to maintain their liberality toward vested interests and keep the way hard for the widows and orphans and other litigants who might sue as dependents of the victims of industry.

A few years ago the conscience of the people began to awake and stronger laws were passed by these States, and, as the learned proctor in admiralty, Mr. Harrington Putnam, says in the report of the Judiciary Committee on this bill, steamboat corporations which had domiciled themselves in States "for taxation purposes"—he meant to dodge taxes—were compelled to have damage suits for death tried in those States under these new laws and a local jury. This was very irritating.

Here is the way Mr. Putnam puts it:

> For reasons of taxation, or other supposed advantages, shipping corporations may be organized in a remote inland State, and if the vessels are negligently managed at sea the death remedy must be sought in the statutes of such State.

Soon demand came for a Federal law, so far as interstate commerce was concerned, and Congress passed the Federal employers' liability statute, and later amended and improved it; but Congress very carefully limited the application of that act to common carriers by railroad, so the steamboats were not involved in the act.

The shipping interest reviewed the situation and observed that, as I have already shown, they had always been liable to descendants for death on the high seas under the common-sense laws of all the civilized nations except England, and that they were liable under English law under the Lord Campbell act since 1846; and that they were liable under State laws of all the States of the American Union, surely within the 3-mile limit on the ocean and on all inland waterways; but they consoled themselves with the thought that American State laws did not extend into the high seas beyond the 3-mile limit. So they were willing to leave good enough alone. They did not bother the Maritime Law Association. They seemed satisfied, hoping to escape something on the high seas; and they were further gratified that the State laws were not so very strong against them as yet, and that, if Congress acted, that body might bind the shipping companies as tight as it had bound the railroads in the employers' liability law. So "let good enough alone" was the policy.

There is a Federal employers' liability law that changes the common-law rule, as I have already stated, but the framers of that act were particular to limit its scope to deaths and injuries by common carriers by railroad. An interstate common carrier by steamboat, or by any other means, does not come under its provisions. It has no application to the sea or to any death unless incurred in interstate commerce by railroad.

In the meantime, however, a jurisprudence was being established for the "mighty main" for this area of the high seas outside State jurisdiction. Judge Adison Brown in 1893, *City of Norwalk* (55 Fed. Rep., 98), had enforced the New York State death liability statute in the navigable waters of the State of New York, and Judge William H. Taft had delivered the opinion of the United States Circuit Court of Appeals for the Sixth District in the case of Robinson *v.* The Detroit & Canada Steam Navigation Co. (20 C. C. A., 86), applying the death statute of Canada in a proceeding in personam, where the injury causing death had occurred in Canadian Great Lakes waters.

Then came the *Hamilton* case (207 U. S., 398). Two Delaware vessels had collided on the high seas outside the 3-mile limit, off the Virginia coast. Eight persons were drowned. The State law of Delaware provides for this death liability, and the Supreme Court of the United States enforced this Delaware law the same as if the accident had occurred on the land, proceeding on the theory that the ships were in truth a part of the State of Delaware, whether in the middle of the ocean or tied up in a home port.

Thus the State laws came to be enforceable wherever the ship might go in its course around the globe. The law of its State went with it. It came from an evolution of the idea of the sovereignty of the ship's flag, which is laid down in a general way in Lindstrom *v.* International Navigation Co. (123 Fed., 475), Judge Wallace speaking for the Circuit Court:

> The territorial sovereignty of a State extends to a vessel of the State when it is upon the high seas, the vessel being deemed a part of the territory of the State to which it belongs; and it follows that a State statute which creates a liability or authorized a recovery for the consequences of a tortious act operates as efficiently upon the vessel of a State when it is beyond its boundaries as it does when it is physically within the State.

Following the Delaware case, known as the *Hamilton* case, came the *La Bourgogne*, which further established the doctrine. In this case the court applied the law of France to this French vessel and held that the claimants could recover and participate in the find. The wreck of the *La Bourgogne* in collision with the British ship occurred, as I remember, in 1905.

The shipping interests found that the courts were holding them liable for death wherever they turned—if a foreign ship on the high seas under the law of the flag, and if an American ship under the law of the particular State. Right after the *La Bourgogne* case they became very busy, as the record will show. All feeling of security and safety from this death liability vanished. So the next best thing was to have a weak, inefficient, archaic Federal law passed providing for admiralty trial, where they can escape juries and the States and take advantage of such other liberal turns as they could incorporate in the bill to save themselves from widows and orphans.

I have looked up the record of this legislation, in part at least, and I find it has had a checkered career. Many bills were introduced, but only recently have the shipowners got real busy on the subject.

On March 6, 1900, Mr. Boutell, of Illinois, introduces a bill, H. R. 9197, which restricted subject matter to boats or individuals or corporations carrying passengers or freight between American and foreign ports, provided for jury as at common law, did not contain the "pecuniary damages" clause or certain other defenses against liability incorporated in this pending act. It did not preserve the shipowners' right to limit liability under navigation laws. The American Bar Association in its annual meeting in 1900 indorses the bill, but suggests elimination of jury trial and other amendments.

On February 7, 1902, Mr. Boutell again introduces the act. He leaves off the jury-trial provision, but provides for jurisdiction of the "circuit court as court of law," which would really give jury trial. He adds the section saving to shipowners their right to limit liability under navigation laws.

In 1904 Senator Depew introduces the bill as S. 5564 in the Senate and Mr. Sherman in the House as H. R. 9880. By this time the shipowners had begun to get busy. Nothing is said about jury trial. Pecuniary damages is written into the bill. Shipowners' right to limit liability is especially preserved; the scope of the act is confined to injuries on vessels carrying passengers or freight. Other defenses and safeguards against widows and orphans getting judgment are added, and it is provided that in no case shall judgment exceed $5,000.

In 1906 Mr. Sherman again introduces the bill as H. R. 11486. It is the same bill. Nothing said about jury trial nor as to court jurisdiction. Doubtless it would have come solely under admiralty jurisdiction, and, of course, jury trial would have been denied. The American Bar Association and the steamboat companies were against jury trial.

On January 11, 1909, Mr. Jenkins, who died in 1911 as Federal judge in Porto Rico, introduces the bill as H. R. 25807. and Senator LODGE introduces the identical bill in the Senate on January 12, 1909, as S. 8397. The same bill is introduced by Mr. PARKER of New Jersey as H. R. 15811 on December 17, 1909. The American Bar Association passed strong resolutions indorsing the bill at the meeting of that association in August, 1909.

On June 7, 1911, Mr. BRANDEGEE introduces the bill in the Senate as S. 2673 and on May 23, 1912, Senator BRANDEGEE introduces as S. 6930 practically the bill we have now pending. Several changes are made. The admiralty jurisdiction is plainly set forth and jury trial is thereby made certainly beyond the right of the claimant. The scope of the action is enlarged so as to cover any tort involving death on the water, whether arising from shipping, bathing, hunting, docking, construction work, or in any other manner. One year is fixed as the period of limitation for the commencement of the suit. The negligence fence against damage liability is strengthened against the widows and orphans. On May 22, 1912, Mr. Peters, of Massachusetts, introduces the bill in its last-mentioned form in the House as H. R. 24764 and then, June 17, 1913, Mr. Peters again introduces it as H. R. 6143 in the form it is now pending.

SHIPPING INTERESTS LOBBY FOR BILL.

The first committee report to come out was during the second session of the present Congress. The great anxiety and unusual desire of the shipowners for this bill now is due mainly to the stringent laws the present awakened conscience of the people have caused to be enacted in the State and are proposing in the Nation. With one accord the shipowners pray for deliverance. They were perfectly satisfied till State laws came to be applied. Their claim that they want to supply a liability against themselves is as silly as it sounds.

On March 31, 1910, during the hearing on this bill before the Senate committee, the great proctors in admiralty being present, Mr. HUGHES, one of the committee members, announced that he had a wire from Edward C. Plummer asking him to state that he favored this bill. "Mr. Plummer," it is added, "is from Bath, Me., and is counsel for the Atlantic Carriers' Association, which includes all the large coasting steamers in the coal trade."

Mr. R. M. Hughes, attorney for British Steamship Co., member of committee before this hearing in support of the bill.

Mr. Herman A. Kelley was at the above hearing. He is an attorney from Cleveland. Here is what he said:

> I represent the lake interests here. I feel that the very clear statement made as to the merit of the bill can not be improved upon.

This is the Mr. Kelley who was attorney for the Thompson Towing & Wrecking Association already cited—Two hundred and fifth Federal Reporter, page 209.

Other attorneys there representing lake shipping interests were all very friendly to the bill.

Mr. Lawrence Kneeland, attorney, 43 Cedar Street, New York, before the House hearing on August 6, 1912, on behalf of this bill, said:

Gentlemen, we have been trying for 10 years or more to get a bill of this kind. It has been gone over and worked over with great care, and we think we have the bill in as good shape as it can be. All through these negotiations the people who have taken part in it and who have tried to get the bill in shape have followed largely the counsel of the attorneys for the various lines of steamships and other shipowners throughout the United States. It is in no sense a one-sided proposition.

Last Wednesday the gentleman from Illinois had read, in his time, a letter from Mr. C. E. Kremer, whom he introduced as an admiralty lawyer of Chicago of very high standing. There is no question about the sincerity of the gentleman from Illinois [Mr. MANN] or as to the high standing of the author of the letter, Mr. Kremer. Here are some additional facts about Mr. Kremer:

Lawyer, born at Oshkosh, Wis., December 23, 1850; admitted to the bar in 1874; practiced in Chicago since 1875; lecturer on admiralty law, Chicago College of Law, 1893, and in University of Chicago since 1902; president of Caldick Transportation Co. and Steamer Phoenix Co. and Atlas Car Co.; one of the founders of Legal Aid Society; secretary of Lake Michigan Steamship Association; president of Chicago and Illinois State Bar Association; United States Maritime Law Association; Republican; Union League; judge advocate; one of the founders of the Chicago Law Club in 1883; Wisconsin Association; home is 1336 North State Street, Chicago; office is at the Insurance Exchange, Chicago.

I call special attention to the extensive steamship interests of Mr. Kremer. I think Mr. Kremer is anxious to get his steamship liability away from the States of Illinois and Wisconsin and Michigan and transfer it to the Federal Government under this weak archaic statute. The first statement in the letter from Mr. Kremer on the merits of the bill is as follows:

The advantages of this bill are that it provides for a survival of a right of action on the high seas, where at present there is no such survival, because the high seas are outside of the territorial limits and the jurisdiction of the different States.

There is, as you know, as much reason for providing for a right of action where a death occurs on the high seas as where it occurs on waters within the boundaries of a State, in which case the State law provides for a right of action.

This statement involves, first, the survival of a right of action on the high seas; second, that no such survival exists at this time; third, that such survival is right and just.

As to the first proposition, there is no doubt that this bill does provide for a survival of a right of action for death on the high seas. As to the adequacy of the remedy provided in this bill much can be said, but that is not under consideration just now.

The second proposition, that no such survival of action exists at this time on the high seas, is inaccurate and erroneous, because it has been decided that the law of the State where the vessel is registered follows the vessel outside the jurisdiction of the State, and that action for death on an American vessel registered at New York, for instance, survives to the descendants wherever the negligent accident which caused the death may have occurred. The American Steamship Co. can be sued at its domicile for its tort. The Great Lakes vessels, in which Mr. Kremer is so extensively interested, are well provided for. The people are better satisfied with the laws they have than with this law, and please do not forget that if you pass this law you provide an exclusive remedy for the Great Lakes, for the Great Lakes are the "high seas." We have already seen that the State law follows the ship out upon the high seas, wherever it goes.

From this it appears to me that the statement of the learned Mr. Kremer, of Chicago, that no action survives on the high seas for the negligent killing of another, is not borne out by the facts and that such action does survive under State laws.

As I have already stated, these shipping interests and the presidents of these shipping companies have never been known to enter into a campaign to procure the passage of an act creating a liability upon themselves where no liability or no cause of action survives, as is stated in this case. The bare statement of the proposition that steamship companies would be pleading with the Judiciary Committee to pass a death-liability statute involving them in the payment of judgments for which they are not at all liable at this time is so absurd, silly, and ridiculous as not to be entitled to a moment's consideration. But we do not need to resort to logic or argument. The facts are plainly demonstrated. Such actions do survive. Such liability does exist, and the steamboat companies are busy now to eliminate that liability, to get away from that responsibility. Nobody blames them particularly for trying to save money or trying to get away from juries and trying to provide weak, vacillating statutes as substitutes for more effective statutes the State legislatures are now enacting. They are looking out for dividends, and it is perfectly natural for them to storm this Judiciary Committee and hoodwink its members and make them come in here and support the bill if they can. They are cute and receive big salaries for doing that very kind of thing, and in this case their efforts have been tremendously successful. The heathen Chinee can not beat the Shipping Trust for ways that are peculiar and effective.

As to the third feature of this first statement by the Chicago president of the shipping companies, Mr. Kremer, that it is just and proper to provide for such liability, of course there can be no question. Anybody would agree with his statement that steamship companies ought to be made to pay up when they negligently kill their employees.

The next statement by Mr. Kremer is that the passage of this statute will eliminate discrepancies as to territorial jurisdiction by the several States and by the several States and Canada. There may be some truth in this, and doubtless is, but the same trouble exists in cases of crimes where a State law is violated by the murder of an individual on one of the Great Lakes, for instance, or where any other crime is committed in certain cases in Michigan or in Illinois or in Wisconsin, but there are well-settled rules to determine that, and the criminal does not get away on that account. It has been the steamboat companies that have always used this pretext to get around the laws of Wisconsin, Michigan, and Illinois when they were sued in those courts for liability to descendants because of the negligent death of an individual. If their efforts to get around the State laws had been successful and they had been permitted to save themselves from State judgments and State juries, they would not be appealing now to this Congress and this Judiciary Committee to pass a statute creating a liability in a broad jurisdiction which they could not possibly escape. The man who does not know that steamship companies and employers generally desire to escape liability and accept gladly a condition that permits them to escape liability does not understand enough about matters of this kind to justify him in having left the farm. But Mr. Kremer is worried in his letter about possible conflict territorially with Canada's laws in the Great Lakes. Should a boat get over or very close to the Canadian line and a death occur through negligence, what then? reasons Mr. Kremer. The poor widow and orphan dependents of the deceased would be subjected to an awful condition in such case! Let us see as to that. A certain steamboat company was sued in exactly a case of this kind, and the steamboat company plead that the accident occurred outside the jurisdiction of the United States and in the jurisdiction of Canada.

The widow and orphans in this case had been attempting to apply the State law and the steamboat company tried to escape by setting up the defense that the negligent killing occurred in Canada. The case went up before an able judge. His name is William H. Taft. He refused to worry much about that proposition, for he said in his decision, "Canada has a death statute, so we will just apply the law of Canada," and sustained the claimants' right to recovery and the steamboat company had to pay up.

Now, it appears to me that your lake steamship companies do not like the law of Canada. They do not like the law of Illinois, nor the law of Wisconsin, nor the law of Ohio, nor the law of New York, nor of Pennsylvania or Delaware. They pretend to want a different law because they themselves are so humane. They want to protect the widows and orphans and do not want to escape any liability! And so they ask in finely worded communications the Judiciary Committee of this House to come forward with a bill like the one they have presented here and then they try to tell us they are not looking out for their own interest, but are trying to create a liability that does not now exist against them! The statement is false both as to the Great Lakes inside the territory of the United States and inside the territory of Canada, and it is false as to the high seas. There is such liability now on all the vessels of all the corporations domiciled anywhere within the United States of America. It is to escape as much of this liability as possible that the steamship companies have this Judiciary Committee hustling so energetically in their behalf.

Not only the present State laws worry them, but progressive States are passing more stringent laws all the time. Common-law defenses are being eliminated and recovery made more certain. They want to get away from these statutes.

The next statement made by Mr. Kremer, of Chicago, is that the passage of this statute would not deprive State courts of jurisdiction.

That this statement is erroneous is perfectly plain from the reading of section 8 of the statute. The only instance where State jurisdiction is sustained is in cases of death from injuries received elsewhere than on the high seas. The Great Lakes are the high seas. The Chesapeake Bay and waters within

State jurisdiction are still a part of the high seas. The States generally extend out into the ocean 3 miles. Within this 3-mile limitation the State has jurisdiction. It is a part of the State just as much as the land is a part of the State, but this act provides an exclusive jurisdiction on the high seas, and a ferry going from one point of land to another on the ocean now under State regulation, or on the Great Lakes, would be transferred exclusively to Federal jurisdiction if this act passes and the humane legislation by the several States, which permits damages under State laws, assessed by a jury in the local community where the negligent act has occurred or where the corporation which performed the act of negligence resides, would be done away with and all such cases would be tried before some Federal judge—the Lord knows where.

Some of the gentlemen from States on the Great Lakes may question whether the Great Lakes are the high seas. I insert here a letter recently received by me from the Attorney General bearing on this subject:

DEPARTMENT OF JUSTICE,
Washington, D. C., February 13, 1914.

Hon. J. W. BRYAN,
House of Representatives.

DEAR MR. CONGRESSMAN: I am directed by the Attorney General to acknowledge the receipt of your letter of January 23, 1914, in which you request the definition of the term "high seas" as used in H. R. 6143.

As the department renders opinions only to the President or the heads of departments, I am only giving definitions of the term "high seas" without attempting to express an opinion as to whether Puget Sound would come within the term as defined below. It will be noted that some of these definitions are not entirely consistent, and this probably may be accounted for by the context of the law where the term is used.

"The high seas include the whole of the seas below high-water mark and outside the body of the county." (Bouvier's Law Dictionary.)

"According to the English doctrine, the high sea begins at the distance of 3 miles from the coast of any country; according to the American view, at low-water mark, except in the case of small harbors and roadsteads inclosed within the fauces terræ." (Black's Law Dictionary.)

In the case of United States *v.* Rodgers (150 U. S., 249) the court held that the term "high seas" was applicable to the open, unincloses waters of the Great Lakes between which the Detroit River is the connecting stream, notwithstanding the water of the Lakes is fresh and tideless.

The term "high seas" includes water on the seacoast without the boundaries of low-water mark. (See Ross *v.* McIntyre, 140 U. S., 453.)

Respectfully (for the Attorney General),
SAMUEL J. GRAHAM,
Assistant Attorney General.

A study of the last-cited case above will show that the Supreme Court of the United States regards an American ship tied up in the harbor of Yokohama as on the "high seas" and subject to our admiralty jurisdiction.

I quote from United States *v.* Rodgers (150 U. S., p. 249).

After defining the term "high seas," the court says:

As thus defined, the term would seem to be applicable to the open waters of the great northern lakes as it is to the open waters of those bodies usually designated as seas. The Great Lakes possess every essential characteristic of seas. * * * The fact that the waters are fresh and not subject to the tides does not affect their essential character as seas. Many seas are tideless, and the waters of some are saline only in a very slight degree.

There is no question that the passage of this act would deprive the States of jurisdiction in the Great Lakes under all accidents coming under its provisions. The State is divested of all jurisdiction except for death occuring in connection with accidents occurring "elsewhere than on the high seas."

I stated in recent debate that it was a question as to whether Puget Sound would be deemed a part of the high seas. I will say that upon investigation of the subject I am now of opinion that Puget Sound would not be deemed to be "high seas" within the line establishing the application of the inland rules (see Navigation Laws of the United States, 1911, p. 359), which line passes from New Dungeness Lighthouse to Cattle Point Light on Orcas Island and on to the north.

But this act will have a very important bearing on death injuries in the waters of the State of Washington. Our law has abolished the right to sue for death, or personal injuries less than death, in that State in certain hazardous employments. Among these are included stevedores and longshoremen. The State and the Federal Governments have concurrent jurisdiction in all the navigable waters. But the State law especially provides that it will yield to any action by Congress on the subject. If this law is passed, in case of death a longshoreman's dependents must go to an admiralty judge without a jury. But if the accident is less than death he goes before the State commission under our workmen's compensation law. In Two hundred and fifth Federal, page 169, Judge Cushman has held that the State law controls in the absence of a Federal law. There is no Federal law as yet, so the State law is the sole remedy for a judgment of this kind. But if Congress passes the present statute it becomes exclusive, as a death liability statute, for the Washington law by its very terms does not apply where Congress acts. But it will still be in force for damages by personal injuries less than death, for this congressional act will not apply to injuries less than death.

Now read the first section of this shipowners' statute to dodge liability, which the Judiciary Committee want us to pass.

The decedents are to sue the—

vessel, person, or corporation that would have been liable to a suit in damages * * * if death had not ensued.

But such suits are barred in the case of stevedores and others in Washington. They are prohibited from suing any employer in that industry who is paid up to the commission provided for in the State law for any personal injury.

The Federal statute will be exclusive on Puget Sound and on the navigable waters of Washington and within the 3-mile limit on the ocean. If by interpreting the act the court can tell the widow whom to sue, she will then have to bring the suit in admiralty before a Federal judge without a jury for pecuniary loss, and divide up with a string of relatives, and under comparative negligence and the limiting-liability statutes, and every trick and device that these steamship owners have been able to incorporate in this archaic and insufficient statute.

That is how it will hit my State. California and Oregon are very similarly situated.

It might be worth while to trace the development of the legislation on this subject through the States. All the States have passed laws giving the relief. These statutes differ greatly from the Lord Campbell act and from each other as to (1) what surviving members of the family may bring the suit; (2) for whose benefit the suit may be brought; (3) in what limit of time and in whose name; (4) distribution among claimants and procedure; (5) measure of damages; (6) limitation of amount; (7) some provide for exemplary or punitive damages; (8) negligence rules differ, employer being held in some cases to stricter account than in others. Of course, all provide for jury trials.

THE WASHINGTON STATE DEATH LIABILITY STATUTE.

The Washington State statute is of interest, because of the great maritime business of that State. The port of Puget Sound has surpassed all other Pacific ports, except San Francisco, in tonnage and amount of business handled, and no doubt in a few years it will lead all other American Pacific Ocean ports in tonnage and value of imports and exports.

Then, Seattle is the entry port for Alaska and all the shipping from Alaska to that port, and the maritime business is large in the sound and in the river. Except for certain hazardous undertakings, including stevedoring and the work of the longshoremen, which, as already stated, are under the compensation act, this general statute applies to all deaths on the waters of that State, including the 3-mile strip of the ocean along the short. It also applies to all deaths occurring anywhere on boats domiciled or registered at Seattle or anywhere within the State. That State law provides:

That when the death of a person is caused by the wrongful act or neglect of another his heirs or personal representatives may maintain an action against the person causing the death; that if the deceased leaves no widow or issue, his parents, sisters, or minor brothers, who may be dependent on him for support, and who are residents within the United States at his death, may maintain the action; and that in every case the jury may give such damages as under all the circumstances of the case may be just.

That a father, or, in case of his death or desertion of his family, the mother, may maintain an action for the death of a child, and a guardian for the death of a ward; that no action for a personal injury to any person occasioning his death shall abate, nor such right of action determine, by reason of such death, if he have a wife or child living, or, leaving none, if he have dependent on him for support and resident within the United States at his death parents, sisters, or minor brothers; and that such action may be prosecuted or commenced in favor of the wife and children, or, if no wife, in favor of children, or, if no wife or children, of parents, sisters, and minor brothers who may be dependent upon him for support.

Then another statute in the State of Washington (Pierce's Code, title 309, sec. 5) provides:

"That all steamers, vessels, and boats, their tackle, apparel, and furniture, are liable for injuries committed by them to persons or property within this State, or while transporting such persons or property to or from this State. Demands for these several causes constitute liens upon all steamers, vessels, and boats, and their tackle, apparel, and furniture * * * and have preference over all other demands; but such liens continue in force only for a period of three years from the time the cause of action accrued."

You will see we have no trouble in Washington about an in rem judgment, as well as in personom. But, remember, the shipowners do not like that and expect this Congress to relieve them from such burdens. Do not overlook the "three-year" provision as to time the lien runs. This act has been applied in Federal courts, as I will show later.

Think of the vast difference in this statute and the lame and ancient statute this committee now proposes to force on my

State, except as to the inland waters, and concurrently on all the waters, lakes, rivers, and bays of the State.

In my State the people would in all probability recall a governor who would sign such a death-liability statute as these shipowners are trying to put over here while the Congressmen from the Lake States and other jurisdictions have their minds taken up with other matters. The benefits the steamship owners get are:

(1) ADMIRALTY JURISDICTION INSTEAD OF STATE OR FEDERAL COURT JURISDICTION.

Proctors instead of lawyers; judges for life, instead of for four years. The claimant, a timid widow, perhaps, hesitates about these proctors and Federal judges and Federal buildings and that mysterious word "admiralty" more than she would about an ordinary trial at the county courthouse.

(2) JUDGE TRIAL INSTEAD OF JURY TRIAL.

Oh, what a boone. The steamships in my State find it simply impossible to adapt themselves to jury trial. "Twelve men," they say; "what do they know about it?" But the widow, the orphan, the dependent prefers a jury. Who is this Judiciary Committee representing on this floor? Of course, they are not knowingly working for the steamship companies against the unfortunate claimants. But it is time for them to find out. I have been hammering on this proposition for months; a schoolboy can understand. There is nothing complicated about it. Why let the steamship companies escape jury trial? Nobody asks that but the shipowners.

(3) DIRECTNESS AND DEFINITENESS.

The Washington State statute creates the liability in the most straightforward terms. The pending bill says the dependents have a right to sue—

the vessel, person, or corporation which would have been liable to a suit for damages by or in behalf of the decedent by reason of such act if death had not ensued.

I consider this a backhanded way to preserve all the out-of-date common-law or admiralty defenses—assumption of risk, fellow servant, and every other old rule made to bar recovery—which our State statutes in many cases have legislated out of existence. There has been a great amount of legislation over this clause, "if death had not ensued." It carries with it a whole flock of defenses that steamboat companies and proctors in admiralty love. For instance, a steamboat runs a whisky joint on board and sells a man whisky who has a wife dependent upon him, and death results from the intoxication. No liability exists under this clause, according to King *v.* Henkil (80 Ala., 505), since no action could have been maintained by the party himself if death had not ensued. I take this illustration from "Death by Wrongful Act," by Tiffany, page 189. Steamboat companies like "ifs," and as many as possible, when it comes to creating liability against them, so we have to put the "if" in this law. Read the up-to-date State statutes and the Federal employers' liability law and you do not find the steamboat companies' "if."

(4) BENEFICIARIES ARE BUNCHED TO DISSIPATE THE AWARD BY THE FEDERAL JUDGE.

The pending bill enumerates as beneficiaries the—

wife, husband, parent, child, or dependent relatives.

Then section 2 bunches all these beneficiaries and provides that the award which the Federal judge allows—

shall be apportioned among them by the court in proportion to the damage they may severally have suffered by reason of the death of the person by whose representatives the suit is brought.

Since it is everybody's money, nobody will want it, reasons the steamboat proctors, enough to put up the costs. The provision will help some to dodge damages, so in it goes into the proposed bill.

How do the State statutes put it, and how does the employers' liability statute put it? Compare the Washington statute:

When the death of a person is caused by the wrongful act or neglect of another his heirs or personal representatives may maintain an action against the person causing the death—

No "if" here—

* * * in favor of the wife and children, or, if no wife, in favor of children, or, if no wife or children, of parents, sisters, and minor brothers who may be dependent upon him for support.

(5) PECUNIARY LOSS ONLY ALLOWED.

The Shipping Trust's bill says:

That the recovery in such suit shall be a fair and just compensation for the pecuniary loss sustained—

Which is to be "apportioned" by the Federal judge in admiralty.

The Washington statute says:

And that in every case the jury may give such damages as under all the circumstances of the case may be just.

Is it any wonder that the shipowners encourage able and learned and high-priced proctors to get busy for a Federal statute? Many State statutes are more liberal than the Washington statute on this, but in our courts juries are returning large verdicts, from $25,000 down, for deaths caused in industry and through various negligent acts where the recovery is not had after the direct fashion of workmen's compensation.

Is it any wonder that the shipowners hasten to our Judiciary Committee for first aid?

They tell us our State law does not go in the Federal court and on the seas. The statement is not true. I could cite any number of cases proving the contrary. The State law goes in the rivers and bays and on the high seas. The ship registered at Seattle as it goes around the world continues subject to the laws of Washington throughout its course, except where Federal law has asserted its superior jurisdiction. There is no Federal law on the subject of death liability.

The shipowners are not looking for a new liability against themselves. They want to get away from juries and State laws.

(6) THREE YEARS TO COMMENCE ACTION INSTEAD OF THREE MONTHS.

The Washington State law allows three years to bring the action and allows a lien for that long. Absence of the boat from the waters of Puget Sound does not prevent the existence of the lien. We can sue the company by service at the office of the company. We do not have to serve the captain of the vessel, who may be in Alaska or China. If the person who is to be served in our State stays away and avoids service, we have three years after he comes back to commence the suit. Under this proposed shipowners' statute to dodge liability we have this boon to negligent, crew-killing, and passenger-drowning ships:

The right of action hereby given shall not be deemed to have lapsed until 90 days after a reasonable opportunity to secure jurisdiction has offered.

This means after the two years have passed, all of which time Mr. Shipowner may have avoided service and maintained his vessel in foreign waters.

Can you blame the Shipping Trust proctors for working hard, yes, very hard, for this bill?

(7) JUDGE TO REDUCE AMOUNT OF DAMAGES IN PROPORTION TO DEGREE OF NEGLIGENCE.

Little attention is paid to the shipowners' negligence, the only question being, Did the deceased contribute any negligence? The Federal employers' liability negligence provisions make recovery very much easier.

But, of course, the shipowners will not stand for the doctrine of negligence laid down by Congress for railroads. And this committee is to concur, it seems, in their wishes. Maybe so; but not by default. There will be a roll call, and those who want to help out the shipowners in their effort to dodge liability can do it with a loud "aye" for this bill for their relief. Oh, the poor shipowners! Why should they have to subject themselves to juries and State judges and modern rules which eliminate in the main those old common-law defenses? The widows and orphans have no business responsibility. The shipowner did not take their property. He only took the life of the husband and father. Who can blame this Judiciary Committee for flying to the relief of the poor shipowners?

(8) DO NOT HAVE TO PAY THE JUDGMENT AFTER IT IS RECOVERED.

Section 6 of this proposed bill, in its three lines and one word of many "crimes that have been committed in thy name," oh business. Under this section a steamboat owner can take a ship worth $75,000 and insure it for $75,000; an old, leaky ship, with a Chinese crew and incompetent officers. He can load it at Norfolk with passengers and freight—the freight all insured—for New York. If the ship sinks in midocean he can take the $75,000 insurance money, the shippers of freight collect their insurance money, and the surviving dependents of the passengers and crew, the widows and orphans, are to be told to go take the ship at the bottom of the ocean, or maybe there are some lifeboats saved; take them, together with the freight charges and the passenger fees of the trip. But all these freight charges must be divided up among all claimants—crew, and so forth? Is that not a crime? Do I put it too strong? They say they passed that infamous set of liability laws, which this section 6 preserves for the poor Shipping Trust against the claims of widows and orphans, to encourage our merchant marine on the ocean and to cause it to carry our flag into the ports of the world and to have ships for transports in case of war; but after they passed the original outrage they later amended it to make it apply to coal barges and little craft in the Great Lakes and in the rivers and other inland waters of the country.

It is true that this bill does not create that defense, or rather that final haven of refuge for the shipowner, but I can not understand how any committee can handle the unclean, unjust,

and abominable statute without an awakened sense of justice and patriotism that would demand a repeal rather than a confirmation and reenactment as a protection against damages for the negligent death of employees and passengers.

The American Bar Association should withdraw its approval, and the Judiciary Committee should withdraw it from consideration by this Congress. The committee has not realized the abominable features it contains.

Joseph Chamberlain, when president of the Board of Trade of England, concerning this steamship protection, said:

Bear in mind, when a ship is lost the shipowner may make a profit, the owner may get more than the value of his ship; the merchant may lose nothing, but may, and very often does, get more than the value of the cargo back. In the same way the underwriter averages his losses, and on the whole makes a profit on the insurance of the ship out of his premium.

But the English limitation of liability law is much less favorable to shipowners than is ours. The English law is £15 per ton when loss of life is involved and £8 per ton where loss of cargo only is involved. We say, "Go get the ship at the bottom of the ocean." We let the shipowner have the insurance money even. Oh, the poor shipowner, we must protect him!

But we have never written a law on death liability at sea, and it would be thinkable, at least, that members of the American Bar Association, that great and honorable organization which has made so many good suggestions, would consider human life and compensation therefor as of enough importance to at least vary this liability rule after the English rule.

The un-American and inhuman liability statutes have already been referred to, but court rules authorized by these statutes are very much against the interest of the claimants in the application of the State statutes. It would seem that if State laws can be applied that the right of jury trial would follow. Jury trial, though permissible in certain cases, is rarely granted in an admiralty court.

Rules 54 and 56 in admiralty, prescribed by the Federal court under authority of Congress, do about as much enacting as the statutes themselves. These rules provide that when a shipowner shall file suit to limit his liability in an admiralty court the judge of such court may at once stop all pending suits against him in any other court in the United State and order them all assembled before him, and he may issue an injunction prohibiting any person from suing the shipowner before any judge but himself. This, of course, enables the shipowner to pick his judge and then compel all claimants to bring their claims to the forum thus selected and abide the decrees or await orders of this particular judge, including all delays for appeals to higher courts touching the question of limiting liability. By this injunction process this Federal judge in admiralty is enabled to supersede all other judicial forums wherein claimants may have preferred to file their claims. And, of course, the liability decree of the admiralty court is binding on all parties.

These court rules add to the statute matter which, no doubt, Congress would have refused to enact, notwithstanding the rush of a last day of emergency and unanimous-consent legislation, such as was going on when Senator Hamlin put through his liability statute. By this court rule the extraordinary writ of injunction is conferred to supersede all other State or Federal jurisdiction. Congress would have spurned a statute providing for such an injunction, but an admiralty judge passed the necessary legislation in his study.

THE "TITANIC" AVOIDS ENGLISH JUSTICE.

The pending cases against the Oceanic Steam Navigation Co. (Ltd.) for loss of life and property on the *Titanic* illustrates the injustice both of this limitation of liability statute and the injunction against other suits provided by enactment of the Federal judge.

The incidents connected with the *Titanic* disaster are fresh in the minds of all. The *Titanic*, a ship of British register, was built in Belfast and launched in 1911 under the ownership and control of the Oceanic Steam Navigation Co. (Ltd.), also known as the White Star Line. On April 10, 1912, the *Titanic*, with passengers and cargo on board, left Southampton on her maiden voyage bound for New York. On April 14, at about 11.40 p. m., in mid-ocean, latitude 41° 46'' north and longitude 50° 14'' west, the ship came into collision with an iceberg, and at 2.20 a. m. on April 15, 1912, she sank, a complete loss, except 14 lifeboats, which were saved. Seven hundred and eleven persons of her crew and passenger list were saved and a large number perished, as well as her entire cargo, including freight, baggage, and mails.

THE "TITANIC" OWNERS ARE SUED IN MANY COURTS.

In due course a large number of suits and claims were filed against the owners of this vessel in American courts. These complainants sought to hold the *Titanic* owners under the law of the flag, but the English company became very American all of a sudden.

There is an English liability law governing shipowners, but even the reputed selfishness of John Bull had not permitted any such liability limitation as Uncle Sam had provided. The British act provides a limitation of £15 per ton of ship and cargo. In the case of the *Titanic* English liability law would render the owners of the vessel liable for an amount aggregating $3,000,000. The American statute would limit the liability to $96,000 plus the value of the *Titanic* as it now lies at the bottom of the ocean.

The Oceanic Steam & Navigation Co. (Ltd.) had offices in several cities of this country, and many claimants hoping to apply the English statute as the Taft decision had applied Canadian law, brought actions against the owners for damages sustained by reason of the *Titanic* disaster, as follows:

In the United States District Court for the Southern District of New York, by Louise Robins, as administratrix, and so forth, of George Robins, deceased, for damages for loss of the life of George Robins.

In the supreme court, New York County, N. Y., by Frederick W. Shellard, as administrator, and so forth, of Frederick B. Shellard, deceased, for damages for loss of the life of Frederick B. Shellard.

In the Superior Court, Cook County, Ill.: By John Devine, as administrator, and so forth, of A. Willard, deceased, for damages for the loss of the life of A. Willard.

In the district court, Ramsey County, Minn.: By Carl Johnson, for damages for alleged personal injuries sustained and for loss of baggage. By Oscar Hedman, for damages for alleged personal injuries and for loss of baggage.

ENGLISH DEFENDANTS CHOOSE THE COURT AND NAME THE JUDGE.

Of course, the wise English shipowners did not want these American passengers and employees and their dependents to carry on these proceedings in these several American courts.

In the first place, they naturally wanted all such cases tried in some court of their own selection, before some judge of their own selection, and, of course, without a jury. They wanted the court domiciled in a convenient place. They preferred the hill to come to Mahomet rather than for Mahomet to go to the hill, and they could go Mahomet one better, for they could have their way in the first instance and Mahomet could not.

Then they wanted American liability law applied, if possible, so as to let them off on $96,000 liability rather than English law, with $3,000,000.

All of a sudden, like a bolt of lightning out of a clear sky, these litigants and all other claimants that can be found—and, of course, the shipowning company had the whole list—are searched out by a United States marshal and an order of the Federal judge of the southern district of New York is served upon them, each and every one, and they are commanded to quit suing these English shipowners in any court but that of the said judge. And all who have not yet commenced suit are ordered to come before this particular judge with their complaint. Here we have the spectacle of an English corporation, which has already been compelled by a jury in England to pay up English claims, compelling American citizens on American soil to go across the country to a forum of its own selection to have their cases tried. Congress could not have been forced to pass such a law, but the court's rules were sufficient.

THE STANDARD OF LIABILITY SHOULD BE IDENTICAL ON SEA AND LAND.

The United States Supreme Court has finally ruled on this case and decided that American liability law is to be applied, and not English liability law. This decision makes it so much more imperative that the antiquated and uncivilized standards of American liability for shipowners be abandoned and the same standard applied on the water as on the land.

Under the common law, as was laid down in the case of Pandorf against Hamilton, by Lord Justice Lopes, "A carrier by sea is, like a common carrier, apart from express contract, absolutely responsible for the goods intrusted to him, and insures them against all contingencies excepting only the act of God and the enemies of the Queen."

It did not take the American Congress long to knock out that feature of the common law. But how different with provisions for the benefit of those who bear the terrible burdens of industry.

(9) FEDERAL JURISDICTION EXCLUSIVE ON GREAT LAKES AND ELSEWHERE.

Sections 7 and 8 of the bill make it impossible to try any case for death through negligence on the Great Lakes or on the ocean or Gulf within the 3-mile limit. Look out for homefolks in Texas if the Texas delegation votes for this. Texas has a very effective death liability statute. The people do not want this thing substituted for it.

NOT LIMITED TO VESSELS OR COMMERCE.

A feature of this bill which no one seems to have noticed is that it is to apply to each and every liability for death in the area mentioned. Two people in bathing at Atlantic City or elsewhere in the ocean or Gulf or Great Lakes and one injures the other, causing death. It goes to the Federal court, but not "district court," mind you, but "district court in admiralty." No jury, no local law, or local court.

WORKMEN'S COMPENSATION THE RIGHT SOLUTION FOR THE EMPLOYEES.

What the American Bar Association ought to do is to prepare a bill applying its ideas on uniform workmen's compensation to the waters of the country and to interstate carriers. That would be up to date. But I do not believe anything less advanced than the Federal employers' liability act can pass this Congress with a parallel and equal liability for passengers as for workmen. The liability on the ocean for unsafe passage and for injuries to employees should be just as great as on a railroad train. It is absurd to let the shipowners escape their just responsibility.

I have received a letter from F. R. Wall, of San Francisco, indorsing my fight on this bill, which I here insert:

SAN FRANCISCO, CAL., *February 19, 1914.*

Representatives J. W. BRYAN,
Washington, D. C.

DEAR SIR: I appreciate very much your remarks on H. R. 6143, and approve thoroughly of all you say as to the limited liability law. Hope your proposed bill may become law. May I suggest that it should provide specifically for a lien in rem in all cases of death or personal injuries?

Yours, very truly,

F. R. WALL.

The same party wrote a letter to the chairman of the House Judiciary Committee, which was published in the Coast Seaman's Journal with comments as follows:

LIABILITY OF SHIPOWNERS.

Attorney F. R. Wall, of San Francisco, has favored the Journal with a copy of a communication sent by him recently to the chairman of a subcommitee of the House of Representatives in relation to pending legislation upon the limitation of shipowners' liability, etc.

Mr. Wall's criticism of House bill 6143 is deserving of careful perusal, as it shows clearly that under present law the shipowner is well protected from bothersome damage suits, his frequent complaints to the contrary notwithstanding.

Mr. Wall's letter follows:

SAN FRANCISCO, CAL., *March 9, 1914.*

Hon. E. Y. WEBB,
Chairman of Subcommittee of Committee on Judiciary,
House of Representatives, Washington, D. C.

DEAR SIR: Please permit me, as one who for many years has been deeply interested in the welfare of seamen, to suggest what seem to me pertinent criticisms of H. R. 6143.

The bill provides for recovery in case there could have been recovery "by or in behalf of the decedent by reason of such act if death had not ensued." The effect of this part of the provision would be to leave the beneficiary in a worse position than he would be in were the bill not enacted into law.

The reason why this is so is that the laws of a great many of the States permit recovery for wrongful death in cases where the proximate cause is negligence of a fellow servant or risks of employment. In all such cases the libelant can now, if he chooses to do so, take his case into the admiralty court, where the tort has occurred on the Great Lakes or any navigable waters of the United States and within the actual physical boundaries of such States. Further, on a vessel owned in such a State, the libelant may now, under the decision of the Supreme Court in the case of the *Hamilton* (207 U. S., 398), go into the admiralty court, and, I think, any State court where he can get jurisdiction, when the tort occurs on such a vessel on the high seas. Under the proposed law, in case of death occurring on the high seas because of negligence of a fellow servant or assumption of risk, the libelant would be without any means of recovery.

Further, for all cases of death on the high seas, regardless of what may be the laws of the State where the vessel is owned, under the proposed law the libelant would be limited to a right of action, under the decision of the Supreme Court in the case of the *Osceola* (189 U. S., 175), to those cases where the death was caused "in consequence of the unseaworthiness of the ship, or a failure to supply and keep in order the proper appliances appurtenant to the ship." As everyone knows, deaths resulting from such consequence or failure constitute a very small part of the accidental deaths occurring on board ship.

It must be clear, therefore, that the bill, taken as a whole, gives no new or additional remedy in any case whatsoever, unless it be that there are some States in the Union in which vessels are owned that do not give a right of action for wrongful death; and I know of no such States. It must be apparent that those who drafted the bill either had not examined carefully into the law applicable to seafarers, or else they were strongly opposed to the abolition of the fellow servant and assumption of risk doctrines. The policy of the Government of the United States, as expressed in the Federal employers' liability law, leaves no possibility for doubting that these outworn doctrines of the common law are regarded with pronounced disfavor in all cases relating to the safety of employees engaged in interstate commerce on land. And certainly, also, the laws of many of the States express the same disfavor. It is impossible for the ordinary person to understand, and there is no reason why the fellow servant and assumption of risk doctrines should cling to the seamen after the workmen on shore have been released therefrom.

This brings me naturally to a criticism of section 6 of the bill, which preserves all of the rights of the shipowner to limit his liability.

There is no limitation of liability on land in similar cases, and the United States is perhaps the only Government that allows its shipowners to limit their liability to the value of the vessel and her freight pending. England permits its shipowner to limit his liability to a value of £15 a ton in such cases, and there is every reason why we should have some similar provision. Our owner protects himself from all loss by insurance, and then, if his vessel has been lost by the plain fault of his agents or servants, with great loss of life, he collects his full insurance and, under the decision of the Supreme Court of the United States in the case of the *Main* (152 U. S., 122), puts all of the insurance money in his pocket and keeps it there, free from all possible attack; limits his liability to the value of a few lifeboats; and the widows and orphans, made such by the negligence of his agents, are left practically without any remedy. The books are full of such cases as these, but I refer you to two from among those within my own experience:

1. Eight or ten years ago the steamship *Walla Walla*, out of San Francisco, was in collision with the French bark *Max*. The *Walla Walla* was plainly in fault, and the court so found. The claims for damages for loss of life, which was great, would easily have amounted to several hundred thousand dollars. The *Walla Walla's* owners limited their liability to a sum less than $1,300, and that was the entire fund from which all of these claims could be satisfied.

2. The steamship *Columbia*, out of San Francisco, was in collision with the steam schooner *San Pedro* off the California coast on July 21, 1907. Both vessels were plainly in fault, and the court so found. The total of the claims proved was $234,481.45. These were about half of the claims that could have been proved against the vessel. Of the proved claims, those for loss of life amounted to about $30,000. The *Columbia* limited her liability to a sum less than $3,500. The *San Pedro* limited her liability to $16,500. The claimants, all of whom were entirely without fault, were paid about 8 cents on the dollar of their allowed claims. The owners of both vessels were undoubtedly fully covered by insurance, not only for this 8 per cent that they had to pay but for all their losses resulting from the collision.

The two cases above mentioned are typical, not at all unusual. In substance, the proposed bill takes away a right of action now given by many States where the death occurs on vessels of such States upon the high seas, and adds a thousandfold to the difficulties of proving such rights as it does give.

Yours, very truly,

F. R. WALL.

University of Rochester Class Memorial to Hon. Sereno E. Payne.

EXTENSION OF REMARKS

OF

HON. JAMES S. PARKER,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, December 21, 1914.

Mr. PARKER of New York. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a resolution by resident members of the class of 1864 of the University of Rochester, December 11, 1914, with regard to the death of Hon. SERENO E. PAYNE.

The resolution is as follows:

UNIVERSITY OF ROCHESTER CLASS MEMORIAL TO HON. SERENO E. PAYNE; LL. D.

At a meeting of the resident members of the class of 1864, of the University of Rochester, December 11, 1914, held because of the sudden death of our classmate, the Hon. SERENO E. PAYNE, LL. D., of Auburn, N. Y., it was decided to express our regrets at this national loss, and our personal appreciation of his character and distinguished career, by this informal memorial.

At the recent "golden" anniversary of our class day and commencement, the week of June 11, 1914, Mr. PAYNE was one of the six members of our class permitted to gather for this dual reunion at the altars of our alma mater.

Mr. PAYNE was the central figure in our class exercises, and the chief spokesman, after our honored president, in the social festivities of commencement day.

In our class reunion he was the same genial, simple, honest, frank "old boy" of 54 years ago, when we first met as a class in the old United States Hotel Building, Buffalo Street. There was nothing then to indicate the prophetic appropriateness of his title to the subsequent career of national celebrity and achievement to the ruddy-faced Auburn boy, or the present standing among the halls of learning of the United States of our alma mater in the fourteenth year of its strenuous struggle for academic foothold. What an incentive this joint record of boy and university is to students and institutions, unknown to-day, yet with the same possibilities before them.

Longfellow did not dream that in his immortal "Psalm of life" he was inscribing his own epitaph, as well as the historic record of many others, in his paradoxical phrase of imperishable imprint in the shifting toys of "every wind that blows," when he wrote:

"Lives of great men all remind us,
We can make our lives sublime;
And, departing, leave behind us,
Footprints on the sands of time."

These words of eulogy do not seem an unfitting laurel crown for the man who has reflected honor upon the city of his birth and residence, upon his alma mater and its proud city, upon the Empire State and all her associated States.

Finally, we, his classmates and friends, are proud of the boy and the man, the classmate and citizen, the fellow student and statesman.

We most sincerely desire to extend our sympathy and condolence and our congratulations on his record to his surviving son, his city, our own city and university, to his State and National friends, and to his associates in the House of Representatives of the Sixty-third Congress, honored by his active membership up to the moment of his solemn, unwitnessed summons.

For the class of 1864.

EDWARD DWIGHT CHAPIN, *President.*
CHARLES WILTSHIRE WOOD, *Secretary.*

National Prohibition.

EXTENSION OF REMARKS
OF
HON. CLAUDE U. STONE,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 22, 1914.

Mr. STONE. Mr. Speaker, it is not my intention to discuss the merits of national prohibition. I am here in a representative capacity, and it is my duty to reflect by my votes the views of a majority of my constituents rather than my personal opinions. That is the real meaning and true spirit of representative government.

I do not argue that the people collectively are always right, that their voice is the voice of God, but I do contend that their voice should be the voice of authority. Fully 30,000 voters of my district have by name petitioned me to vote against national prohibition. About 2,000 voters and nonvoters combined have by name petitioned me to favor national prohibition. In addition, church congregations having a total membership of about seven or eight thousand have been reported by ministers and others as indorsing the movement. In the circumstances, and inasmuch as national prohibition has never been a feature of the platform of any political party that as late as 1912 polled as high as 500 votes in my congressional district, I feel that I am practically instructed to vote against national prohibtion. If during my service in Congress the sentiment in favor of national prohibition should grow until a majority of the voters of my district desire me to vote for it, then I shall unhesitatingly register their will.

The fact that my constituents, in the ratio of more than three to one, oppose national prohibition does not signify that they oppose temperance, nor that they submit tamely to liquor domination. Fortunately they are not compelled to choose between intemperance and national prohibition. Some people seemingly confuse the terms "temperance" and "prohibition" as if they were synonymous. Prohibition is merely one of the proposed methods of securing temperance, and in the judgment of many well-known temperance workers, it does not give the greatest promise of producing the desired result, and the premature attempt to get it is likely to delay rather than hasten national temperance.

The people have been getting more and more temperate year by year. This has not been due to coercion nor to repression nor to restrictive legislation of any character, but to education and social evolution.

When a city, township, county, or State, by a majority vote of the people, eliminates the saloons, that action in itself is evidence that the community affected has become temperate because of influences other than legislation, and no doubt would even without legislation become more and more temperate through the same influences. However, when the temperance sentiment of such a community has developed to so great a degree that a majority of the voters favor the imposition of restraints upon the nontemperate population, then there is some justification for such a course. That is the philosophy of local-option laws; that of home rule, of local self-government, of rule by majorities. When a majority of the people of a community desire temperance it is likely that regulatory laws will be uniformly and strictly enforced. When such is not the case the laws will not be enforced, but instead will be disregarded and violated, thus adding the evils of lawlessness and disrespect for law to that of intemperance. Favorable public sentiment is required to make temperance laws effective. No law dealing with human appetites can be stronger than the jury box.

There is State-wide prohibition in Maine, and the Webb-Kenyon law prevents the overriding of that law by other States, and yet there are cities in Maine that have more shops per capita for the public sale of liquor than my home city, which is the greatest distilling city in the world. In parts of Maine candidates for sheriff, who have the enforcing of the law, can not be elected to office if they do not give a public pledge that they will violate their oath of office and will not enforce the law. The same can be said of Georgia, another prohibition State. It is for this reason that the people should be permitted to determine by their own votes the character of restraint that shall be placed upon themselves. State control through local-option laws, whether by city, township, county, or State unit, will permit a vote by the people. National prohibition by an amendment to the Federal Constitution, such as that which is proposed by the pending resolution, will not permit a vote by the people.

The temperance forces of Illinois have been working under township option for a number of years, the law having been passed through their influence. The Anti-Saloon League and other temperance organizations are now seeking to secure a county option law. Thus far they have not attempted to get nor even declared themselves in favor of option by legislative districts or congressional districts or by the State at large. Surely they can not reasonably expect me to take a position so far in advance of their position and so far in advance of public opinion as I should have to take in order to vote for national prohibition.

President Wilson and Secretary of State Bryan, both Christian gentlemen, and the latter especially a pronounced temperance advocate, have taken the position that the liquor question should be regarded as a State issue and that the people of the various States should be free to deal with it in the way that they deem proper. For the present at least I shall follow their leadership on this question just as I declared I would do in 35,000 letters sent to constituents on September 1, 1914.

In order to amend the Federal Constitution it requires a two-thirds vote of both Houses of Congress and ratification by the legislatures of 36 States. Not a single State through its legislature has petitioned Congress to submit such an amendment. Only 14 States have State-wide prohibition now or have voted in favor of it. At least 36 States would have to reach that stage of temperance development before there would be any chance at all of ratifying such an amendment. Because of the prejudice that some States have against turning the police powers over to the Federal Government and having Federal courts and Federal marshals enforce laws pertaining to liquor or any other subject, it is quite likely that some of the States will refuse to ratify an amendment providing for national prohibition even after they adopt State-wide prohibition. Therefore, practically the entire United States could and in a sense must become prohibition territory before a prohibition amendment to the Federal Constitution could be adopted. That condition of public sentiment should be attained by the States before the proposed amendment is submitted rather than afterwards. This situation makes the submission of a national prohibition amendment at this time premature and inopportune and a national contest over the proposition; in the words of Secretary Bryan in the December Commoner:

> Would simply divert attention from the issues upon which the people are ready to act.

There seems to be a general impression that the Hobson resolution, if it secures a two-thirds vote of the two Houses of Congress and is ratified by three-fourths of the States, would forever prohibit the manufacture, transportation, importation, and sale of intoxicating liquors. Such is not the case. It would prohibit the sale, manufacture for sale, transportation for sale, and importation for sale of intoxicating liquors for beverage purposes. Surely it is the use of intoxicating liquors and not merely the sale of them which temperance people desire to prevent. Under the operation of the Hobson resolution there would be no restriction upon the manufacture of liquors for personal use or to give away. A "still" that would manufacture 15 gallons of whisky a day could be purchased for $28. Every family could own one, or a cooperative club could be formed so as to supply a town or neighborhood. The word "sale" is a technical term and would not prevent the owner of a distillery receiving a supply of corn, rye, and so forth, to be manufactured into whisky and charging a fee for the service. There would be no restriction on the importation of intoxicating liquors provided they were not imported for sale. A club could be organized and members could each order a certain number of pints or gallons, the orders could go abroad together and the deliveries could be made together. A clerk could look after all of this work and be paid a salary for it; most likely an enterprising clerk would promote the club. Of course any individual could order directly whatever he desired for personal or family use or to give away. It will be seen that the Hobson resolution is not a panacea for the liquor evil, but contains many possibilities for harm. Few people in the country are familiar with its terms. There has been no general discussion of its merits based upon an actual knowledge of its contents. Nine different resolutions on national prohibition have been introduced by Mr. HOBSON during the present Congress, and to-day we are considering a tenth resolution, which has not even been printed. This indicates the unsettled convictions on the subject of the author of the resolution himself, and the other proponents of the resolution are not likely to be more firm and steadfast in their views.

Here it is not pretended that the Hobson resolution provides genuine prohibition, but that fact has not been explained to the country. The principal advocates of the resolution are acquainted with its weaknesses, but see in those weaknesses its chief strength. Votes are wanted in order to give the appearance of a strong prohibition sentiment in Congress, and nearly every inducement has been offered, except to provide the whisky users of the country with plants for the free and unlimited manufacture of whisky, in order to get support for the resolution. I have observed politicians who sought to divide the liquor forces by truthfully assuring one portion of them that they were not affected by legislation aimed at some evil of the business, but the spectacle of ministers and avowed prohibitionists eagerly giving the assurance that a proposed national prohibition resolution will not prevent the use of intoxicants, but will really allow drinkers to even make all they want without restriction or payment of revenue, is something that I never expected to witness.

It would seem advisable that when the temperance sentiment has grown so that public opinion will sustain Congress in voting for national prohibition, and it is likely that three-fourths of the States will ratify the amendment submitted, that the resolution adopted should be of such a character as to end the liquor question for all time.

In the past I have supported a number of measures to regulate the liquor traffic that impressed me as being well considered in the interests of temperance and not in advance of public opinion on the subject in the district which I represent.

I have no defense to make of intoxicating liquors, and I have no sympathy for the evils of the traffic in them. I believe in temperance and I practice my belief. I have been fought as bitterly by the organized liquor interests as any Member of this House, and I entertain no hope that they will change their attitude. However, I shall not allow these circumstances to control my judgment so as to cause me, without instructions from my constituents after full debate, to support a proposition that is not only untimely but is so illy conceived as to be likely to prove a setback to the accomplishment of real national temperance. It shall be my purpose in the future to proceed along the same lines as in the past, not hoping to satisfy the extremists of either side of the question, but hoping to do what the great mass of my constituents desire me to do and what gives the surest promise of promoting the best interests of the country.

Education.

EXTENSION OF REMARKS

OF

HON. LOUIS FITZHENRY,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, December 23, 1914.

Mr. FITZHENRY. Mr. Speaker, the Congress of the United States ought to be interested in American history being correctly taught to the youth of this country. I am informed that in many of the public schools of the United States, particularly in the State of Illinois, the textbooks either state as an established fact or by inference that an American discovered the North Pole, and that the American who did so was Robert E. Peary, United States Navy, now retired with the rank of rear admiral.

It is claimed that the North Pole was discovered by him April 6, 1909, and these statements are very largely made upon the belief that the Congress of the United States, through its proper committees, has made an investigation as to who did discover the North Pole, and that the findings of the Congress were to the effect that this honor was due Robert E. Peary.

I have made some investigation myself to ascertain the truth of this assertion, and find that Congress never has stated that Rear Admiral Peary discovered the North Pole, but have learned that some years ago, while investigating the merits of a bill to retire Mr. Peary with the rank of rear admiral, one of the committees did report a finding to the effect that Admiral Peary had "reached" the North Pole, but neither the committee nor the House presumed to determine who did discover the North Pole.

Matters of history should be as correctly taught in the schools of this country as possible. More than five years have passed since the claim that Admiral Peary had discovered the North Pole was made.

Another Arctic explorer has also laid claims to this great honor, contending that he reached the North Pole about a year prior to Admiral Peary; but no investigation to ascertain the truth or falsity of his claim has ever been made, and I feel that it is in the interest of education that some steps along this line should be taken, and that at as early a date as is practicable, for in a few years the lips of many of the now living witnesses will be closed forever.

The fact should be formally ascertained as to whether or not an American did discover the North Pole; and if so, a record of that fact should be established so as to avoid the possibility of any future contention.

The frozen North, of which we know so little to-day, is very apt to prove a veritable treasure storehouse for this country in the future. We have learned in a general way of the limitless deposits of anthracite coal in the islands of the Arctic Ocean and of the innumerable fur-bearing and food-producing animals of that unprospected country. If we as a Nation wish to quiet our title by discovery to these lands, we should do so now, to say nothing of the importance of properly establishing a scientific fact.

If the claims of Admiral Robert E. Peary to the discovery of the North Pole can be substantiated, it should be done, as I find it has been seriously questioned by men who have given great study and devoted much time to research upon Arctic matters as well as a large number of the leading Arctic explorers of the world. On the other hand, Dr. Frederick A. Cook, another Arctic explorer, claims that he discovered the North Pole, having reached it on the 21st day of April, 1908; and I find that a great preponderance of the authorities upon this subject are inclined to give Dr. Cook the credit for having made this exceedingly valuable addition to science as well as to the territory of the United States. In justice to him, as well as Admiral Peary, the conflicting claims should be finally settled.

Some time ago Mr. E. C. Rost inaugurated a systematic investigation to discover just what learned men, scientific societies, our public educators in schools, colleges, and universities, our encyclopedias, libraries, and the CONGRESSIONAL RECORD had to offer in this matter.

The heads of public instruction in our 48 States all replied to his inquiries. None had any authority to offer for the statement that an American discovered the North Pole; some referred to newspapers, magazines, and the National Geographic Society; the majority expressed ignorance as to what is taught in the schools and referred to some subordinate.

Not a president of any university or college, not even President Emeritus Charles W. Eliot, of Harvard University, quoted any authority that an American discovered the North Pole.

The authorities of libraries of New York, Boston, Chicago, and elsewhere replied in substantially the same words as are here quoted from a letter received from the Congressional Library of Washington, D. C.:

JANUARY 6, 1914.

DEAR SIR: The Government documents afford all the information which we have in regard to the recognition of Robert E. Peary as the discoverer of the North Pole.

J. L. FARNUM, *Secretary.*

The John Crerar Reference Library, of Chicago, through Mr. Robert J. Usher, acting reference librarian, has issued a special statement that no such authority exists, and has signed a memorial asking Congress to establish the claim to discovery.

Mr. Usher has also furnished the following letter:

NOVEMBER 23, 1914.

* * * My own observations lead me to believe more and more firmly that any unfavorable statement against Dr. Cook from encyclopedias, magazines, or schoolbooks can be traced back to some slanderous and unverified newspaper story. All such statements would simmer down to a few, which could be labeled "Hampton's Slanders," etc. Proof of the falsity of these various statements is found outside of Dr. Cook's own statements.

The Chicago Post in its issue of November 26, 1914, published the following letter from Mr. Usher:

To the Editor of the Post.

SIR: Why does your inspired headline writer refer to Dr. Frederick Cook as "Ole Doc Cook"?

Dr. Cook was born in 1865. He is a bona fide M. D. and a member of the American Medical Association, as its latest directory attests.

If the term is used as derogatory, it is well to remember that no scientific body has ever disproved his claims of having reached the North Pole in 1908 and of having climbed to the top of Mount McKinley in 1906.

Statements discrediting Dr. Cook can always be traced to cumulated newspaper statements made without reference to facts and originally instigated, in most instances, by a press bureau whose sole purpose was to destroy Dr. Cook's good name.

ROBERT J. USHER,
Assistant Reference Librarian, John Crerar Library.

None of the encyclopedias had any authority to offer, but followed a general system of referring the inquirer from one

encyclopedia to another, to the various editions of Who's Who, and so forth, ignoring the fact that the biographical notes in these publications are written and edited by the persons to whom they refer. The Century Cyclopedia, after repeated futile attempts to substantiate their statement that Peary discovered the North Pole by quoting Mr. Peary's own book, the National Geographic Society, and the Century Dictionary, finally referred for proof to the Arctic Club of America, which club presented a gold medal for the discovery of the pole to Dr. Frederick A. Cook and refused to take any action on Mr. Peary's claim.

Bowdoin College conferred the degree of LL. D. on Mr. Peary. On application to President Hyde, of that institution, for the authority on which such action was taken, he stated that a former professor of Bowdoin College—Hudson Bridge Hastings—had examined Peary's original material. A letter to Prof. Hastings brought a reply as follows:

I beg to state that I did not examine or check Admiral Peary's original astronomical observations.

HUDSON B. HASTINGS.

During the congressional investigation of Mr. Peary's case the statement was made before the Naval Committee that the Coast and Geodetic Survey officially examined Mr. Peary's original data. Later a letter from O. H. Tittmann, then and now Superintendent of the Coast and Geodetic Survey, stated that the material was examined by two men employed by Mr. Peary for that purpose, and that his—Mr. Tittmann's—bureau did not make such an examination.

On page 364 of Mr. Peary's book, The North Pole, published by Stokes & Co., New York, Mr. Peary says:

Among the home and foreign honors awarded for the attainment of the pole are the following: * * * The Royal Geographical Society of London—

And so forth.

But facing page 365 of that book is a full-size reproduction of the medal presented to Mr. Peary by the Royal Geographical Society, showing plainly that the words "discovery" or "North Pole" do not appear on it. The inscription reads: "For Arctic explorations." Other medals presented to Mr. Peary by geographical societies bear similar evasively worded inscriptions. If all of these various medals had actually been given by scientific and geographical societies in good faith for the discovery of the North Pole, it would be unnecessary for those interested in Mr. Peary's success to resort to anonymous communications and other material to defend his claims.

The Des Moines (Iowa) Evening Tribune of June 23, 1914, published the following timely and pertinent editorial:

Whatever else Dr. Cook may be right or wrong about, he is most certainly right about the efforts that are being made to suppress him and his contention over the North Pole discovery.

The Evening Tribune is in receipt of a mass of printed matter about the doctor sent from no acknowledged source, that in the preparation must represent weeks of labor and hundreds of dollars of expense.

The question that naturally suggests itself is why such an effort should now be considered necessary to discredit the doctor, and who is financially interested enough to go to the expense?

Whence comes the belief, then, that Mr. Peary is generally indorsed as the discoverer of the North Pole?

The National Geographic Society (a private enterprise), of Washington, D. C., represented by a committee of three men, Messrs. Gannett, Tittmann, and Chester, presented Mr. Peary's case to Congress, and asked that Peary be recognized as the discoverer of the North Pole. As the above-mentioned society, it was claimed, made a $25,000 subscription to Mr. Peary's polar expedition, it was financially interested in the expedition.

The report of its committee was accepted as offered, however, and embodied in a report presented to Congress, but the words "discovery" and "discoverer" were stricken from the bill before it was finally passed. See Private Calendar No. 733, Report No. 1961, Sixty-first Congress, third session. United States Statutes at Large, chapter 247, gives the wording of the bill as finally passed.

Thus the Congress of the United States, so far as the record discloses, has rejected the verdict of the National Geographic Society, and refused Mr. Peary the title claim to discovery, primarily because of a prior record, the claim of Dr. Frederick A. Cook.

I have examined a number of recent letters from Arctic explorers of the highest rank and achievement, from which I shall quote briefly:

OAKLAND, CAL., *April 27, 1914.*

* * * You ask me for my opinion as to the merit of the claims for discovery of the geographical point, the North Pole, and in reply I wish to state that I have met both the persons referred to, have carefully studied their reports, and from the experience I have had during five cruises to the Arctic Ocean on the Pacific side in Government ships, I fully indorse the view that the priority of discovery belongs to Dr. Cook.

O. C. HAMLET,
Senior Captain, United States Revenue-Cutter Service, Retired.

SAN FRANCISCO, *June 12, 1914.*

* * * Man's ability or endurance is never known until it is put to the test. The man of recognized accomplishment to-day has simply emerged from the quiet unheard of life of yesterday. Success is attained by many routes. While one may shout himself into success, another may attain success so quietly as to fully arrive before the world knows about him.

I can not believe that anyone familiar with Arctic work, or even sufficiently familiar with Arctic history to appreciate the worth of what they read, can read with an unprejudiced mind Dr. Frederick A. Cook's My Attainment of the Pole and not be impressed with the vivid and realistic character of the wonderful story, or fail to be impressed with the intelligence, the fidelity, and the quiet, determined courage of its author. I do not believe any man sufficiently clever to construct this story as it is written without first having had the experience.

ANDREW J. STONE,
Arctic Explorer and Author.

—

JULY, 1914.

After careful consideration of Rear Admiral Schley's Arctic letters to Dr. Cook, I don't hesitate to indorse every word the Admiral said of the Doctor.

JOHN BYERS WIRT,
Commodore, Commanding National Naval Veterans,
United States Army.

The letter referred to by Commodore Wirt is an indorsement of Dr. Cook's claims by the late Admiral.

DURHAN, *April 24, 1914.*

To Dr. F. A. COOK.

DEAR SIR: * * * Permit me to tell you that I've always been one of your most ardent supporters, even in those days when the Peary gang had the run of the press and you were silent. Amongst those who have had a peep behind the curtains of Arctic exploration Peary's true character is only too well known to be commented upon, and his doings are, the least said, infamous.

You have fought a noble fight with a true gentleman's weapon, which is more than can be said about your antagonist. I sincerely hope that the justice you are demanding shall not be long in forthcoming.

Hoping to have the pleasure of one day making your personal acquaintance, I beg to remain,

Sincerely, yours,

R. BERGENDAHL,
Swedish Arctic Explorer.

—

STRANDBOULEVARD, *Kobenhavn, 1914.*

MY DEAR DR. COOK: May I congratulate you? I saw in the papers that the Congress was going to confer an honor on you. I need not tell you that I was very pleased.

I have from our mutual friend—Hamlet—received the congressional report on the Peary investigation and was extremely interested. That committee of the National Geographic Society have certainly taken matters easy. It seems really incredible.

I have written and written again to Peary regarding some glacialogical work done on the ice cap on Greenland, but have never received an answer; and I presume that he does not like that I brought back the information that the Peary Channel did not exist. That's the only reason that I can find out.

I am working hard, as I have to draw up my official report over the voyage across the northern Greenlandic ice cap. With my kindest regards, I am,

Yours, faithfully,

EJNAR MIKKELSEN,
Arctic Explorer and Author of Lost in the Arctic.

Dr. J. G. Knowlton, surgeon on the steamer *Neptune*, Scott expedition, wrote the following words on a photograph of himself, which he presented to Dr. Cook:

For Dr. Frederick A. Cook. The first man at the North Pole, and, I may say, the only one up to date.

From his friend,

Dr. J. G. KNOWLTON.

JANUARY 19, 1914.

The foregoing are only a few of many hearty indorsements of practical Arctic explorers concerning Cook's discovery of the North Pole, and, as is the case in all lines of endeavor, the opinions of practical, experienced men in the same line of work should and do carry great weight. However, the scientific and mathematical side of an explorer's work must also be considered. In Dr. Cook's case six of the foremost civil engineers in America, whose names I shall give, men unbiased by personal friendship or financial business associations, after careful calculations and checking of Dr. Cook's original data, state that they prove beyond question or dispute that he arrived at the North Pole on April 21, 1908:

Clark Brown, associate member American Society Civil Engineers.

David R. Lee, C. E., "B. S., C. U., 1889," member American Society Civil Engineers.

J. M. Taylor, M. E., Cornell University, 1888.

E. G. Raynor, C. E., B. S., New York University, 1903.

R. L. Holt, C. E., Rensselaer Polytechnic Institute, 1904.

J. C. Green, Michigan Agricultural College, 1901, associate member American Society Civil Engineers.

The responsibility for a just decision of this question rests on our National Government, not only as a matter of justice but to insure the future teaching of verified historical truths instead of glittering generalities or unestablished claims to the children of this and coming generations.

Correspondence and Affidavits in Relation to Actual Homesteaders Living on Lands Now Contested by Railroad Companies in the State of Washington.

EXTENSION OF REMARKS
OF
HON. J. A. FALCONER,
OF WASHINGTON,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, December 23, 1914.

Mr. FALCONER. Mr. Speaker, it is very unfortunate that these controversies come up, and, Mr. Speaker, I am of the opinion that Government officials of former years giving, as they seem to have done by the affidavits following, encouragement to homesteaders to locate, are more or less responsible for the unfortunate situation these bona fide homesteaders now find themselves in.

The railroad officials in certain past instances have acquiesced to the desires of homesteaders, and I believe in these cases, if the facts are presented, they will again show proper consideration to these men who, with families, have made an effort to develop a home out yonder in the far West.

A close reading of these affidavits must impress anyone that the encouragement to locate given these men by land-office officials and the Department of the Interior, together with lawyers who for many years have been in close touch with land-office matters, always on hand to advise the homesteader—and in these particular cases did advise them—is a factor that should be taken into serious consideration by the present officials having to do with Land Department matters.

The fact that these men are bona fide settlers, with all they have in the world tied up in these homesteads, should appeal to any fair-minded man.

Bills are pending covering these cases, but it is hoped that these cases may be settled satisfactorily without legislation.

These affidavits draw in strong colors pictures of humble homes, and I desire to place them in the permanent records of the Congress:

STATE OF WASHINGTON, *County of King, ss:*

Thomas Scott, being first duly sworn according to law, deposes and says: I settled on the southeast quarter of section 27, township 23 north, range 9 east, Willamette meridian, the same being in King County, Wash., on February 10, 1908, intending to make the same my homestead; that I am married and have family of five children, and reside on said claim and have resided there continuously since February 10, 1908; that I have 1 acre under cultivation, and my improvements consist of a story and a half frame dwelling house 20 by 30 feet, barn 18 by 24 feet, chicken coop 14 by 20 feet, cellar 10 by 12 feet, woodshed 16 by 20 feet, milk house 10 by 12 feet; that I bought a relinquishment from Lewis Sheldrew and paid $1,250 cash, Sheldrew subsequently settling on the southwest quarter of section 29 in the same township; before buying I went to the local land office in Seattle to get what information I wanted. They told me if I found unsurveyed, unoccupied land anywhere west of the Cascade Mountains, went on it, and lived up to the homestead laws that I would be sure of holding it and procuring patent. From there I went to Randolph & Gregorys office in Seattle; had a long talk with them; told them the land I was thinking of settling on was at the foot of the Cascade Mountains, and that it was not surveyed nor in a forest reserve and told them all I could about it, and they told me if I found unsurveyed vacant land anywhere west of the Cascades, went on it, and treated it as my homestead and lived up to the homestead laws, nobody could beat me out of it, and that I would be sure to get my patent, and on the strength of the information and advice I bought the relinquishment of Sheldrew for $1,250; that in addition to the buildings set out above I have a water system piped into the house with about 1,500 feet of pipe; have apple trees, pear trees, plum trees, gooseberries, currants, blackberries, raspberries, strawberries, rhubarb, and all kinds of garden vegetables, cows, chickens, hogs, calf, etc. Further affiant saith not.

THOMAS SCOTT.

Subscribed and sworn to before me this 15th day of December, 1914.

STATE OF WASHINGTON, *County of King, ss:*

Elmer B. Holdredge, being first duly sworn according to law, deposes and says that I settled on the southeast quarter of section 29, township 23 north, range 9 east, Willamette meridian, the same being in King County, Wash., on February 10, 1908, with the intention of making the same my homestead; that I have lived on said land continuously ever since, and still live thereon; that my improvements are worth upward of $2,500 and consist of a two-story house, with shingle roof, 20 by 30 feet, cellar under house 8 by 14 feet, woodshed 12 by 22 feet, barn 18 by 36 feet with large hayloft, hen house 13 by 24 feet with loft, wagon shed 9 by 36 feet. All buildings are frame; about 2 acres cleared and under cultivation, and about 2,000 feet of fence, cable footbridge with 150 feet span across river; apple, pear, and plum trees; all kinds of berries, currants, gooseberries, and rhubarb; one horse, one cow, 40 hens; running water piped into house and barn and for irrigation and fire protection; I am unmarried. I was looking for a homestead and saw this one, which was and is unsurveyed, and it suited me; then I went to the local land office at Seattle, Wash., and the land-office officials told me that all unsurveyed land was Government land and open for settlement, and when a man lived up to the requirements of the law regarding homestead settlement there could not be any possible question of his securing patent, and on the strength of their advice and information and on the further advice of Messrs. Gregory & Randolph I paid William Tanner $1,200 to relinquish the land to me. That attached hereto is a photograph of part of my claim, showing some of the improvements and affiant. Further affiant saith not.

ELMER B. HOLDREDGE.

Subscribed and sworn to before me this 10th day of December, 1914.

STATE OF WASHINGTON, *County of King, ss:*

Willis E. Dwyer, being first duly sworn according to law, deposes and says: I settled on the south half of the northeast quarter and the south half of the northwest quarter section 3, township 23 north, range 9 east, Willamette meridian, the same being in King County, Wash., in March, 1906, intending to make the same my homestead; that I am married, and my wife and boy came to live on said place with me on June 1, 1906, and I lived there continuously for five years; that at the time of my settlement said land was unsurveyed and was occupied by F. A. Philbrick, to whom I paid $300 for relinquishment; that I have made substantial improvements consisting of a cabin 18 by 40, cleared 2 acres, planted 6 fruit trees, made about 2½ miles of trail and 2 substantial bridges, piped for water to house, including 1,000 feet of pipe, fine vegetable garden, containing all kinds of berries and garden vegetables; that when said land was surveyed I made my application for filing, but was contested by the Northern Pacific Railway Co., said company claiming the land to be within the primary limits of their grant; that my filing was rejected, and I appealed to the General Land Office and the decision of the local register and receiver was sustained; that I was told by Mr. Twichell there was no reason, so far as he knew, why I could not get this land, and I think Mr. Twichell acted in good faith in making said statement; that my improvements cost about $1,200. Further affiant saith not.

WILLIS E. DWYER.

Subscribed and sworn to before me this 15th day of December, 1914.
[SEAL.] HOWARD H. STARTZMAN,
Notary Public in and for the State of Washington,
Residing at Seattle.

—

STATE OF WASHINGTON, *County of King, ss:*

Lewis Sheldrew, being first duly sworn according to law, deposes and says: I settled on the southwest quarter of section 29, township 23 north, range 9 east, Willamette meridian, the same being in King County, Wash., on February 16, 1908; that I bought the relinquishment for said land from one A. Violet, of North Bend, Wash., and paid him the sum of $1,500 cash; that before completing said purchase I went to the local land office at Seattle, Wash., and was advised by Frank A. Twichell that any land that was not in a forest reserve and not occupied and was still unsurveyed was open for settlement, and he advised me to go on this land, which I did; I have lived on the land continuously ever since I settled on it, and during the last five years, altogether, I have not been absent from it more than one month; that I have not been absent from said land more than four days at any one time; that said land is my home and the only property I have of any kind, and I settled on it intending to make it my home; that my improvements consist of one log house 19 by 20, one log house 28 by 20, containing three rooms, root house 8 by 10, 1½ acres cleared and sown to grass and used for garden and berries, said land producing more than needed for my support, and 1½ acres slashed and partly cleared; my land is fine agricultural land, have matured blue-stem wheat in 100 days, raised the finest of strawberries and all kinds of garden vegetables; that I am a single man, and still live on said land. Further affiant saith not.

LEWIS SHELDREW.

Subscribed and sworn to before me this 7th day of December, 1914.
[SEAL.] HOWARD H. STARTZMAN,
Notary Public in and for the State of Washington,
Residing at Seattle.

—

STATE OF WASHINGTON, *County of King, ss:*

I, Gustav A. Schultheiss, being first duly sworn according to law, on oath depose and say: That I am a citizen of the United States of lawful age, to wit, 53 years, and my post-office address is Baring, Wash., and qualified to make homestead entry. I did on the 22d day of May, 1908, make homestead settlement on unsurveyed land, which since survey has been described as the northeast quarter of the southeast quarter, and lots 7, 8, and 9 of section 1, township 26 north, range 10 east, Willamette meridian; that before making settlement on said land, about the latter part of March, 1908, I called to see Joseph Gregory, a land attorney of Seattle, Wash., and I was handed a decision by said Gregory and was informed by him that the decision handed me was the latest decision of the highest court, and that the decision held that when a settler made settlement on unsurveyed land within the limits of the grant to the Northern Pacific Railroad Co., and that when later the land was surveyed and found to be railroad land, so called, that it was mandatory for the railroad company to relinquish said land and to accept scrip in lieu thereof; and at that time said Gregory went with me to the local land office at Seattle and showed the aforementioned decision to Frank Twichell, receiver of the United States land office at Seattle, Wash., and said Twichell informed me that there was no such thing as unsurveyed railroad land; that all land belonged to the Government until patented; and that anybody settling on said land prior to survey would have a prior right over the railroad claimant. And I was at that time given the circular of the General Land Office approved February 14, 1899, containing regulations under the act of July 1, 1898 (30 Stat., 597-620), and I thereafter read said circular most carefully, paying particular attention to the interpretation placed upon said act in said circular by the Commissioner of the General Land Office, and I particularly noted paragraph B, and I believed that the interpretation placed upon said act in said circular to be the law, and I relied on this circular and believed I had a right to make settlement on said land, and that I would eventually obtain entry of said land when open for entry. And after I settled on the land I was in the land office several times and talked

with Henry Smith, register of the land office at Seattle, Wash., and I was informed by him that the land on which I had settled was within the grant of the Northern Pacific Railway Co.; and said Smith informed me that there had never been a case, to his knowledge, where the railroad company had refused to relinquish such land in favor of a settler when requested to do so by the Government; and I believed in and relied on the circular of February 14, 1899, and the advice given me by Joseph Gregory, the attorney, and the information received from both the register and receiver of the land office at Seattle, and in making settlement upon and continuing my residence and improvement of said land acted on said advice and information.

Since the date of the settlement I have made said land my home and lived on said land continuously from the date of settlement to May 14, 1913, when I was granted leave of absence by the local land office at Seattle to come to Seattle for medical treatment for chronic injury to my shoulder, and that I have constructed improvements on said land of the value of about $1,400; that my improvements consist of a house 18 by 24, woodshed 18 by 20 feet, root house 8 by 10 feet, 36 apple trees, berry bushes of all kinds, and I built about 1 mile of trail and have 1 acre cleared, and said land is good bench land and can raise thereon all kinds of garden vegetables.

After the land was surveyed and opened for entry I made homestead application to enter said land, and my entry was rejected by the register and receiver of the land office at Seattle, and I perfected my appeal, and the Department of the Interior made demand on the Northern Pacific Railroad Co. to relinquish said land in my favor, which said company has refused to do, and my entry is held for rejection, and the decision of the local land office was affirmed by the Interior Department on appeal.

That after my claim had been rejected by the local land office and my appeal decided adversely by the Interior Department I offered my final proof on August 18, 1913, which was accepted at the local land office, but was rejected by the General Land Office at Washington, D. C. That in the year 1912 I was severely injured, and my injury, which became chronic, necessitated constant medical attention, and on May 13, 1913, I applied to the local land office at Seattle for leave of absence to have my injury attended to, which application on May 14, 1913, was granted, and since May 14, 1913, have been a great part of the time in Seattle. But up to about May 1, 1913, I lived continuously on my claim.

That prior to settling on said claim I was at an age when I needed a home; that I was strong and rugged, working at the sheet-metal trade and earning $5 a day; that I gave up my trade on the advice above stated, and in good faith intended to make the same my home; that now I am physically incapacitated, and in addition at an age when it is practically impossible to begin to provide for old age; all I have on earth is tied up in my claim; it is the only home I have, and if I lose that I am left wholly without means, all on account of the erroneous advice, misinformation, and misinterpretation of the law received by me as set forth herein.

GUSTAV A. SCHULTHEISS.

Subscribed and sworn to before me this 12th day of December, 1914.

Notary Public in and for the State of Washington,
Residing at Seattle.

STATE OF WASHINGTON, *County of King, ss:*

Kenneth G. Murray, being first duly sworn according to law, deposes and says:

I settled on the northwest quarter of section 27, township 23 north, range 9 east, the same being in King County, Wash., on February 10, 1908, intending to make said claim my home; that I am married and aged 54 years, and have lived on said claim continuously since date of settlement, and still live there; that my improvements consist of a story and half house, frame, 30 by 32, with basement; barn, 14 by 60; meat house, 8 by 10; 1 acre cleared, part of it in garden, with apple, plum, pear trees, currants, and gooseberries, blackberries, strawberries, and all kinds of garden vegetables, the land being very good agricultural land; have a water system piped into the house, with about 800 feet of pipe; a private telephone system, used jointly with my neighbors, at our own expense; and have at present about 300 hens; that I bought a relinquishment from one L. B. Tanner, of Seattle, for $1,500, on the strength of information and advice I got from the local land office at Seattle, and from Messrs. Gregory & Randolph, land attorneys of Seattle, Wash.; that before I closed with Mr. Tanner I went to Messrs. Gregory & Randolph and was advised by one of them that any land unsurveyed was subject to entry, and that if I went on it and settled thereon, intending to make the same my homestead and complied with the homestead laws, no one could beat me out of it, and to make sure of it one of the attorneys of Gregory & Randolph went with Mr. Tanner and myself to the local land office, and at the land office I told them the land lay on the west slope of the Cascade Mountains and was not surveyed, and they in turn told me if I found land unsurveyed anywhere west of the Cascades to go on in and live up to the requirements of the homestead laws, and that if I did this I would surely get title to the land; that after these conversations I paid Mr. Tanner $1,500 cash for his relinquishment as above stated; that since settled on said land in February, 1908, I have never lived anywhere else; that said land is now my home, and has been ever since the date of settlement. Further affiant saith not.

STATE OF WASHINGTON, *County of King, ss:*

Andrew Myerstuen, being first duly sworn according to law, deposes and says that I settled on lots 1 and 2 and the east half of the northeast quarter of section 21, township 23 north, range 9 east, Willamette meridian, on November 4, 1904, with the intention of making the same my homestead; that I am a single man, and was born and raised on my father's homestead, in Wisconsin; my improvements consist of a dwelling house, 14½ by 16½ feet, with an addition 14 by 14½ feet, woodshed, 6 by 12; root house, 8 by 10; outhouse; hay shed, 15 by 24; 3 acres slashed, 2 acres cleared, one-half mile horse trail, picket fence, plenty of rhubarb and rose bushes, about 2,000 strawberry plants, 2 cherry trees, 3 plum trees, and 22 apples trees of all kinds. My claim is the only home I have on earth, and $2,000 would not cover my actual cash outlay on my claim. I was located on my claim by one William Hamilton, to whom I paid $150. I was told by him the land was unsurveyed, and that I could not file my homestead claim until the land was officially surveyed by the United States Government, and was told by local land-office officials at Seattle, Wash., that I would be entitled to proceed to patent the land under the homestead law if I settled on the same prior to survey, and that if I settled thereon prior to survey and otherwise cultivated and improved the same that my possessory title would be superior to the title of any other claimant; that I entered on said land, and not until the survey was filed, a number of years after my entry, did I find out that the Northern Pacific claimed the land to be within its grant; that I have exhausted all remedy in the General Land Office, my homestead entry being contested by the Northern Pacific and rejected on appeal by the General Land Office. I filed in good faith. The official circular of the General Land Office said I was right. Hon. R. A. Ballinger advised the settlers by letter to stay on their claims, and when the survey was filed to file their entry claim and elect to retain their land under the act of July 1, 1898; and now if I lose my homestead, I will have lost the only home I ever had of my own and over $2,000 in cash. Further affiant saith not.

ANDREW MYERSTUEN.

Gustave Borowski, being first duly sworn, on oath deposes and says: That he is a citizen of the United States of America, over 21 years of age, married, and has a family; that on December 7, 1904, he made settlement and established his residence on the northeast quarter of section 21 in township 27 north of range 9 east, Willamette meridian, which residence has been continuous ever since; that he has slashed 3 acres on said land and cleared and fenced 1 acre of same, which he has cultivated each year of his residence; that his other improvements consist of a 3-room dwelling, well built and comfortably furnished; two woodsheds, one 12 by 16 feet and one 8 by 26 feet; a root house, 10 by 12 feet; a smoke house, 4 by 4 feet; a chicken house, 10 by 12 feet; a number of chickens, varying at different times; an outhouse; that he has planted and cultivated about 2,000 strawberry plants, 150 raspberry bushes, 6 apple trees, besides cherry trees, plum trees, English-walnut trees, and currant bushes, and constructed and maintained a hotbed; that he has made and kept in repair 5 miles of trail; that he has assisted in the construction and maintenance of the Settlers' Bridge across the Skykomish River, necessary in order to reach the land from the nearest post office; that he has constructed and maintained an aerial tram across the Skykomish River at Reiter; that he has constructed and maintained an aerial tram across Proctor Creek, also necessary in reaching the said land; that the cost of said improvements and their present value is not less than $2,500.

He further says that his family has resided on said land continuously, and that he or they have maintained no residence nor abode elsewhere during such time.

He further says that he made settlement on said land through the advice of the Interior Department, by whose representations he was led to believe that the Northern Pacific Railroad Co. would be compelled to relinquish their claim to said land, and that by his settlement and residence he could establish a superior right to same; that his former attorney, Joseph W. Gregory, a land attorney of repute, advised him in the matter that he could obtain title to the said land, and that in similar cases the settlers had been successful in securing their claims.

GUSTAVE BOROWSKI.

Notary Public in and for the State of Washington,
Residing at Gold Bar, Wash.

INDEX, WASH., *November 23, 1914.*

I, Gustav A. Schaefer, settled on the northwest quarter of section 23, township 27 north, range 9 east, on the 18th day of April, 1904. Before settling on the place I wrote to the General Land Office at Washington, D. C., and inquired if the land could be taken up as a homestead. They advised me that it could; also sent me a pamphlet of the laws which had been passed for settlers on such lands. The papers are with Senator MILES POINDEXTER.

I also was advised by J. Gregory, an attorney of Seattle, Wash., that the land could be homesteaded.

I am a married man.

My improvements on the place are a three-room house—one room 12 feet by 12 feet 6 inches, one room 14 feet by 12 feet 6 inches, and one room 16 feet by 12 feet 6 inches. Have 10 windows in the house.

A washhouse 9 feet by 9 feet with running water.

A root house 6 feet by 6 feet.

A woodhouse 22 feet by 16 feet.

Have planted 32 fruit trees. Also a nursery of 100 trees. Have 1½ acres under cultivation. About 5 acres in slashing.

Have spent $400 on the Settlers' Bridge, which had to be built to reach the homestead.

I value the improvements on the place at $2,500, besides the work and expense of keeping up the same.

GUSTAV A. SCHAEFER.

INDEX, WASH., *November 23, 1914.*

Mr. HOWARD H. STARTZMAN,
610 New York Block, Seattle, Wash.

DEAR SIR: In reply to your letter of the 17th instant as to how I was located on the land which I am now on and how I happen to get same, I will report as follows:

I was for many years working in a sawmill as a laborer and was in the meantime looking for a homestead. I found out through Mr. Henry Bell, another homesteader and locator, that this land was open for settlement. I went over to the local land office to find out about the

land in question—if it was advisable to settle on the same and if there was anything in the way. I was told there that everything was all right, that nothing was in the way, and that they advised me to take it up.

I went up to Index, Wash., the 20th of March, 1906, put up my notice papers, paid Mr. Henry Bell $250 in locating fees, for which I am holding receipt. The land in question is described as follows: The northeast quarter of section 23, township 27 north, range 9 east, Willamette meridian, Snohomish County, Wash.

What I have been raising on the land in question is potatoes, strawberries, raspberries, and all kinds of vegetables and six fruit trees. As to my improvements and valuables in the cabin I will hereby send you a copy of the same so as to give you an idea of what I have got.

I do not know if I am giving you full information as you would like to have it, but this is the best I can do now. Will soon be down, and then I will explain things better. Hoping everything will come out all right, I remain,

Respectfully, yours, P. A. JOHNSON,
Box 5, Index, Wash.

Three-fourths of an acre under cultivation and some slashing.

Affidavit.

I, Henry Bell, do solemnly swear that I am the person seeking patent from the United States for the following lands, to wit: NE. ¼ of section 23, township 27 north of range 9 east, in Snohomish County, Wash. I further swear that in June, 1904, I was advised through the Department of the Interior at Washington, D. C., that any bona fide settler of good repute who chose to settle on any unsurveyed Northern Pacific lands and to comply with the laws and regulations governing the acquirement of land from the United States under the homestead act would be entitled to patent, and that the Northern Pacific would relinquish such lands. Being an experienced woodsman and familiar with above-mentioned tract, I concluded to acquire title to same under the United States homestead laws, and on June 20, 1904, did settle on said land and have resided there continuously ever since and reside there now. During about six years of said period I was a married man, and my wife resided with me. I am a single man now, and my sister resides with me, and it is the only home we have.

I have cleared of timber 3½ acres and have 1 acre under cultivation, an orchard of 27 fruit trees, part of which have been bearing for three years. I have erected on said land a frame house 14 feet by 20 feet, with an addition, 9 feet by 16 feet; a frame woodshed, 20 feet by 25 feet; a log cabin, 12 feet by 16 feet; a chicken coop, 12 feet by 16 feet, with about one-fourth acre of chicken yard inclosed with 6-foot poultry netting. I have constructed a foot trail from house to Great Northern Railway and Snohomish County road, a distance of about 80 rods, and did build in such trail and across the Skykomish River at a foot bridge at a cost of more than $450.

I have made said land my bona fide residence since June 20, 1904, and have lived there in good faith, complied with the requirements of the homestead laws, and pray that I may be allowed to offer proof to the United States in the matter of securing a patent thereto.

HENRY BELL.

Sworn and subscribed to at Alpine, King County, Wash., this 26th day of November, 1914.

[SEAL.] F. A. ELEBE,
Justice of the Peace in and for King County, Wash.

Witness:
F. F. DUELL, *Alpine, Wash.*

STATE OF WASHINGTON, *County of King, ss:*

I, Thomas W. Beckett, being duly sworn, depose and say that I am a citizen of the United States, of lawful age, and that my post-office address is Grotto, Wash.

I am single, but my aged mother lives with me, and I am a settler upon land known as the northwest quarter of section 17, township 26 north, range 11 east, Willamette Meridian, in King County, Wash., and that said land has been my sole home since March, 1907.

In March, 1907, I purchased for $500 cash the relinquishment and improvements upon said land from my predecessor, M. B. Jackson, jr., who wished to engage in business in Seattle, said improvements at that time consisting of a trail, slashing, and small clearing, with garden plat, and a house 12 by 28 feet, built of shakes.

In March, 1907, I entered upon said land and began slashing and clearing. Then in April of the same year a letter of reply received from the honorable Commissioner of the General Land Office in Washington, D. C., written to my brother, E. E. Beckett, M. D., of 317 Lumber Exchange Building, Seattle, and written concerning my settlement here upon said land, and in which letter the honorable commissioner stated that (after survey) "when the plat of the survey becomes filed in the local land office he may submit his homestead application, with election, under the act of July 1, 1898, to retain the land * * *," thereby leading me to believe that I was justified in establishing and maintaining a home here upon said land, and that in due time I would receive patent from the United States.

I have resided here continuously since March, 1907, and my aged mother has lived with me during much of the time. I have built trails, road, and bridges, besides making other improvements upon the place. Then in August, 1910, my house was destroyed by fire, together with more than 40 young fruit trees, besides fencing, wood, lumber, and many things of value, thus causing a great loss to me. Since then I have made new improvements, now valued at more than $1,500. I have built a log house of one and a half stories, 14 by 34 feet inside; also a substantial hog barn, 10 by 16 feet, with pen attached, and a shake chicken house.

I have more than 3 acres slashed, with about 1½ acres cleared, from which most of the stumps have been taken out, where my buildings are situated, together with fences, garden, berry bushes, and several young fruit trees, and also a small field of alfalfa, timothy, and clover hay. I have a pig, 5 dozen chickens, and a few Belgian hares.

Hence, in accordance with the letter written by the honorable Commissioner of the General Land Office to my brother concerning my rights of settlement here, I feel that it is the duty of the officials of the United States Land Office, with the concurrence of Congress, to make a just settlement for my claim.

THOS. W. BECKETT.

Subscribed and sworn to before me this 28th day of November, 1914.

[SEAL.] F. A. ELDER,
Justice of the Peace, Residing at Skykomish, Wash.

DEPARTMENT OF THE INTERIOR,
GENERAL LAND OFFICE,
Washington, D. C., April 16, 1907.

Dr. E. E. BECKETT,
355–357 Lumber Exchange, Seattle, Wash.

SIR: Answering your letter of March 16, 1907, respecting settlement of your brother on northwest quarter section 17, township 26 north, range 11 east, Washington, I advise you that said tract is unsurveyed land within the primary limits of the Northern Pacific Railroad grant upon definite location of December 8, 1884, at which date its right vested; that the temporary withdrawal of the land March 18, 1905, for forest reserve did not affect the company's right; and that the land was released from said reservation July 6, 1905.

Therefore, if your brother settled upon the land since the definite location of the road and prior to the survey in the field of the land in question, he may, when the plat of the survey becomes filed in the local land office, submit his homestead application, with election, under act of July 1, 1898, to retain the land (forms of which will be furnished by the district officers on request), upon which, if found correct, the railroad company will be requested to relinquish its rights to the land.

Very respectfully,

R. A. BALLINGER, *Commissioner.*

STATE OF WASHINGTON, *County of King, ss:*

William G. Ellis, being first duly sworn according to law, deposes and says: I settled on the southeast quarter of section 33, township 23 north, range 9 east, Willamette meridian, in King County, Wash., on June 5, 1909. I took the place on the advice of Joseph W. Gregory, a land attorney of Seattle. He said he never knew of a case in which the settler failed to get the land; that the land was unsurveyed land and belonged to the United States Government, and that settlement thereon prior to survey would give the settler prior rights over anyone else. When I went to look at the land I learned from conversation with settlers on claims in the immediate vicinity that they had been informed by the local land office officials at Seattle that settlement prior to survey would give the settler prior right over anyone else. Also, I was informed by the official circular, issued by the General Land Office, that where the land was occupied by a bona fide settler at the time of settlement that the railroad claimant would be requested to relinquish to the Government, and that the settler would in that event get the land. I considered a request from the Government to the railroad to be equivalent to a command.

I have lived on my place seven or eight months a year every year since I located thereon. At times I have had to earn money to improve my place and for my necessary expense. I have a house, 14 by 24, consisting of two rooms, one 8 by 14, the other 12 by 14. The rooms are sealed and papered, and the roof and walls are shingled. I have a woodshed 14 by 14, and a cellar 8 by 12. I have about 200 yards of water pipe bringing water into the house. I have over an acre cleared and under cultivation, about half a mile of trails, besides

same amount of wagon roads. The land is good agricultural land, and I have raised fine potatoes, cabbage, onions, all kinds of berries and garden vegetables. Further affiant saith not.

WILLIAM G. ELLIS.

Subscribed and sworn to before me this 1st day of December, 1914.
[SEAL.] HOWARD H. STARTZMAN,
Notary Public in and for the State of Washington,

STATE OF WASHINGTON, *County of King, ss:*

Edwin O. Gifford, being first duly sworn according to law, deposes and says: I settled on ——— on or about April 15, 1907, with the intention of making the same my homestead; that I improved the same with two houses, one 10 by 14, one 8 by 10, woodshed 8 by 10, cleared 1 acre of land, and raised thereon potatoes, berries, and generally all garden vegetables, the same being fine agricultural land, built about one-quarter mile trail; that said claim has been my home since the date of settlement, although I have been obliged to go elsewhere from time to time to earn necessary funds to live; that I paid one F. A. Philbrick $300 to locate me; that I was informed by said Philbrick and others who were settlers in the vicinity that a settlement on unsurveyed public land with view to homestead entry vested the settler with prior rights over any other claimant; that I am married and have resided on said claim with my wife.

EDWIN O. GIFFORD.

Subscribed and sworn to before me this 3d day of December, 1914.
[SEAL.] HOWARD H. STARTZMAN,
Notary Public in and for the State of Washington,
Residing at Seattle.

STATE OF WASHINGTON, *County of King, ss:*

Spencer Eaton, of lawful age, being first duly sworn, upon oath says that he is a veteran of the Civil War of the United States and is now 74 years of age; that he settled upon the lands aforesaid on the 20th day of February, 1910, with his wife, he then and now being a married man, and has made the above land his permanent residence since that date, and that he has erected upon the land aforesaid a dwelling house made of cedar shakes, in a good habitable condition, consisting of three rooms, and has built a shop and storage house adjacent thereto, 16 feet wide and 40 feet long, and that he has lived there at all seasons of the year; that he has slashed and partially burned about 4 acres and cleared 1 acre, and has grown upon the land so cleared strawberries, cabbages, potatoes, turnips, and other vegetables, and raspberries, and the land is good agricultural soil; that he has built a trail from the Middle Fork of the Snoqualmie River up to his place, being a distance of about 1½ miles, and has used the trail for going back and forth and carrying up his provisions and other supplies, and has kept the same open year after year; and that he has at his place tools, saws, hoes, and other implements and instruments necessary for cultivating the ground, building his house, etc., and that the same are there maintained at this time.

That before making settlement upon the land aforesaid he was told by one James Anderson, a homesteader in the vicinity, that the above land had been settled on more than 16 years ago and that the then settler sold his relinquishment right to one Edgar Marston, who was then, as affiant understood, on the land and had a cabin there and a right to the land, and that at said time the said Edgar Marston relinquished his rights to affiant, the said affiant believing that he had a perfect right to homestead the lands, and that he paid the said Edgar Marston for his rights $400, and then entered upon the premises and built a new house and other properties, not using the cabin theretofore built by the said Marston or his predecessor in interest.

That the above-named Anderson is brother-in-law of affiant, and that before affiant went on the land or paid the consideration the said Anderson, so he stated, consulted with some land attorney in Seattle, but affiant does not know now whom, who told him he had a right to take the land and that he believed he had a bona fide right to settle upon and take the land; that at the time of the settlement he did not advise with the local land office, and did not seek information therefrom, because he believed that his rights were paramount to that of anyone else, and that by making the requisite settlement upon the lands and making the requisite improvements he would be entitled to his patent.

SPENCER EATON.

Address of Mrs. Elizabeth N. Cushman on "Women's Lessons in Politics."

"There are but two roots to all human endeavor—reason and feeling. The first may be called the masculine quality, the second the feminine; but both are necessary in arriving at truth."—Mrs. Elizabeth N. Cushman in an address at Tacoma, Wash.

EXTENSION OF REMARKS

OF

HON. ALBERT JOHNSON,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, December 23, 1914.

Mr. JOHNSON of Washington. Mr. Speaker, in an address at a meeting recently held in Tacoma, Mrs. Elizabeth N. Cushman, mother of the lamented Francis W. Cushman, who for so many years represented in Congress the district which I now have the honor to represent, discussed some of the lessons which the women voters of the United States must study as they take up the duties of the electorate.

"What women have to learn in the use of the right of franchise" was Mrs. Cushman's theme. She described the home as the first unit in just government, then law, an open mind, justice, charity, and mercy. The remarks of this splendid woman are of particular interest at this time, and I am grateful to the Members of the House for the privilege of placing them in the CONGRESSIONAL RECORD.

Mrs. Cushman's address follows:

"WOMEN'S LESSON IN POLITICS.

"The first lesson to be learned by women, when given the right of franchise, is that every right has a duty tied fast to it. The duty belonging to the franchise is to use all one's mental and moral power to help build and maintain a firm, just government. We think of this right as of something entirely new, yet we have been training for its exercise all our lives.

"What is a well-ordered home but the first unit in a general government? We have kept the home, swept the hearth, built and tended upon its shrine an altar fire to our household gods. There we have made, interpreted, and executed the law. We have been a court of last resort. We have had training in all branches of government.

"HAVE BEEN HOME AUTOCRATS.

"A great poet has said that 'all experience is an arch wherethrough shines that untraveled world whose margin fades forever and forever as we move.' We stand to-night in the shadow of that arch looking toward the future. What that future will bring us depends upon how we meet its problems. There is one particular in which our home training has weakened us for public life. In the home we have been autocrats; in the forum we stand among our peers. They have rights and opinions that we are bound to respect. What shall we surrender? Not the eternal verities—all else is trivial.

"MUST CAST OFF PREJUDICE.

"We must cultivate the open mind. We must cast off prejudice, that dark veil that often obscures the white light of truth. We must get rid of some of our selfishness, our narrow-mindedness. Our range of vision is very short. It is hard for us to take interest, to the point of self-denial, in that which does not contribute to our own ease, or to that of our immediate friends. Our brothers have carried no light burden in assuming responsibility in political work. But how they have labored in this work and, with the best of intentions, often failed in accomplishing the good they sought. Sometimes their reasoning was faulty, their premises wrong, their information incorrect. Sometimes they have met as we shall meet, many specious instructors, who know so well and state so convincingly so many things that are not true. Trusting in these, they have been led into error. So long as human nature shall be frail, so long shall the sifting of truth from error be a problem among men.

"MEN TOO OFTEN MISLED.

"Men have been so often misled that the word 'politics' is sometimes spoken contemptuously. Our subconsciousness has classed the politician with the 'confidence man.' But politics, the science of government. Where find a worthier theme? What can be nobler than a life properly devoted to this? To give one's life for the public good; to battle in the interests of the downtrodden, whose feeble cries are too often drowned in the tumult of the successful; to stand unflinchingly for the right as one understands it—that in the face of possible disaster to one's self requires heroism.

"Psychologists tell us there are but two roots to all human endeavor—reason and feeling. The first may be called the masculine quality, the second the feminine; but both are necessary in arriving at truth.

"FOUNDATIONS OF GOVERNMENT.

"Justice, charity, and mercy are enduring foundation stones in the structure of all right government. Charity and mercy are, or should be, eminently womanly qualities. Justice we more frequently associate with men; but if human justice were entirely just we would have no courts of equity. Both men and women should possess in some degree all of these qualities in order to properly shape their own lives, for who, where life is incorrect, is worthy to govern another? Reason, feeling, justice, charity, and mercy are permanent mental qualities, upon the exercise of which all right government must be founded.

"Surely no nation upon earth is better fitted to carry to success the representative form of government that we have, for nowhere are these qualities more generally distributed. From the time when the first 'cave man' shared his bone with his weaker fellow until now has come echoing down the ages the insistent question: 'Am I my brother's keeper?' And just now, in answer to the cries of the hungry and homeless, both here and abroad, thousands of warm, throbbing, human hearts have sent back the ringing answer, 'Yes.'"

National Prohibition.

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 22, 1914.

Mr. SABATH. Mr. Speaker, it was my intention to express my views on the important question now before the House, but having been deprived of the opportunity of preparing a speech on the subject I desire to avail myself of the privilege of inserting in the RECORD as a part of my remarks a brief submitted to me by Mr. O. P. Anderson on the power to amend the Federal Constitution by a three-fourths vote of the States to provide for national prohibition.

I consider it a great legal document, entitled to most careful consideration on the part of the membership of the House, and, believing that nothing that I could say on this question would give greater opportunity for thought than this able document, I respectfully submit it for your consideration:

BRIEF ON THE POWER TO AMEND THE FEDERAL CONSTITUTION BY A THREE-FOURTHS VOTE OF THE STATES TO PROVIDE FOR NATIONAL PROHIBITION.

[By O. P. Anderson, 601 Stahlman Building, Nashville, Tenn.]

VINOUS, SPIRITUOUS, AND MALT LIQUORS HAVE BEEN HELD BY THE SUPREME COURT OF THE UNITED STATES TO BE LEGITIMATE ARTICLES OF COMMERCE.

In the case of Champion *v.* Ames (188 U. S., 321, 360, 361; Lottery case) the United States Supreme Court thus paraphrased two of its decisions concerning the liquor traffic, when viewed from the standpoint of interstate commerce, viz:

"Subsequently, in Bowman *v.* Chicago & North Western Railway Co. (125 U. S., 465), this court held that ardent spirits, distilled liquors, ale, and beer were subjects of exchange, barter, and traffic, and were so recognized by the usages of the commercial world, as well as by the laws of Congress and the decisions of the courts. In Leisy *v.* Hardin (135 U. S., 100, 110, 125) the court again held that spirituous liquors were recognized articles of commerce," etc.

In Vance *v.* Vandercook Co. (No. 1) (170 U. S., 452, 453) the court said:

"The right of persons in one State to ship liquor into another State to a resident for his own use is derived from the Constitution of the United States and does not rest on the grant of the State law."

While the general power of the States to control and regulate or prohibit within their borders the business of dealing in intoxicating liquors is beyond question, yet so long as any of the States in their sovereign capacity recognize the traffic as legitimate their interests are protected against action by others which may seek to destroy interstate commerce in the traffic, though the Wilson Act of 1890 and the Webb-Kenyon Act of 1913 have had the effect of enabling the individual States to restrict and diminish the traffic.

NATIONAL CONTROL OF THE LIQUOR TRAFFIC CAN NOT BE SURRENDERED TO THE FEDERAL GOVERNMENT THROUGH THE MEDIUM OF A CONSTITUTIONAL AMENDMENT RECEIVING A THREE-FOURTHS VOTE.

Article V of the Constitution is as follows:

"The Congress, whenever two-thirds of both Houses shall deem it necessary, shall propose amendments to this Constitution or, on the application of the legislatures of two-thirds of the several States, shall call a convention for proposing amendments which, in either case, shall be valid to all intents and purposes, as part of this Constitution, when ratified by the legislatures of three-fourths of the several States or by conventions in three-fourths thereof as the one or the other mode of ratification may be proposed by the Congress: *Provided*, That no amendment which may be made prior to the year 1808 shall in any manner affect the first and fourth clauses in the ninth section of the first article, and that no State, without its consent, shall be deprived of its equal suffrage in the Senate."

The first clause in the ninth section of the first article is as follows:

"The migration or importation of such persons as any of the States now existing shall think proper to admit shall not be prohibited by the Congress prior to the year 1808, but a tax or duty may be imposed on such importation not exceeding $10 for each person."

The fourth clause of the ninth section of the first article is as follows:

"No capitation or other direct tax shall be laid, unless in proportion to the census or enumeration herein before directed to be taken."

By the first of these clauses Congress was forbidden to prohibit the importation of slaves prior to the year 1808, and the forbidden power was exercised as soon as this time had expired. (Cooley, Principles of Constitutional Law, 3d ed., p. 113.)

The second clause seems to have been considered as having possible relation to taxes which might be imposed upon the importation of slaves. (Meigs' Growth of the Constitution, pp. 277, 278.)

"In scope the amending power is now limited as to but one subject, namely, the equal representation of the States in the Senate. It has been by some urged that even this limitation may be evaded by adopting a constitutional amendment eliminating this limitation upon the amending power, and thus opening the way to subsequent amendments providing for an unequal senatorial representation of the States." (Willoughby's Constitutional Law, abridged ed., p. 178, citing Von Holst, Constitutional Law of the United States, 31, note.)

It will be noted that the restrictions contained in the proviso to Article V related to matters which were already embraced in the Constitution, and that no attempt was made to forestall amendments upon unrelated subjects.

This seems to show that the framers of the Constitution, in providing a mode whereby it might be amended, had in view the true sense of the word "amend," which is "to change, alter, or correct something which already exists," and not to create something entirely new or subversive of fundamental provisions.

The extreme illustration given in the quotation above, in which it is suggested that unequal senatorial representation of the States may be termed an "amendment," and passed by a three-fourths vote of the States, shows how far afield the reasoning upon the subject had proceeded, and the proposition to accomplish national prohibition by so-called "amendment" can be demonstrated to be almost as radical a departure from the true purpose and intent of the Constitution.

To use the word "amend" as synonymous with "supplement" is a loose and inexact employment of language.

In Article V it is provided that the Constitution may be "amended," not that it may be "supplemented."

The following extracts from Words and Phrases (West Publishing Co., St. Paul) show clearly that in legal phraseology the words "amend" and "amendment" have well-defined limitations upon their application, viz:

"To 'amend' a thing, as defined by Webster, is to change it in any way for the betterment; to remove what is erroneous, superfluous, faulty, and the like; to supply deficiencies; to substitute something in place of what is removed. The word is synonymous with 'correct,' 'reform,' 'rectify.' An amendment, therefore, is a change or alteration for the better; a correction of faults or errors; an improvement, a reformation, an emendation. It necessarily implies something upon which the correction, alteration, improvement, or reformation can operate; something to be reformed, corrected, rectified, altered, or improved. In other words, that which is proposed as an amendment must be germane to or related to the thing to be amended." (In re Pennsylvania Tel. Co. (Pa.) *v.* Chest. Co., Rept. 129, 131.)

"The term 'amendment' implies such an addition or change within the lines of the original instrument as will effect an improvement or better carry out the purposes for which it was framed." (Livermore *v.* White, 36 Pac., 424, 426; 102 Cal., 113; 25 L. R. A., 312.)

"'Amendment' as used in Constitution, Article IV, paragraph 32, requiring that when an act is amended, the act or section amended shall be set forth at full length, means a change in some of the provisions of an act, and does not include additional provisions not affecting existing ones." (Sheridan *v.* City of Salem, 12 Pac., 925, 928; 14 Or., 328.)

"An amendment is the correction of some error or mistake in a pleading already before the court, and therefore there must be something to amend by, whereas the insertion of facts constituting a new cause of action or defense would be a substituted pleading and not an amendment of an existing pleading." (Woodruff *v.* Pickle, 28 N. Y. Super. Ct. (5 Rob.), 619, 622.)

"An 'amended demurrer' is one which adds to or supplements a demurrer already filed in the cause, but which does not add entirely new matter or arrest the progress of the case." (Lundbeck *v.* Pilmair, 43 N. W., 271; 78 Iowa, 434.

In Brake *v.* Callison (122 Fed. Rep., 2, 724) it is said:

"In the First Congress of the Confederation, in 1781, the fifteenth rule provided that no new motion or proposition should be admitted under color of an amendment, as a substitute for the question or proposition under debate until the latter is disposed of or disagreed to; and in the House of Representatives of the First Congress, 4th of March, 1789, it was provided as a rule for the conduct of its business that no new motion or proposition shall be admitted under color of an amendment as a substitute for the motion or proposition under debate. But in 1822 a new rule was adopted, and reaffirmed by nearly every succeeding Congress, and extensively adopted in other legislative assemblies, that no new motion or proposition on a subject different from that under consideration shall be admitted under color of an amendment. (Cusg. Par. Law of L. A., secs. 1366–1369.)"

To append to the Federal Constitution a prohibition of the liquor traffic throughout the Union would in no sense constitute an "amendment" of anything contained in the Constitution.

In section 8 of Article I the various powers delegated by the States to Congress are enumerated. Conspicuously present is the delegation to Congress of the power to legislate on the subject of bankruptcies. Conspicuously absent is the mention of any power reposed in Congress to regulate for the Nation the important subjects of marriage, divorce, and property rights of married women.

The power reposed in Congress to enact uniform bankrupt laws is absolute. A restriction or modification of this power, passed by a three-fourths vote of the States, would constitute a permissible amendment to the Constitution.

As no power is reposed in Congress to legislate on the subject of marriage and divorce and married women's rights, any attempt to give Congress that power by a three-fourths vote of the States would be improper. It would not be an amendment, but a supplement of the most far-reaching character.

The liquor traffic has been the subject of State regulation continuously since the formation of the Union. Congress has no power to determine how the States shall control the question. The liquor traffic therefore, so far as amending the Constitution is concerned, stands in exactly the same attitude as the subject of marriage and divorce, and is not subject to control by an amendment receiving a three-fourths vote.

The preamble to the Constitution recites that it is designed, among other things, to "promote the general welfare." Some claim that national prohibition is a matter of general welfare, and that therefore the power to provide for it by amendment of the Constitution is derived from the preamble.

The position is untenable, as it has been held that the preamble is a mere recitation of the purposes of the Constitution and not a grant of powers to the Federal Government. Upon this point the United States Supreme Court, in Jacobson *v.* Massachusetts (197 U. S., 22), said:

"Although the preamble indicates the general purposes for which the people ordained and established the Constitution, it has never been regarded as the source of any substantive power conferred on the Government of the United States or on any of its departments. Such powers embrace only those expressly granted in the body of the Constitution, and such as may be implied from those so granted."

In Martin *v.* Hunter's Lessee (1 Wheat., 326) it was held that words used in the Federal Constitution "are to be taken in their natural and obvious sense, and not in a sense unreasonably restricted or enlarged."

The word "amend," as used in the Constitution, can not under any reasonable construction be considered as the equivalent of "supplement." Had the framers of the Constitution, or the States originally ratifying same, intended that extraneous matter, regardless of its character, might be added to the Constitution by a three-fourths vote, it would have been simple enough to have provided that the Constitution might be "amended or supplemented."

That it was never intended that three-fourths of the States should control the remaining one-fourth on fundamental propositions is shown by Article VII of the Constitution, which reads:

"The ratification of the conventions of nine States shall be sufficient for the establishment of this Constitution between the States so ratifying the same."

If the contention now made that three-fourths of the States may control the remaining one-fourth on the question of prohibition be correct, may we not ask why unanimous ratification was considered necessary in 1789 in connection with the surrender by the States of other fundamental rights?

All the States of the Union, regardless of the date of their admission, stand upon an equal footing under the Constitution, and are invested with equal rights and powers and subject only to similar restrictions. (Michie's Enc. of U. S. Sup. Ct. Repts., pp. 334, 335, vol. 4, and cases cited.)

"The Constitution is a written instrument. As such, its meaning does not alter. That which is meant when adopted it means now. Being a grant of powers to a Government, its language is general, and, as changes come in social and political life, it embraces in its grasp all new conditions which are within the scope of the powers in terms conferred. In other words, while the powers granted do not change, they apply from generation to generation to all things to which they are in their nature applicable. This in no manner abridges the fact of its changeless nature and meaning. Those things which are within its grants of power, as those grants were understood when made, are still within them, and those things not within them remain still excluded." (South Carolina *v.* U. S., 199 U. S., pp. 448–449.)

As all the States admitted since the adoption of the Constitution stand on an equal footing with the original thirteen, and as the meaning of the instrument itself has undergone no change, we may simplify the issue by reverting backward 125 years and asking ourselves a question. If it had been determined to be necessary to omit from the Constitution the provision as to bankruptcies in order to secure unanimous approval of the original thirteen States, could 10 of those States, within a month after the final adoption of the Constitution, have reinstated the provision as to bankruptcies in opposition to the wishes of the other three? The question answers itself.

And every question of present-day policies now regulated as a matter of State sovereignty stands upon the same footing.

The history of Article V of the Constitution, as set forth in Meig's Growth of the Constitution, pages 272–277, evidences the intention of its framers to confine the matter of constitutional amendments to matters already embraced in the instrument.

"Mason and Randolph urged the necessity of a provision for amendment, saying that the plan to be formed was sure to be defective, as the confederation had been found to be, and it was much better to provide for amending in a constitutional way than to trust to chance and violence."

The committee of detail, to which the matter was referred, reported a provision as follows:

"On the application of the legislatures of two-thirds of the States in the Union for an amendment of this Constitution the Legislature of the United States shall call a convention for that purpose."

This clause, which at first met with approval of the convention, was afterwards reconsidered on the ground that the National Legislature (as well as the States) should be empowered to initiate amendments.

Sherman suggested the proviso "but no amendments shall be binding until consented to by the several States." Subsequently it was proposed that two-thirds of the States might make amendments effective, which, being defeated, the three-fourths provision was proposed and carried.

Madison then proposed a substitute which is substantially the same as Article V as finally adopted, except that it did not contain the proviso which appears in said article. As to the proviso, the following significant action occurred:

"Rutledge said he could never agree to give a power by which the articles relating to slaves might be altered by the States not interested in that property," and he accordingly moved that no amendments which might be made prior to the year 1808 should in any manner affect those articles.

Rutledge and the two Pinckneys had strenuously contended against conferring upon the Federal Government the right to tax the importation of slaves, stating that their section of the country would never agree to the Constitution if such a right were given (p. 162). A tax, however, of not exceeding $10 having been incorporated in the draft, contrary to their views, and the year 1808 having been fixed as a time limit before which the importation of slaves should not be prohibited, Rutledge became quite solicitous that it might be proposed by amendment to alter these conditions; hence the proviso to Article V in regard to the slave traffic. Does this not show that Rutledge understood the subject of amendment as relating to things already embraced in the instrument? If he was solicitous about the mere importation of slaves, certainly he must have been more so that nothing should be done which would destroy property rights in slaves already within his State. Yet we find no suggestion from him that the Constitution should not be permitted to be amended so as to provide for their emancipation by a three-fourths vote. Clearly he regarded such a proceeding as wholly beyond the scope of the instrument which he was assisting in formulating. Had he entertained such fear, there was no reason why he might not have successfully proposed an additional proviso that permanent control of the slavery question should be guaranteed by the Constitution to the States respectively.

In Cohens *v.* Virginia (6 Wheat., 418) Chief Justice Marshall said: "Great weight has always been attached, and very rightly attached, to contemporaneous exposition. * * * The opinion of the Federalist has always been considered as of great authority. It is a complete commentary on our Constitution, and is appealed to by all parties in the questions to which that instrument has given birth. Its intrinsic merit entitles it to this high rank, and the part two of its authors performed in framing the Constitution put it very much in their power to explain the views with which it was framed."

Upon the subject of amending the Federal Constitution, Madison, in the Federalist (No. 43), said:

"That useful alterations will be suggested by experience could not but be foreseen. It was requisite, therefore, that a mode for introducing them should be provided. The mode preferred by the convention seems to be stamped with every mark of propriety. It guards equally against that extreme facility which would render the Constitution too mutable and that extreme difficulty which might perpetuate its discovered faults. It moreover equally enables the General and the State Governments to originate the amendment of errors as they may be pointed out by the experience on one side or the other." (Ford's edition of Federalist, p. 291.)

Upon the same subject Hamilton (No. 85) said:

"The compacts which are to embrace 13 distinct States in a common bond of amity and union must as necessarily be a compromise of as many dissimilar interests and inclinations. How can perfection spring from such materials? * * *

"It appears to me susceptible of absolute demonstration that it will be far more easy to obtain subsequent than previous amendments to the Constitution. The moment an *alteration* is made in the present plan it becomes, to the purpose of adoption, a new one, and must undergo a new decision of each State. To its complete establishment throughout the Union it will therefore require the concurrence of 13 States. If, on the contrary, the Constitution proposed should once be ratified by all the States as it stands, *alterations in it* may at any time be effected by 9 (10) States.

"In opposition to the probability of subsequent amendments it has been urged that the persons delegated to the administration of the National Government will always be disinclined to yield up any portion of the authority of which they were once possessed. For my own part, I acknowledge a thorough conviction that any amendments which may, upon mature consideration, be thought useful *will be applicable to the organization of the Government, not to the mass of its powers.*

"The zeal for attempts to amend prior to the establishment of the Constitution must abate in every man who is ready to accede to the truth of the following observations of a writer equally solid and ingenious: 'To balance a large state or society,' says he, 'whether monarchical or republican, on general laws is a work of so great difficulty that no human genius, however comprehensive, is able, by the mere dint of reason and reflection, to effect it. The judgments of many must unite in the work, experience must guide their labor, time must bring it to perfection, and the feeling of *inconveniences* must correct the *mistakes* which they inevitably fall into in their first trials and experiments.' [Quotation is from Hume's Essays.] These judicious reflections contain a lesson of moderation to all the sincere lovers of the Union and ought to put them upon their guard against hazarding anarchy, civil war, a perpetual alienation of the States from each other, and perhaps the military despotism of a victorious demagogue, in the pursuit of what they are not likely to obtain but from time and experience. * * * The establishment of a Constitution in time of profound peace, by the voluntary consent of the whole people, is a prodigy to the completion of which I look forward with trembling anxiety." (Ford's edition of Federalist, pp. 585–588.)

These extracts from the Federalist, especially in the passages in italics, show clearly that Madison and Hamilton, when they discussed the subject of amending the Constitution, had only in mind the curing of defects or faults in the instrument which was already before the people for ratification. Their purpose in writing was to defend the instrument. To have suggested that unsurrendered powers might be surrendered to the Federal Government by a three-fourths vote of the States would in the then state of public opinion have created sufficient apprehension to have insured rejection of the Constitution by many States.

THE FIRST 10 AMENDMENTS TO THE CONSTITUTION.

"The first 10 amendments to the Constitution, adopted, as they were, soon after the adoption of the Constitution, are in the nature of a bill of rights, and were adopted in order to quiet the apprehension of many that without some such declaration of rights the Government would assume, and might be held to possess, the power to trespass upon those rights of persons and property which by the Declaration of Independence were affirmed to be inalienable rights." (Monongahela Nav. Co. *v.* U. S., 148 U. S., 324.)

In submitting said amendments Congress thus prefaced its action:

"The conventions of a number of the States having at the time of their adoption of the Constitution expressed a desire, in order to prevent misconstruction or abuse of its powers, that further declaratory and restrictive clauses should be added, and as extending the ground of public confidence in the Government will best insure the beneficent ends of its institution," etc. (Taylor's American Constitution, p. 229.)

In Slaughter House cases (16 Wall., 72) the Supreme Court said:

"Twelve articles of amendment were added to the Federal Constitution soon after the original organization of the Government under it in 1789. Of these all but the last were adopted so soon afterwards as to justify the statement that they were practically contemporaneous with the adoption of the original; and the twelfth, adopted in 1803, was so nearly so as to have become like all the others—historical and of another age."

In Michie's Encyclopedia of United States Supreme Court Reports, volume 4, page 139, it is stated:

"The 10 amendments first ingrafted upon the Constitution had their origin in the apprehension that in the investment of powers made by that instrument in the Federal Government the safety of the States and their citizens had not been sufficiently guarded. These amendments were designed to be modifications of the powers vested in the Federal Government; their language is susceptible of no other rational, literal, or verbal acceptation, and it has been uniformly held that they impose limitations only upon the Federal Government and not upon the States."

In Pierce on Federal Usurpation, pages 25–26, it is said:

"The first 8 amendments to the Constitution enumerate popular rights, the origin of which can be traced to some event or series of events in English history where the right was won as the result of years of struggle. The Constitution of the United States creates none of these rights. Every one of these enumerated safeguards exist under the common law or under the constitution of each State, and the only result of their incorporation by amendment in the Constitution of the United States is as a restraint upon the action of the United States Government.

"Next it is important to observe that the ninth and tenth amendments to the Constitution preserve to the States all powers not delegated to the United States by the Constitution nor prohibited by it to the States, and that the enumeration of certain rights delegated to the National Government shall not be construed to deny or disparage others retained by the people.

"These amendments, say the United States Supreme Court in a recent case, were 'adopted with prescience' under 'fear that the National Government might, under the pressure of a supposed general welfare, attempt to exercise powers which had not been granted.'"

The tenth amendment to the Federal Constitution, declaring that the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people, is construed to mean that powers not expressly delegated to the United States are reserved to the States. (Cyc., vol. 8, p. 774, Padelford *v.* Savannah, 14 Ga., 438.)

Control of the liquor traffic was not delegated to the United States by the Constitution, and since the adoption of that instrument has been continuously and variously regulated by the respective States com-

posing the Union. It was therefore one of the powers reserved to the States.

Conceding for the sake of argument that Article V might be broadly construed as authorizing amendments upon subjects foreign to the Constitution, the tenth amendment, so far as rights reserved to the States are concerned, controls and sets discussion at rest.

In the case of Schick *v.* United States (195 U. S., 65) there was a suggestion that the provision in the original Constitution that the "trial of all crimes, except in cases of impeachment, shall be by jury," and the provision in the sixth amendment that the accused, in every criminal prosecution "shall enjoy the right to a speedy and public trial, by an impartial jury," etc., conflicted, as affecting the right of waiver of jury trial, and on this point the Supreme Court, in passing, said:

"If there be any conflict between these two provisions, the one found in the amendments must control, under the well-understood rule that the last expression of the will of the lawmaker prevails over an earlier one." (See pp. 68 and 78.)

Under this dictum the tenth amendment controls Article V of the original instrument in any matter where the rights reserved to the States may be involved, and in the simplicity of its wording it wholly negatives the idea that three-fourths of the States may surrender new powers to the Federal Government in derogation of the rights of the remaining one-fourth. When it says, "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people," it can mean nothing else than that each State has an equal right to say what powers shall be surrendered. It also necessarily means that no powers now exercised by the States can be surrendered to the Federal Government save by unanimous consent. As said by the United States Supreme Court in Cohens *v.* Virginia (6 Wheat., 389):

"The people made the Constitution, and the people can unmake it. It is the creature of their own will, and lives only by their will. But this supreme and irresistible power to make or unmake resides only in the whole body of the people; not in any subdivision of them. The attempt of any of the parts to exercise it is usurpation and ought to be repelled by those to whom the people have delegated their power of repealing it."

The caption of the amendments to the Constitution is as follows: "Articles in addition to and amendment of the Constitution of the United States of America."

Madison's plan was to incorporate the first set of amendments to the Constitution in their proper places, and not to add them in a body at the close. He thought this would be neater and make their meaning plainer. Sherman objected to the insertion of the amendments in the body of the instrument, because he thought they should appear in supplementary form, as a body of changes at the close. Clymer, mindful of the labors of the Federal convention, urged that its work be left intact, and that the amendments be added at its close. Stone, of Maryland, said that if the amendments were incorporated in the original instrument it would appear that George Washington and other worthy characters had signed something which they never had in contemplation. Gerry agreed with Madison's view that they should be incorporated in the body of the instrument. Sherman made a motion to add the amendments as a body at the close of the Constitution, which was defeated. Later, however, he renewed his motion to add them by way of supplement instead of incorporating them, and the motion on this occasion carried by two-thirds vote. (Thorpe's Constitutional History of the United States, vol. 2, pp. 216, 228, 229, 230, 232, 250.)

The foregoing clearly shows that the use of the expression, "in addition to," was intended more as a line of demarcation between the old and the new, rather than as suggesting that an amendment to the Constitution may consist of the "addition" of matter extraneous to the purposes of the original instrument.

While there is no evidence on the journals of Congress that the legislatures of Connecticut, Georgia, and Massachusetts ratified the first 10 amendments (Taylor's American Constitution, p. 637), it appears that said amendments had their origin with the States and met with no opposition from any source. They therefore afford no precedent for the adoption of an amendment by three-fourths vote, which involves the surrender of rights hitherto exercised by the respective States, and concerning which there may be radical differences of opinion.

THE ELEVENTH AND TWELFTH AMENDMENTS.

The first of these amendments related to the judicial power of the United States; the second to the mode of election of the President and Vice President of the United States. Both were true amendments, as they relate to matters embraced in the original instrument.

THE THIRTEENTH, FOURTEENTH, AND FIFTEENTH AMENDMENTS.

The history of these three amendments is thus set forth by Justice Miller in Slaughter House cases (16 Wall., 68–71):

"The institution of African slavery as it existed in about half the States of the Union and the contests pervading the public mind for many years between those who desired its curtailment and ultimate extinction and those who desired additional safeguards for its security and perpetuation culminated in the effort, on the part of most of the States in which slavery existed, to separate from the Federal Government and to resist its authority. This constituted the War of the Rebellion, and whatever auxiliary causes may have been contributed to bring about this war, undoubtedly the overshadowing and efficient cause was African slavery. In that struggle slavery as a legalized social relation perished. It perished as a necessity of the bitterness and force of the conflict. * * *

"The proclamation of President Lincoln expressed an accomplished fact as to a large portion of the insurrectionary districts when he declared slavery abolished in them all. But the war being over, those who had succeeded in reestablishing the authority of the Federal Government were not content to permit this great act of emancipation to rest on the actual results of the contest or the proclamation of the Executive, both of which might have been questioned in aftertimes, and they determined to place this main and most valuable result in the Constitution of the restored Union as one of its fundamental articles. Hence the thirteenth article of amendment to that instrument. * * *

"The process of restoring to their proper relations with the Federal Government and with the other States those which had sided with the rebellion, undertaken under the proclamation of President Johnson in 1865 and before the assembling of Congress, developed the fact that notwithstanding the formal recognition by those States of the abolition of slavery the condition of the slave race would, without further protection of the Federal Government, be almost as bad as it was before. Among the first acts of legislation adopted by several of the States in the legislative bodies which claimed to be in their normal relations with the Federal Government were laws which imposed upon the colored race onerous disabilities and burdens," etc.

"These circumstances, whatever of falsehood or misconception, may have been mingled with their presentation, forced upon the statesmen who had conducted the Federal Government in safety through the crises of the rebellion and who supposed that by the thirteenth article of amendment they had secured the result of their labors the conviction that something more was necessary in the way of constitutional protection to the unfortunate race who had suffered so much. They accordingly passed through Congress the proposition for the fourteenth amendment, and they declined to treat as restored to their full participation in the Government of the Union the States which had been in insurrection until they ratified that article by a formal vote of their legislative bodies.

"A few years' experience satisfied the thoughtful men who had been the authors of the other two amendments that notwithstanding the restraints of those articles on the States, and the laws passed under the additional powers granted to Congress, these were inadequate for the protection of life, liberty, and property, without which freedom to the slave was no boon. They were in all those States denied the right of suffrage. The laws were administered by the white man alone. It was urged that a race of men distinctively marked as was the negro, living in the midst of another and dominant race, could never be fully secured in their person and their property without the right of suffrage. Hence the fifteenth amendment. * * *

"We repeat, then, in the light of this recapitulation of events, almost too recent to be called history (i. e., as of Apr. 14, 1873), but which are familiar to us all, and on the most casual examination of the language of these amendments, no one can fail to be impressed with the one pervading purpose found in them all, lying at the foundation of each, and without which none of them would have been even suggested; we mean the freedom of the slave race, the security and firm establishment of that freedom, and the protection of the newly made freeman and citizen from the oppressions of those who had formerly exercised unlimited dominion over him."

The three amendments are known as the "war amendments."

The thirteenth, which is called the emancipation amendment, was ratified, according to the proclamation of the Secretary of State, dated December 18, 1865, by the legislatures of 27 States. Six other States also ratified it. Alabama ratified the amendment "with the understanding that it did not confer upon Congress the power to legislate upon the political status of freedom in the State." Kentucky rejected the thirteenth amendment, and did not legally abolish slavery within its borders until the adoption of its present constitution—about 25 years later. The thirteenth amendment was also rejected by Delaware, the general assembly of that State pronouncing the proposed amendment "a violation of the reserved rights of the several States, contrary to the principle upon which the Government was formed," and, taking the action of Delaware as a precedent, Mississippi also refused to ratify. (Thorpe's Constitutional History of United States, vol. 3, pp. 200, 201 (Ala.), 197 (Miss.), 230 (Ky.), 320 (Del.); Taylor's American Constitution, pp. 651, 652.)

The proposal for the abolition of slavery by constitutional amendment was first proposed in the Thirty-eighth Congress in 1863. It passed the Senate, but failed to pass the House by the required two-thirds. The discussion of the proposal was characterized by spirited debate, those favoring the amendment discussing it from a moral standpoint, those opposing it discussing it from a legal standpoint as an infringement of the reserved rights of the States.

Senator Saulsbury, of Delaware, denied the constitutional authority of the General Government to interfere with the rights of property, which the amendment must do. Even if ratified by the requisite number of States, it would not be binding upon others that refused their assent, for slavery was a domestic, a State institution.

"The time for such an amendment is come," was the brief reply of Senator Clark, of New Hampshire. (Thorpe's Constitutional History of United States, vol. 3, pp. 130, 131.)

In the House it was argued by Representative Anson Herrick, of New York, that the resolution struck at the original compact between the States; that it was to be forced through by a political dynasty; and that the slavery issue, which the resolution sought to settle by immediate abolition, was legitimately merged in the higher issue of the right of the States to control their domestic affairs. (Thorpe's Constitutional History of United States, vol. 3, pp. 138, 139.)

By Representative Pruyn, of New York, it was argued that for the first time in our history it was proposed to make a change in the Constitution which, if effective, would interfere with the reserved rights of the States. Could three-fourths, under the power of the amendment, overturn the institutions, subvert the authority, and change the condition of the other States? If so, the States might as well have surrendered all their sovereignty to the General Government at the outset, and the tenth amendment, declaratory of their reserved rights, was meaningless. (Thorpe's Constitutional History of United States, vol. 3, p. 139.)

"The real question," said Fernando Wood, "was whether the whole structure and theory of our Government should be altered by changing its basis. It was not the time while in the midst of a fearful civil war to change the organic law. The amendment was especially objectionable because it made social interests the subject of governmental action. It was, moreover, a breach of good faith with the States and utterly inexpedient." (Thorpe's Constitutional History of United States, vol. 3, p. 139.)

On June 15, 1864, the House voted upon the resolution, but it failed to receive the required two-thirds. During the roll call Mr. Ashley, who had introduced the original resolution, foreseeing the end, changed his vote from the affirmative to the negative for the purpose of submitting at the proper time a motion to reconsider.

Just a week before the vote was taken the Republican national convention at Baltimore adjourned. Its delegates were in closer touch with public opinion than the House of Representatives. In calling it to order Senator Edwin D. Morgan, of New York, chairman of the national executive committee, told the convention that it would fall short of accomplishing its great mission unless it should declare for an amendment to the Constitution prohibiting slavery. This utterance was received with prolonged applause, but enthusiasm would have been greater had the delegates known that Lincoln was the author of the suggestion. However, it at once captivated the delegates. They responded to the appeal of the Rev. Dr. Robert J. Breckenridge, a delegate from Kentucky, that the whole power of the Government, both for war and peace, and all the practical power that the people of the United States would give them should be applied to "exterminate and extinguish slavery." The plank in the platform favoring the constitutional amendment, the natural effect of a controlling idea, it

was soon known, originated with Lincoln. (Thorpe's Constitutional History of United States, vol. 3, pp. 141, 142.)

When Congress reconvened in December, 1864, Mr. Ashley promptly gave notice that he would move to reconsider the vote upon the joint resolution providing for constitutional abolishment of slavery. It is said that he made a "powerful" speech, in which he pronounced slavery wrong and criminal; in which he claimed that the States might adopt "any" amendment to the Constitution so long as it did not affect the equality of the States in the Senate and the apportionment of direct taxes, concluding with the following absolutely untrue and astonishing statement: "Nowhere did the Constitution clothe the States with the attribute of a sovereign power; but, on the contrary, rigorously maintained the supreme authority of the National Government." (Thorpe's Constitutional History of United States, vol. 3, pp. 144, 145.)

The principal objection to the amendment was uttered by George H. Pendleton, of Ohio, the recently defeated candidate for Vice President and the leader of his party in the House. The amendment should be rejected, he said, because republicanism lies at the very foundation of our system of government; to overthrow that idea would be not to amend but to subvert the Constitution. If three-fourths of the States should undertake to pass the amendment and one State dissented, it would have a right to resist by force. Could three-fourths of the States make an amendment which should prohibit a State from having two houses in its legislature? Yet this was not prohibited in the Constitution. Equality of the States in the control of their internal affairs was at the foundation of our system; three-fourths of the States could not amend the Constitution so as to make one-fourth bear all the taxes or to divide the territory of one-fourth among the rest or to make the Northern States slave holding, yet none of these things were forbidden by the Constitution. (Thorpe's Constitutional History of United States, vol. 3, pp. 149, 150.)

And then Thorpe states:

"The only answer that could be made to this argument was founded on an entirely different interpretation of the origin, the scope, and the nature of the National Government than that which Pendleton and his political associates maintained. It was the answer which Mr. Ashley gave at the opening of the debate."

To one accustomed to strict reasoning, the answer which Mr. Ashley gave, and which has been fully outlined herein, does not constitute a satisfactory reply to the argument of Mr. Pendleton.

As already stated, the thirteenth amendment was suggested by President Lincoln. And yet, in his negotiations with Members of Congress in connection with his compensatory emancipation plan, which he advocated in his message of March, 1862, he said that "emancipation is a subject exclusively under the control of the States, and must be adopted or rejected by each for itself."

On January 31, 1865, the House reconsidered its action of the previous June, and by a large majority adopted the resolution favoring the thirteenth amendment.

The fourteenth amendment is known as the reconstruction amendment. It is partly amendatory and partly an addition to the Constitution. It was proposed and passed, as already explained, as part of the program for emancipation of the negro race. It was rejected by Delaware, Maryland, Kentucky, and California. It was at first either rejected or ignored by the Southern States, but under the reconstruction acts of 1867 they were forced to ratify. The reconstruction acts applied to Virginia, North Carolina, South Carolina, Georgia, Mississippi, Alabama, Louisiana, Florida, Arkansas, and Texas. (Thorpe's Constitutional History of the United States, vol. 3, pp. 325, 329, 394.)

The fifteenth amendment was also an addition rather than an amendment, though it mingled the qualities of both, for it clearly changed the provision in the Constitution respecting the unlimited power of each State to prescribe qualifications for electors (Art. I, sec. 2, cl. 1). (Thorpe's Constitutional History of the United States, vol. 3, p. 515.)

It was rejected by California, Delaware, Kentucky, Maryland, Oregon, and Tennessee. (Thorpe's Constitutional History of the United States, vol. 3, p. 455.)

The foregoing extended review of the three war amendments demonstrates the following:

First. All met with opposition, and not one received a unanimous vote.

Second. They each involved an invasion of the reserved rights of the States, and this fact was known to and exhaustively argued by leaders in national councils.

Third. Their addition to the Constitution was wholly the result of the Civil War, and such a disregard of the reserved rights of the States would not have been countenanced in times of peace.

Fourth. When the fourteenth amendment was adopted there were 37 States in the Union, 14 of which were opposed to the amendment. But for the involuntary consent of the 10 Southern States, brought about by the reconstruction acts, the three-fourths requisite for ratification could not have been secured.

Fifth. Though it can not be denied that the thirteenth, fourteenth, and fifteenth amendments infringed the reserved rights of the States, the incorporation of said amendments in the Constitution affords no precedent in times of peace for a further invasion of the reserved rights of the States.

The usurpation of power on the part of the National Government which was involved in the freeing of the slaves and which was admitted by President Lincoln, and which was fully argued by prominent Members of both the Senate and the House in connection with the thirteenth amendment, manifested itself throughout the entire period of reconstruction. The following is an interesting commentary upon the spirit of the times:

"During the period between 1789, when the First Congress under the Constitution convened, and 1863, the United States Supreme Court had declared only 2 statutes unconstitutional. * * * Between the years 1863 and 1870, 11 statutes were passed by Congress which were declared unconstitutional by the Supreme Court of the United States. During the same period examination by the Supreme Court of several congressional statutes was prevented by acts of Congress repealing the law allowing appeals to that court. So that during 74 years of the history of the country, between 1789 and 1863, the United States Supreme Court declared 2 congressional acts unconstitutional, while from 1863 to 1870, a period of only 7 years, 11 statutes were declared unconstitutional, and many more would have been declared unconstitutional had the court ever had opportunity to pass upon them.

"No facts could more strongly demonstrate that this era of the latter part of the Civil War and the reconstruction period was an era of usurpation than the decisions of the highest court that so many statutes passed in that period were void as usurping the rights of the several States." (Pierce on Federal Usurpation, pp. 72, 73; D. Appleton & Co., 1908).

THE SIXTEENTH AND SEVENTEENTH AMENDMENTS.

These amendments, respectively, relate to the income tax and to the popular election of Senators, and are true amendments of matters embraced in the original instrument.

EXPRESSIONS OF THE UNITED STATES SUPREME COURT BEARING UPON THE POWER TO AMEND THE CONSTITUTION AND UPON THE FEDERAL POWER IN GENERAL.

In the case of Dred Scott *v.* Sanford (19 How., 411, 426), decided four years previous to the Civil War, Chief Justice Taney said:

"But there are two clauses in the Constitution which point directly and specifically to the negro race as a separate class of persons, and show clearly that they were not regarded as a portion of the people or citizens of the Government then formed.

"One of these clauses reserves to each of the 13 States the right to import slaves until the year 1808, if it thinks proper. * * * And by the other provision the States pledge themselves to each other to maintain the right of property of the master by delivering up to him any slave who may have escaped from his service and be found within their respective territories.

* * * * * * *

"The Government of the United States had no right to interfere for any other purpose but that of protecting the rights of the owner, leaving it altogether with the several States to deal with this race, whether emancipated or not, as each State may think justice, humanity, and the interests and safety of society require. The States evidently intended to reserve this power exclusively to themselves.

"No one, we presume, suppose that any change in public opinion or feeling in relation to this unfortunate race in the civilized nations of Europe or in this country should induce the court to give to the words of the Constitution a more liberal construction in their favor than they were intended to bear when the instrument was framed and adopted. Such an argument would be altogether inadmissible in any tribunal called on to interpret it. If any of its provisions are deemed unjust, there is a mode prescribed in the instrument itself by which it may be amended; but while it remains unaltered it must be construed now as it was understood at the time of its adoption."

The inferenece to be drawn from these expressions is that the provision that fugitive slaves should be surrendered to their masters was susceptible of amendment in the mode prescribed by the Constitution, so that it might no longer be required that such escaping slaves be surrendered. This would be a true amendment of matter already embraced, not involving a surrender of any of the reserved rights of the States.

In Kansas *v.* Colorado (206 U. S., 46–118), decided by Mr. Justice Brewer May 13, 1907, certain expressions occur which would doubtless be cited in any argument that may be made in favor of the proposed amendment. A brief reference to that case is therefore appropriate.

The suit of Kansas against Colorado involved the reclamation of lands in Colorado by use of water from the Arkansas River. Colorado, it was claimed, had made such appropriation of the water that owners of lands in Kansas adjacent to said river had been injured by the action of Colorado. The United States intervened in the case, claiming that the determination of the rights of the two States inter sese in regard to the flow of waters in the Arkansas River was subordinate to a superior right on the part of the National Government to control the whole matter of reclamation of arid lands, basing its argument upon the ground that legislative power affecting a subject, national in its scope, could not be exercised by the States, and that therefore such power must have been reposed in Congress.

The Supreme Court held that no such general power over arid lands had been conferred on the National Government, and that it could not assume to exercise such a power in derogation of the control that might be exercised by Colorado or Kansas over the subject.

The reclamation of arid lands by use of water from rivers flowing through many States is inherently a matter which can not be most efficiently controlled by conflicting action of the States. And in this respect it bears analogy to the subjects of interstate commerce and post offices and post roads, both of which subjects are confided by the Constitution to exclusive control of the National Government.

In replying to the argument of counsel for the Government that Congress should control the matter the court took occasion to construe the tenth amendment to the Constitution, which reads:

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people."

In this connection, the court said:

"The argument of counsel (for the Government) ignores the principal factor in this article, to wit, 'the people.' Its principal purpose was not the distribution of power between the United States and the States, but a reservation to the people of all powers not granted. The preamble of the Constitution declares who framed it, 'We, the people of the United States,' not the people of one State, but the people of all the States; and Article X reserves to the people of all the States the powers not delegated to the United States. The powers affecting the internal affairs of the States not granted to the United States by the Constitution nor prohibited by it to the States are reserved to the States, respectively, and all powers of a national character which are not delegated to the National Government by the Constitution are reserved to the people of the United States."

Evidently the court regarded the matter of control over reclamation of arid lands as of a "national character" and not as merely affecting the "internal affairs" of the States. Hence it was a power which, not being delegated to the National Government, was reserved to the people and not to the States.

The court then proceeded as follows:

"The people who adopted the Constitution knew that in the nature of things they could not foresee all the questions which might arise in the future, all the circumstances which might call for the exercise of further national powers than those granted to the United States, and, after making provision for an amendment to the Constitution, by which any needed additional powers would be granted, they reserved to themselves all powers not so delegated."

It will be noted that this language was used solely with respect to powers of a "national character" and had no reference to that class of powers which relate to what the court termed the "internal affairs" of the States.

Under the contentions hereinbefore made the bestowal upon the Federal Government of further powers, even of a "national character," would, in strict parlance, constitute a supplement and not an amendment to the Constitution. While the procedure prescribed by the Constitution for amendments by three-fourths vote of the States would seem peculiarly inappropriate in connection with the surrender to the

National Government of a right which had been reserved to all the people (as contradistinguished from the States), nevertheless such procedure would have the practical effect of determining whether a majority of the people favored surrender of the right; and as the Constitution contains no provision that two-thirds or three-fourths or any other percentage of the people is essential to the surrender of a right of "national character," presumably the majority would control and correct results be obtained by application of the rule as to a three-fourths vote of the States. But in the case of proposed surrender of a power which affects the "internal affairs" of the States, and which by the tenth amendment is reserved to the States respectively, it is impossible to conceive how such surrender—whether it be termed an amendment or a supplement—can be effected by a three-fourths vote, especially when it is considered that such subjects as naturalization, bankruptcies, patents and copyrights, and control of post offices and post roads were surrendered only by unanimous consent of the original thirteen States, and would each and all have failed to be incorporated in the Constitution had any State objected.

However, the expression used by Justice Brewer in Kansas against Colorado are merely obiter, and were not based upon the record or argument in an actual case involving an attempt to confer upon the Federal Government powers of a "national character" by three-fourths vote of the States. It had been repeatedly held by the Supreme Court that it will not undertake to volunteer opinions on constitutional questions where no case is presented directly involving them. (Michie's Enc. of U. S. Sup. Ct. Repts., vol 12, pp. 303, 304, and cases cited.)

We therefore have the court's own word for the assertion that what may have been said by it in Kansas against Colorado, so far as it relates to the subject of constitutional amendment, was not intended by it as a final utterance. At all events it has as yet said nothing in any case, either by way of obiter or otherwise, which would indicate that a power affecting the "internal affairs" of a State can, except possibly as a war measure, be surrendered by a three-fourths vote.

In the case of Hodges *v.* United States (203 U. S., 19) the Supreme Court, speaking of the thirteenth, fourteenth, and fifteenth amendments, said:

"One thing more, at the close of the Civil War, when the problem of the emancipated slaves was before the Nation, it might have left them in a condition of alienage or established them as wards of the Government, like the Indian tribes, and thus retained for the Nation jurisdiction over them, or it might, as it did, give them citizenship. It chose the latter. By the fourteenth amendment, it made citizens of all born within the limits of the United States and subject to its jurisdiction. By the fifteenth amendment, it prohibited any State from denying the right of suffrage on account of race, color, or previous condition of servitude, and by the thirteenth, it forbade slavery or involuntary servitude anywhere within the limits of the land. Whether this was or was not the wiser way to deal with the great problem is not a matter for the courts to consider."

Certainly it could never say that the constitutionality of an amendment providing for national prohibition "is not a matter for the courts to consider"; and we therefore find in this utterance a differentiation by the Supreme Court itself between the war amendments and all others which may in future be proposed.

In speaking of the power of Congress to make laws for the suppression of insurrections and the duty of the President to execute them—and unquestionably such validity as may be imputed to the thirteenth, fourteenth, and fifteenth amendments stands largely upon the same footing—the Supreme Court in Stewart *v.* Kahn (11 Wall., 507), said that the power is not limited to victories in the field and the dispersion of insurgent forces, but carries with it inherently the power to guard against immediate renewal of the conflict and to remedy the evils which have arisen from its rise and progress, and the court held that an act of Congress enlarging the statute of limitations on account of war was a beneficent exercise of this authority.

In White *v.* Hart (13 Wall., 651), the court said:

"The power exercised in putting down the late rebellion is given expressly by the Constitution to Congress. That body made the laws and the President executed them. The granted power carried with it not only the right to use the requisite means, but it reached further and carried with it also authority to guard against the renewal of the conflict, and to remedy the evils arising from it in so far as that could be effected by appropriate legislation. At no time were the rebellion States out of the pale of the Union. Their rights under the Constitution were suspended, but not destroyed. Their constitutional duties and obligations were unaffected and remained the same."

To the same effect is the conclusion of the opinion in Slaughter House cases (16 Wall., p. 82):

"The adoption of the first 11 amendments to the Constitution so soon after the original instrument was accepted shows a prevailing sense of danger at that time from the Federal power. And it can not be denied that such a jealousy continued to exist with many patriotic men until the breaking out of the late Civil War. It was then discovered that the true danger to the perpetuity of the Union was in the capacity of the State organizations to combine and concentrate all the powers of the State, and of contiguous States, for a determined resistance to the General Government.

"Unquestionably this has given great force to the argument and added largely to the number of those who believe in the necessity of a strong National Government.

"But however pervading this sentiment, and however it may have contributed to the adoption of the amendments we have been considering—viz, the thirteenth, fourteenth, and fifteenth—we do not see in those amendments any purpose to destroy the main features of the general system. Under the pressure of all the excited feeling growing out of the war, our statesmen have still believed that the existence of the States with powers for domestic and local government, including the regulation of civil rights, the rights of person and of property, was essential to the perfect working of our complex form of government, though they have thought proper to impose additional limitations on the States and to confer additional power on that of the Nation.

"But whatever fluctuations may be seen in the history of public opinion on this subject during the period of our national existence, we think it will be found that this court, so far as its functions required, has always held with a steady and an even hand the balance between the State and Federal power, and we trust that such may continue to be the history of its relation to that subject so long as it shall have duties to perform which demand of it a construction of the Constitution or of any of its parts."

CONCLUSION.

From the foregoing the following conclusions may be deduced:

The liquor traffic has been from the beginning, and is now, recognized as subject to control by the States, respectively.

The States can not be deprived of the right to regulate this traffic by a constitutional amendment adopted by three-fourths vote.

The word "amend," used in a legal sense, is not synonymous with "supplement," but has reference to the correction of defects or deficiencies, errors or mistakes, or to alterations for the better in something which already has existence and to which the amendment is germane.

Every power originally delegated to the Federal Government by the States was conferred by unanimous consent.

The history of Article V in the convention, as well as the discussions by Hamilton and Madison in the Federalist, unquestionably show that its purpose was to provide a simple method for rectification of faults in the Constitution as adopted, which the inconveniences of experience alone could demonstrate.

The first 10 amendments constituted a Bill of Rights, intended to safeguard the people and the States.

Conceding, for the sake of argument, that Article V, standing alone, might have been construed as authorizing surrender by the States of reserved rights upon a three-fourths vote, the tenth amendment controls and sets discussion at rest, the amendment being later in point of time than Article V.

The thirteenth amendment, the first of the war amendments, was admitted by leaders in Congress and was known to President Lincoln to constitute an invasion of the reserved rights of the States, and its validity, as well as that of the fourteenth and fifteenth amendments, has been sustained only as an exercise of the war power.

The thirteenth, fourteenth, and fifteenth amendments constitute no precedent for further invasion of the reserved rights of the States in times of peace.

The "general-welfare" provision of the preamble can not be utilized as a pretext for a prohibition amendment, it having been expressly held by the Supreme Court that the preamble to the Constitution is not a grant of powers.

Upon the restoration to the Union of the Southern States the relations between the States and the National Government became the same as they were previous to the Civil War, with the exception of the additional powers which had been conferred upon and exercised by the National Government as a result of the war.

The inherent right of the people or the States to make such additions to the Federal Constitution as they please by unanimous consent is not in terms incorporated in the Constitution, but it was to all intents and purposes exercised with respect to the first 10 amendments and can be again as readily exercised.

The phrase "Articles in addition to and amendment of the Constitution of the United States of America," which appears as a caption to the amendments, had its origin in the discussions as to the first 10 amendments and the desire to avoid confusion on the part of the States in considering said amendments, as well as to avoid mutilation of a historic document. It should not be coupled with the thirteenth, fourteenth, and fifteenth amendments as a justification of their addition to the Constitution.

If the Constitution is to be amended by a three-fourths vote of the States so as to provide for national prohibition, it might at the same time also be very appropriately amended by similar procedure so as to provide for uniform national laws upon the subject of marriage and divorce, and thus more completely confide to national supervision the question of morality among citizens of the United States. The latter amendment would be quite as feasible as the first.

Prohibition from Economical Standpoint.

EXTENSION OF REMARKS

OF

HON. MICHAEL J. GILL,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 22, 1914.

Mr. GILL. Mr. Speaker—

First. The prohibition question is a corrective and not an economic problem in itself.

Second. Usually agitated by communities distinctively agricultural in economic base, and is not acquainted with the fierce struggle for existence always present in industrial centers where masses of workingmen work in conjunction with masses of capital.

Third. Usually agitated by communities actuated by moral motives only rather than the economic motives so ever-present in our now complex industrial centers.

Fourth. Being only moral in its aspect, it overlooks that very essential element in our industrial life which makes for, first, employment for labor, and, second, capital invested in legitimate enterprises in the various walks of industry.

Fifth. Being overzealous from a purely moral motive, the advocates for prohibition are actually gloating at the prospect of destroying ruthlessly large industrial enterprises, with no concern whatever as to what becomes of the workingmen thrown out of work by their fanatic zeal. They also feel a savage glee at the destruction of millions of dollars of invested capital.

Sixth. As a representative of labor on this floor, I am proud to stand in unison with my old associate and coworker, Samuel Gompers, of the American Federation of Labor, and state with added emphasis that it would be far better, far more wise, more moral, and a thousand times more desirable to take the position of organized labor on this question and insist on—

(a) Increasing wages,

(b) Shorter hours of work,

(c) More leisure, so as to afford an opportunity for the cultivation of—

(1) Better tastes,
(2) Better aspirations,
(3) Higher ideals,
(4) Better standard of living,
(5) Freedom from the burdens of excessive toil,
(6) Better homes and surroundings for the poor—

than try to effect by statutory law that which must come from the ever-expanding consciousness of a world's people.

In the meantime we must not and dare not anticipate experience. That which is wise and needed now is to do that which our common needs as a great industrial Nation suggests, namely:

First. Jealously guard our commercial credit, to the end that its millions of invested capital be not ruthlessly struck down.

Second. Keep in safe condition that enormous wage fund in the hands of legitimate capital, to the end that labor's employment be secured against wild-eyed agitation.

Third. The equilibrium of our Nation's economic life must not be overburdened with another and altogether unnecessary addition to the problem of economic administration.

Fourth. At a time of a great European war we, as a peaceful Nation, must try to cooperate with our President in keeping our ship of state as free as possible from internal as well as external disturbance. I surely do regard this prohibition as a movement which will disturb our business and economic life far beyond the endurance point, and, in the name of American labor, I ask this Congress to consider its acts seriously before it hurls another bolt at the stability and integrity of our economic structure.

District of Columbia Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. WILLIAM A. CULLOP,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,

Friday, December 11, 1914,

On the bill (H. R. 19422) making appropriations to provide for the expenses of the government of the District of Columbia for the fiscal year ending June 30, 1916, and for other purposes.

Mr. CULLOP. Mr. Speaker, the national administration deserves and is receiving the commendation of the people of this country, irrespective of party affiliations, for its wise, courageous, and conservative course. It has been confronted with great problems, the like of which has not been presented for solution to any other administration. Be it said to its credit that it has handled these great questions of vital importance to the people composing this great Nation with courage, ability, and satisfaction, and we are now beginning to realize what a great and good work it has performed and how valuable it has been to the entire country. Always a revision of the tariff, either upward or downward, necessarily disturbs the business of the country, because it changes conditions, and business must have and requires time to adjust itself to the new conditions thereby created. This great work was accomplished with less friction than is usual under such circumstances. The reason for this is because the changes were made in accordance with intelligent and impartial investigation as to the conditions existing with reference to the changes made in the various schedules revised. In other words, experts carefully and fairly investigated the facts in regard to the cost of production at home and abroad and the scope of competition encountered. These are always essential facts to be taken into consideration in the enactment of tariff schedules, and when impartially exercised a revision can be made without serious disturbance of any legitimate business affected by it, and hence the satisfactory result in this instance.

The reformation of the banking and currency system of any country is always attended with apprehension. It is a most sensitive thing to deal with, and any change is viewed with alarm, because it reaches and ramifies every department of business throughout the entire country and affects every individual, regardless of locality or calling. For years the business of the country required, if not demanded, the reformation of this most important function of our Government, and yet conditions were such that every attempt had proven futile, and whatever partial reforms were attempted had proven for the worse instead of the better. Fortunate for this administration it had come into power free from all entangling alliances, and thereupon was obligated to serve no special business, combination, or interest save the people alone, and hence it could act freely and independently of all interests in making this much-needed reform, and did it with wise, conservative, and impartial legislation. It had a single object in view, to construct a financial system that would answer the purpose under the strain of danger and perils to business, that would meet the requirements where others had failed, that would emancipate the country's finances from the control of selfish individuals who could convert it at pleasure to their immediate benefit at the expense of business, industry, and commerce. This it has done with phenomenal success and earned the gratitude of millions struggling to develop and operate the business of our country. It has founded the currency system upon our assets, instead of our liabilities, as was formerly the case; upon what we own, instead of what we owe; it has made it possible to pay our public debt, which under the former system could not have been done without wiping out of existence our bank-note circulation, and thereby contracting the amount of our circulating medium, reducing the amount per capita to such a minimum that the remainder would be inadequate to transact the business of the country, and thereby prevent the expansion of our ever-growing industrial, mercantile, and commercial development, upon which we must depend if our people sustain their prestige among the people of other nations. It has transferred the control of the finances of the country from a few men in Wall Street, who manipulated them for personal aggrandizement, to the Government at Washington, where they are to be controlled in the interests of the entire public, free from selfishness or at the expense of any legitimate business, a currency which can be expanded or contracted as the requirements of the country make necessary. This great piece of constructive legislation is the greatest act of the administration and the one which will prove more beneficial than any legislation enacted for years to the people of this great Republic.

On the 1st of last August war broke out in Europe without notice or previous warning, and in less than one week from that date eight of the leading countries of Europe had made formal declarations of war; and from that date to this it has been such a war as all the past has never witnessed, and we hope all the future will not be called to witness its like. It is costing the nations involved about $54,000,000 per day to pay the expense of maintaining the armies. No one would attempt to approximate the cost for destruction of property, waste, and loss of trade. It will take time to ascertain these items of expense and and the amounts thereof. These will be enormous, as it is the most destructive war ever known. At the time the war broke out European parties owned at least $4,000,000,000 of American securities, all payable in gold, as specified in the securities. The holders of these securities, alarmed over the conditions created because of the great war, naturally enough were desirous of converting these securities into cash and desired doubtless to present them for payment where opportunity was offered. Our entire gold supply, much the largest of any nation in the world, amounted to about one and seven-eighths billion dollars, a sum much smaller than the securities outstanding. So that if all these securities had been presented and payment in gold demanded, our gold holdings would have been wholly inadequate to pay them. This presented the most serious condition that ever confronted a nation. It took courage, ability, and confidence to meet and handle the situation, but it was both wisely and ably done, and disaster of the most serious and far-reaching character was averted. Under our old banking and currency laws it could not have been done. Men of less courage, ability, and patriotism would have faltered and failed. The years of 1893 and 1907, serious and destructive as those situations were, presented no such dangers as were threatened in the crisis of August 1, 1914. But the dangers that day presented were averted and the people relying upon the administration patiently confided in it for escape from the disasters about to be visited upon them. It was equal to the task, able to cope with the emergencies, control the situation, and avoided the calamity quite ready to fall upon the people, until now the danger is passed, the ominous clouds have rolled away, and the dawn of a better era is visible all over our broad land.

Look at the situation from any angle we may, consider it from any viewpoint, and the inevitable conclusion is forced upon us that we are entering upon the most marvelous period of prosperity in the business history of the entire country. The war in Europe has done for our manufacturers what a protective tariff would never do—it has cut off entirely imports from the countries which were our greatest competitors and given us our home markets unmolested, and thrown open to us the ports of other countries practically freed from competition with our greatest rivals. This is the golden opportunity for our

manufacturers, for our producers, and it is up to them to either grasp it and reap the great harvest or let it pass by. With bountiful crops of golden grain harvested from our millions of farms, with both domestic and foreign demand unparalleled, commanding the highest of prices for everything the farmer produces, with more money per capita in circulation than ever known hitherto, how could it be otherwise than a period of unbounded prosperity? The way is blazed out, the opportunity is looking every man in the face and beckoning him on to enjoy the goal. Shall we seize the opportunity or shall we push it aside? It is up to the people. Knocking for admittance, shall we open the door and bid it welcome, or shall we close it and tell it to pass us by? If we would enjoy it, we must encourage it; if we do not, we will drive it away.

If the manufacturer does not recommend his goods, praise their quality, and urge their use, he can not complain if they are a drug on the market and purchases limited. If the banker depreciates business by constantly talking about the scarcity of money, discourages investment, pictures a gloomy future for business, advises customers loans must be liquidated, and refuses new loans, he is impliedly inviting patrons to withdraw their deposits, which is usually accepted, very much to the injury of his institution and to the detriment of the locality in which it is located, and which conduct on the part of bankers throughout the country in the last few months has caused many million dollars to be withdrawn from the bank deposits and retired from circulation. If the jobber and wholesale merchant constantly tell the retail dealers that business is bad, minimize trade, and declare the outlook unpromising, they discourage purchases and limit business. If in turn the retail merchant informs his customers that business is rotten, trade is dull, the future gloomy, and money scarce, naturally he frightens his customers, and they minimize their purchases, reduce trade, horde their money, lessen consumption, and business suffers, commerce is impaired, production is paralyzed, and the entire country seriously injured. This is the natural result, although no real or substantial foundation may exist for such a condition. It is the outgrowth, the result of the knocker and the pessimist, who have worked overtime in foisting their disordered mental conditions on the public. They see no good in anything, bad in everything. Business can be, and doubtless has been in many instances, strangled, development retarded, and production and consumption curtailed, by the persistent and constant efforts on the part of knockers and pessimists. Nobody is benefited thereby, but the country as a whole suffers irreparable injury on account thereof.

On the other hand, if all such had boosted instead of knocked, had been optimistic instead of pessimistic, business conditions would have reflected hope and prosperity, thrift and enterprise, and would have stimulated energies which were otherwise dormant. Courage is the watchword of success, and men of courage have in the last few months, in spite of the proverbial knockers, pessimists, and calamity howlers, piloted us by the perilous dangers which have so seriously threatened us as a people into the doorway of the most marvelous era of prosperity it has ever been the good fortune of the country to enjoy. All the indications now clearly demonstrate we are a highly favored people, the most fortunate of any nation in the world.

As much as it may be regretted, it is nevertheless true that in many portions of the country business has suffered and injury resulted because men hostile politically to the administration have been howling calamity, knocking its policies, talking about imaginary conditions, and minimizing real ones until the timid were frightened, hesitated in making investments, and restricted development, all producing injury in the business world and delaying the onward march of prosperity. Because of it capital was withdrawn from circulation, went into hiding, and the inevitable result was business suffered.

Men who thus conducted themselves deserve the censure they are now receiving for their unreasonable and unwarranted conduct in this regard. They have proven themselves a detriment to the public. Such men have placed their party fealty above their obligations to their country, the welfare of their fellow men, and the advancement of their own personal fortunes, and have invited and received for their behavior the censure of the high-minded and patriotic people who place the country's advancement and the best interests of the citizen above partisanship and the selfish, sordid purposes of designing individuals.

The business of a community is a safe barometer to show the feeling and disposition, reflecting the measure of approval or disapproval of the people who are its patrons. It will respond with alacrity to sympathetic sentiment and shrink away from a discouraging one. How important it is, therefore, to encourage and boost legitimate business in order that it may enjoy healthful activity. Under such encouraging influences it thrives, distributes thrift, inspires enterprise, and secures happiness, dispels gloom and fear, and assists the energizing forces which forge a nation's prosperity, urges the people to greater diligence in their industrial and commercial conquests, and multiplies the rewards for faithful, honest toil.

The dangers which so ominously threatened our business enterprises a few months ago have passed without disaster, and there has been ushered upon us a better era which is unfolding its unrivalled promises to our people, extending alluring invitations to embark in new enterprises and to enlarge existing ones in order to successfully meet and care for the greater requirements which the new conditions are bringing upon us. We are moving under the most flattering auspices, which assure us will prove the most prosperous in the Nation's history.

The awful war now raging in the producing countries of Europe has practically destroyed both their foreign and domestic commerce, and their customers must necessarily turn to us and become our patrons. We are called upon to supply the deficit thus created, which will tax to the utmost our producing facilities, but will yield to us profitable returns as a remuneration for the new responsibility which it imposes. It will increase our influence as a world power and develop our strength as a nation, making us the most potential factor in the commerce of the world. With our unsurpassed facilities for production, our vast natural resources, both developed and undeveloped, our enviable geographical location for transportation to all parts of the world, our superior mechanical and inventive genius, and our energies and capacity for production now existing furnish ample assurance we will capture the commerce of the world and are capable of holding it. We will reap the golden reward and enjoy it.

National Prohibition.

EXTENSION OF REMARKS
OF
HON. CARL HAYDEN,
OF ARIZONA,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 22, 1914,

On the joint resolution (H. J. Res. 168) proposing an amendment to the Constitution of the United States prohibiting the sale, etc., of intoxicating liquors for beverage purposes.

Mr. HAYDEN. Mr. Speaker, on the 3d day of last November the qualified electors of my State adopted a constitutional amendment prohibiting the importation, manufacture, or sale of intoxicating liquods. The text of the amendment is as follows:

Be it enacted by the people of the State of Arizona, That the constitution of the State of Arizona be, and is hereby, amended by adding thereto another article, the same to be numbered 23 and to read as follows, to wit:

"SECTION 1. Ardent spirits, ale, beer, wine, or intoxicating liquor or liquors of whatever kind shall not be manufactured in or introduced into the State of Arizona under any pretense. Every person who sells, exchanges, gives, barters, or disposes of any ardent spirits, ale, beer, wine, or intoxicating liquor of any kind to any person in the State of Arizona, or who manufactures or introduces into, or attempts to introduce into, the State of Arizona any ardent spirits, ale, beer, wine, or intoxicating liquor of any kind, shall be guilty of a misdemeanor, and upon conviction shall be imprisoned for not less than 10 days nor more than 2 years and fined not less than $25 and costs nor more than $300 and costs for each offense: *Provided,* That nothing in this amendment contained shall apply to the manufacture or sale of denatured alcohol.

"SEC. 2. The legislature shall by appropriate legislation provide for the carrying into effect of this amendment.

"SEC. 3. This amendment shall take effect on and be in force on and after the 1st day of January, 1915."

The following is a tabulation of the vote by counties on this amendment:

Counties.	Yes.	No.
Apache	559	271
Coconino	865	1,042
Cochise	3,850	4,149
Gila	2,030	2,290
Graham	1,548	557
Greenlee	1,018	1,031
Maricopa	8,692	4,951
Mohave	566	817
Navajo	1,078	611
Pima	1,699	2,230
Pinal	813	871
Santa Cruz	480	536
Yavapai	1,642	2,385
Yuma	1,047	1,022
Total	25,887	22,743

Majority for prohibition, 3,144.

LAW LIBRARY
FEDERAL WORKS AGENCY

A majority of the citizens of Arizona having expressed themselves in favor of the suppression of the liquor traffic on the very day that I was reelected to represent them in the Sixty-Fourth Congress, I consider that I am instructed as to my vote on the pending measure. I am satisfied that if the Hobson amendment to the Federal Constitution could have been submitted to the people of Arizona at the same time it would have likewise received their approval at the election, and, therefore, when I cast my vote in its favor I am carrying out the will of the majority in Arizona.

* * * * * * *

The language of the Hobson resolution as finally perfected is as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following amendment of the Constitution be, and hereby is, proposed to the States, to become valid as a part of the Constitution when ratified by the legislatures of the several States as provided by the Constitution.

SECTION 1. The sale, manufacture for sale, transportation for sale, importation for sale of intoxicating liquors for beverage purposes in the United States and all territory subject to the jurisdiction thereof and exportation thereof are forever prohibited.

SEC. 2. The Congress or the States shall have power independently or concurrently to enforce this article by all needful legislation.

How to Destroy the Rum Power.

EXTENSION OF REMARKS

OF

HON. HENRY GEORGE, JR.,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 22, 1914,

On the joint resolution (H. J. Res. 168) proposing an amendment to the Constitution of the United States prohibiting the sale, etc., of intoxicating liquors for beverage purposes.

Mr. GEORGE. Mr. Speaker, since the motion to suspend the rules and pass the resolution has served to cut short debate on this question, I avail myself of the privilege of expressing as my views on the measure an appropriate article written by my father more than 20 years ago, and with the article an explanatory foreword with which it has been printed in pamphlet form and widely circulated in this country:

FOREWORD.

This article was written by Henry George as the result of a meeting with Mr. B. O. Flower, editor of the Arena and the Twentieth Century magazines. Mr. Flower says that he had suggested to Mr. George that he prepare an outline of his social and economic philosophy, but to his surprise was told by Mr. George that he would much prefer to write a paper in advocacy of free rum to be one of a series of articles Mr. Flower had told him he was having prepared dealing with various aspects of the temperance problem. On Mr. Flower expressing astonishment at Mr. George's choice of a subject the latter replied:

"Mr. Flower, intemperance is a great curse; we all admit that. But there is something more deadly than intemperance threatening the Republic to-day, and that is political corruption. The rum power in politics is a greater evil than intemperance, and it has arisen and become the evil that it is to-day—an evil that is poisoning the political conscience of the Nation—because of restrictive legislation. Restrictive legislation," he repeated, "is the cause, and the rum power in politics is the effect."

From another friend of Mr. George very close to him at the time, we have the following statement:

"Henry George, the Rev. Dr. Howard Crosby, and a distinguished woman of the time—about 1887 or 1888—were invited to debate the liquor question at the Academy of Music at Brooklyn. The woman advocated absolute prohibition, Dr. Crosby advocated high license, and Mr. George, in beginning his speech, after hearing them both, said that he agreed with the woman's argument against Dr. Crosby's, and with Dr. Crosby's against the woman's; whereupon he advocated absolute freedom in the matter, doing so in the interest of temperance."

HOW TO DESTROY THE RUM POWER.

[By Henry George.]

For years the liquor question has been largely and widely discussed in the United States. But the discussion has turned on the kind and degree of legal restriction that ought to be applied to the manufacture and sale of intoxicating drink, and the political effects of this restriction have been but little considered. The "rum power" has been sufficiently recognized and bitterly denounced, but, without inquiry into its nature and causes, has generally been treated as one of the evils that make restriction necessary.

Yet the political influence of the various interests connected with the manufacture and sale of liquors is a matter of sufficient importance to demand some consideration in itself, and apart from the question of temperance. For the "rum power" is certainly a fact of the first importance. It is an active, energetic, tireless factor in our practical politics, a corrupt and debauching element, standing in the way of all reform and progress, a potent agency by which unscrupulous men may lift themselves to power, and an influence which operates to lower public morality and official character.

Intemperance is a grave evil, but it is not the only evil. Political corruption is also a grave evil. The most ardent advocate of temperance would probably admit that there may be a point where the one evil may be outweighed by the other, and would hesitate to accept the total abstinence that prevails in Turkey if accompanied with Turkish corruption of government. There is no instance in which intemperance among a civilized people has stopped advance and turned civilization back toward barbarism, but the history of the world furnishes example after example in which this has occurred from the corruption of government, ending finally in the corruption of the masses.

While the lessening of intemperance may be the most important end that under present conditions we can seek; while it may be that in our liquor legislation we should disregard all other effects if we can secure this, it is nevertheless wise that we should at least consider what these effects may be.

In the presence of the giant evils springing from the existence of the "rum power" in our politics it is certainly worth while to inquire how the existence of this power stands related to our restrictive liquor legislation.

A little consideration will show that they are indeed related and that this relation is that of cause and effect. Not as is generally assumed, the rum power being the cause and the restrictive legislation the effect of opposition aroused by it, but the restrictive legislation being the cause and the appearance of the "rum power" in politics the effect of this restriction.

This we may see from general principles and a wide experience. While there is any possibility of changing them through political action, legal restrictions on any branch of business must introduce into politics a special element, which will exert power proportioned to the pecuniary interest involved.

We restrict the importation of wool by putting a duty on wool, and immediately there arises in our politics a wool power to send lobbyists to Washington, to secure the nomination and election of Members of Congress, to exert an influence upon party organization and conventions, and to contribute to political corruption funds. We put a duty on iron, and at once there arises an iron power to logroll and bulldoze, to bribe and corrupt, to use our politics in every way for the defense or promotion of its special interests, and, uniting with other special interests of the same kind, to exert such influence on the organs of public education and opinion as to make the great body of the American people actually believe that the way to make people rich is to tax them. We interfere with the industry of making cigars by imposing an internal-revenue tax on cigars, and as a consequence we have a league of cigar manufacturers ready to spend money and to exert political influence to maintain the tax which, by concentrating business, gives them larger profits. The match industry is comparatively small, yet the tax on matches imposed during the war begot a match power which, though not large enough to cut any figure in the politics of the country at large, was sufficient to be perceptible at Washington when the question of reducing taxes came up. Or, to take a case where the popular reason for the restriction is of the same kind as that for restriction on the manufacture and sale of liquor, we have put a high duty on opium. Hence the growth of a combination or combinations on the Pacific coast making some millions a year by smuggling opium. To make sure of the retention of the duty and keep in place public officials blind-eyed to the operations of the smugglers, the pecuniary interest thus created must take part in politics, for under our system the power to get votes and to manage conventions is the foundation of the power to make laws and secure appointments.

If such be the effects of simple restrictions, what must be the effect of such restrictions as we impose on the manufacture and sale of intoxicating liquors? What would they be on any other business? There are people who believe the wearing of corsets a deleterious habit, greatly injurious to American women. Others contend that wearing corsets in moderation is harmless if not helpful and that it is only the excess of tight lacing that is injurious. But without concerning ourselves with this we can readily imagine the effects of applying to the corset business the restrictions now imposed on the liquor business.

If the Federal Government were to put such a tax on the manufacture of corsets as it does on whisky, we would soon have a corset ring, with large pecuniary interests in the retention of the tax, in the rulings of the department, and in the appointment of internal-revenue officials.

If corset selling were restricted by licenses as is liquor selling, the privilege would become valuable and its holders have reason to "keep solid" with the dominant party. Where it was prohibited, illicit sales, it is risking nothing to predict, would still go on. These illicit sellers would all the more need the favor and connivance of officials owing their places to politics, and must therefore use their influence and spend their money in politics.

Just what would thus follow from corset restriction has followed from liquor restrictions. The effect of the tax on the manufacture of liquor is to concentrate the business in the hands of larger capitals and stronger men, and to make evasions a source of great profit. It is thus directly to concern large pecuniary interests in politics in order to maintain the tax and to influence or control the officials concerned with its administrations.

This is the genesis of the American whisky ring, which sprung into the most pernicious activity with the imposition of the $2-a-gallon tax, a tax which led to the most widespread political debauchery and corruption. The reduction of this tax to 50 cents per gallon, accomplished against the efforts of the ring, has greatly reduced this corruption and lessened the political influence of the whisky ring.

But it still exists, as it will exist while the tax on liquor remains a potent factor in national legislation, bringing its money and its influence into all elections where its interests are even remotely affected. Here is what Hon. Ernest H. Crosby, in an article in the May Forum entitled "The saloon as a political power," has to say of one branch of it:

"The brewers deserve special notice. Their immense wealth gives them opportunities for wholesale bribery. They raise enormous funds for use in all canvasses in which the temperance issue is raised. But the brewers have a greater power than mere riches. Each brewery has a large number of beer shops under its direct control. They select men of straw, provide the money to establish them in business, and take back chattel mortgages on the saloon fixtures. They thus gain absolute possession of the mortgagor, body and soul, and he follows their directions in politics implicitly. One firm of brewers in a leading city holds 600 chattel mortgages of this kind, aggregating $310,134 in value. Another has 208, valued at $442,063. We can see in a moment the concentration of power which such a system affords. The saloons in order to rule must combine, and here is a plan of combination already provided. One example will show how this power is used. Two years ago the brewers in a strong Democratic district determined to send an attorney of theirs, Mr. A. P. Fitch, to Congress. They secured the Republican nomination for him. The Democratic barrooms were ordered to support him, and he was elected. While serving his term in Congress the Mills bill, leading toward free trade, came up for consideration. The brewers were in favor of reducing the surplus in this way, as they desired the internal revenue to remain untouched. Mr. Fitch left his party and voted for the Mills bill. The brewers turned to, obtained the Democratic nomination for him, and elected him again in the same district."

Not entirely the brewers. Men like myself voted for Mr. Fitch, as we always will vote in favor of a Republican who inclines to free trade or, indeed, a Republican protectionist as against a Democratic protectionist. As to the political influence of the liquor power in New York, Mr. Crosby is right. It was thrown against me in solid mass when I ran for mayor, in 1886. A deputation came to me to ask what my course, if elected, would be. My reply was that, so far as it might devolve on me, I would enforce the law without fear or favor. But I have no reason to think that this had any effect on the action of the liquor men. They supported Mr. Hewitt because the excise commissioners and the police department were in his favor.

It is high time that these brewers were brought to their senses. They sustain the internal-revenue system because it keeps others from competing with their monopoly, and also because they buy their revenue stamps at wholesale—at 7½ per cent discount—and charge them to their customers at par. One well-known firm is said to make $28,000 a year by this arrangement. In their effort to preserve the internal revenue the brewers support tariff reduction, and even free trade, but only in so far as it does not injure them.

In Great Britain the excise system has produced the same effects—the concentration of the business, the accumulation of enormous fortunes, the control of public houses by brewers and distillers, and the building up of a political power which is a bulwark of Tory conservatism and an obstacle to all real reform and advance.

To tax liquor is inevitably to call a "rum power" into politics. Where the liquor sellers do not throw their money and influence into politics of their own volition they are forced to do so. In New York, for instance, the influence and the contributions of the liquor sellers are controlled by the party or factions that control the excise commissioners and the police department, and the liquor sellers are compelled to use their influence and give their money to every election. Indictments are found for violations of excise regulations and corded up in pigeonholes by the thousands, never to be taken down unless the saloon keeper is recalcitrant, while spasmodic raids and arrests enforce the necessity of keeping on the good side of the powers that be.

And besides the work that is compelled and the "voluntary contributions" that are exacted for party, there is a special service and ransom to individual officials and politicians. This is one of the reasons why such enormous amounts of money are spent in New York even in trivial election contests and why officials grow rich on small salaries. This enormous liquor influence, organized, disciplined, and controlled through the very laws intended to lessen the evils of intemperance, is one of the great agencies which have made democratic government, in the true sense of the term, as nonexistent in New York as in Constantinople.

As it is in New York, so it is in degree at least in other cities. Where licenses are limited in number, they become the more valuable. When they are raised in price, the number of unlicensed liquor sellers, who are even more under the control of corrupt politicians than are the licensed ones, increase.

In Philadelphia the power to grant licenses has been placed in the hands of the judges of the courts. Whether the ultimate result be good or bad, it is certain that in the long run the political power growing out of the liquor business will not be diminished, and that the pecuniary interests involved in the traffic will enter into the nomination and election of judges.

Prohibition puts liquor selling under the ban of the law. Hence where liquor selling continues, as it does in every prohibition State, it must be by connivance of officials and by favor of politicians. Thus the work and the money of the illegal liquor sellers build up a "rum power" relatively stronger than where restriction has not been carried to the length of prohibition. In Maine, where prohibition has been longest, it is said to be the control of the illicit sellers of liquor which keeps the State in the hands of the Republican Party, not because it is the Republican Party, of course, but because it is the party in power.

In Iowa, where ingenuity seems to have exhausted itself in framing legal provisions to absolutely prevent either the manufacture or sale of liquor, the returns of the United States Commissioner of Internal Revenue show that United States license taxes were paid during the last fiscal year by 7 rectifiers, 25 wholesale liquor dealers, 2,758 retail liquor dealers, 41 brewers, 50 wholesale dealers in malt liquors, and 223 retail dealers. These people did not pay United States special taxes out of patriotism. If so many of them paid these United States taxes, how much must they, and the far greater number not thus returned (the proportion of 41 brewers and 50 wholesale dealers to 223 retail beer sellers is very significant), have paid as hush money and political subscriptions?

The more carefully the subject is examined the more clear I think it will appear that to eliminate the "rum power" as a corrupting element in our politics by restrictive laws is hopeless. On the contrary, it is restriction that brings it into our politics. There is only one way of eliminating it from politics, and that is by doing away with all restrictions, from Federal tax to municipal license, and permitting "free trade in rum."

To many people this will seem like saying that the only way to get rid of the trouble of keeping pigs out of a garden is to throw down the fences and let them root at will. Others will see in the increase of intemperance which they will associate with free trade in liquor greater evils than the corrupting political influence of the "rum power." Yet even if this be so, it is at least worth while to see that in attempting to cure one evil by restriction we are creating another.

But is it so? To abolish all taxes on liquor would be to make liquor cheap and easily obtained. But would this be to increase drunkenness? Is there more intemperance in countries where liquor is relatively cheap than in countries where it is very dear? Did the $2 tax on whisky lessen drunkenness? Did the reduction to 50 cents increase it? Is there more drunkenness among the rich, whose power to purchase all they want is not lessened by the artificial enhancement in the cost of liquor, than there is among the poor, on whose power to purchase this enhancement must most seriously tell? Is it not notorious that men too poor to get proper food, clothing, and shelter for themselves and their families do still manage to get drunk? And among the temperate men or total abstainers who read this page, is there one whose abstinence is due to the costliness of liquor?

All our restriction, even to the point of absolute legal prohibition, does not, except perhaps in some places to strangers and in some small communities, really prevent the man who wants liquor from getting it. Where it even closes the open saloon it only substitutes for it the drug store, the clubroom, the backdoor, and the kitchen bar.

On one Sunday in New York I had to ride from the upper end of the island to the Astor House to get a little liquor for medicinal purposes, but it was only because one of the periodical raids against Sunday selling was on, that I was a stranger, and perhaps that I looked like a temperance man. People known to the saloon keepers or druggists could get all they wanted. I have never lived in a prohibition State, but I have never been in one where there seemed any difficulty in getting liquor. In Burlington, Iowa, I saw saloons openly doing business; in Des Moines I saw young men drunk in the hall of the principal hotel at midday; in Lewiston, Me., I was recently told that there were some 300 places where liquor was sold, mostly kitchen bars, and in a Vermont town a prosecuting attorney, even then prosecuting some offenses against the prohibitory law, took me into his back room and producing a bottle and glasses from a closet and setting them on the table remarked, "It is against the law to sell or to give liquor as a beverage, but there is no law to prevent a man from taking it if he sees it lying around."

But the artificial enhancement in the cost of liquor by taxation and restriction does have the effect of promoting adulteration. With no tax whatever upon spirits they would be too cheap to make adulteration pay. But every artificial increase in cost is a premium on the substitution of poisonous mixtures for the pure article. The abuse of liquor is bad enough, but there can be no question that much of the evil that is attributed to liquor is due to adulterations not really entitled to the name. Dr. Willard H. Morse, in the North American Review, says: "If two puppies are fed, the one on the whisky of the saloons, and the other on the purest product of distillation, the autopsy of the former will show a diseased brain, while the brain of the latter will be found to be normal." Drug store whisky is reputed worse than saloon whisky, and the worst whisky of all is said to be prohibition whisky.

And the effect of these poisonous adulterations which our restrictions promote and encourage is, it must be remembered, not merely to make the drinking habit more deadly, it is to produce a quicker and stronger craving on the part of those who partake of the stuff, and thus to make confirmed drinkers—to produce a diseased condition of body and mind which urges the victim to satisfy the insane craving at all risks and costs.

That the abolition of all taxes on the manufacture and sale of liquor would increase the consumption of liquor is doubtless true. It would increase its consumption in the arts and for domestic purposes; but that it would increase its consumption as a beverage is not so clear. For there are certain exceptions to the general rule that consumption is inverse to cost. Where a depraved appetite is the cause of consumption no increase of cost that we have found practicable will reduce consumption, and where ostentation prompts consumption decrease of cost is apt to lessen it. If invention were to reduce the cost of diamonds to a cent or two a pound, their consumption in the arts would much increase, but their consumption for personal adornment would cease. Where sturgeon are scarce and costly their meat is esteemed a delicacy and placed before guests; where they are very plenty and cheap they are thrown out of the nets or fed to the pigs.

The most ardent temperance men, whether favoring high license or prohibition, will not contend that in the present conditions of society it is possible by any amount of legal restriction to prevent liquor drinking. But they will contend that restriction tends to discourage the formation of the drinking habit, by lessening the temptations to begin it.

Now, the great agencies in the formation of the drinking habit are social entertainment, the custom of treating, and the enticements of the saloon.

Does restriction tend in the slightest degree to discourage the setting of liquor before guests in private houses and at social entertainments? There is probably less of this in the prohibition States than in the nonprohibition States, and there is certainly less of it now in all sections than there was in preceding generations when the restrictions were less or did not exist. But this is not because of prohibition or restriction, but because of the stronger moral sentiment against liquor drinking, and of which the restriction or prohibition is one of the manifestations. No man disposed to drink or to set drink before others in private refrains from doing so because of any statute law. Legislatures may impose penalties, but they have no power to make people think wrong what before they deemed right. Prohibition may have some little effect on public and official entertainments, and the increased cost of liquor may have some effect in preventing it being set before guests. But, on the other hand, the prohibition of what is not felt to be wrong in itself provokes a certain disposition to it, and the greater costliness of a thing prompts the offering of it to those we would compliment. The treating habit, which springs from a desire to compliment or return a compliment, is certainly strengthened by the costliness of liquor. Millionaires do not ask each other to go out and take 10 cents' worth of whisky or 5 cents' worth of beer when they want to be complimentary or sociable. But men to whom 5 cents or 10 cents is an object do, and unless the treat is in discharge or recognition of some obligation they feel bound to return it in kind.

Now, with liquor so cheap as it would be if there were no tax or restriction on its manufacture and sale, the treating habit would certainly be largely weakened. If whisky were as cheap as water, it would entirely die out. Who thinks of treating another to water, or feels the refusal of another to empty a glass of water into his stomach a slight, or imagines that because one man offers a glass of water to each of a party that each one of the party must in his turn offer a glass of water to all the others?

As for the saloon, the license system makes it more gorgeous and enticing, while prohibition drives it into lower and viler forms. What really would be the effect of absolute free trade in liquor? At first blush it may seem as if it would be to enormously multiply saloons. On second consideration it will seem more likely to utterly destroy them. This is certain, that if anywhere that saloons exist a proposition were made to do away with all tax, license, or restriction the saloon keepers would be its most bitter opponents. And they would quickly assign the reason: "If everybody were free to sell liquor, we would have to go out of the business."

The liquor saloon as we know it is a specialization which can only exist by the concentration of business which restriction causes. Were liquor as cheap as it would be were all taxes on it removed, and were everyone free to sell it, it might be sold in every hotel, in every boarding or lodging house, in every restaurant, druggist's, bakery, confectionery, grocery, drygoods store, or peanut stand, but places specially devoted to its sale could not be paved with silver dollars, or ornamented with costly paintings, or set fine free lunches, or provide free concerts, even if, indeed, they could continue to exist. And where liquor was sold in connection with food, entertainment, or other things, and at prices which free competition would compel, it would not pay to let men drink themselves into intoxication or semi-intoxication or in any way to provoke or encourage the drinking habit.

In short, I believe that examination will show that the sweeping away of all taxes and restrictions would not only destroy the "rum power" in our politics but would much decrease intemperance.

And this view has the support of one of the keenest observers. Adam Smith, who treats this matter at some length in chapter 3, Book IV, of The Wealth of Nations, says:

"If we consult experience, the cheapness of wine seems to be a cause, not of drunkenness but of sobriety. The inhabitants of the wine countries are in general the soberest people in Europe.

"People are seldom guilty of excess in what is their daily fare. Nobody affects the character of liberality and good fellowship by being profuse of a liquor which is cheap as small beer.

"When a French regiment comes from some of the northern Provinces of France, where wine is somewhat dear, to be quartered in the southern, where it is very cheap, the soldiers, I have frequently heard it observed, are at first debauched by the cheapness and novelty of good wine, but after a few months' residence the greater part of them become as sober as the rest of the inhabitants. Were the duties upon foreign wines and the excise upon malt, beer, and ale to be taken away all at once, it might in some manner occasion in Great Britain a pretty general and temporary drunkenness among the middle and inferior ranks of people, which would probably be soon followed by a permanent and almost universal sobriety."

"Almost universal sobriety," wrote Adam Smith in Kierkaldy, somewhere in the early seventies of the eighteenth century. Writing as the wonderful nineteenth century nears its final decade and in the great metropolis of a mighty nation then unborn, I can say no more, if as much. The temperance question does not stand alone. It is related—nay, it is but a phase of the great social question. By abolishing liquor taxes and licenses we may drive the "rum power" out of politics and somewhat, I think, lessen intemperance. Thus we may get rid of an obstacle to the improvement of social conditions and increase the effective force that demands improvement. But without the improvement of social conditions we can not hope to abolish intemperance. Intemperance to-day springs mainly from that unjust distribution of wealth, which gives to some less and to others more than they have fairly earned. Among the masses it is fed by hard and monotonous toil, or the still more straining and demoralizing search for leave to toil; by overtasked muscles and overstrained nerves and undernurtured bodies; by the poverty which makes men afraid to marry and sets little children at work and crowds families into rooms of tenement houses; which stints the nobler and brings out the baser qualities; and in full tide of the highest civilization the world has yet seen robs life of poetry and glory, of beauty and joy. Among the classes it finds its victims in those from whom the obligation to exertion has been artificially lifted; who are born to enjoy the results of labor without doing any labor; and in whom the lack of stimulus to healthy exertion causes moral obesity; and consumption without the need of productive work breeds satiety. Intemperance is abnormal. It is the vice of those who are starved and those who are gorged.

Free trade in liquor would tend to reduce it, but could not abolish it. But free trade in everything would. I do not mean a sneaking, half-hearted, and half-witted "tariff reform," but that absolute, thorough free trade which would not only abolish the customhouse and the excise but would do away with every tax on the products of labor and every restriction on the exertion of labor and would leave everyone free to do whatever did not infringe the Ten Commandments.

A year before the Wealth of Nations was published, Thomas Spence, of Newcastle, in a lecture before the Philosophical Society, of that place, thus pictured such a state of things:

"Then you may behold the rent which the people have paid into the parish treasuries, employed by each parish in paying the Government its share of the sum which the Parliament or National Congress at any time grants; in maintaining and relieving its own poor and people out of work; in paying the necessary officers their salaries; in building, repairing, and adorning its houses, bridges, and other structures; in making and maintaining convenient and delightful streets, highways, and passages, both for foot and carriages; in making and maintaining canals and other conveniences for trade and navigation; in planting and taking in waste grounds; in providing and keeping up a magazine of ammunition and all sorts of arms sufficient for all its inhabitants in case of danger from enemies; in premiums for the encouragement of agriculture or anything else thought worthy of encouragement; and in a word in doing whatever the people think proper and not, as formerly, to support and spread luxury, pride, and all manner of vice.

"There are no tolls or taxes of any kind paid among them by native or foreigner, but the aforesaid rent, which every person pays to the parish, according to the quantity, quality, and conveniences of the land, housing, etc., which he occupies in it. The Government, poor roads, etc., as said before, are all maintained by the parishes with the rent, on which account all wares, manufactures, allowable trade employments, or actions are entirely duty free. Freedom to do anything whatever can not there be bought; a thing is either entirely prohibited, as theft or murder, or entirely free to everyone without tax or price."

Gov. Colquitt's Frankness.

EXTENSION OF REMARKS

OF

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 29, 1914.

Mr. MOORE. Mr. Speaker, the interesting statement of the gentleman from Texas [Mr. HARDY] refers to an article in the newspapers attributed to a distinguished Texan who happens at this time to be the governor of the State. That there should be any difference of opinion between the brethren from Texas is surprising, but that any of them should disagree with the President of their own choice, or find it necessary to defend him from attack, is truly iconoclastic. Since the gentleman from Texas [Mr. HARDY] has come to the aid of the administration, however, it would seem fair to the governor of Texas that what he had to say to provoke a defense should be printed along with the criticism of his utterances. The publication of these views of the governor may come with more grace from the minority side of the House than if they were presented in all good cheer by the gentlemen from Texas themselves.

Behold how good and how pleasant it is for brethren to dwell together in unity.

I append the statement of Gov. Colquitt as it appeared in the Public Ledger, of Philadelphia, with headlines attached:

GOV. COLQUITT DECLARES PRESIDENT A FAILURE—EXECUTIVE OF LONE STAR STATE DENOUNCES MEN WHO ARE AT HEAD OF THE GOVERNMENT—MEXICAN POLICY ASSAILED.

[By O. B. Colquitt, governor of Texas.]

HOUSTON, TEX., *December 2.*

The Wilson administration has been the greatest failure in the history of the Presidency. The South is a land literally flowing with milk and honey; it has made one of the biggest and best crops in its history, and yet, because of the utter incompetence of the men in charge of the Government, its business is prostrated, its credit is impaired, and thousands of its people are starving.

The administration's tariff law was pledged to lower the cost of living, and it has had the contrary effect. By putting raw materials on the free list and keeping the protective tariff on manufactured goods, it has condemned American farmers by hundreds of thousands to peonage and has enabled the manufacturers, getting their raw materials cheaper, to charge higher prices for their goods, which they have done. Hides were free-listed and shoes have gone higher. This is true of virtually every single item similarly treated in the administration tariff law. The American workingman pays more for the finished product, and both are robbed to further enrich the protected manufacturing trusts and combines.

The administration's foreign policy has been imbecile. It has allowed England to dictate conditions as to cotton shipments to European countries that enabled the English spinners to rob the American cotton growers of half the value of their crop.

England stopped American shipments until the English spinners had bought their supply at 6¼ cents a pound and stored it in Texas and other southern warehouses. Then England consented to declare cotton not contraband, and France followed suit a day or two later. Our Government weakly submitted to England's dictation, playing into the hands of the English spinners and betraying the American cotton growers as completely as if this country were an English vassal State.

If I had been President, I would have served notice on England's premier that our foreign trade in cotton and other noncontraband commodities was going forward with or without England's consent, and, if necessary, I would have sent American ironclads to England's door to enforce that notice.

The administration's repeal of the Panama Canal tolls exemption in violation of the party's national platform was another weak surrender to England. If free tolls for American ships had not been repealed, hundreds of American-owned ships flying a foreign flag would have come under the American flag to get the benefit of exemption and we would to-day have an American merchant marine competent to carry our goods to foreign markets. We have no such merchant marine, and to supply it the Wilson administration is proposing to spend the taxpayers' money buying a subsidized national shipping service.

"EGREGIOUS FAILURE" IN MEXICO.

The Wilson-Bryan management of the Mexican affair has been an egregious failure. They landed an American Army in Vera Cruz to force Huerta to salute the flag and have brought it back without getting the salute. They now ask Congress to appropriate more than $500,000 to pay the expenses of that ridiculous expedition. For what? What did it accomplish? It set all Mexico aflame against the Americans, not only in Mexico, but in Texas, where all along the north bank of the Rio Grande there are 10 Mexicans for one American.

It brought on a reign of terror all along the Texas border, so that when the Federal Government refused to afford protection for our people in their own State I was forced to send 1,200 Texas troops down there to give it. Mexican bandit gangs were crossing the border into Texas raiding and terrorizing our scattered people. Women and children were huddled together in brick houses, menaced with murder and worse. My desk was flooded with telegrams from chambers of commerce, bankers, stockmen, and other responsible citizens, praying for protection at points all along our 1,200-mile frontier.

The Federal Government had only 60 troopers at Brownsville to cover more than two-thirds of that long border. When I rushed the Texas State troops down there, stationing a company at each of the principal border towns, I instructed them not to cross the river nor in any way to violate the neutrality law, but at all costs to protect the lives and property of Texas people.

Secretary of War Garrison telegraphed me that he thought it unwise to have two military forces occupying the same territory under separate commanders and suggested that I withdraw the State troops. I wired him that I would withdraw the Texas troops when he sent an equal number of United States regulars to take their place. And I kept our men there until he did send an equal number of Regulars to replace them at every place where our men were stationed.

I understand they had everything prepared at Washington to have me indicted by a Federal grand jury and put in a Federal prison, on the assumption that I meant to invade Mexico—a palpable absurdity, which only men utterly ignorant of the situation could have entertained. It is a fact, which the country does not know, that when our Texas troops arrived in Brownsville the Mexican commander at Matamoros, across the river, offered to surrender that city to the commander of the troops of United States cavalrymen. The commander at Matamoros evidently believed the Texas troops meant to take his city and thought the United States troops were more friendly than the Texans. The Washington conception of our business on the border was as ridiculous as that of the Mexican commander.

CALLS IT ENCOURAGING BANDITS.

Wilson and Bryan have stood by encouraging one gang of bandits after another while people were being butchered all over Mexico, while the vast American interests in that country were being confiscated and shot to pieces, and to-day the Mexican chaos is worse than at any time since Madero was assassinated. Villa is the dictator of the country, and I understand that all he wants is to be chief of police of the City of Mexico, with control of the gambling concessions in the City of Mexico and Juarez.

Our Government has kept England and Germany from restoring order in Mexico, and has itself done nothing but contribute to the disorder

and lawlessness by its vacillating "watching and waiting" policy—if it can be called a policy. The property interests of Mexico and the big American exploiters of Mexican resources have got control of the situation absolutely, and these same interests have got the ear of our Government at Washington.

ANTITRUST LAWS "FAKE."

The administration's antitrust laws are barefaced fakes, so far as protecting the people from trust oppression is concerned. These laws please nobody else so well as they do the Standard Oil, the Steel, and other great trusts.

I believed at first that the Federal reserve banking act was the administration's one meritorious achievement, but national bankers tell me it is going to prove a failure. The control of the system, in practice, appears to rest in New York City instead of in Washington.

I am fully convinced the national election of 1916 will end the Democratic régime. The policies of the Democratic national administration have wholly failed either to curb monopolies or to lower the cost of living for the people, and they have materially contributed to deprive millions of wage earners of employment. The administration valorized $20,000,000,000 worth of corporate securities owned in the North and East by a Treasury Department order to national banks to loan money on listed securities at not less than the closing quotations of July 30, 1914.

But the same administration, when asked to allow the people to use a quarter of a billion dollars of their collective credit for two or three years to save them from losing $500,000,000 on their cotton crop, regarded valorization as violative of sound government.

The President stood in the road and condemned the South, which made him, to heavier loss and more widespread misery than it has known in three generations. He vindicated an obsolete theory of political economy, but he mighty near ruined the country doing it.

I raised among my personal friends in Texas more than $10,000 for the Wilson campaign fund, and the only favor I asked of him was that he appoint men who would aid the Texas State government to enforce law and order along the Mexican border. It was my earnest desire to assist in making the Democratic national administration a success, but I would not sacrifice the honor of my State nor the welfare of her people to win the favor of any administration.

At no time have I failed to get courteous treatment from the leaders of the Mexican revolution. I sympathize with the Mexican people, but I also sympathize with Americans who have property rights in Mexico that ought to have been protected.

National Prohibition.

EXTENSION OF REMARKS
OF
HON. WARREN WORTH BAILEY,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 22, 1914,

On House joint resolution 168, proposing an amendment to the Constitution prohibiting the sale, the manufacture for sale, transportation for sale, and importation for sale of intoxicating liquors.

Mr. BAILEY. Mr. Speaker, for one I am not yet ready to Russianize this country. I am not yet ready to give up the fruits of a seven years' war to establish the right of local self-government and the principle of individual liberty. I am not yet ready to surrender the Bill of Rights and the very essence of the Declaration of Independence. I am not yet ready to concede that despotism by a majority is less odious than despotism by a czar or a sultan, a king or a kaiser. Yet, if we shall adopt the pending resolution, we shall have entered upon a course which must lead finally to the surrender of everything we have held sacred in this free Republic.

For who can believe that those who attack the very foundations of individual liberty in giving a majority despotic and irresponsible power over the minority in dealing with the liquor traffic will rest content with this triumph, should it be achieved? Do we not see looming up on the horizon already a powerful, an insidious, and a most dangerous movement against the freedom of the press? Is there not at this moment a widespread propaganda which has for its secret, if not its open, aim a denial of religious liberty? Is it possible for any discerning man to doubt that if a breach in the Bill of Rights is effected at one point other breaches will follow until the whole fabric shall fall into ruin under the assaults of privilege operating through fanaticism, bigotry, and mistaken zeal?

Mr. Speaker, I hold no brief for the liquor interests. I care nothing for those interests. They can make no appeal to me by the arrays of figures which they present, by the property losses with which they are threatened, by the hundreds of thousands of men who would lose employment were this amendment to be written into the fundamental law, by the losses of revenue which municipal, State, and National Governments would sustain, by the destruction of markets for grain which prohibition would involve, or by any other of the economic effects which are anticipated by both friends and foes of this resolution. Let these losses be what they may, let the disarrangement of productive energies be all that the most pessimistic have imagined, let the disemployment be even ten times greater than the most extravagant estimates indicate, what are all these when compared with the loss of individual liberty, the loss of fundamental rights, the loss of that free choice which is the very corner stone of the Christian religion, and at the base of the great Republic and its democratic institutions?

That the drink evil is a great and most terrible one, who is there to deny? We have only to look around us to see the ravages which it makes in almost every community. But in comparison with other evils may it not have been somewhat exaggerated by those who for the last 30 or 40 years have devoted all their thought and all their energy and all their resources to a war on King Alcohol? I look about me in the crowded centers of this country, in New York, in Chicago, in Pittsburgh, in Cleveland, in St. Louis, in Cincinnati, in Baltimore, in Buffalo, and in Boston, and for every human wreck cast up on the shores of time as a result of drink I see a dozen or perhaps a hundred which have resulted from involuntary poverty, from want and the fear of want, from that fearful condition which we know as "hard times"—a condition that would be unthinkable under any orderly economic system in which the inherent natural right of the individual to self-employment were recognized and made possible by unrestricted access to the bounties of nature.

I am not unaware, Mr. Speaker, that the economic phases of this question appeal powerfully to many and determine them in the acceptance of a proposition which they would otherwise reject. They trace the misery, the degradation, the sin, the sorrow, the broken homes, the hunger, the cold, the nakedness, the empty cupboard, the crowded jail, the brothel, the soup house, the painted woman on the highway, the tramp, the thief, and the murderer to the one common source—the saloon. And let no one doubt that the saloon has its full share of the evils of modern society to answer for. But how shall we account for the misery, the degradation, the sin, the sorrow, the broken homes, the hunger, the cold, the nakedness, the empty cupboard, the crowded jail, the brothel, the soup house, the painted woman on the highway, the thief, and the murderer—how shall we account for these when we find them, as we may, far removed from the influences of the saloon, by no possibility traceable to the abuses of drink?

As I have said before, Mr. Speaker, I hold no brief for liquor. I make no appeal in its behalf. No one can more deeply deplore the evils it involves than myself. But I am unwilling that crimes chargeable to other and infinitely more serious evils shall be laid at its door while the real culprit goes unchallenged and even unrecognized. The advocates of this resolution lay less stress on the moral side of the issue than on the economic side. They see a broken man here whose shattered nerves tell their own sad story, and the poverty and sorrow and degradation which mark his life are by some strange logic attributed to tens of thousands of others who may never have taken a drink, who have no association with the saloon, who live lives of sobriety and prudence, yet who are steeped in misery and driven irresistibly toward the rocks. Is all the outcry over the one man with shattered nerves really designed to distract attention from the tens of thousands whose nerves are sound who yet shiver on the brink of the economic and social abyss? I do not know whence all this sudden clamor has come.

We know that the Prohibition Party has been in the field for more than a generation. It has not lacked in zeal. It has shown a fortitude in the face of utter discouragement worthy of all praise. It has been almost fanatical in its devotion to the cause which it placed above every other cause affecting the lives of the American people. Yet this party made practically no appeal to the electorate. It failed to grow. It was always negligible as far as numbers went. And if it made any real impression on the politics of the country, the fact was not manifested in the ordinary way. Yet in the twinkling of an eye we find the stone rejected of the builder made chief of the corner in the edifice which the gentleman from Alabama proposes to erect on the ruins of our Bill of Rights. Thomas Jefferson is supplanted by Neal Dow as the patron saint of the new cult. Abraham Lincoln must give way to the lamented Carrie Nation. And men who for a generation had marched under the banner of freedom make sudden shift to enroll with those who have never believed in freedom and have never trusted it.

I say I do not know whence all this sudden clamor has come. But let me state right here that if I were as deeply interested as a Rockefeller, a Frick, a Morgan, a Weyerhaeuser, or a Havemeyer in the maintenance of things as they are, I should not discourage this propaganda. I should be more than willing to contribute liberally in promoting it. I should find in it a very safe and effective diversion, one with a fine moral appeal, one which to challenge would be to be misunderstood. And I

should therefore turn every resource at my command to its service. I should finance costly campaigns and keep brilliant and resourceful advocates constantly in the field enlisting support for it. For I should know that as long as the mass of the people were in pursuit of the demon rum they would have no time to devote to a scrutiny of my titles to the resources which I have monopolized or the privileges which I find so profitable.

It is not charged that this propaganda is corrupt or that the great body of the good people enlisted in it are actuated by other than the highest motives. Attention is merely called to the fact that it has received in recent years a most surprising and unaccountable impetus—an impetus such as it might have received had big business seized upon it as a means of distracting attention from its sinister and sordid operations. As far as the propagandists themselves are concerned, who can doubt their earnestness, their unselfishness, their moral impulse, their zeal to advance the coming of the kingdom? The crusaders of old were not more sincere, nor perhaps were they launched upon a more chimerical adventure, for our modern crusaders are really undertaking to change human nature, to put the race in a strait-jacket, to inculcate morals with a club, to spread the gospel with tyranny, to establish the foundations of the kingdom on the ruins of individual liberty.

Mr. Speaker, there is no question about the power of the majority. It can do what it pleases. It can wipe out every guaranty of the Bill of Rights. It may upset the Declaration of Independence. It may trample the Constitution under foot. It may set up a state religion to which the minority must conform. It may throttle free speech. It may deny the right of petition. It may overthrow trial by jury. It may destroy the freedom of the press. There is no limit to its power along physical lines. But, thank God, it can not destroy the spirit of human liberty! It can not shackle the human mind! It can not enchain the human soul! It can not avert the rising up of other liberators, such as those who dreamed the dream which Thomas Jefferson later wrote into the Declaration of Independence and Abraham Lincoln into the emancipation proclamation.

I stand here in my humble way to voice an unshaken and an unshakable faith in those dreams. The majority here in our own day may do what princes and potentates of old times were wont to do. It may ride roughshod over the minority. But may the majority of to-day remain always the majority? May not the time come when a revolution of the wheel may reverse the order? And what would those now constituting the majority say were a new majority to walk roughshod over all they hold sacred regarding freedom to speak, to publish, to worship, or to pursue happiness in their own way? May not the time come when another and a very strange majority shall arise—a majority bent on subverting every principle of the Republic, every concept of human liberty, every instrumentality of the enfranchised individual? Is it forgotten that majorities most strangely shift? Is it forgotten that empires rise and fall, that republics flourish and decay, that the despot of to-day may become the exile of to-morrow? What Pandora's box may we not be opening when we lift the lid which so long has shut in the imps of Old World despotism? To-day we enjoy freedom of worship, freedom of assembly, freedom of speech, freedom of the press, and freedom to trade among ourselves over this great, rich area under the Stars and Stripes—Congresses and legislatures, Presidents and governors, courts and councils having been forbidden ever to tamper with these sacred institutions. But if individual liberty is to be struck down here and now, with what reason may we hope that the sappers and miners will rest from their labors?

National Prohibition Amendment.

EXTENSION OF REMARKS

OF

HON. JAMES M. GRAHAM,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 22, 1914.

Mr. GRAHAM of Illinois. Mr. Speaker, I have received so many communications from my district—some favoring, some opposing the pending resolution—that I feel I should give at least a brief statement of the reasons which induce me to vote against it.

Many—indeed, most—of these communications indicate a misapprehension as to the very question on which the House is about to vote. Some of them seem to have been written under the impression that favorable action on this resolution would give the country immediate Nation-wide prohibition. Others, that the adoption of the resolution would result in the submission of the question to a referendum vote all over the country. Of course neither of these views is correct.

The question before us is whether this House will, by a two-thirds vote, submit the proposed amendment to the States to be voted on—not by the people, but by the various State legislatures.

If two-thirds of the Members of the House and two-thirds of the Members of the Senate favor its submission and three-fourths of the State legislatures ratify it, then on proper proclamation of the result the provision becomes a part of the organic law of the country.

But this ratification by the States would not of itself effect any change in the law with regard to prohibition. It would merely make a foundation or basis for subsequent legislation by Congress on that subject. Until Congress did enact such legislation conditions would remain just as they are.

Much of the discussion we have listened to to-day has been addressed to the merits or demerits of the question of prohibition.

To my mind that is not the real issue before us. Prohibition may be ever so meritorious and yet it may not be a national question or entitled to a place in the Federal Constitution. The discussion would be much more to the point if we had before us for consideration a bill for an act to establish Nation-wide prohibition.

The question therefore is whether we should make prohibition a subject for national legislation or whether we should leave it with the various States, where it now is, to be dealt with by each State as it sees fit.

The real question now before us is, therefore, a question of public policy on a matter which touches the very soul and essence of our Government. It is not merely the wisdom or unwisdom of passing a statute law. It is far more than that. It is a question of amending the organic or fundamental law—the Constitution itself.

What is the Constitution, and wherein does it differ from a mere statute law?

The Constitution is a concise general statement of those fundamental political principles which are essential to political liberty and on which the people are in substantial agreement.

The provisions in a Constitution should have practically unanimous sympathy and support.

A subject should have passed beyond the stage of acute and widespread controversy before a provision concerning it is embodied in the organic law.

Constitutions are not handmade or made to order. Indeed, they are not made at all, in the true sense of that word; they are evolved. Like Topsy, they just grow. They are the result of the environment and mode of life of a race or nation. The best constitution for one nation may not be the best for another. John Locke's constitution may have been a very fine one for those it would fit, but it did not fit the colonists of Georgia for whom it was made, and so they discarded it, threw it on the political scrap heap. It did not fit them, and they were not willing to put up with it until they grew to fit it. In 1789, and for more than half a century thereafter, France ran a constitution factory, but the product did not fit the habits of the people; the made-to-order constitutions were all short lived and died violent deaths.

Gladstone spoke thoughtlessly when he paid his glowing tribute to our National Constitution. In substance he said it was the greatest work ever struck off by the brain and purpose of man at a given time.

But it was not struck off at a given time. It was the result of many centuries of growth.

Mr. Bryce had a far clearer and more accurate view of it. He says:

> The American Constitution is no exception to the rule that everything which has power to win the obedience and respect of men must have its roots deep in the past, and that the more slowly every institution has grown, so much the more enduring is it likely to prove. There is little in this Constitution that is absolutely new. There is much that is as old as Magna Charta.

And he might have said that some of it was much older than Magna Charta.

In the evolution or development of the habits of a people, there occurs on any given subject a period of conflict, of ebb and flow; the current of opinion moves this way or that on it until finally public opinion becomes crystallized and there is no substantial dissent. The Nation's mind is made up on the subject, and it is then ready to be framed into the organic law.

Take, for example, the slavery question. For generations it was a subject of acute controversy, a veritable bone of conten-

tion. Laws were enacted concerning it which could not be, and were not, enforced.

Whether the Nation could have reached a peaceful solution of it, and if so, when it could have done so, we shall never know, for finally in the white heat of a dreadful Civil War the solution was welded into the Constitution, and the subject removed forever from the realm of controversy. But, remember, it was after the titanic struggle was over that the thirteenth amendment was written into the Constitution, declaring that—

> Neither slavery nor involuntary servitude, except as a punishment for crime, shall exist within the United States or any place subject to their jurisdiction.

Let me repeat by way of emphasis that this amendment was not added till after the question of slavery had been forever settled through the storm and stress of war. What good would it have done to write that provision into the Constitution before the Civil War?

It would have done no good. It would not have accomplished anything toward a real settlement of the matter. It would rather have done harm by bringing upon the great Charter contempt and hatred where there should be only reverence and love.

The struggle for liberty has been a very long and very arduous one. In the main it has been a struggle by the many against power centralized in the hands of one or a few. A history of its growth would show that little by little, after setbacks and defeats, the many compelled a recognition of some of the most essential and fundamental human rights, such as the right to go freely from place to place, the right to enjoy property, the right of trial by jury, the right of habeas corpus, the right of freedom of conscience, freedom of speech, and of the press, the right to be secure in their homes from unreasonable searches and seizures, and many other such fundamental rights. These fundamental rights, which practically all the people agree about, are gathered into our organic law and constitute the brightest political jewels in the crown of liberty. But, again I say, they were not placed there until they were proved, until they were tried out and acquiesced in by practically all the people.

True, in at least one instance we ignored the proper functions of a constitution, and ignoring the reserved rights of the States we wrote into it the fifteenth amendment on the question of suffrage. It was not the result of crystallized public opinion, and it was an invasion of those reserved rights of the States. The unfortunate but very natural result is that this provision is not only evaded, but is practically ignored.

President Lincoln, when once called upon by some enthusiasts who urged him to issue an emancipation proclamation at a time when it could not have been enforced and would have done more harm than good, reminded them that "calling a sheep's tail a leg would not make it one."

Nor will writing into it a provision about a sharply controverted question, which invades the reserved rights of the States and which is opposed by half or more than half the people, make such provision a real vital part of the Constitution. Such action would only tend to bring that venerable document into further disrespect, a most unhappy result.

The Constitution should contain nothing which would cause a large proportion of the people—possibly more than half of them—to feel that it was an instrument of tyranny and oppression.

On scarcely any other public question is feeling so acute as on this one. Many think the sale of alcoholic liquors for beverage purposes should be abolished. Many others, equally honest and equally sincere, think it should be regulated.

The position I take on the pending question makes it unnecessary for me to even refer to the merits of either contention. I only say the matter is not ripe for constitutional action. I am only pleading for the Constitution. I am urging that it be not made a mere bridge over which to carry a partisan cause to victory. I only ask that we keep in mind the true function of a constitution and that we do not depart from the proper scope and purpose of it.

I am only reminding you that constitutions are not ordained or adopted for the mere purpose of forming public sentiment; they are rather for the purpose of recording and preserving it after it is formed.

Has public opinion in favor of national prohibition formed and crystallized to such extent as to entitle it to a place in our organic law?

Clearly it has not. It is to-day the subject of widespread discussion, of intense and even bitter feeling. No other question—not even the tariff—divides the people so radically as it does. True, many States have adopted it, but they are in the main States with small population, and in many of them strong minorities are bitterly opposed to it. Of the 48 States, 12 of the larger ones, which seem to be opposed to prohibition, have considerably more than 50 per cent of the whole population leaving to the other 36 States considerably less than one-half of it.

Thus, while three-fourths of the States might adopt the pending amendment, considerably more than half of the people might be bitterly opposed to it. On a question about which feeling is so intense is it not, to say the least, doubtful whether we should trifle with the organic law by making this provision a part of it?

Who that is not intensely partisan can say that it is not even more than doubtful? The intense partisan is apt to think that this case is exceptional; that in this case the end is so desirable as to justify the means.

One might well believe in the prohibition cause and yet oppose its advancement in this particular way. I have before me a letter on the subject from a clergyman. He says of the Hobson amendment:

> I am a prohibitionist, but for several good reasons do not approve the measure referred to.

In one of his reasons he says:

> If prohibitionists—and I am one—want Nation-wide prohibition, let them keep pegging away, getting one State after another, just as they have been doing.

Laws which are not backed by public opinion, which are so unpopular that they are habitually violated and can not be enforced, are a detriment to the cause of good government. They bring the law generally into disrepute, if not contempt.

But how much worse it is when a minority forces into the Constitution itself—into the fundamental law—a provision which seems harsh and intolerable to a majority or even to a considerable minority.

The last census shows that 55 per cent of the population of the United States resides in the 12 most populous States and only 45 per cent in the other 36.

If this amendment is adopted and a national prohibition law is enacted under it, in the present state of public feeling on the subject, what an army of Federal police and Federal spies will be required to enforce it, if, indeed, it can be enforced at all.

We are told that national prohibition has been declared even in Russia, and if it can be enforced there, why not here?

The force of our laws rests largely, perhaps I might say mainly, on public opinion—on the respect our people have for the law. But in Russia the enforcement of the law depends more on bayonets than on public opinion. We should be very careful about thrusting on the States laws which are not sustained by public opinion, but we should be far more careful not to put such things into the Constitution.

There is another phase of the question on which I would like to say a few words.

I agree with my reverend correspondent, as well as with President Wilson and Secretary of State Bryan, that the question is one for the States, rather than for the Nation, to settle.

I am very thoroughly committed to the Democratic principle of home rule or local self-government. I have believed in it and advocated it, in season and out of season, since I reached manhood. I have supported it both by voice and vote whenever an occasion arose. I voted for the Webb-Kenyon bill because the principle of home rule or local self-government was involved in it. It would take some overwhelming reason to induce me to vote against any measure which involved that principle.

But as I see the Hobson resolution the principle of local self-government or home rule is necessarily involved in it, too.

The effect of the resolution would be to take away from the States a part of their reserved rights, a part of their right of self-government or home rule, and to transfer that power to the Government at Washington.

There seems to be a very strong and a growing tendency to turn over to the Federal Government such matters as the State legislatures do not act upon promptly, regardless of whether or not these matters should, under our system of government, receive congressional consideration.

The question with those who take that view too often seems to be, not whether the matter is properly a Federal question, but whether the action desired can be had more quickly at Washington. It is so tiresome to await the action of 48 different sovereignties when it might be settled by the action of one. Why not achieve a victory for their cause at one fell swoop, even if in doing so they shake to its foundations the theory on which our Government rests.

I am convinced that this tendency to take to the National Capital questions which properly belong to the States is an unfortunate, a wrong tendency. In taking that course I think we move in the wrong direction. I believe there is far more danger to be apprehended from the centralizing of power at Washington than from leaving that power with the States and with the local units of government, where it properly belongs.

even though action is thereby delayed. If it has merit, it will win as soon as local public opinion is behind it, and that is soon enough. I am afraid of the concentration or centralization of political power. I can not believe that Congressmen gathered together from every part of the Union at Washington know more about, or are more solicitous for, the rights and interests of the people of Illinois, or the people of California, than the legislatures of these States are. To say so is to argue against the very principle of self-government.

As I read history, the growth of liberty has been marked by the decentralization of political power, by wresting from the central authority a recognition of the right of the people to manage their local affairs the way that seemed best to them. The tendency to-day in almost every civilized and progressive country except our own is in the direction of decentralization. In Great Britain we see the central authority at London giving to Canada, to Australia, to New Zealand, and to South Africa the right to make their own local laws and to manage their local affairs. We see them about to give home rule or local self-government to Ireland, and there is little doubt that the same right will soon be given to Scotland and Wales.

Instead of gathering the legislative power into the Parliament at London they are dividing it up, decentralizing it, and giving it to the various local units which constitute the Empire. This is wise and in the interest of greater liberty, and this tendency, as I said, is manifest in every progressive nation except our own. Even in Germany, which is looked on as imperialistic, the various countries composing the Empire have their local parliamentary bodies, which legislate for local affairs. Strange to say, while this decentralization is going on in other progressive countries, in ours, which led the way and which showed the others the value of local self-government, the tendency toward centralization is growing rapidly, and we seem to think that if we could only shift matters from the various State capitols to Washington and deal with them there all would soon be well.

The functions of the State governments are purely local in their nature and operation. Their object is to secure personal rights, to provide for the safety and happiness of the individuals of the community, to protect men from their neighbors. Public education, public health, public morals, the detection and punishment of crime, the care of local industries and interests—these are some of the subjects over which the State governments have absolute control.

If the time ever comes when the people do not look with jealousy upon any attempt to centralize these functions and do not resist steadily and vigorously all tendencies in this direction, that will be the Nation's greatest peril. As Guizot said:

> Civilization incessantly tends to carry power still higher. But frequently also, as it ascends, power forgets its origin and final destiny; it forgets that it was founded to maintain all rights, to respect all liberties, and meeting with no further obstacle from the energy of local liberties it becomes transformed into despotism.

Let us take heed that in transferring power from the State to the Nation we do not fatally injure this "energy of local liberties."

In my judgment, such a policy amounts to a reversal of the machinery which runs the wheels of political progress and faces us in the wrong direction. The farther we travel that way the farther we will find ourselves from the goal of true political freedom.

I am not unmindful of the fact that those who espouse a cause to which they are devoted, and which they are very anxious to see adopted, are often willing to strain a principle in order to accomplish a purpose; but in the long run such a course proves mistaken. It is wiser and better to stick to sound principles even though we have to wait longer for the result we desire. Many of those who are now seeking congressional action on the liquor question were very ardent advocates of the doctrine of local option a few years ago. In advocating that doctrine, I think, they were entirely logical and politically sound. But principles do not change so quickly, and I think the principle of local option or local self-government is still sound and right. We are all too apt to favor a particular measure because we think it will accomplish what we have at heart rather than because we think it theoretically sound.

How many of those who favor the adoption of this amendment are for it solely because they think it a sound constitutional policy, and how many favor it simply because they believe it will enable them to accomplish a purpose which they have very much at heart?

Let us apply a test by supposing that the converse of this amendment was proposed. Let us suppose an amendment to the Constitution was offered providing that the manufacture or importation for sale of intoxicating beverages in the United States shall never be prohibited.

Would not those who advocate the present amendment justly claim, and urge with great force, that such an amendment would be an unwarrantable invasion of the rights of the States? And, in my judgment, they would be right.

Again I say I am not attempting to discuss the merits of the prohibition question. That does not enter into the case. I am only considering the soundness or unsoundness of the public policy underlying this joint resolution. I am only trying to determine what my duty is in the premises, and whether it is wise and right to take this matter and similar matters away from the State legislatures and hand them over to the National Legislature—whether it justifies a departure from the vital principle of home rule.

If a policy is not sound and right in a matter which does not meet our approval, it is not sound or right in a similar matter which does meet our approval.

So far as the centralizing of legislative power in the Congress is concerned, I can see no difference in principle between giving Congress the power to say that the manufacture of intoxicating liquors for sale as a beverage shall never be permitted, and in giving it the power to say that such manufacture shall never be prohibited.

Most of those who favor the pending resolution would, I think, oppose an amendment providing that such manufacture should never be prohibited, and they would doubtless urge that it was a violation of the right of local self-government. But their opposition to it would not affect the principle involved. If they would oppose such an amendment as an invasion of the rights of the States, to be consistent they should oppose the pending resolution for the same reason.

To me it seems very clear that to indorse the proposed amendment would be unwise; first, because it is an invasion of the reserved rights of the States; second because it violates a fundamental principle of liberty by attacking local self-government or home rule; and, third, because it would incorporate in the Constitution or fundamental law a matter not sufficiently supported by public opinion.

I believe this so firmly that I feel bound to cast my vote in accordance with my belief. Nor am I influenced by any merely personal feeling. If I acted from pique or from a desire to "get even" I would have to vote the other way, as the State Liquor Dealers' Association of Illinois opposed my election, and the local, or Springfield Liquor Dealers' Association, composed largely of Democrats, opposed me bitterly and adopted a resolution indorsing my Republican opponent.

But the matter is far too important to be considered from a merely personal point of view. It involves principles of government—nay, fundamental principles of liberty—far too important and too dear to me to be so lightly treated.

We now enjoy under our Constitution and laws the best and the freest government ever devised by men. I believe that our first duty to that Government, to ourselves, and to posterity is to preserve and, so far as we can, to perpetuate it intact in all its vigor as an inheritance for our successors and as a guide and a beacon light for all the children of men.

I am convinced that one of the surest ways to do that is to prevent any unnecessary centralization of political power, to jealously guard the principle of local self-government or home rule, and to leave with each State, so far as practicable, the right to determine its own internal policy. Thus, and thus only, can we best assure to all the people that ideal liberty "which secures at once the authority of the public and the freedom of the individual—the sovereignty of the people without despotism and individual freedom without anarchy."

Federal or State Control of the Liquor Traffic.

EXTENSION OF REMARKS

OF

HON. LAWRENCE B. STRINGER,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 22, 1914.

Mr. STRINGER. Mr. Speaker, I have been the recipient of many letters and telegrams from church organizations in Illinois requesting me to vote for the pending resolution, referred to by them as "The Hobson resolution."

These communications have been forwarded in response to requests sent out from Washington by the advocates of this resolution to pastors of Illinois churches with a view to bringing concerted pressure to bear in favor of this resolution at the psychological time.

Whether the request that these indorsements be secured and forwarded contained a full and clear statement of the scope and purpose of the pending resolution I do not know, but from the tenor of the communications received by me it is very evident that a large majority of those sending the communications and the church organizations directing the same labored under a misconception as to such scope and purpose.

It is possible that if the scope of the amendment had been thoroughly understood that these communications might still have been sent. It is possible that some might have been withheld. But for a clear understanding of the effect of the proposed amendment, if submitted and approved, it is necessary for fair discussion that all misconceptions should be cleared away.

SCOPE OF THE AMENDMENT.

A majority of the communications received by me request me to vote for the constitutional amendment pending in this Congress to prohibit "the manufacture, importation, exportation, and sale of intoxicating liquors in the United States."

From this wording it is clearly evident that the parties making these requests do not know what every Member of this House knows, that no such amendment has been proposed nor is now pending in this session of Congress.

The proposed amendment does not provide for the prohibition of the manufacture, importation, and exportation of intoxicating liquors in the United States, but provides simply and solely for the prohibition of the sale of such liquors under certain circumstances specified.

In exact language it provides for the prohibition in the United States of "the sale, manufacture for sale, transportation for sale, importation for sale, and exportation for sale of intoxicating liquors for beverage purposes."

It does not prohibit the manufacture of liquor in the United States except where such manufacture is for the purpose of sale.

It not only allows but constitutionally legitimatizes the manufacture of liquor for personal use, for home and personal consumption, and for the giving of it away to others.

The prohibitionist in the United States has for years advocated the prohibition of the manufacture of intoxicating liquors as the only solution of the problem.

He has argued that to stop the use you must stop the supply; that to stop the effect you must prohibit the cause; that if liquor is manufactured, it will be consumed, and if consumed it will cause intemperance.

He has argued that any other measure that is short of the prohibition of the manufacture fails to strike at the root of the evil, is only a spurious prohibition, a mere subterfuge, and will be productive of more harm than good.

He has continuously contended that prohibition of the sale of intoxicating liquor is only a limitation and will be evaded and that national sobriety can only be secured by the absolute prohibition of the manufacture, exportation, importation, and transportation as well as the sale.

He has contended that if the manufacture and exportation is prohibited, it will not be necessary to prohibit the exportation and sale, for if none can be manufactured or imported none will be exported or sold.

But in this amendment the prohibitionist will not find the relief he desires, for it does not prohibit the manufacture. It does not stop the supply. It does not dry up the source. It really legitimatizes the production and recognizes consumption and use, not only as a medicine and in the arts, but for beverage purposes as well.

That the friends of this amendment do not wish to inhibit the manufacture and use of ardent spirits in the United States is evidenced by their having joined in defeating by a vote of 200 to 77 an amendment to their resolution which if adopted would have provided for absolute prohibition of the manufacture of intoxicating liquors, whether for sale or otherwise.

The amendment defeated by them declared that—

> The sale, manufacture, transportation, importation, and exportation of intoxicating liquors in the United States and all territory subject to the jurisdiction thereof are forever prohibited.

This amendment was opposed by Mr. HOBSON, the author of the resolution, and in opposing same the real intention is evidenced by the following statement made by him in this discussion:

> The object of forbidding the sale is to avoid even a suspicion of any desire to impose sumptuary legislation upon the American people or to invade the rights of the individual and the home.

In other words, the manufacture of liquor is not prohibited by Mr. HOBSON in his resolution, because, according to his own statement, to do so might be construed as sumptuary legislation and as invading the rights of the individual and the home.

Instead of this resolution being intended, then, as a prohibition measure, it is a measure declarative of the old doctrine that prohibitory laws are sumptuary in character, are invasions of the rights of individuals, and it is intended, while limiting the sale, to protect the manufacture and use.

Should the proposed amendment be submitted to the State legislatures and approved by three-fourths of them, as far as the said amendment is concerned, the manufacture of intoxicating liquors would be continued in the United States without license, without tax, and without limitation, except that it is not to be sold.

Under this resolution every individual, every organization, every society and club could manufacture or arrange for the manufacture of intoxicating liquor at home or anywhere else in the United States for personal consumption and use, so long as it is not intended to be sold.

AS TO IMPORTATION.

Neither does this amendment prohibit the importation of liquors into this country, in quantities large or small, from Canada, Mexico, or other foreign lands if imported for personal use; only its importation for sale is herein prohibited. A flourishing business would likely be conducted on our Canadian and Mexican borders.

Bearing on this point, I quote from the Clerk's notes on this discussion:

> Mr. SABATH. Mr. Speaker, will the gentleman yield?
> Mr. HOBSON. Yes.
> Mr. SABATH. In one of these provisions you do not prohibit the importation, so anyone can import any amount or quantity for any use that he might desire?
> Mr. HOBSON. For his own use.

And again:

> Mr. SABATH. It would in no way prohibit the importation for use on the part of any citizen of the United States such as he desires?
> Mr. HOBSON. No.

THE MORRISON AMENDMENT.

Another amendment offered to this resolution is what is known as the Morrison amendment.

This amendment provides for absolute prohibition of the importation of intoxicating liquors into the United States from any other country or into any State of the Union from any other State in the Union for any purpose whatsoever.

This amendment, which would lock up and confine the liquor traffic to each separate State to be absolutely regulated by that State, has also been defeated on this floor by the advocates of the Hobson resolution.

The argument used against the Morrison amendment has been that no constitutional amendment is needed to adopt the Morrison provision; that it can be adopted now as a Federal statute and immediately put into force. Why, then, have not the advocates of the Hobson amendment advocated the passage of such a statute?

It is conceded that a majority in both Houses in this Congress are favorable to the Hobson amendment, but a majority is not enough to pass the amendment so as to render it possible to submit it to the State legislatures. Being a proposed amendment to the Constitution, it requires a two-thirds favorable vote, which it is conceded it can not receive.

Even if it did receive a two-thirds vote in this Congress, it would still have to run the gantlet of the several State legislatures—an interminable contest—and one-fourth of the State legislatures could in the end defeat it.

If the Morrison provision needs no constitutional amendment and could be adopted as a Federal statute, a bare majority of this House and of the Senate could enact it into a law. It could be passed in this Congress by the very majority which favors the Hobson amendment. It would not have to be submitted to the State legislatures. It could be enacted and in force by March 4 next ensuing—all this, of course, upon the theory that the advocates of the Hobson amendment really want prohibition in a speedy and effective manner.

The gentleman from North Carolina [Mr. WEBB], one of the advocates of the Hobson resolution, in a discussion of the Morrison amendment, has said:

> It is quite evident that the Morrison amendment is in some respects more drastic prohibition than the so-called Hobson amendment. But I contend that Congress already has the power to pass just that drastic legislation if it desires to do so, and therefore it would be a useless thing for this House to submit to the various States a constitutional amendment giving to Congress the power that it already has.

Prohibition legislation is necessarily drastic legislation. It is in its nature drastic, because it is prohibitory, peremptory, and confiscatory. If, then, prohibition is desired, why select the less drastic legislation when it is conceded that it can not receive the necessary two-thirds vote on this floor—and even if it could, would have to run the gantlet of getting three-fourths of the State legislatures to favor it—when more drastic legislation is at hand which can be passed, adopted, and crystallized into

law in a few months by the very votes of those who favor the Hobson resolution?

Is, then, real prohibition desired by the advocates of the Hobson resolution, or is political agitation merely desired—an agitation which would be protracted in State legislative contests for an unending term of years?

THE REAL ISSUE.

Mr. William A. Brubaker in the National Issue, a prohibition organ, thus analyzes the situation:

Anyone who understands the English language can readily see that the Hobson amendment would not prohibit the manufacture of liquor for personal use nor its importation for personal use. Mr. HOBSON admitted in his speech in this city (Detroit) recently that his amendment was not intended to prohibit the manufacture or the importation of liquors intended for personal use.

It will be readily seen that this will open the door to all sorts of evasion and frauds and will make the enforcement of the law exceedingly difficult. If I may manufacture liquor for my own use, several of us may join in such manufacture. A hundred, a thousand, any number of men may join in such an enterprise.

Clubs would be organized, as they are now in local-option territory, for the importation of liquors, not for sale, of course, but for the personal use of the member—beer from Bavaria, champagne from France, whisky from Scotland.

The question is, Do the temperance people of America care to spend money and effort for the adoption of such an amendment? Would its enactment better present conditions a particle?

It, then, becomes clear as to the purpose and scope of the pending amendment. It is not, as many who have written me believe, an actual prohibition amendment. It does not prohibit the manufacture, exportation, importation, or transportation of intoxicating liquors. It simply regulates their sale by means of Federal control.

The sale of liquor is now under State and local control. This amendment takes this control away from the locality and State and places it in the hands of the Federal Government. The question therefore here submitted is, Shall the sale of intoxicating liquors in this country be hereafter under State or under Federal control? And this is the real question upon which this Congress is asked to pass in deciding upon the pending resolution.

THE SO-CALLED REFERENDUM.

Another misapprehension evidenced by letters received by me is that the proposed amendment is a referendum giving the people a direct opportunity of voting at the polls upon the question of national prohibition.

Even if it be conceded that the pending resolution is a prohibition measure, no opportunity is given therein for a vote of the people directly upon the proposition.

If this resolution be adopted, it goes to the legislatures of the respective States for ratification or rejection. If three-fourths of these legislatures ratify it, it becomes part of the organic law. If less than three-fourths ratify it, it is defeated. The people have no direct vote upon it. The legislatures will decide the issue.

Under the present system of township option in Illinois every portion of the State can prohibit the sale of liquor therein if a majority in each township so decree. And this can be done by direct popular vote independent of the legislature.

Under the present system in Illinois the entire State can be voted dry by the people, irrespective of the will of the legislature.

Under the present system in Illinois women can vote upon the proposition of making the State dry by township units.

Under the Hobson constitutional amendment the proposition of ratification or rejection is under the control of the legislature alone, and with the election of legislators in Illinois women have nothing whatever to do, as they can not vote for these officials and would therefore have no vote, either directly or indirectly, on the ratification or rejection of the Hobson amendment.

There is a thousand times greater opportunity for voting Illinois dry under the present system of township option than under the Hobson amendment. One is real referendum, the other only relatively so. One recognizes the democratic principle of local self-government and the other the principle of Federal control.

REAL REFERENDUM.

Two methods are prescribed by the Constitution for an amendment of that document. One is by submitting same to the legislatures of the respective States. The other is by submitting same to a convention of the States.

Under the former method the amendment is submitted to legislatures elected upon political and economic issues of all kinds. Under the latter method delegates are elected by the people of the States to a convention upon the sole and only issue which is involved in the proposed amendment.

The former method is indirect, uncertain, and indecisive. The latter method is direct and is representative of the popular will upon the amendment proposed. The Hobson amendment adopts the former or the legislative method, which has very little, if any, of the real referendum in it.

Neither can it be said that the convention method was not proposed. It was proposed in an amendment offered to that end. This amendment providing for the direct convention method was opposed by Mr. HOBSON and the advocates of the pending resolution. A roll call was had upon the convention amendment. Believing in the doctrine of true referendum, I had the pleasure of voting for it. But it was defeated. Real referendum was seemingly not desired.

Reverting, therefore, to the original proposition, it is clear that, with reference to the pending resolution, the question of actual prohibition is not involved, neither is the question of referendum, but the real proposition is the question whether the sale of intoxicating liquors in this Nation of ours shall be the subject of Federal or State control, of centralized power or of local self-government, of surrender or continued reservation to the States of the right to manage their own internal affairs.

THE DEMOCRATIC POSITION.

From time immemorial the Democratic Party has taken no uncertain stand upon this proposition, and I have been elected to this Congress as a Democrat upon a Democratic platform.

From time immemorial the Democratic Party has taken the position that the sale of intoxicating liquors is a matter which should be regulated and controlled by the several States; that it is and should be the subject of local self-government; that it is one of the powers reserved to the State in the management of the State's internal affairs and is not a matter of Federal control.

It is needless to cite National and State Democratic platforms upon this proposition. No one has disputed or will dispute what has been considered a time-honored Democratic principle in this regard, for Democratic State and National platforms have reiterated this from the beginning of our history to the present.

The Democratic national platform of 1912, upon which I was elected Congressman at large, not for any single congressional district, but for the entire State of Illinois, declared that:

Believing that the most efficient results under our system of government are to be attained by the full exercise by the States of their reserve sovereign powers, we denounce as usurpation the efforts to deprive the States of any of the rights reserved to them and to enlarge and magnify by indirection the powers of the Federal Government.

President Woodrow Wilson, a recognized Christian President, who was elected upon this same platform, has spoken in no uncertain terms as to his position upon this question. He says:

I am in favor of local option. I am a thorough believer in local self-government, and believe that every self-governing community which constitutes a social unit should have the right to control the matter of the regulation or withholding of licenses.

William J. Bryan, Secretary of State, an ardent temperance and antisaloon advocate, in this current month's issue of the Commoner, referring to constructions placed by certain newspapers upon former editorials in the Commoner, says:

These editors seem to consider the above-mentioned editorials as an indorsement of national amendments favorable to prohibition, but a careful reading of them will reveal the fact that while the former plainly protests against the domination of the Democratic Party by the liquor interests they relate to these issues as they present themselves in the various States. A national contest for the amendment would simply divert attention from other issues upon which the people are ready to act without advancing the prohibition movement.

Mr. UNDERWOOD, the Democratic leader of this House, has said:

The proposed amendment does not raise the issue of temperance. It is not a moral issue before us. The issue that is present is a governmental issue as to whether or not the enforcement of certain police regulations had best be controlled by the National Government or left within the jurisdiction of the several States, where they were placed by the fathers who builded this Republic. It is merely a question as to whether you are going to substitute for the authority of your State to enforce its laws against your own people the authority of the Federal Government.

In voting upon this resolution I vote upon it in a representative capacity as a Member of Congress at large from the entire State of Illinois, and it is my duty to represent as best I can what I conceive to be the wishes of a majority of the voters of my State as indicated by their expressions in the campaign of 1912 which resulted in my election.

As indicated in the party platforms of that year, not a single vote was cast in Illinois in favor of control of the liquor traffic by national constitutional amendment. No political party declared for it either directly or indirectly. It was not an issue in that campaign, was not discussed or referred to, and I was not called upon to state my position upon that subject.

Even the National Prohibition Party did not declare in 1912 for prohibition by constitutional amendment. I quote from an address delivered in Chicago October 14, 1913, by Hon. Eugene

W. Chafin, Prohibition candidate for President in 1912, as reported in the Vindicator, a Prohibition organ. Mr. Chafin said:

Our good friends throughout the United States who have announced themselves in favor of the constitutional-amendment scheme, I venture to observe, have not, a single one of them, had before them the facts when they committed themselves to such policy.

Of all the foolish and impossible schemes devised to destroy the liquor traffic, this is certainly the worst. Every minute of time and every dollar expended on these schemes is criminally wasteful.

Before the campaign of 1908 was over I saw the poison in the reference to constitutional prohibition in our platform of that year. After consultation with many of our leaders we determined that it should be left out of our next platform.

When I drew the platform for the Atlantic City convention in 1912 I left it out and so constructed the first plank that it conformed to our new line of battle—government by administration—which repudiated any thought of constitutional amendment.

Amendments to our Federal Constitution heretofore have been preceded by years of discussion and initiative.

The latest amendment, for election of the United States Senators by the people, was not submitted until scores of State legislatures had, by resolutions passed, petitioned Congress for such submission and party platforms in nearly every State had declared for it.

The present amendment has not been indorsed by nor petitioned for by a single State legislature, not even by those States where State-wide prohibition prevails. It has not been advocated in a single party platform, State or National, and is presented in such a shape that it is doubtful whether those who have petitioned for it individually would have done so had they understood its imperfections.

I do not know what the motives of others may be in voting against the submission of this amendment. I only know my own motives and am only responsible therefor.

My vote on this amendment does not conclude me either way in the event the question of State-wide prohibition be submitted in my own State. State-wide prohibition and Federal control of the sale of intoxicating liquors are distinct and separate propositions.

I cast this vote against the submission of this amendment because in doing so I am thoroughly convinced that I represent the views of a majority of my constituents in Illinois, and that is the purpose for which I am here.

I cast this vote because in doing so I believe that I am voting in accordance with the Democratic doctrine of local self-government; that I am voting with my party in accordance with the platform upon which I was elected and which was my pledge to the people of Illinois at the time I sought their suffrages, and that in so doing I am voting with the President and the leaders of my party and in the interests of good government.

The So-called Hobson Prohibition Resolution.

EXTENSION OF REMARKS

OF

HON. JOHN A. M. ADAIR,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 22, 1914,

On House joint resolution 168, proposing an amendment to the Constitution prohibiting the sale, the manufacture for sale, transportation for sale, and importation for sale of intoxicating liquors.

Mr. ADAIR. Mr. Speaker, as it was not possible for me to secure the time in which to discuss this resolution in detail, I shall content myself with a brief statement setting forth only a few of the many reasons why I shall vote against it. In my judgment, no bill or resolution introduced in Congress during the past 50 years was so greatly misunderstood by the American people as is the Hobson resolution, No. 168, now being considered by the House. For several days I have been receiving letters and telegrams—some 35 or 40 in all—asking me to vote for the Hobson resolution to prohibit the manufacture and sale of intoxicating liquors. It is evident from the wording of these letters and telegrams that those sending them have never read and know nothing about the provisions of the Hobson resolution. As every Member of the House knows, no resolution or bill has been introduced by Mr. HOBSON or anyone else prohibiting the manufacture of intoxicating liquors. Up to this time Mr. HOBSON has introduced nine different resolutions relating to this subject, but none of them are intended to prohibit the manufacture of intoxicating liquors. All are intended to prohibit the sale of intoxicating liquors for beverage purposes, but none prohibit the manufacture. The Hobson resolution now under consideration reads as follows:

SECTION 1. The sale, manufacture for sale, transportation for sale, importation for sale, and exportation for sale of intoxicating liquors for beverage purpose in the United States and all territory subject to the jurisdiction thereof are forever prohibited.

SEC. 2. Congress shall have power to provide for the manufacture, sale, importation, and transportation of intoxicating liquors for sacramental, medicinal, mechanical, pharmaceutical, or scientific purposes, or for use in the arts, and shall have power to enforce this article by all needful legislation.

Mr. Speaker, it will be observed from the reading of this resolution that it provides for the prohibition in the United States of "the sale, manufacture for sale, transportation for sale, importation for sale, and exportation for sale of intoxicating liquors for beverage purposes."

It does not prohibit the manufacture of intoxicating liquors except when it is manufactured for sale.

It makes it lawful for anyone to manufacture intoxicating liquors in any quantity for home consumption, personal use, or to give away to others. The sole and only thing this resolution seeks to do is to stop the traffic in intoxicating liquors. It does not undertake to stop the manufacture or consumption. Now, let us analyze this proposition and see what would happen if our laws were changed in accordance with this resolution.

Under the Hobson plan anyone who desired to do so could fit up a still at a cost of from $5 up, according to the amount of whisky he wanted to make, could manufacture all he wanted for his own use, and give all he wanted to give to his neighbors, regardless of their age, without violating the law. With the tax off, it would be so cheap that cafés, restaurants, and hotels could serve it free with meals, which they would have the right to do under the Hobson resolution. Social and fraternal clubs would have the right to hire a distillery or brewery in my State, to manufacture a trainload of whisky or beer, and ship it to their club rooms, where it could not be sold, but could be given away to members of the club or anyone else, regardless of age, without violating the law. With the tax off, whisky would only cost about one-third of 1 cent a drink, and social clubs could fix their annual dues at $10 per year, which would be sufficient to supply all the intoxicating liquors its membership could use.

The fact is, Mr. Speaker, this resolution should have been labeled the "Hobson free-whisky resolution" instead of the "Hobson prohibition resolution." In the language of my good friend from Indiana, Mr. MORRISON, under this resolution "every lad would be his own moonshiner and every lad would be his own bootlegger." Whisky would be cheap and easy to get, and an era of drunkenness, with its attendant debauchery and crime, would sweep over this country such as the mind is scarcely able to conceive of.

For many years the Prohibition Party has advocated the prohibition of the manufacture of intoxicating liquors as the only solution of the liquor question. They have argued that the only way to stop the use is to shut off the supply. The Hobson resolution does not prohibit the manufacture nor does it shut off the supply. It simply stops the sale, but at the same time makes it cheaper and easier to obtain. At present, under the various kinds of option, more than 70 per cent of the United States is dry, but if the Hobson resolution should become the law of the land, all this dry territory would immediately become wet. Therefore this resolution does not meet with the views of the members of the Prohibition Party or give them the legislation they desire. In 1912 Hon. Eugene Chafin was the candidate for President on the Prohibition national ticket, and in an address delivered at Chicago October 14, 1913, he made the following statement concerning the Hobson plan:

Our good friends throughout the United States who have announced themselves in favor of the constitutional-amendment scheme, I venture to observe, have not, a single one of them, had before them the facts when they committed themselves to such policy.

Of all the foolish and impossible schemes devised to destroy the liquor traffic, this is certainly the worst. Every minute of time and every dollar expended on these schemes is criminally wasteful.

Before the campaign of 1908 was over I saw the poison in the reference to constitutional prohibition in our platform of that year. After consultation with many of our leaders we determined that it should be left out of our next platform.

When I drew the platform for the Atlantic City convention in 1912 I left it out and so constructed the first plank that it conformed to our new line of battle—government by administration—which repudiated any thought of constitutional amendment.

Mr. Speaker, this statement made by the Prohibition candidate for President in 1912 shows that the temperance people are divided in their views upon this question. The Anti Saloon League favoring the Hobson resolution and the members of the Prohibition Party opposing it. The Prohibitionists favoring legislation which they believe means real prohibition, while the

Anti Saloon League favors legislation which they know means free whisky for everybody who wants it. It is evident that many Members of the House who advocate the Hobson resolution do not want real prohibition. You have just voted down an amendment offered by the gentleman from Illinois [Mr. MANN] which would prohibit both the manufacture and sale of intoxicating liquors. This, if it could be enforced, would mean genuine prohibition. I dislike to question the motives of any man, but it seems to me the leaders in this fight, who might properly be termed "Chautauqua lecturers," "platform performers," and "pay-roll advocates," do not want this question settled. As long as the agitation goes on there will be a demand for their services and their salaries will continue. And in the meantime the honest, conscientious, hard-working temperance people throughout the country, who are misled and deceived, will be asked to contribute of their hard earnings a sum sufficient to carry on this sham battle.

Mr. Speaker, let me quote from another prohibition source. Mr. William A. Brubaker, in the National Issue, a prohibition paper, thus analyzes the situation:

Anyone who understands the English language can readily see that the Hobson amendment would not prohibit the manufacture of liquor for personal use nor its importation for personal use. Mr. HOBSON admitted in his speech in this city (Detroit) recently that his amendment was not intended to prohibit the manufacture or the importation of liquors intended for personal use.

It will be readily seen that this will open the door to all sorts of evasion and frauds and will make the enforcement of the law exceedingly difficult. If I may manufacture liquor for my own use, several of us may join in such manufacture. A hundred, a thousand, any number of men may join in such an enterprise.

Clubs would be organized, as they are now in local-option territory, for the importation of liquors, not for sale, of course, but for the personal use of the member—beer from Bavaria, champagne from France, whisky from Scotland.

The question is, Do the temperance people of America care to spend money and effort for the adoption of such an amendment? Would its enactment better present conditions a particle?

There can be no doubt about the purpose and scope of the Hobson amendment. Mr. Brubaker has stated it correctly and stated it well. In fact, Mr. HOBSON, himself, made a statement on the floor of the House which in effect bears out and sustains the correctness of the position taken by Mr. Brubaker. Mr. HOBSON's statement is as follows:

The object of forbidding the sale is to avoid even a suspicion of any desire to impose sumptuary legislation upon the American people or to invade the rights of the individual and the home.

According to Mr. HOBSON's own statement he is opposed to sumptuary legislation and does not want to invade the rights of the individual or the home. This resolution, then, is not intended as a prohibition measure. It rests upon the doctrine that prohibitory laws are sumptuary in character, and are invasions of the rights of individuals. While Mr. HOBSON would limit the sale of intoxicating liquors he would protect the manufacture and use. If this resolution should be passed by Congress and ratified by the States, the manufacture of intoxicating liquor would continue without license, without tax, and without limitation, except that it is not to be sold for beverage purposes. And after all would it not be difficult to prove when it was and was not used for beverage purposes. Suppose I should buy intoxicating liquors from my neighbor, how could anyone prove it was used for beverage purposes. The fact is, the Hobson plan is not practical. It will not work. It would only delay the settlement of this great question, while it would furnish an opportunity for a few to draw comfortable salaries for waging a contest, which amounts to nothing but disappointment and defeat of the real object sought to be obtained.

Let me quote from President Wilson, a strong temperance advocate—a man of such irreproachable integrity of character that all men are constrained to acknowledge his virtues. Here is what he says:

I am in favor of local option. I am a thorough believer in local self-government, and believe that every self-governing community which constitutes a social unit should have the right to control the matter of the regulation or withholding of licenses.

Again, let me quote from Secretary of State Bryan, a man who has done as much for the cause of temperance and the elevation of mankind as any living human being. In an editorial appearing in the Commoner he says:

These editors seem to consider the above-mentioned editorials as an indorsement of national amendments favorable to prohibition, but a careful reading of them will reveal the fact that while the former plainly protests against the domination of the Democratic Party by the liquor interests they relate to these issues as they present themselves in the various States. A national contest for the amendment would simply divert attention from other issues upon which the people are ready to act without advancing the prohibition movement.

Now let me quote the words of Hon. William H. Taft, ex-President of the United States, an able lawyer and an earnest advocate of temperance. Speaking to the Bar Association of Massachusetts, Mr. Taft asserted that national prohibition was dangerous, that it was nonenforceable and would destroy local government. His exact language is as follows:

It would revolutionize the National Government. It would put on the shoulders of the Government the duty of sweeping the doorsteps of every home in the land. If national prohibition legislation is passed, local government would be destroyed; and if you destroy local government, you destroy one of the things which go to make for a healthy condition of the National Government.

National prohibition is nonenforceable; it is a confession on the part of State governments of inability to control and regulate their own especial business and duty. If the matter were placed under Federal control, it would result in creation of a machinery of Government officials large enough to nominate any President and would offer too great an opportunity to persons seeking to perpetuate their power in Washington.

Again, let me quote from Mr. UNDERWOOD, the Democratic leader of the House, who agrees with ex-President Taft and who on the floor of the House said:

The proposed amendment does not raise the issue of temperance. It is not a moral issue before us. The issue that is present is a governmental issue as to whether or not the enforcement of certain police regulations had best be controlled by the National Government or left within the jurisdiction of the several States, where they were placed by the fathers who builded this Republic. It is merely a question as to whether you are going to substitute for the authority of your State to enforce its laws against your own people the authority of the Federal Government.

Mr. Speaker, I shall not at this time discuss the question of Federal control. I shall stop long enough, however, to say that I believe in local self-government. I believe that as much power as is consistent with our dual form of government should be left with the people. The police powers now rest with the States, and I doubt the wisdom of taking it away or transferring it to the Federal Government. In other words, I believe the people of my county, out in Indiana, can enforce the law in that community better than it can be enforced by some one in Washington, 700 miles away, and I know it can be done with much less expense. I do not believe the power to control the liquor traffic will ever be taken away from the States and transferred to the Federal Government. If it is, the law will never be enforced. It would cost the Federal Government more to police the entire United States for the enforcement of a liquor law than it now costs to pay all the running expenses of our Government.

Mr. Speaker, since I have been a Member of this House I have voted for every temperance and moral measure presented. I helped pass the Jones-Works bill and the Kenyon red-light bill, which have made the city of Washington the cleanest city in all the world. I helped pass the Webb bill regulating the interstate shipment of intoxicating liquors which gave to prohibition territory the protection to which it was entitled. I am 51 years old to-day, and I state the truth when I say that I have not consumed as much intoxicating liquor in 51 years as some who vociferously advocate this resolution have consumed during the past 51 days.

I am for temperance and against intemperance. I am for virtue and against vice. I am for morality, decency, law, and order. I told the people I represent that I would stand for all of these while representing them in this body. One of my constituents, a preacher, wrote me that I ought to vote for this resolution because I promised him in a letter I would vote for temperance measures. I did make that promise, and I shall sacredly keep it. But the Hobson resolution is not a temperance measure, and I can not in justice to my conscience vote for it. I believe I am a better temperance man than anyone who advocates a proposition that places intoxicating liquors in the hands of everybody without regulation and almost without limitation. I reserve the right to judge for myself what is a temperance measure and what is not a temperance measure. I can tell from the wording of the letters and telegrams I received asking me to vote for this resolution that those sending them have been misled and deceived or have not informed themselves as to what it really is. They thought it meant prohibition instead of free whisky.

Mr. Speaker, the national prohibitionists are opposed to this measure, while the Anti-Saloon League is for it. If I vote against it, I will displease the Anti-Saloon League. If I vote for it, I will displease the national prohibitionists. Feeling certain the national prohibitionists are right and the Anti-Saloon League is wrong—so far as this resolution is concerned—I shall vote against it.

I have no doubt but that many honest temperance advocates in my district who have been misled and deceived as to the provisions of the Hobson resolution will criticize my action, but that should not and will not deter me from doing my duty as I see it. My vote against this amendment is based on my

judgment and my conscience, and in time, I believe, practically everybody will approve it, except possibly the Chautauqua lecturers, platform performers, and pay-roll advocates, whose occupation and livelihood depends very largely on the continued agitation of this question.

Mr. Speaker, like President Wilson, ex-President Taft, Secretary of State Bryan, ex-candidate for President on the Prohibition ticket, Hon. Eugene Chafin; Hon. William A. Brubaker, editor of one of the leading prohibition papers of the country, and many other distinguished and earnest advocates of temperance, I doubt the wisdom of attempting to solve the liquor problem by constitutional amendment, but if Congress should decide to submit an amendment, let it be one that means something instead of a makeshift.

Mineral Production of Oklahoma.

EXTENSION OF REMARKS

OF

HON. CLAUDE WEAVER,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 29, 1914.

Mr. WEAVER. Mr. Speaker, the United States Geological Survey, a branch of the public service under the Department of the Interior, has just published the official Review and Summary of the Mineral Products of the United States for the Year 1913. That report shows that Oklahoma advanced from twelfth place among the States in 1912 to seventh place in 1913 in value of mineral production and to first place in the value of the output of petroleum. When the figures for 1914 are given it will be found that Oklahoma in the present year has produced more than one-third of the world's total petroleum and more than two-thirds of all refinable oil of the whole world. The discovery and development of the Healdton field, in Carter County, and the vastly increased yield of the Cushing field, in Creek County, and of other fields, have resulted in a 1914 production of more than 100,000,000 barrels of high-grade illuminating oil in the State of Oklahoma. Under the leave granted me to extend my remarks in the RECORD I will print a summary of Oklahoma's mineral products for 1913 from the Government's official report:

MINERAL PRODUCTION OF OKLAHOMA FOR 1913.

Oklahoma has achieved importance as a mining State in the last few years, principally on account of its phenomenal increase in the production of petroleum which followed the discovery of oil in quantity in that State in 1904. The record for 1913 in consequence concludes the first 10 years of petroleum production in quantity in Oklahoma. At the beginning of this period, as a result of considerable drilling in the Osage Indian Reservation and in the vicinity of Bartlesville and Ramona, in the Cherokee Nation (then Indian Territory), the production rose to nearly 1,400,000 barrels. This was about ten times the output of the preceding year (1903). In 1905 the production reached a total of nearly 10,000,000 barrels, and this output was approximately doubled in 1906. In the next two years, or in 1908, it was again more than doubled, with a total production of nearly 46,000,000 barrels. Another 10,000,000-barrel increase was added in 1911, when the production amounted to 56,069,637 barrels. The first interruption to this steady increase was in 1912, when the output receded to 51,427,071 barrels, but this decrease was more than made up by the production of 1913, when it increased to 63,579,384 barrels. The increase in 1913 over 1912 was 12,152,313 barrels, or 24 per cent, but this increase paled somewhat in comparison with the increase in value, which was from $34,672,604 in 1912 to $59,581,948 in 1913, a difference in favor of the latter year of $24,909,344, or 72 per cent, the percentage of gain in value being three times that in the quantity. Oklahoma now ranks second in quantity among the petroleum-producing States, with California first; but in 1913 the value of the Oklahoma production exceeded that of California by nearly $14,000,000, placing Oklahoma at the head of the list in the value of petroleum output. From 1906 to 1908 Oklahoma stood first also in the quantity of production, but was displaced by California in 1909. Because of the increased value of its petroleum output, Oklahoma advanced from twelfth place in 1912 to seventh place among all the States in the total value of its mineral output. The increased production of petroleum in Oklahoma was due to greatly extended drilling, principally within the known oil fields, especially the development to the north and east of the prolific Cushing field. The increased drilling was doubtless somewhat stimulated by the advances in price of Mid-Continent oil.

Oklahoma is also one of the important producers of coal among the Southwestern States, and is the most important producer of natural gas in that section. The coal production increased from 3,675,418 short tons, valued at $7,867,331, in 1912, to 4,165,770 tons, valued at $8,542,748, in 1913. The increase in coal production in 1913 is attributed more to a rather abrupt withdrawal of fuel oil from markets where it had been in competition with Oklahoma coal and to a diminution in the supply of natural gas from the northern part of the Mid-Continent field, particularly in Arkansas. The decreased production of coal in Colorado, due to labor troubles, was also partly responsible for the increased production in Oklahoma. Until 1912 there had not been for 10 years any substantial increase in the production of Oklahoma coal, but in that year there was a gain of about 600,000 tons, followed by another of nearly 500,000 tons in 1913. In the 10 years from 1902 to 1911, inclusive, the production of coal in Oklahoma ranged between 2,646,226 tons in 1910 and 3,642,658 tons in 1907, with an average for the decade of 3,059,984 tons, showing that because of the production and use of fuel oil the output of coal had remained practically stationary. Prior to the admission of Oklahoma as a State the principal production of coal was from the Choctaw Nation, with smaller quantities from Cherokee and Creek Nations. Pittsburg County is now the leading producer, with Coal, Okmulgee, and Latimer in the order named. Six other counties also produce coal.

The value of the natural gas produced in 1913 was $7,436,389, as compared with $7,406,528, with an increase in quantity from 73,799,319,000 cubic feet to 75,017,668,000 cubic feet. The total value of the three fuels—coal, petroleum, and natural gas—in 1913 amounted to $75,561,085, or 94 per cent of the total mineral output of the State.

The only other products which had a value in excess of $1,000,000 were cement and zinc, the latter showing an increase from 5,769 short tons, valued at $796,122, in 1912 to 11,664 short tons, valued at $1,306,368, in 1913. As there are only two manufacturers of cement in the State, the totals of production are not published. The zinc ores are entirely from Ottawa County in the northeastern part of the State, which has developed some importance in the production of lead and zinc. The lead content of the ores produced in Oklahoma increased from 3,388 short tons, valued at $304,920, in 1912 to 6,228 tons, valued at $548,064.

The clay products of the State are chiefly common and vitrified brick, the total value of which in 1913 was $573,371, compared with $535,318 in 1912. The principal counties in the utilization of clay resources are Muskogee, Rogers, and Tulsa.

The chief quarry product is limestone, used mainly for railroad ballast and concrete. The quarrying of granite is chiefly for building purposes and is of some importance in Greer, Johnston, Kiowa, and Sequoyah Counties. The total value of the stone produced decreased from $795,879 in 1911 to $429,788 in 1912 and to $278,600 in 1913. The decrease is due to a smaller quantity used for railroad ballast.

The other mineral products of Oklahoma are asphalt, gypsum, lime, commercial mineral waters, salt, sand and gravel, sand-lime brick, and a small quantity of silver. The total value of the mineral products of Oklahoma increased (chiefly because of the increase in petroleum) from $53,614,130 in 1912 to $80,168,820 in 1913. The distribution of the production in 1912 and 1913, by substances, is shown in the following table:

Mineral production of Oklahoma in 1912 and 1913.

National Prohibition.

EXTENSION OF REMARKS
OF
HON. HORACE W. VAUGHAN,
OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 22, 1914,

On House joint resolution 168, proposing an amendment to the Constitution prohibiting the sale, the manufacture for sale, transportation for sale, and importation for sale of intoxicating liquors.

Mr. VAUGHAN. Mr. Speaker, I desire to put in the RECORD at this time my reasons for being opposed to the Hobson resolution.

As amended by its friends, the amendment which the resolution proposes for the ratification of the legislatures of the States reads as follows:

SECTION 1. The sale, manufacture for sale, importation for sale of intoxicating liquors for beverage purposes in the United States and all territory subject to the jurisdiction thereof, and the exportation thereof, are forever prohibited.

SEC. 2. Congress or the States shall have power, independently or concurrently, to enforce this article by all needful legislation.

As introduced, section 2 reads as follows:

SEC. 2. Congress shall have power to provide for the manufacture, sale, importation, and transportation of intoxicating liquors for sacramental, medicinal, mechanical, pharmaceutical, or scientific purposes, or for use in the arts, and shall have power to enforce this article by all needful legislation.

This language unquestionably would have conferred upon Congress, and upon Congress alone, the "power to enforce this article by all needful legislation." Everyone could readily see that it would take away from the States the police powers they now have over this subject and would vest in the Congress the power to make such laws as Congress should deem needful to enforce the prohibition declared in the amendment.

The friends of the resolution for some purpose changed it so as to confer the power on "Congress or the States independently or concurrently." What power? The power "to enforce this article by all needful legislation." And now they tell us it would not interfere with the police powers of the States. What are the police powers of the States on this subject? Each State may now determine for itself, considering its own condition and the habits and sentiments of its people, what is best to be done, whether the traffic should be absolutely prohibited or placed under restrictions and regulations, whether it will have absolute prohibition throughout the limits of the State, or will permit counties and communities to exercise the option to prohibit it.

Each State now has the power to prohibit absolutely the sale or manufacture, or both, or to permit the sale and prohibit the drinking saloon. The police powers of the States over the subject are broad and are quite sufficient to enable each State to legislate for itself against all the evils of the traffic or growing out of it, and to determine, each for itself, what legislation on the subject is best for itself. Each State may prohibit or may regulate the traffic within its own limits in any manner it chooses; and Congress may now prohibit or regulate in any manner it chooses the interstate traffic.

The laws of the several States upon this subject are various and differ widely; some have absolute prohibition of the manufacture and sale except for certain specified purposes, others have local option, and others have different methods of regulation. All of these regulatory and prohibitory laws and all of the local option laws of the States were passed in the exercise of the police powers now possessed by the State governments.

If the Hobson amendment, either as introduced or as amended, were to become a part of the Constitution it would of its own force repeal every provision of every State constitution and every State law providing for local option, and every State law, constitutional and statutory, prohibiting or regulating the sale of liquor, and would substitute in their place the Hobson amendment and such laws as Congress should from time to time "deem needful" to enforce it. It would prohibit the States from passing any laws affecting the sale of liquor except the same as those passed by Congress. There is a provision of the Constitution which makes the laws passed by Congress in pursuance of the powers conferred upon it by the Constitution supreme over any State law. Whatever law Congress passed on the subject would control, and no State law on the subject would be of any validity unless the same as that passed by Congress.

If this were not true, the situation would be worse, because you would have "confusion worse confounded," Congress and the States enacting different laws on the same subject. Which would prevail? Which would be supreme? Which would be the law within the limits of a State enacting a law upon the subject different from that passed by Congress? Do not the friends of the resolution believe that in case of conflict between laws passed by a State and those passed by Congress on this subject those of Congress would prevail? Of course, Congress would pass laws to enforce the prohibition declared in the first section of the amendment, many of them, and would change them from time to time as it deemed "needful." Proposed prohibition legislation would occupy the time and attention of Congress as it now does of the State legislatures. After Congress had passed laws on the subject, what power would the States have over it? Either to do nothing or to enact the same laws that Congress passed and help the Federal Government enforce them. Then, why change the language of section 2, as introduced? Why confer power on "Congress or the States"? The States already have all the police powers over the subject within their respective limits, and the Federal Government has none within the limits of the States. Why change the section to say the States shall have power to enforce," and so forth?

Mr. Speaker, evidently this was done in order to afford a pretext for the claim that the amendment would not take away from the States the police powers they now have. "No," they tell us, "we do not propose to take away anything from the States; we expressly confer power on the States, either concurrently with or independently of Congress, to enforce this article by "all needful legislation." No; they would not take any police powers from the States; they would divest the States of all the powers over this subject they now have, and let them assume the burden of helping the Federal Government enforce the Federal laws if they desire to do so.

Section 2, as introduced, proposed to confer on Congress "power to provide for the manufacture, sale, importation, and transportation of intoxicating liquors for sacramental, medicinal, mechanical, pharmaceutical, or scientific purposes, or for use in the arts," and so forth.

When the author of the resolution introduced it he evidently believed that the usefulness of such liquors for these purposes was of sufficient importance to require recognition in an amendment intended to prohibit their use for beverage purposes, of such importance that Congress should be given power to provide therefor; and his resolution proposed to confer such power on Congress, and would have put the Federal Government in the business of "providing" for the manufacture, sale, importation, and transportation of such liquors for such sacramental and other purposes. Why was this language stricken out of the section? Did it make the federalism of the proposition too glaring? Would Congress have the power under the section as amended, which the language stricken out would have expressly conferred—would this power be implied as necessary to the exercise of the power to prohibit the sale, and so forth, for beverage purposes? Could Congress, in the exercise of the power given to prohibit for beverage purposes, if it should "deem needful" to enforce its laws, take over the business of manufacture, sale, and so forth, for other purposes?

These are pertinent questions in view of the changes made in the language of the resolution. Many powers exercised by Congress have been sustained by the courts as being warranted, authorized, and implied by the powers conferred.

It is not necessary to adopt national prohibition in order that each State may free itself from the liquor traffic; each State may do so whenever it desires, and I believe that the people of each State can best determine for themselves when it is best for them to adopt prohibition and whether it is best for them to do so, for the simple reason that they are better acquainted with their own conditions and needs and are entitled to determine for themselves.

Stripped of all disguise, the proposition is to force prohibition on those States in which a majority of the people are opposed to it. I do not believe it right nor do I believe it wise to do so.

It is said that the traffic is a national evil, a national crime, a national curse. In the same sense, so is immorality and every other vice that is prevalent in all the States.

I desire to repeat what I have heretofore said on this subject. The careful student has observed that it was the general purpose of the framers of the Constitution to confer upon the Federal Government such powers only as are necessary to enable it to maintain itself and to exercise control over transactions, affairs, and relations with foreign countries, of the States with each other, and between citizens of different States. In general, our foreign affairs and the mutual relations of the States with each other are committed to the Federal Government, and all other affairs are withheld from it and reserved to the States or to the people.

Why? That as to other nations we may act as a unit; that as to matters affecting our relations with each other the common government of all should control; and that the regulation of the civil rights of the people and the making of police regulations should be in the hands of that government which is closer home, closer to the people, more directly under their supervision, inspection, and control.

The diversified habits, customs, conditions, resources, industries, and interests of the peoples of the several States made it apparent that the people of each State could best govern themselves, for the simple reason that being better acquainted with their own institutions they knew best what should be done.

There is now more reason than ever for this division of the powers of government between the States and the Federal Government and this limitation upon the powers of the latter. When the Constitution was adopted we were only 13 States, covering only a part of the Atlantic coast and a few hundred miles into the interior, and the conditions of life were simple and much more alike in the different States. We now cover the continent from ocean to ocean and from the Lakes to the Rio Grande. If our interests were sufficiently diversified then to make it wise to divide the powers of government between the State and the Federal, as I have explained, the multiplication of that diversification and the vast extension of our territory certainly multiply the reasons for the continuation of the same wise policy.

The candid, thoughtful man who will consider these facts will become more and more convinced that Mr. Jefferson's opinions and views of this subject accord with wisdom and common sense. Permit me to borrow his language to express a few pertinent thoughts. He said:

The extent of our country was so great and its former division into distinct States so established that we thought it better to confederate as to foreign affairs only. Every State retained its self-government in domestic matters, as better qualified to direct them to the good and satisfaction of their citizens than a general government so distant from its remoter citizens and so little familiar with the local peculiarities of the different parts.

Again—

Our country is too large to have all its affairs directed by a single government. Public servants at such a distance, and from under the eye of their constituents, must from the circumstance of distance be unable to administer and overlook all the details necessary for the good government of the citizens; and the same circumstance, by rendering detection impossible to their constituents, will invite the public agents to corruption, plunder, and waste.

Again—

It is not by the consolidation or centralization of powers, but by their distribution, that good government is affected. Were not this great country already divided into States, that division must be made that each might do for itself what concerns itself directly and what it can so much better do than a distant authority.

Again—

When all government, domestic and foreign, in little as in great things, shall be drawn to Washington as the center of all power, it will render powerless the checks provided of one government on another and will become as venal and oppressive as the government from which we separated.

Again—

I was in Europe when the Constitution was planned, and never saw it until after it was established. On receiving it I wrote to Mr. Madison urging the want of provision for the freedom of religion, freedom of the press, trial by jury, habeas corpus, a substitution of militia for a standing army, and *an express reservation to the State of all rights not specifically granted to the Union.* He accordingly moved, in the first session of Congress, for these amendments, which were agreed to and ratified by the States as they now stand.

Again—

I wish to preserve (in a new constitution for Virginia) the line drawn by the Federal Constitution between the general and particular governments as it stands at present, and to take every prudent means of preventing either from stepping over it.

It was on this very subject that differences caused the first division of our people into political parties. It was adherence to the views and principles of Mr. Jefferson on this subject that constituted the fundamental doctrine of the Democratic Party, and if there is any doctrine, any principle to which the Democratic Party is committed it is that the States alone have, and that the States alone should have, the powers of government over commerce within the States; the regulation of the civil rights of the people, police regulations, and all other domestic affairs; and that the exclusive powers of the States to govern themselves in these matters should be maintained unabridged.

There may be some who believe this division of powers between the State and the Federal Governments and the limitation upon the powers of the latter were destroyed by the War between the States; but they are in error. The war was not fought for the destruction of the rights of the States, but for the preservation of the Union; and while war measures were taken which resulted in depriving the States of their right to determine some questions over which dissensions had arisen, resulting in the war, and while the right of States to secede was denied by the arbitrament of arms, the other reserved rights of the States and limitations upon the powers of the Federal Government were saved.

This very doctrine saved the Southern States from negro domination and from carpet-bag government after the war was over, from the force bill, and from the infamies the reconstructionists would have loaded upon us; and it protects us now against those who, under the pretense that they are their "brothers' keepers," assert that they have the right to govern us and would force us to have whites and negroes attend the same schools and otherwise mingle on terms of social equality.

I am unwilling to abandon the fundamental teachings and principles of the Democratic Party to help set a precedent that will enable the centralizationists to follow with force bills and measures interfering with our elections and otherwise meddling with domestic affairs.

I am unwilling to surrender the doctrine that has enabled us to maintain white supremacy in the South or to help set a precedent that may be used against us when we invoke that doctrine in our defense in the future.

They tell us that because the States have agreed in the Constitution that it may be amended whenever two-thirds of both Houses of Congress propose an amendment and three-fourths of the States ratify it, the adoption of this amendment would not conflict with the doctrine of State rights. An amendment providing for a consolidated, centralized government could be adopted in the same way, and the rights of the States to govern themselves absolutely done away with. It is the Democratic doctrine not only that the States have the right of self-government and the powers which this amendment would take away from them, but that they should retain them, that they should not be surrendered nor abridged.

They tell us we should vote for the amendment, whether we favor it or not, to refer or submit it to the people; that the people have a right to amend the Constitution, and that we should give them a chance to do so. The same could be said in favor of any amendment offered. The Constitution does not provide for submitting amendments to the people, but for proposing them to the legislatures of the several States or to conventions in the several States for their ratification. It is not necessary for Congress to propose in order to give the States the opportunity to amend. The Constitution is so worded that a Member of Congress in voting for a proposed amendment votes not to refer it or submit it to the people, but that he deems it necessary and proposes it for ratification. Congress is required by the plain language of the Constitution to vote its judgment upon the proposition. If two-thirds of the States apply for it, Congress shall call a convention for proposing amendments; and they may be proposed by Congress or by such a convention either to the legislatures of the several States or to conventions of the several States composed of members elected by the people to determine whether they will ratify or not. The resolution proposing the amendment in this case is so worded as to propose to the legislatures, and the people would have no voice in the matter except through their members of the legislature.

National Prohibition Amendment.

EXTENSION OF REMARKS

OF

HON. S. HUBERT DENT, JR.,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 22, 1914.

Mr. DENT. Mr. Speaker, I am opposed to this amendment, first, because it is to be submitted to the legislatures of the different States instead of conventions to be selected by the people solely to pass upon this question. This is the nearest approach to a referendum provided for in our Constitution. Second, because it takes from the States through themselves or their localities the right to regulate individual conduct and transfers this right to the Federal Government, thereby dragging the citizen far from home to stand trial before a Federal judge and a Federal jury. Third, because it leaves the purpose

of manufacture, sale, and transportation to be determined by the courts, which will either result in absolute failure or subject the citizen to a system of espionage heretofore unheard of. Fourth, because it will not only deprive the Government of several hundred millions of revenue, but require many millions more to provide the machinery and the vast army of employees necessary to enforce it. Fifth, because it will permit 36 States to require of 12 States the adoption of a policy to which they are utterly opposed. Sixth, because it would require a system of espionage directed from Washington which might enter even the privacy of every home. Seventh, because it enters upon an entirely new era of Constitution amendment, restricting, rather than enlarging, individual rights.

I think we may remind ourselves of the significant fact that no amendment to our Federal Constitution has ever been adopted which tended in any way to abridge individual liberty. On the contrary, every amendment that bears any relation to individual rights has tended to enlarge rather than contract them. In fact, historians agree that but for a tentative understanding that the first 10 amendments would be submitted and agreed upon, the Constitution would never have been adopted. These amendments, with the exception of the ninth and tenth, which are merely declaratory, define the rights of the individual against the tyranny of power in the most positive and concise form. The first declares for religious liberty, the freedom of speech and of the press, and the right of petition. The second guarantees the right to bear arms. The third prevents soldiers from being quartered in any man's home except in time of war, and then only in a manner previously prescribed by law. The fourth secures the people against unreasonable searches and seizures as to their persons, houses, papers, and effects. The fifth prevents a prosecution for an infamous crime except by indictment by a grand jury, provides that no person shall be twice put in jeopardy, or be a witness against himself, or be deprived of life, liberty, or property except by due process of law. The sixth guarantees to an accused person the right to a speedy public trial by an impartial jury of the State and district where the crime is said to be committed, with the right to be informed of the nature and cause of the accusation, to be confronted with the witnesses against him, to have compulsory process for his witnesses, and to be represented by counsel. The seventh guarantees the right of trial by jury, even in civil cases, where the amount involved exceeds $20. The eighth prevents excessive bail and fines, as well as cruel and unusual punishments. The ninth simply declares that the enumeration of rights in the Constitution shall not deny or disparage others which are retained by the people.

I have reviewed these amendments for the purpose of calling attention to the fact that if the proposed amendment should be adopted our people would enter upon an entirely new program in framing our organic law, for, confessedly, the proponents of this new era are striving to prevent the citizen from exercising the right to indulge in the personal use of any intoxicating liquor. There would be no excuse for the amendment if a considerable portion of our population did not claim the right to exercise this privilege if they saw fit. It must, then, be admitted that it is proposed that we take a back step and give to the Federal Government the right to investigate and punish the conduct of the individual in a respect entirely different from any heretofore entered upon by Federal legislation.

The Federal Constitution is full of prohibitions, but they are directed to the State and Federal Governments and not to the individual. They say to the State and Federal Governments you must not do this and you must not do that, but they do not say to the individual citizen you must not do this and you must not do that. All through it we find restrictions upon the right of the State and Federal Governments to control the conduct of the citizen. The genius of the Federal Constitution is the enlargement and protection of individual right, and especially is this true of the amendments.

All our laws depend at last for their enforcement upon the jury, and anyone who has had the slightest experience knows that it is difficult to find a jury drawn from people who are opposed to a sumptuary law that will enforce it. There are too many dead laws now, and to add to the number would be only to run the risk of bringing the law itself as an institution into disrepute.

Prohibition and other sumptuary laws can not be enforced under our system until the people from whom the jury is drawn are almost unanimous in wishing their enforcement. When the people become almost unanimous in wishing the enforcement of prohibition, prohibition becomes unnecessary, for there are no longer any people who will patronize a barroom if there is one. This is a reductio ad absurdum, I know, but such is the propaganda seen to be when examined in the merciless light of reason and experience.

It may not be amiss in this connection to call attention to the fact that the 12 largest States in the Union in population are Massachusetts, New York, Pennsylvania, Ohio, Illinois, Missouri, Texas, New Jersey, Indiana, Michigan, Georgia, and Kentucky, and the population of these 12 States is nearly 51,000,000—largely more than half the population of the United States proper. Of these 12 largest States only one, the State of Georgia, is a prohibition State. Local option exists in the other 11. It is, then, manifest that 37 States, with a population considerably less than half the total population of the United States proper, could inflict upon 11 local option States, with a population of considerably more than half the total population of the country, not only a law which these States do not desire, but a sumptuary law which must be enforced by juries selected from the body of the people of these States which are opposed to such legislation.

Such a proposition, in itself alone, so thoroughly transgresses all the fundamental principles of the Democratic Party as to call for the defeat of this amendment. It is impossible for me to understand how any man trained in the school of democracy can so far forget the doctrine of State sovereignty and local self-government, as well as antagonism to the centralization of power at Washington, as to vote for this amendment.

Oregon's Forest Reserves.

EXTENSION OF REMARKS

OF

HON. A. W. LAFFERTY,

OF OREGON,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 31, 1914.

Mr. LAFFERTY. Mr. Speaker, under the leave given me to extend my remarks in the RECORD, I submit the following correspondence just had between the West Coast Lumber Manufacturers' Association and myself, in which I endeavor to show why Mr. J. N. Teal, attorney for said association, in his other capacity as president of the "Oregon Conservation Commission," so strenuously opposes the conveyance of the forest reserves in trust to the States:

[West Coast Lumber Manufacturers' Association (Inc.). General offices: 610 Tacoma Building, Tacoma, Wash. Branch office: 509 Gerlinger Building, Portland, Oreg. Officers: President, W. B. Mackay; vice president, J. H. Bloedel; secretary, T. Babcock; counsel, Joseph N. Teal. Trustees: E. J. Palmer, Chemanius, British Columbia; J. H. Bloedel, Bellingham, Wash.; R. H. Hambridge, Everett, Wash.; D. E. Skinner, Seattle, Wash.; L. L. Doud, Tacoma, Wash.; T. H. MacLafferty, Tenino, Wash.; W. B. Mack, Aberdeen, Wash.; E. L. Gaudette, South Bend, Wash.; W. B. Mackay, Portland, Oreg.; R. S. Shaw, Astoria, Oreg.; F. J. Cobbs, Falls City, Oreg. Main 4485.]

TACOMA, WASH., *December 23, 1914.*

Hon. A. W. LAFFERTY,
Washington, D. C.

DEAR SIR: A short time ago the lumbermen of Oregon entertained the Oregon congressional delegation at a dinner, at which the lumbermen presented the conditions of the lumber business with a view to putting the Senators and Congressmen in a better position to take care of matters affecting the industry which might be brought up at Washington. The writer made a few remarks at that meeting from the inclosed notes, which are sent you with the thought that you may be able to understand better the true condition of the lumber business of this Northwest, if you can find the opportunity to read them over. We all know that the lumber industry is the backbone, so to speak, of Washington and Oregon, and we know that our Representatives in Congress are anxious to do what they can to help this industry.

Hoping the inclosed may be of some help to you, we are,

Yours, respectfully,

WEST COAST LUMBER MANUFACTURERS' ASSOCIATION,
By THORPE BABCOCK, *Secretary.*

[A. W. LAFFERTY, third Oregon district; Richard L. Merrick, private secretary and special assistant in departmental matters. Washington address: 486 House Office Building. Portland address during vacations of Congress: 733–736 Pittock Block.]

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., December 31, 1914.

Mr. THORPE BABCOCK,
Secretary West Coast Lumber Manufacturers' Association,
Tacoma, Wash.

DEAR SIR: I was interested to receive to-day your letter of the 23d instant, inclosing a copy of your very able address at the dinner given to the Oregon congressional delegation at the Portland Commercial Club by your association shortly after the late election.

I had no knowledge of such dinner until to-day, and if I was not entitled to the courtesy of being treated as a member of the Oregon congressional delegation at that time I see no reason why I should be so treated now.

However, I wish to thank you for your letter and the information it gives me. I see that the letterhead carries the names of the officers of your association, among whom is "J. N. Teal, attorney."

This is the same J. N. Teal who is attorney for the Booth-Kelly Lumber Co. This is the same J. N. Teal who is part owner of the Oregon Daily Journal. This is the same J. N. Teal who is president of the Oregon Conservation Commission.

Now, the last two annual reports of this so-called Oregon Conservation Commission have strongly opposed conveying the forest reserves in trust to the States, on the ground that it would be the first step toward putting the lands into the hands of private lumber manufacturers and exploiters.

I ask you and all fair-minded people if this was the true motive which Mr. Teal had in opposing the conveyance of the forest reserves in trust to the States?

Mr. Teal appears to be the attorney for the private lumber manufacturers and exploiters. Can it be that he is double-crossing you? Can it be that while he is being supported in luxury by your hard-earned cash he is fighting your interests as president of the Oregon Conservation Commission, from which he receives no salary? Yet Mr. Teal, out of his unselfish devotion to the public, comes out and opposes conveying the forest reserves in trust to the States, because it would be the first step toward putting these lands in the hands of you men who are paying him yearly as your private attorney—you men whom he denominates as "exploiters."

I very much fear that Mr. Teal is faithful to you, the men who have him on yearly salary. I very much fear that in opposing the conveyance of the forest reserves in trust to the States Mr. Teal is not so much concerned in protecting the public against his clients as he is in protecting his clients against the public.

The truth is that the only bill ever offered in Congress to convey the forest reserves in trust to the States is my bill, and it was I who originated the idea during my first campaign in 1910. Mr. Teal and the Journal and the Oregonian have opposed it from the start. These papers have refused even to tell the people that I have such a bill pending and that I am fighting for its passage; but some of these days it will pass, nevertheless.

Mr. Teal well knows that the lands could never fall into your hands or into the hands of other exploiters, because it is expressly provided in the bill that the States shall have no power to sell an acre of the land for any purpose. It provides that the States may cut only the ripe trees from year to year, permitting the young trees to grow up and replace those cut, thereby preserving our great national forests forever.

Should such a bill give Mr. Teal any concern lest the lands should fall into the hands of his wicked clients?

The bill further provides that Congress may even revoke the conveyance in trust at any time it so desires.

Does such a law look like it was framed in the interests of exploitation?

No, indeed. Mr. Teal well knows that the proposition is in the interests of conservation and against the interests of the timber barons and private exploiters. He well knows that it would put State owned and operated forests into direct competition with you gentlemen, the private owners and manufacturers of lumber. That is why he is having his string-jumping Oregon Conservation Commission oppose the proposition. In so doing he is in reality faithfully serving you, and he is a traitor to Oregon and to the cause of conservation.

Oregon has 16,000,000 acres of land in the forest reserves, more than one-fourth of the State's area. This land is held off the tax rolls. This land, according to Mr. Teal himself, is worth $400,000,000. Were these lands conveyed to the State in trust, allowing the ripe trees to be cut each year, the State would make a profit of at least 3 per cent net per year, or $12,000,000 from her forest reserves, and that would reduce Oregon's taxes just one-half. Besides, the forests would be preserved forever, and thousands of citizens of Oregon would be given permanent employment.

Who opposes this law? You do. Mr. Teal is your hired attorney. It was Mr. Teal who arranged the banquet of which you speak. He invited all the members of the Oregon delegation except myself. In my place he invited Mr. C. N. McArthur, who will not be a member of the Oregon delegation until March 4 next, and who would never have been except for the perfidy of Mr. Teal and the paper he partly owns, the Oregon Daily Journal.

The people of Oregon will become acquainted with the true facts in due time, notwithstanding the foxy Mr. Teal. Then, I fear your association will have to meet State competition.

However, I wish you well and hope that only prosperity will be yours.

Very sincerely,

A. W. LAFFERTY.

National Prohibition.

EXTENSION OF REMARKS
OF
HON. GEORGE J. KINDEL,
OF COLORADO,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 22, 1914,

On the joint resolution (H. J. Res. 168) proposing an amendment to the Constitution of the United States prohibiting the sale, etc., of intoxicating liquors for beverage purposes.

Mr. KINDEL. Mr. Speaker, when I first listened to the arguments in favor of prohibition advanced by the gentleman from Alabama [Mr. HOBSON] a year and a half ago, I thought him a zealous fanatic and a bore on the question.

A little over a year ago, while my State was suffering the agonies of a coal strike, in which 1,000 miners were led, or rather misled, by union agitators who insisted on intimidating over 10,000 fellow workers into submitting to being subjected to $10 initiation and $1 per month dues and whatever fines or checkups might be imposed upon them, it was here that I witnessed the overindulgence in liquor and its consequent results, and it was here that I was converted to Mr. HOBSON'S views on the liquor question. The purpose of my visit to the coal camps of southern Colorado was to get a minute understanding of the situation; therefore I was resolved to investigate the causes of trouble impartially and fearlessly. I was escorted first by one side and then by the other, and listened attentively to every complaint presented. I soon discovered that if the demon liquor could be banished from the coal camps, peace and prosperity would again prevail. I then and there came to the conclusion that it was my duty to assist in restoring law and order; that I would henceforth become a champion of prohibition for the good of humanity, although I am of German extraction and have indulged in beer, and so forth, all my life, having been reared in an atmosphere of so-called personal privilege.

Just as soon as the Union troops appeared on the scene and liquor was at once positively prohibited, then anarchy ceased and the efficiency of 12,000 miners at work, by reason of enforced prohibition, was increased to from 15 to 25 per cent. (See sworn statement of mine operators.)

The merchants and miners are thankful for the restoration of law and order and attending happiness. It was the coal strike, more than any other one argument, that is responsible for State-wide prohibition in Colorado, by a large majority at the recent election.

Although I regard the Hobson amendment to the Constitution unnecessary to insure national prohibition, I voted for it. To my surprise not one of the orators pro or con on this great question alluded to House Document No. 935, Postal Laws and Regulations, 1913, third session Sixty-second Congress, volume 38, section 472, which classes spirituous, malted, fremented, or other intoxicating liquors of any kind as positively nonmailable. The same law, under certain rules prescribed by the Postmaster General, permits the mailing of poisonous animals, insects, and reptiles, explosives of every kind, gasoline, infernal machines, and so forth, but provides:

Provided, That all spirituous, vinous, malted, fermented, or other intoxicating liquors of any kind are hereby declared to be nonmailable, and shall not be deposited in or carried through the mails. Whoever shall knowingly deposit or cause to be deposited for mailing or delivery, or shall knowingly cause to be delivered by mail according to the direction thereon, or at any place at which it is directed to be delivered by the person to whom it is addressed, anything declared by this section to be nonmailable, unless in accordance with the rules and regulations hereby authorized to be prescribed by the Postmaster General, shall be fined not more than $1,000 or imprisoned not more than two years, or both; and whoever shall knowingly deposit or cause to be deposited for mailing or delivery, or shall knowingly cause to be delivered by mail according to the direction thereon, or at any place to which it is directed to be delivered by the person to whom it is addressed, anything declared by this section to be nonmailable, whether transmitted in accordance with the rules and regulations authorized to be prescribed by the Postmaster General or not, with the design, intent, or purpose to kill or in anywise hurt, harm, or injure another, or damage, deface, or otherwise injure the mails or other property, shall be fined not more than $5,000, or imprisoned not more than 10 years, or both.

With local option in each State and the extension of the parcel-post law controlling liquor transportation to all other modes and transportation companies, the question of prohibition would speedily, automatically, and effectively be settled by the majority votes in the respective States desiring it.

To all those who do not agree with me on prohibition I would ask if they would restore liquor, with its dire sequences, at the Capitol of Washington? Would they install a bar at either of our national institutions—the naval and military schools?

[Excerpt from Washington Post, January 1.]

HARD TO ENFORCE DRYNESS.

"It takes a State-wide prohibition law to prove that prohibition does not prohibit," said George W. Summers, of Charles Town, W. Va., at the Willard. "The majority of the people of West Virginia doubtless still are in favor of prohibition—the State-wide amendment carried by 93,000—but nevertheless beer and whisky and other intoxicants are finding their way into the State, and those who want them have little difficulty in buying them. One of the railroads that crosses the State runs every day a special train which has been termed 'the booze special,' and this train distributes at different stations any quantity of beer and whisky ordered by residents of the State.

"To supply the holiday trade an express company rented a large warehouse in several cities and deposited the packages there, the consignees calling for them. A little while ago, on application of the antisaloon people, a State court granted an injunction against one of the roads and an express company to prohibit the transportation of intoxicants, alleging a violation of the Webb law, but a short time afterwards a Federal court issued a mandamus requiring the express company and the railroad to accept packages containing liquors for transportation. I do not know what will be the outcome of the fight, but meantime there is very little trouble for those who want to drink to obtain what they desire."

What else can you expect, so long as the Federal court is allowed to override the will of the people?

Our Interstate Commerce Commission is as much at fault in aiding and abetting the liquor interests as is the Federal court. Do not the express tariffs, which are scrutinized and sanctioned

by the commission, provide a second-class rate on ale, beer, and nonmedicated malt beverages, while holy water (water, not otherwise specified) is strictly first class?

How long will the American people stand for such humbug?

I might say the renown of the gentleman from Alabama [Mr. HOBSON] as the fearless and persistent fighter for national prohibition will, in my opinion, far outlive his heroic deed of sinking a ship during the Spanish War at the entrance of Santiago Harbor.

In answer to the soulless argument against prohibition on account of loss of revenue to the cities, States, and Nation, it should not and can not be considered for a moment by any self-respecting citizen, be he rich or poor, white or black. Even granting this debatable argument to be true, he indeed deserves our pity who lives for revenue only. None but a coward would sacrifice priceless manhood and womanhood to insatiate greed and self-aggrandizement.

Sale of Liquors to Minors.

EXTENSION OF REMARKS
OF
HON. JAMES W. BRYAN,
OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 4, 1915.

Mr. BRYAN. Mr. Speaker, to-day I insisted upon having the RECORD show me as voting against an act entitled "An act to prohibit the sale or gift of intoxicating liquors to minors within the admiralty and maritime jurisdiction of the United States" (H. R. 18851).

The gentleman from Illinois [Mr. MANN] suggested, as the RECORD shows, that I was voting against prohibiting the sale of liquor to minors. I then declared I was not doing anything of the kind. I was granted unanimous consent to explain in this way my position on the subject.

I now declare that the act voted on to-day was wrongly entitled; that it should have been styled "An act to provide for and encourage the sale of intoxicating liquor to minors within admiralty jurisdiction."

It is impossible for any man on this floor to be more opposed to the sale of the filthy product of the brewers and distillers and debauchers of humanity to man, woman, or child than I am. But liquor dealers, brewers, and distillers are very anxious to sell their stuff to boys and girls and to men and women; and, as a first tip to the wise, I want to call attention to the fact that every man on this floor who generally votes against anti-liquor statutes was for this act to-day—provided no amendment be allowed. That is just a tip. I will come back to it later, but remember the adage, "Beware of the Greeks bearing gifts."

If I am opposed to the sale of the stuff under ordinary conditions, I am certainly more opposed to its sale to minors and on boats than under most any other conditions. Why am I opposed to its sale on boats, to minors, or to anybody else? The crimes of the liquor pirates on excursion boats on the Great Lakes out of Chicago and other lake cities are enough to make a prohibitionist out of a Member from Milwaukee or any other place, it would seem to me. I can not figure it out how a Member of this House can oppose prohibition of the liquor traffic within the admiralty jurisdiction.

The following from the Chicago Tribune of July 18, 1914, tells something of the awful tale of the ravages of this piratical crew on the Great Lakes:

"INQUIRY FINDS LAKE STEAMERS LURE TO YOUNG—LAXITY OF MORALS ON LOCAL EXCURSION BOATS CHARGED IN REPORT TO SCHOOL BOARD—MINORS BUY DRINKS—SAFETY DEVICES ARE SAID TO BE INADEQUATE—INSUFFICIENT GUARD AGAINST BAD INFLUENCES.

"A report was submitted to Peter Reinberg, president of the board of education, yesterday by W. L. Bodine, superintendent of compulsory education, showing up gambling, juvenile drunkenness, and general bad conditions on Lake excursion steamers plying between Chicago, Michigan City, South Haven, St. Joe, and Benton Harbor and Milwaukee.

"Mr. Bodine made an investigation from June 29 to July 8 in behalf of a subcommittee of the school management committee of the board, of which Dean W. T. Sumner is chairman. The committee was appointed last year and made an investigation late in the season. According to Mr. Bodine, the matter was taken up with the steamship companies, and the present investigation was made to see if bad conditions had been eliminated. His report says they are still bad.

"Only one boat, the City of South Haven, according to the report, made any attempt to police its decks.

"PERSONAL SAFETY IMPERILED.

"In the course of his report Mr. Bodine said:

"'Reliable investigators, including an expert on personal-safety appliances, have been detailed on the work by the bureau of compulsory education on all the boats on various occasions from June 29 to July 8.

"'The average excursion boat, especially on days when the capacity is taxed, is not adequately equipped for the personal safety of all passengers. There are not enough lifeboats or life rafts, and the facilities to expedite service, and accessibility of life rafts for emergency use require immediate attention and improvement. Government inspectors admit that the lifeboat and life-raft equipments in the excursion season would not provide for over 30 or 40 per cent of passengers on big days, and that the life preservers would be the only hope of the excess.

"'REGULATE OR CLOSE THE BARS.

"'The bars on these excursion boats should be either regulated or eliminated. Steps should be taken to prevent the sale of liquor to minors. Boys only 17 years of age were found drunk, and girls under 16 years were found in the same condition in a Fourth of July crush.

"'Women and children are not adequately protected by enforced discipline of boat rowdies. With one exception, the boat companies make no appreciable effort to maintain proper conduct on board with special police from the crew.

"'While the majority of the passengers conduct themselves properly, there is a vicious and degenerate minority, including a clique of young men who infest the boats looking upon unescorted young girls as legitimate prey. Some women, on the other hand, have developed the "excursion" habit to lure susceptible youths.

"'Anyone with "the price" can secure a drink or a stateroom on the average steamer.

"'The upper decks and secluded parts of the boats are the spooners' paradise. Liberties are often taken with intoxicated young girls, whose mothers should not have permitted them to go on a public boat unescorted.

"'GAMBLING DEVICES ON ALL HANDS.

"'The average lake excursion boat is equipped with slot machines, wheel and paddle games, and various devices to secure nickels and dimes. They are merely marine kindergartens of gambling, patronized extensively by school children. A system of petty gambling exists, in which a first-grade child with a nickel or dime in his hand is permitted to take his first lesson if he is big enough to push to the front with his small change.

"'Open-eyed school girls, as well as boys, are lured to games of chance by the enchanting song of the "barkers of ballyhoo." The system is a "sure thing"—for the concessionaires. One boy who won $5 worth of trade checks "reedemable on the boat" was barred from the game on one of the steamers plying between Chicago and a Michigan port.

"'NO IMPROVEMENT SHOWN.

"'It has been a pleasure for me to cooperate with your administration for the protection of children and secure evidence for public welfare. The board of education, some time ago, had a subcommittee, of which Dean W. T. Sumner was chairman, to take such steps as it deemed best to safeguard the interests of Chicago school children who patronize these boats.

"'The committee at that time took the subject up with the various managers of the lake steamer lines, but conditions show no improvement this year.

"'The question of police jurisdiction beyond the 3-mile limit places the remedy in the hands of the companies operating these boats. The question of patronage rests with the public.'"

The Chicago Herald of the same date verifies the same news item, as follows:

"EXCURSION BOATS HELD MENACE TO THE YOUNG—PERSONAL SAFETY AND MORAL WELFARE ENDANGERED, SAYS REPORT TO BODINE—BOYS AND GIRLS DRUNK—GAMBLING FLOURISHES AND LIQUOR LAWS ARE IGNORED, SAY INVESTIGATORS.

"Conditions that are a menace to the personal safety and moral welfare of Chicago school children exist on Lake Michigan excursion boats, acording to a report submitted yesterday to Peter Reinberg, president of the board of education, by W. L. Bodine, head of the compulsory education department of the board.

"Gambling flourishes openly, he says, and intoxicating liquors are sold to minors, without regard for the law. Rowdies are permitted to insult women and children, and a clique of young men infest the boats, who look upon unescorted girls as legitimate prey, according to the report.

"Mr. Bodine's findings are based upon information gathered by a corps of investigators, who rode on the boats plying out of Chicago from June 29 until July 8.

"FINDS GIRLS DRUNK.

"The report says in part:

"'Boys only 17 years of age and girls under 16 were found drunk during a Fourth of July crush.

"'A vicious and degenerate element travels on some of the boats, including a clique of young men who look upon unescorted girls as legitimate prey. Some women, on the other hand, have developed the "excursion" habit to lure susceptible youths.

"'Anyone with the price can obtain a drink or a stateroom on the average steamer, the only exception being the *Eastland*, which has no staterooms.

"'Petty gambling, slot machines, wheel and paddle games, and raffles are in full operation on most boats. They are merely marine kindergartens of gambling. A system of mean gambling exists, in which a second-grade child with a nickel or a dime in hand is permitted to take the first lesson if he is big enough to toddle to the front with the small change.

"'Poker games, with money in sight, were among the features on one Fourth of July excursion.

"'CHILDREN DRINK BEER.

"'Boys and girls between 15 and 17 years old openly drank beer between Chicago and Michigan City. On the return trip two couples, both under 18 years and intoxicated, sat in the stern of the boat, the boys sitting on the girls's laps.

"'On the dance floor there was no restriction to any kind of dancing, and a number of young persons under the influence of liquor were on the floor.

"'The stateroom patronage on most of the daylight boats was brisk, especially on the return trips.

"'Personal safety of passengers is imperiled by the limited supply of lifeboats and life rafts on the average excursion boats. Life preservers are available, but many of them are stored on deck ceilings beyond the reach of women and children, or even men of short stature. The staterooms are, of course, supplied with life preservers, but are locked up, except when the staterooms are in use.

"'The question of police jurisdiction beyond the three-mile limit places the remedy in the hands of the companies manning these boats. The question of patronage rests with the public.'"

These reports were published on front pages of the papers named. No Billy Sunday was then holding a meeting in Chicago. The statements show a public revolting against the most monumental curse any nation has ever known.

Juvenile organizations have taken the matter up. Mrs. Joseph Tilton Bowen, of Chicago, president of the Juvenile Protective Association, wrote the gentleman from Pennsylvania [Mr. DONOHOE] recently as follows:

As president of the Juvenile Protective Association I have seen much of the evil effects resulting from the sale of liquor to minors in the excursion boats which ply on Lake Michigan. Many of these boats say that they sell liquor only in unbroken packages, and it is not an uncommon thing to see boys and girls consume a bottle of whisky between them. I am inclosing a report of a recent investigation made by our association. We were unable to secure any improvement, so we called in the help of the Union League Club, and they laid the result of our investigation so forcibly before the directors of these boat lines that the most decided improvement was effected in these boats last summer and fall. The investigation I am sending you was made a year ago last summer.

Read this, and see if you are still proud of having voted against the Hobson amendment. It is taken from a report from Philadelphia, submitted by Mr. DONOHOE:

The boat is usually packed to its utmost capacity, and has scarcely left the wharf until "criers" at the foot of the stairs leading to the lower deck begin to call out, "Checks for the bar; here you are, boys; get your checks for the bar," which is kept up during the whole trip, while waiters, two or three for each deck, go about taking orders from those who wish the beer brought to them on deck.

The members of these social groups are usually quite young, as is the majority of the crowd on these excursions. No objection is made to selling beer in any quantity to minors, and almost every boy is more or less intoxicated before the end of the trip. Many boys may be seen lying on the floor or on benches in a drunken stupor, who will have to be aroused and helped by some of their companions who are more used to the drink to walk home or to the house of some friend, as some of them frankly admitted that they would not dare to go home and have their parents see them in such condition.

Upon investigation concerning the license for boats I found that only a Federal license is necessary to sell liquor on navigable waters, no State license being required unless they desire to sell at the wharf. I then sought what Federal regulation there might be for selling liquor to minors, and in getting the information from the assistant district attorney concerning the case he gave it as his opinion that there is no statute making it a misdemeanor or crime to sell liquor to minors, and that the only way to reach this case would be by interstate regulation. Certainly there is urgent need for some legislation to regulate this evil.

Remember, please, that this limitation of State jurisdiction is all folderol, not a word of truth in it. Every inch of the Great Lakes is a part of one of the American States, except such as extends over into Canada. Present State laws reach every inch of American jurisdiction in the Great Lakes. If a man steals a loaf of bread out of your lunch basket 4 miles out of Chicago, there is no trouble about trying him for violating a State law—not at all. But let a white-aproned agent of a dividend-seeking liquor vendor steal your daughter, and the infamous grafters charged with enforcing the State law on the Great Lakes will tell you there is no law, and then they are helped to hold their political jobs by the liquor gang and the steamboat owners, who get the loot from the liquor business.

For my part, the sentiment and the remedy suggested by Mr. Frank E. Herrick, of Wheaton, Ill., in the following poem is the only one that reaches the proposition:

THE PIRATE SHIPS AT BAY.

We've found the range of the pirate ships
That have raided the seven seas
Since the birth of the world
With their flags unfurled
Polluting the wholesome breeze!

Against the cross-bone blazoned ships
Now let the great guns roar
And the thunders sweep
O'er the trackless deep
Till the black fleet floats no more!

The pirate crews of the pirate ships
With the death's-head coat of arms
Are pale with fear
As when sailors hear
The ship bell's loud alarms!

The rum-rigged fleet of pirate ships
Is ranged behind the strand
Where every crime
Within our time
Has made its final stand!

Behind the rights of States these ships
Lie low where slavery bled
And polygamy bold
And the gambler's gold.
For a refuge vainly fled!

Broadside blast the black-hulled ships
And let the turret guns
Shake all the shores
With wrathful roars
Where the tide of battle runs!

Woes for the world these pirate ships
Bear in their groaning hold;
('Tis a lie abhorred
That a State or ward
Can grant them life for gold!)

To the endless deep give the pirate ships
And the crews to the red-jawed sharks
And let every sea
Of the globe be free
From the raids of the demon barques!

There was considerable good cheer at the hearings on the bill for which the bill passed to-day was a substitute, and Mr. SABATH, of Illinois, chairman of the committee, did not believe the reports already detailed as to the necessity for this measure, as the following excerpt from the hearings will show:

Mr. ROBERTS. I am a new member of this committee and have tried to make myself thoroughly conversant with all the duties and responsibilities of a position on this committee. I have sampled the various viands in Washington. I think I am thoroughly familiar with all of them, but I do believe this bill is a good bill and ought to pass; that it ought to be recommended by this committee, and I can see nothing wrong in it. I think, like the gentleman at the head of the table, we ought to do what we can to protect the minors.

Mr. SABATH. If there is anyone who desires to be heard on the bill, why, I have no desire to say anything now, but I reserve to myself the right to answer Mr. DONOHOE on a few matters that he brought before this committee; I think it is my duty to do so. Personally, I can not see wherein this bill would harm anyone. I think it is a well-drawn bill, and I am satisfied that the introducer of the bill meant well and is meaning well and is desiring to reach a certain evil that he believes exists, and as some people make him believe exists. All I desire to say is that the reports from the people of the city of Chicago are not absolutely correct. There was a certain amount of evil in the city of Chicago some years ago, but that has been remedied, and the majority of the boats plying between Chicago and other ports and harbors are now complying with the law and do not sell liquors to minors; and if there are any, I know that there are city authorities, and the State attorneys are very strict in enforcing the law. If there is any violation, however, by any one of these boat lines, I am willing that it should be stopped; and if this bill will strengthen the State law, why, I have no objection, but nevertheless I think we should carefully investigate the bill and see how far it goes and what it aims to do.

The foregoing statement shows that Mr. SABATH knew there were State laws on this subject, and that the sale of liquor to minors, if carried on on vessels on the Great Lakes, violated the law. The State law continues beyond the 3-mile limit. It continues to the State line, and the State line is generally the middle of the lake. They have State laws, and only State laws, for murder and arson and embezzlement and perjury and all other crimes on the Great Lakes, except when you pass over into Canada, and there you have the law of the Province. Why is it necessary to have a different jurisdiction in this case?

You say, for the sake of enforcement. All right; let us see. If a Federal law will help, I am for it. I am no stickler for State rights. But do not anybody forget that these very men claimed when the Hobson amendment was up that to let the Federal authorities take up the enforcement of liquor laws would overturn State governments. I say they have not changed their minds, for there is no chance of enforcement of the law we passed to-day.

Who will enforce this fake we passed to-day? Read it and faint. It says: "The master of the vessel will enforce it." That silly proposition is amazing and beyond explanation. The "master" will report the ship owned by the man who pays him his salary, and the master will cause the Secretary of Commerce to fine the ship. Any attorney who ever handled a liquor case can see how silly this bill is, and any individual able to keep out of an institution for the feeble-minded can understand why it was not to be amended in the slightest particular. I give here the law of Illinois and this fake in parallel columns. Remember, they say they can not enforce the Illinois law. How will the Secretary of Commerce, who has not a single enforcing officer at his command, enforce this weak subterfuge? He has no right to arrest if he had officers.

ILLINOIS LAW.

Whoever, by himself, or his agent or servant, shall sell or give intoxicating liquor to any minor without the written order of his parent, guardian, or family physician, or to any person intoxicated, or who is in the habit of getting intoxicated, shall, for each offense, be fined not less than $20 nor more than $100, or imprisoned in the county jail not less than 10 nor more than 30 days, or both, according to the nature of the offense. (Ill. Stat. Ann., 4605.)

THE FAKE WE PASSED.

Whoever shall sell, give, or dispense in any manner intoxicating liquors of any kind as a beverage to any person under the age of 21 years, within the admiralty and maritime jurisdiction of the United States, shall be fined in any sum not exceeding $500 for each offense. The master of every vessel is directed to enforce this prohibition, and in case any violation of this act is permitted or is committed upon any vessel by any officer or employee of said vessel then said vessel shall be fined in any sum not exceeding $500, the amount of the fine to be determined by the Secretary of Commerce in the same manner that other fines for violation of the navigation and inspection laws are now determined under section 5294 of the Revised Statutes of the United States.

The committee report contains this statement:

Nearly every State in the Union has laws against the sale of intoxicating liquors to minors, but they have no jurisdiction over these vessels, and therefore are helpless to prevent this practice. At the present time there is no law on the statute books prohibiting the sale of liquors to minors within the admiralty or maritime jurisdiction of the United States.

That statement is entirely erroneous. It is true that the laws of all the States prohibit the sale of liquor to minors and provide a jail sentence for violation, but it is not true that such laws do not apply to waters within the State or in the ocean out to the 3-mile line. The 3-mile line applies only to ocean borders, for the State line goes out that far. On the Great Lakes the State area goes to the middle of the lake.

The State law is final in those waters on all such matters till Congress acts. But the right to divest the States of all jurisdiction lies with Congress on account of the admiralty grant of jurisdiction in the Constitution. I understand that the constitutional provision which protects a person from being placed twice in jeopardy would give to the admiralty court exclusive and sole jurisdiction over sales to minors within its jurisdiction if this act should become law. The case of double penalty for the same offense in violating a city ordinance and a State law by the same act is not parallel, for the city gets its power to pass its ordinance from a charter by the State, while the State loses all power and jurisdiction when the admiralty power of the Federal Government is asserted. I can not cite authorities, as I would like, for I am preparing this extension in the RECORD on the spur of the moment, but I will call attention to one or two authorities.

Congress may pass all laws which are necessary for giving the most complete effect of the exercise of the admiralty and maritime jurisdiction granted to the Government of the Union; but the general jurisdiction over the place, subject to this grant, adheres to the territory, as a portion of territory not yet given away, and the residuary powers of legislation still remain in the State. (United States *v.* Beavans, 3 Wheat., 336; 4 L. ed., 404.)

Where the admiralty courts of the United States have jurisdiction over the subject matter their jurisdiction is exclusive. (Rio Grande *v.* Rawson, 42 Ala., 133.)

The State laws of the State of Washington now prohibit sale of liquor to minors, and we can prosecute and place in jail any person who sells liquor to a minor in any part of the State, whether on Puget Sound, on the rivers, or within the 3-mile limit on the ocean. We can jail any such person, and we are able to enforce the law, and we do enforce it.

In fact, we have total prohibition in effect on the waters of our State now, and have had for a long time, because the State laws require a license from every county through which a boat runs or else jails the man for selling liquor without a license. The effect is that all boats selling liquor are "blind pigs," or, legally speaking, are public nuisances. Of course, our prohibition amendment goes into effect on January 1, 1916. Our State law is emphatic and to the point. Our sheriffs go on board the boats and confiscate the liquors and put the officers of the vessel in jail. Do you suppose we want to substitute for that a Federal act which places the enforcement in the hands of the master of the vessel and provides as the sole remedy a lien on the vessel?

Here is the law in the State of Washington:

Every person who shall sell or give, or permit to be sold or given, to any person under the age of 21 years any intoxicating liquor, cigar, cigarette, cigarette paper or wrapper, or tobacco in any form shall be guilty of a gross misdemeanor. (Pierce's Code, title 135, sec. 385.)

The penalty is not exceeding $1,000 fine or one year in jail, or both.

Then, another section provides:

Any person under the age of 21 years who shall purchase, or shall have in his or her possession, any intoxicating liquor, cigar, cigarette, cigarette paper or wrapper, or tobacco in any form shall be guilty of a misdemeanor.

Then I offered an amendment to this act to increase the maximum penalty to $1,000 and to permit imprisonment as well for not more than a year, if so ordered by the court, on which a subsequent amendment would have conferred jurisdiction. Of course under my amendment imprisonment would not be required and the term could be less than a year. But my amendment was voted down on roll call by a tremendous vote. Many who voted against it would gladly have changed their votes when they understood the nature of the amendment.

Not only Illinois and Washington have laws on this subject, but Wisconsin and Ohio and Michigan and Pennsylvania all provide heavy penalties. If this proposed act is to be substituted for the laws of these States on the Great Lakes on this subject, a great mistake will be made.

EFFECT IN DISTRICT OF COLUMBIA.

On excursion boats in the Potomac River for about 5 miles, till after they get beyond the District line, this act being the latest enactment would ordinarily be substituted for the present Jones-Works law, which is the present legislation in the District as to sales to minors. This act would be a very poor and inadequate substitute. The Jones-Works law is so worded and the regulations are so grouped and combined that probably it would stand up in lieu of this fake statute we voted on to-day.

LET US ANALYZE THIS BILL.

In analyzing the provisions of the bill which I to-day went on record against, I direct attention to the substitution of a second bill after the hearing on the bill which the gentleman from Idaho [Mr. SMITH] introduced.

THE ORIGINAL ENFORCING PROVISION.

The master of every vessel is directed to enforce this prohibition, and to this end to keep posted notices of this section, and for failure to execute this direction he shall be liable to the suspension or revocation of his license in the manner prescribed for the suspension and revocation of licenses by Title LII of the Revised Statutes and acts amendatory thereto.

THE FINAL ENFORCING PROVISION.

The master of every vessel is directed to enforce this prohibition, and in case any violation of this act is permitted or is committed upon any vessel by any officer or employee of said vessel, then said vessel shall be fined in any sum not exceeding $500, the amount of the fine to be determined by the Secretary of Commerce in the same manner that other fines for violation of the navigation and inspection laws are now determined under section 5294 of the Revised Statutes of the United States.

It was just too bad to leave that penalty in the bill. As it stands, the master is to report his own vessel and get his own boss fined. Is not that preposterous?

Then observe also that the prohibition is against selling intoxicating liquor "as a beverage" on a boat to a minor. A 15-year-old girl may come up to the bar and say she is sick and wants a flask of whisky, and the barkeeper will say, "Are you sure enough sick?" and she will say, "You bet I am," and then the master of the vessel will not report his vessel and get his boss fined.

Of course, if a man who is 30 years old has a 17-year-old girl for his companion, he can buy beer and whisky and share with the girl.

If he is reported by the master of the vessel to Mr. Redfield, Secretary of Commerce, Mr. Redfield can fine him; but he will say, "My dear Mr. Redfield, I am flat broke; I have no money whatsoever." In such case the Secretary can not detain him. He owes the fine and he will owe it for a long time. There is something in the act about how the Secretary is to determine the amount of the fine, but not a word about how he will collect it, except when it becomes a lien on the vessel

which is owned by the boss of the master who is to enforce the law.

No wonder the wets are satisfied with this law, provided it is not amended. Oh, I hate a fake. Yes; I was against this bill, and was practically alone, as the record shows.

WHAT ARE WE GOING TO DO ABOUT IT?

I beg every prohibitionist and hater of the abominable liquor traffic to get to work on the Senators, and see to it that Senators JONES, KENYON, SHEPPARD, and others make a good prohibitory law out of this faking thing. Let it prohibit totally the sale of liquor to anybody in the admiralty jurisdiction. Why permit floating saloons, whisky joints, brothels? Let us put this branch of the rotten business out of existence. The act ought then to be extended to include the islands and Alaska. These wets say they opposed the Hobson amendment because it conflicted with State rights. There is no State rights in Alaska or the Philippines.

Manufacture of Munitions of War.

EXTENSION OF REMARKS

OF

HON. ROBERT CROSSER,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 5, 1915.

Mr. CROSSER. Mr. Speaker, one of the principal causes of war and of preparation for war is the private interest of the sellers of war munitions. The Steel Trust, the Powder Trust, the Shipbuilding Trust, and all the hundreds of persons, firms, and corporations engaged in selling munitions of war, ammunition, armor plate, and supplies of all kinds to the Army and Navy are interested in the continuance of war preparations, for the very simple reason that the success of their business depends upon continued and large preparations for war—the larger the better.

It would be bad enough if these private interests which are now engaged in furnishing all kinds of war supplies to the Government were doing so at reasonable prices. If this were the case, the only question to be considered would be whether it is advisable to leave in the hands of private corporations Government work of this character, with the inevitable tendency which they would have to maintain lobbies and seek to influence public opinion in favor of large expenditures for military preparation, in order to increase their own profits. But when, in addition to this, it is found that these firms are continually charging the Government exorbitant rates, the reasons for having the Government manufacture materials and equipment for war are increased.

In his annual report for the fiscal year ended June 30, 1913, a year ago, Secretary of the Navy Josephus Daniels, discussing this question, said:

The time has come when the department should be freed from excessive prices charged by private manufacturers of armor plate, guns and gun forgings, powder, torpedoes, and other supplies and munitions. Most of these necessaries for the Navy are made by a very few manufacturers, and the prices charged are so much too high that I earnestly recommend that appropriations be made for an armor-plate factory and an increase in the gun factory, the powder factory, and the torpedo works. The ability to make part of the powder used has effected some reduction, but the department is forced to buy too large a quantity from the Powder Trust at an exorbitant price. It has been demonstrated that the department can save money by making its powder, guns, and torpedoes. It is not open to doubt that it can save larger sums when it can make its own armor plate and gun forgings.

In the same report, discussing the advisability of a Government armor-plate factory, the Secretary of the Navy pointed out that the Government is at the present time at the mercy of three concerns—the Carnegie Steel Co., the Bethlehem Steel Co., and the Midvale Steel Co.

It is evident—

Said the Secretary at that time—

that without an armor plant of its own the Government in time of war or impending war would be entirely at the mercy of these three manufacturers and obliged to pay practically whatever price they asked. History does not warrant an assumption—

He goes on to say—

that the patriotism of these companies would prove superior to their desire for profits, inasmuch as during the time that war with Spain was imminent, these companies refused to accept the price fixed by Congress after investigation as a just rate and declined to manufacture any armor until they got their own price of $100 a ton more than that which Congress had determined on. In this connection it is well to note that the love of country possessed by these companies did not prevent them from furnishing armor to Russia, as reported to Congress, in 1894, at $249 a ton, while they were charging the United States $616.14 a ton upon purchases under the contract of March, 1893, nor did it hinder them from furnishing armor to Italy, in 1911, at $395.03 a ton, while they were charging their own Government $420 a ton, and that even at the present day, according to information that seems reliable, they are furnishing the armor for the *Haruna*, now being built by the Kawasaki Co., at Kobe, for Japan, at $406.35 a ton, as against the price, ranging from $504 to $440 a ton, which they are now charging us for the armor of battleship *No. 39*.

This report was written in 1913. The Secretary was then commenting upon the interesting fact that these three supposedly competing steel-manufacturing firms were in the habit of submitting identical bids, "seldom varying over a few dollars, and in many instances being identical to a cent," on Government armor-plate contracts.

In his annual report for the fiscal year ending 1914, just submitted to the President, Secretary Daniels has reviewed his efforts to secure a Government-owned armor-plate factory, and says he is convinced that enormous sums could be saved to the taxpayers by the erection of a Government plant.

It became even plainer than last year—

He says—

that the Government is at the mercy of the three manufacturers of armor plate, whose policy is to make the Government pay prices much beyond a fair profit. The three companies make affidavits that they are in no combination and have no agreement affecting prices, as they are required by law to do. This does not, however, prevent their availing themselves of a mental telepathy which works against the Government and denies real competition in the bidding.

Secretary Daniels estimates that the Government would save between a million and three million dollars annually, depending on the size of the plant, if it should manufacture its own armor plate.

Taking the highest estimate which has been submitted to me by the experts of the Bureau of Ordnance—

He says—

as the probable total cost price of Government-made armor, the Government can achieve a saving by the erection of a 10,000-ton-a-year plant of $1,061,360 per annum, after deducting 4 per cent as interest on the money used in erection and installation of plant, and $3,048,462 a year on the basis of a Government plant capable of producing 20,000 tons a year. If these figures are correct, as I believe them to be, and as Congress can easily ascertain for itself, I do not see how it is possible for Congress to justify to the people a refusal to erect a Government plant, nor how it can answer the charge that will invariably be brought up—that the same mysterious providence which saved this profitable business to the steel companies three times in the past, even after money for a Government plant had actually been appropriated, is not still at work exercising its beneficent protection over these lusty specimens of infant industries.

(Proof on pp. 40 and 41, Annual Report Secretary of the Navy, 1913.)

What is true of armor plate is practically true of all kinds of war munitions, both for the Army and Navy. In his last annual report, submitted two or three weeks ago, the Secretary of the Navy makes the flat assertion (p. 9):

Contrary to popular idea, the Navy Department in what it manufactures does so, from a superdreadnaught to a gallon of paint or a pound of powder, cheaper than the same can be purchased. This is particularly true of the most expensive instruments of war, but is equally true of gasoline engines, electrical supplies, engines for dreadnaughts, shrapnel, clothing for marines and sailors, accouterments, and a multitude of other articles required for the fleet and shore stations.

The Secretary's report shows that as a result of the enlargement of the Government powder factory large savings have been made (Annual Report Secretary of the Navy, 1914, p. 10):

Before the Government began to manufacture smokeless powder—

Says the Secretary—

it paid 80 cents a pound for it. Government competition, coupled with better methods, have brought down the price at which the department purchases this powder to 53 cents. The department is now manufacturing it at Indianhead at a cost of 36 cents a pound, and when the enlarged plant is completed may be able to still further reduce the cost of production. If the department had bought what it manufactured last year, the powder bill would have been $397,536.16 more than it was. In addition to effecting this saving by manufacture, the department reworked 1,013,940 pounds, at 11.9 cents per pound, and this method insures the use of much powder every year that would otherwise be useless.

Another specific instance of the elimination of private profits, or partial elimination, by Government operation is in the case of the manufacture of torpedoes.

In the two years that the present torpedo works have been in full operation at Newport, R. I.—

Says the Secretary, on page 10 of his last annual report—

the cost of manufacture of each torpedo has been reduced from $4,200 to $3,200. These torpedoes, if bought at the only private torpedo plant in the country, would cost $5,000. The enlargement of the torpedo works will not necessarily cause the Navy Department to manufacture all its torpedoes, but ability to make a large proportion of the number needed will result in securing better prices from manufacturers. This is true of all other munitions of war. Ability to make them secures reduction in cost.

In other words, the private manufacturers of war supplies are playing a hold-up game. Having a monopoly of the business, they are patriotically gouging Uncle Sam to the limit. And

experience has shown that the gouging stops in direct ratio to the ability of the Government to undertake the work itself. When it does all the work, all of the gouging is eliminated, and not before.

The Secretary of the Navy sums up the two reasons why we should have Government manufacture of war munitions:

> The department should be able to demand competitive bids by having potential facilities to manufacture anything needed for armament or equipment which may at any time be controlled by those who demand excessive prices. There is another reason why the Navy Department should be able to manufacture munitions of war; that policy would prevent effective agitation or organization for big preparations for war conducted by those who make profit by the manufacture of war supplies. It has been suspected—

Goes on the report—

> in some countries that makers of armor and powder, guns, and fighting craft have promoted steadily increasing equipment for giant navies and large armies for their personal enrichment, as others have practiced "philanthropy and 5 per cent." The incentive of personal aggrandizement by preparations for war should not be permitted to exist in the United States. The effective way to prevent so baneful an influence is for Congress to give the department authority to manufacture implements of war, an authority which could be employed when necessary. (Annual report, 1914, pp. 10–11.)

What is true of the manufacture of naval supplies is equally true of the Army supplies. Congressman CLYDE H. TAVENNER, of Illinois, in a speech in the House of Representatives, gives some surprising figures as to the comparative cost to the Government of private and Government manufacture. I quote at this time one illustration from the very exhaustive speech which he made on this subject in the House on June 2, 1914 (CONGRESSIONAL RECORD, p. 10508):

In a brief table of comparisons he there shows that on an order of $1,900,064 worth of field-artillery ammunition given to the Frankford Government Arsenal, at Philadelphia, instead of outside manufacturers, the Government saved $979,840, or a saving, in round numbers, of $1,000,000 on a $2,000,000 contract. Another of his tables shows that on an order of $800,120 worth of artillery ammunition now under manufacture by the private manufacturers the Government is losing $312,214, based on what it would cost to have duplicated the order in the Government arsenals. In other words, practically one-half of the entire amount of the order could have been saved had this work been done in the Government arsenals. These figures are based on compilations made by Col. George Montgomery, commandant of the Frankford Arsenal, and they include 15 per cent to cover administration, depreciation, insurance, and interest on money invested.

Is it any wonder that the armament and ammunition and powder gentlemen want big war preparations? And is it any wonder that we have wars in consequence?

In passing, it may be said, too, that Government manufacture, as compared with private manufacture, means an 8-hour workday for the men in Government employment, compared with 9 and 10 hours a day under private operation. The Government's workmen get 15 days annual leave of absence, 7 national holidays, and 13 Saturday afternoons in summer, during which they receive pay. And yet the Government manufacturing cost, including 15 per cent for overhead charges, is from 20 to 60 per cent below the prices of the Ammunition Trust.

Pages of illustrations of this character could be compiled, but these will suffice for the present.

Some means should be adopted to eliminate private profit in war preparation. We do not want private manufacturers to be making enormous profits and goading us on to more and more armament, nor do we want the Powder Trust, the Steel Trust, and the Ammunition Trust manufacturing war materials and selling them at a profit to foreign Governments with the possibility that they will be used for aggression against our own people. I believe that H. R. 20147, introduced by me, will do much to overcome this evil.

We should not tolerate the possibility of our private manufacturers of war munitions to export the instruments of war to be used against our own people because of the sacred profits. For these reasons the bill prohibits exports absolutely. If this bill should be enacted into law, the makers of war munitions would be effectually restrained. Their business would not be prohibited; but unless they could get big contracts from our own or some foreign Government they could not exist. The demand for guns and ammunition from Mr. Rockefeller's private army in Colorado or the Copper Baron's private army in Michigan or the Coal Trust's private army in West Virginia would not be sufficient to justify the continuance of their plants, and they would cease to exist, and with them one potent cause of war.

The bill which I shall incorporate herein as a part of my remarks seeks to remedy some of the evils pointed out. It does not pretend to be a complete remedy for the war malady; it simply seeks to remove one of the main causes of wars—the private interest of those who benefit by war and war preparation.

On a program such as this everybody, whether he is in favor of disarmament, increased armament, or maintaining the present armament, can find a common ground. Whether he believes in large or small armies, large or small navies, does not affect the proposal that whatever armament, ammunition, and military supplies may be needed should be manufactured by the Government. The proposition to eliminate private interest in war and preparation for war by providing Government facilities for producing and manufacturing military and naval equipment, by prohibiting the export of privately made munitions of war, and by reservation to the Government of coal and fuel oil in the public lands is one which will, in some measure at least, do away with one of the causes for war. It is a measure in the interest of peace, and all people really interested in securing peace ought to support it.

I here insert a copy of House bill 20147:

> A bill (H. R. 20147) to eliminate private interest in war and preparation for war by providing Government facilities for producing and manufacturing military and naval equipment, by prohibiting the export of privately made munitions of war, and by reservation to the Government of coal and fuel oil in the public lands.
>
> *Be it enacted, etc.*, That after July 1, 1920, all armament, equipment, and supplies used exclusively by the Government for military purposes shall, so far as practicable, be manufactured by the War Department, and the Secretary of War is hereby empowered, authorized, and directed to immediately begin to provide facilities for such Government manufacture.
>
> That after July 1, 1920, all war vessels and auxiliaries, armor plate, and all other armament, equipment, and supplies used exclusively by the Government for naval purposes shall, so far as practicable, be manufactured by the Navy Department, and the Secretary of the Navy is hereby empowered, authorized, and directed to immediately begin to provide facilities for such Government manufacture.
>
> SEC. 2. That on and after July 1, 1920, it shall be unlawful for any person, firm, partnership, or corporation to export or contract to export any arms, ammunition, artillery, vessels of war, armor plate, torpedoes, or any other thing designed to be used for military or naval purposes. Any person violating this section shall be fined not more than $100,000 and imprisoned not more than three years, and any arms, ammunition, artillery, explosives, or other supplies the exportation of which are attempted in violation of this section shall be forfeited to the use of the United States, and one-half the appraised value thereof shall be paid by the United States to the informer.
>
> SEC. 3. That so much of the coal and fuel oil contained in any of the public lands of the United States as in the judgment of the Secretary of War and the Secretary of the Navy may be necessary to insure an adequate supply of such materials for future military and naval purposes shall be reserved by the Secretary of the Interior, upon request of the Secretary of War and the Secretary of the Navy, for the use of the Army and Navy; and the designation and reservation of suitable lands by the Secretary of the Interior shall be made as soon as practicable and in any event within one year after the passage of this act.
>
> The Secretary of the Navy is hereby empowered, authorized, and directed to carry on the operations of mining, transporting, and storing coal, and drilling for, piping, refining, transporting, and storing fuel oil from the lands so reserved as provided in this act for military and naval purposes.
>
> SEC. 4. That the sum of $2,000,000 is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to be expended by the Secretaries of War and Navy, under the direction of the President, said sum to be immediately available and to remain available until expended, for the purpose of beginning the construction and operation of the Government works provided for in this act, and the said Secretaries of War and Navy are directed to report to Congress at the earliest practicable date what total appropriation will, in their judgment, be necessary to comply fully with the provisions of this act.

Industrial Alcohol.

EXTENSION OF REMARKS

OF

HON. J. A. FALCONER,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 6, 1915.

Mr. FALCONER. Mr. Speaker, the placing of the manufacture of industrial alcohol on a practical economic basis is a matter of world interest. The several discussions on the subject in the House demonstrate its importance.

The amendment in the Underwood tariff bill presumed to make possible the manufacture in small, farm stills, but it does not meet the problem; a small appropriation is necessary. Local, State, and National grange organizations are persistent in demanding the advantages to be derived from proper legislation.

Extract from the report of the committee on resolutions of the Forty-eighth Annual Session of the National Grange, Patrons of Husbandry, Wilmington, Del., November 11 to 20, 1914:

[From the printed proceedings of the National Grange.]

RESOLUTIONS—"ROCKEFELLER FOUNDATION" AND "DENATURED ALCOHOL."

The speech of the Hon. J. A. FALCONER relating to denatured alcohol and the Rockefeller Foundation, in pamphlet form, introduced by Brother C. B. Kegley and referred to your committee, were gone over carefully and in accordance with Brother Kegley's motion.

Recommendation No. 3. We recommend that a copy of same be secured by all subordinate granges, to be read and studied carefully.

Recommendation 3 adopted.

Away on the other side of the earth, Russia, a nation in the throes of war, does not abandon its internal economic interests. I read the following:

OFFERS PRIZES FOR NEW METHODS OF UTILIZING INDUSTRIAL ALCOHOL.

[Correspondence of the Associated Press.]

PETROGRAD, *December 18.*

The Russian Government announces that it has set aside a considerable sum of money for the purpose of organizing an international competition for the discovery of new technical methods of utilizing industrial alcohol.

Prizes amounting to over $50,000 will be awarded.

The people of this Republic are not willing to concede that Russia is more considerate of her people than are we, nor that the Russian Government is more of a people's Government than ours. In the face of the accumulating evidence of the great importance of industrial alcohol, will this Congress turn a deaf ear to the farmers' request for a small appropriation to demonstrate the practical value of farm denatured-alcohol distilling under the new denatured-alcohol law? Congress should, without delay, make this appropriation and establish the industrial alcohol commission provided for in the Falconer bill, H. R. 18479. When this is done, not only will industrial-alcohol development be speeded on its way in this country, but American inventors and scientists may then win some of the prizes of the international competition now being organized by the Russian Government.

Have We To-day a Government of the People, for the People, and by the People?

EXTENSION OF REMARKS

OF

HON. MARTIN B. MADDEN.

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 7, 1915.

Mr. MADDEN. Mr. Speaker, "a government of the people, for the people, and by the people." No simpler definition was ever given of our Government than that from the lips of the immortal Lincoln, and none has been more quoted by Americans of all party affiliations and all respectable political opinions. You gentlemen on that side of the House are as fond of quoting this sentiment of the great emancipator as are we on this side, and I think you believe in it in the abstract as sincerely as we do. We also all believe in government by majorities, and we follow that law in this House, except when revolution charges the atmosphere and there is an opportunity to form alliances to defeat the majority.

Four years ago we had such a revolution in this House, and there followed a new policy, fathered by that new majority, of electing committees by the House instead of permitting the Speaker to perform that service for the House as its chief servant. We are now operating under that new policy, and our honored Speaker has become the moderator over our deliberations instead of the great majority leader, for which he is so well qualified, as was demonstrated by his tact and courage and generalship when he led the minority and by an alliance with the insurgents on this side took command in the most successful revolution we have ever had in the House. That revolution was in the name of greater individual liberty and responsibility for the Representatives, and the overthrow of bossism and Cæsarism in the organization of the House. There were then sounded many eulogies on the new system of government of the House, and there are still some—not many, but some—Members of the majority who still defend it as a great reform, but we have had manifestations here, even on the majority side, of dissatisfaction and complaint that the individual freedom and responsibility for the Representative has not come into full realization; that caucus rule has suppressed that individualism even more than did the power of the Speaker and the Committee on Rules in the older days of "Cannonism."

I propose to discuss one phase of this new control. I am not opposed to caucus rule on political questions, and I have no criticism of the plan of the majority party in settling its political policies in caucus. I would do the same. But the caucus is supposed to represent the majority of the party, and the majority of Democrats ought to be able to declare the party policy to be followed in legislation. It may be that it does, for I have no means of knowing how you vote in caucus, except from the complaints I hear from those who have not been able to control, and I have heard complaints from so many Democrats of caucus rule and presidential dictation that I have wondered where the caucus votes came from that controlled.

This is a great country, with nearly 100,000,000 people, and they have 435 Representatives on this floor to transact their business. You of the majority have 290 of these Representatives, while we of the opposition—Republicans, Progressive Republicans, and Progressives—have only one-half that number. The Democrats on this floor come from every part of the Union more generally than ever before. Only the States of Vermont, Idaho, Nevada, North Dakota, South Dakota, Wyoming, Utah, Oregon, and Washington are without Democratic Representatives here. So the legislation of this House, by the Democratic majority, ought to fairly represent the whole country. Does it?

The Census Office, in its last abstract of the population, divides the country into three grand divisions—the North, the South, and the West. The North includes New England, the North Atlantic, the East North Central, and the West North Central divisions extending from Maine and New Jersey to the Rocky Mountains, taking in 21 States. The South includes the South Atlantic, East South Central, and West South Central divisions, with 16 States. The West includes the Mountain and Pacific divisions, with 11 States. The 21 States here given as North had, in 1910, 55,757,115 population, with 32,669,705 given as urban and 23,087,410 as rural (the rural population being that outside of cities of 2,500). The 16 States given as South, including all the old Southern States and Oklahoma, had 29,389,330 population, divided as 6,623,838 urban and 22,765,492 as rural. The 11 Western States had 6,825,821 population, divided into 3,329,840 urban and 3,495,981 rural. This grouping and these figures are those of the Census Office—not mine.

From them it will be seen that the North had nearly 10,000,000 more urban than rural population, the South more than three times as much rural population as urban, and the West 166,000 more rural than urban. In the South the rural population still dominates in the proportion it did in the whole country 50 years ago. The North and the West have changed in the character of population. I do not complain of the condition in either section of the country. The dominance of the rural may be a good thing in the South, and it might be better if it also dominated in the North, but it does not. We must deal with conditions as they are, not as we would have them. We are here to represent the people, whether they live in town or country, whether they are in the shops or on the farms. This obligation ought to rest on Democrats and Republicans alike. But does it? You have 290 Members here, and from these three grand divisions of the country I have named there are 154 Democrats from the North, 125 from the South, and 11 from the West. You have adopted the policy and the rule of electing the committees of this House, and how have you done it?

The Democrats from the South are not in the majority, but they control and dominate the legislative machinery of the House. They have the chairmanships of all the great committees with the exception of those on Appropriations and Invalid Pensions. The able gentleman from New York [Mr. FITZGERALD] is chairman of the Committee on Appropriations and the old war veteran, Gen. SHERWOOD, is chairman of the Committee on Invalid Pensions. I might add that my friend and colleague, Dr. FOSTER, is chairman of the Committee on Mines and Mining. The Committee on Appropriations prepares the appropriation bills to meet the necessary expenses of the Government, without which it must stop, and it has done its work well, but no man in the House has more often warned us of the extravagance of the majority of the House in spending the peoples' money than the gentleman from New York.

The other great committees which report appropriations, which might be called desirable rather than necessary, have southern men for chairmen. They have the chairmanships of the Committees on Agriculture, Foreign Affairs, Rivers and Harbors, Military Affairs, Naval Affairs, Post Office and Post Roads, and Indian Affairs, which handle appropriation bills, and

they have the chairmanships of the Committees on Ways and Means; Banking and Currency; Coinage, Weights, and Measures; District of Columbia; Census; Claims; Education; Immigration and Naturalization; Patents; Public Lands; Insular Affairs; Public Buildings and Grounds; Judiciary; Revision of the Laws; Territories; Interstate and Foreign Commerce; and Rules. Southern men are chairmen of 35 of the 58 committees of this House, and they are the most important committees in preparing the legislation and controlling the machinery of the House. How did they get them under this rule of electing committees and by the votes of the majority in the Democratic caucus?

The North has the Speaker, but he is not a czar, not even a member of the board of directors who control the business of the House. The South, with considerably less than a majority in the Democratic caucus, managed to pick most of the plums. They are able, experienced, and honorable gentlemen, but they do not represent the majority of the majority under this new order of selecting committees, and they represent less than one-third of the whole population. With the exception of the genial and able majority leader, they represent the rural population of the country. Mr. UNDERWOOD represents a great industrial city, but I had to get a gazetteer to locate the homes of the other great Democratic leaders from the South who sit at the head of the great committees of the House.

So you gentlemen of the South have come back into your father's house with more power than you ever had, not only to direct the House but to control the majority of the House with a minority membership of that majority. You also have control in the Senate, with southern men sitting at the head of all the great committees, except those on Military Affairs, Pensions, Public Lands, Indian Affairs, Interstate Commerce, and Territories. You also have a southern man for President, elected from New Jersey, it is true, but with all the ideals of the South and the lack of experience and interest, I sometimes feel, with the teeming urban population of the North. In his Cabinet are four southern men, in control of the Treasury Department, the Navy Department, the Department of Justice, and the Post Office Department. Then we may add Mr. Bryan as another member of the Cabinet who is distinctly rural in all his tastes and understandings.

Your party still looks to the old ideas of legislating for the people who live in the country, and yet you were perfectly willing to sacrifice the farmers of the North and West by striking down the tariff on all their products. You were willing to try to reduce the cost of living for our northern cities by taking it out of the northern farmers.

You have, however, shown great interest in the work and condition of the farmers of the South and Southwest. With the chairman of the Committee on Agriculture in the House from South Carolina and that in the Senate from Oklahoma, it is perhaps natural that there should be more attention given to the crying needs of the farmers of the southern section than to those of the North in the Agricultural appropriation bill, and that we should now be appropriating millions of dollars to destroy the boll weevil, the cigarette beetle, the prairie dog, and the snapping turtle—some one suggested in the Senate. We had a filibuster here because the bill for rural credit banking had not been put on the program. Here we have been for months talking about how we can help the farmers of the country, when the estimates of population by the Census Office indicate that 49 per cent of the American people live in cities of more than 2,500 and 40 per cent live in cities of more than 8,000.

My own city of Chicago has a larger population than that of any State in the South, except Texas. New York has more people than have a half dozen States in the South, and there are more people living in cities of more than 100,000 than can be found in all the States of this ruling section of the country. And yet the policy of the Democratic Party here has been to legislate for the rural population and against the people who live and work in cities and help to maintain this Government. You have gone on the theory that the man who has his home in the city is living off the farmers, that there is no legitimate trade except from the tail gate of a farmer's wagon, and that the man who seeks any other safety for his money than an old stocking is trying to corner the money of the people. You are anxious to improve the condition of the farmers, but you leave the men in the shops to take care of themselves and compete with all the world.

You are frightened by the word "subsidy" except when it gets into the Agricultural appropriation bill. You are fearful that the railroads may earn dividends, and you are willing to build railroads at Government expense in Alaska and wagon roads in every country district to facilitate the rural delivery of the mails, which is now costing many millions more than its revenues. Your sense of proportion is not fully developed to enable you to appreciate the full meaning of "a government of the people, for the people, and by the people." Your leaders live in the rural districts, and they see only the country and its products, forgetting that the manufactured product of this country is double in value that of the agricultural product. The chairman of the Senate Committee on Agriculture the other day asserted that the farmers of this country paid 70 per cent of the cost of the Federal Government, when any child knows that the people in the cities pay the great bulk of the customs tax—if it is paid by the consumers, as you say—and that they pay three-fourths of the internal revenue, the corporation tax, and the income tax. You are still living in the past, but the country has grown, and the city man now has a right to some consideration from Congress. He has been going along supporting his own municipal government and contributing the larger share of the cost of State and Federal Government, and he has not complained; but the time is here when he will send men to Congress who will have a broader view of a government of the people, and not simply legislation for the rural districts.

Only a year ago you gentlemen from the South were almost stampeded from the constitutional amendment for the election of Senators by the people when the Bristow amendment appeared to continue the control of Congress over the times and places for election. You complained that it would be the end of State rights and permit the Federal Government to send the Army into the States to control your elections with the bayonet; and our impetuous leader from Alabama, Capt. HOBSON, then declared that "the integrity, the prosperity, and the perpetuity of the United States depend more upon safeguarding the principle of local self-government in the individual States than upon any other principle of government."

But now comes the gallant captain with another constitutional amendment by which he proposes to have the Federal Government go into every State and city and town and regulate their domestic affairs. Capt. HOBSON goes a little further than some of you, but he represents the new centralizing theory of the Democratic Party, especially to employ Federal power in meddling with the business and industry and domestic life of the people. You forget all your old State rights doctrine when you are in control here. You boast that your President has set business free, and we admit that he has set millions of men free from daily labor and the wages that went with that labor. He has built a gallows higher than Haman's and has hanged prosperity. He has assumed the leadership of the Democratic Party, in legislative halls as well as in the Executive office, and has here set aside your own chosen leaders to command the caucus, with invisible government. He has made the Congress of the United States his stenographic corps to write into law what he dictates, and in this he has his eye only on his own old ideas, formulated in the privacy of his study, without taking a comprehensive view of the United States. You and your President have lost sight of the idea of a "government of the people, for the people, and by the people."

There are at the present time 289 Democrats in the House and one vacancy in a Democratic district—Judge Clayton—which will return a Democrat.

On the basis of 290 Democrats, the Democratic majority over all is 145.

A quorum of the Democratic caucus is 146, and a majority of that caucus—74—has the power to make a caucus decree. Several times in this and the last Congress a bare quorum transacted business in the caucus, and it is said that on several occasions business was transacted without a quorum. Anyhow, 74 members, a majority of a quorum, have the power and have exercised it of decreeing what shall be the legislative program and in what form bills shall come before the House. The action of this majority of a quorum in a Democratic caucus absolutely binds the other 216 Democratic members, except the few who, for constitutional reasons or because of promises made to their constituents, as in the cases of the Louisiana Members respecting sugar and Mr. SISSON, of Mississippi, on the currency bill, refused to be bound. The southern Democrats have 35 chairmanships, including Maryland, one of the South Atlantic States.

You were in favor of free silver to put up the farmers' prices, and in favor of free trade to put them down. You destroyed the sugar industry of Louisiana and Texas by putting sugar on the free list, because you said it was an artificial and not a legitimate industry, and should not be fostered by the Government; yet you appropriate $100,000 in the Agricultural bill to encourage cattle raising and general production in the sugar-growing sections of the South.

By putting sugar on the free list you take $50,000,000 annually from the Treasury and increase the price of sugar. To

supply this revenue you have imposed an income tax upon the American people. The result of your action is that you impose additional burdens on the people by the income tax, add to the price of the sugar they use, take away $50,000,000 revenue from the Treasury, and add to the profits of the Sugar Trust.

I have often tried to study why the Democratic Party is unsuccessful in its conduct of the affairs of the Nation. I have never had the opportunity of serving in Congress during a Democratic administration until now, and that opportunity to study the reasons for Democratic failure at close range has given me the information which I have all my life unsuccessfully endeavored to obtain.

Whenever the Democrats are in control of the Nation the South dominates. A study of the question at close range, with the Democrats in control, convinces me that the failure of the Democrats in national affairs is in a large measure due to southern domination.

The South, with its 29,000,000 people, 23,000,000 of whom live on farms, sends 125 Democratic Members to the House of Representatives. This number comes from the South in season and out, regardless of what the politics of the Nation may be. The men from the South rank on the committees. They obtain the chairmanships when the Democrats come into power. They shape the policies of the Democratic Party. Their business is that of cotton raising. The world is their market. They are for free trade because of their desire to exchange their cotton for European-made goods, believing that they can get them cheaper than by buying them at home. They have no concern for, and no knowledge of, the industrial needs of the North, and all the legislation enacted by a Democratic Congress is sure to be detrimental to the industrial development and against the welfare of the North.

The North has 71,000,000 people. It has 165 Democratic Members in the present Congress. One would naturally believe that 165 is more than 125, but in this instance that is not the case, for the 125 Democratic Members from the South dominate the 165 Democratic Members from the North and bind and gag them in caucus, so that they are obliged to vote for whatever the southern Democrat proposes or be considered disloyal to their party.

The Democrats of the South do not understand the needs of the North. They can not be expected to. And although of the 71,000,000 living north of the Mason and Dixon line there are 10,000,000 more living in the cities than in the country all the legislation proposed and enacted under the present Democratic administration has been against the industrial worker of the North.

You have increased the imports by your free-trade policy; you have decreased the exports; you have reduced the revenue; you have taken 4,000,000 workmen out of employment; you have destroyed investment, discouraged enterprise; you have created chaos in the industrial world from one end of the country to the other because of your legislation which admits free into American ports the products of European labor.

You came into power on the promise of economy, but you have been recklessly extravagant in the expenditure of the public money. You have taken no account of the Nation's needs; you have destroyed the opportunity of the people to make a livelihood; you have taxed them in the name of war to meet your extravagant expenditures. The appropriations during the session of Congress recently closed amounted to approximately $1,117,000,000 and were $90,000,000 more than those ever appropriated by a session of Congress under Republican rule.

You have found yourselves unable to raise revenue to meet the ordinary running expenses of the Government without new taxation, and the President in his message to the joint session of the House and Senate on September 5, 1914, recommended that a new tax be levied upon the people to meet the extravagance indulged in by the administration. The general fund on the day of the President's message showed a balance of $120,000,000, $75,000,000 of which was on deposit in the national banks drawing 2 per cent interest, but the President said it would not be wise for the Government to draw checks against its own deposits to meet the Government's obligations, but on the other hand he considered it wise to keep the Treasury strong by levying a new tax on the already overburdened people.

The banks that had this $75,000,000, on which they were paying 2 per cent, were drawing from 7 per cent to 12 per cent interest on it, depending upon the location of the bank, but the administration did not think it wise to draw its checks against its own funds on deposit in these banks, and instead of doing that induced you gentlemen of the Congress to pass a law levying a tax upon the peoples' necessities, which compels them to draw their checks against what little balance they may have in the bank.

Under this law the people are obliged now to pay a tax on telegrams and on telephone messages, to pay a tax on a mortgage which they may be obliged to place upon their homes, and in fact pay a tax on every activity in which they may be engaged, in order that you may continue on in your mad race of extravagant waste of public funds. Economy is an unknown quantity with the Democrats in control. You not only deprive the Government of the revenue which it should naturally receive by admitting foreign-made goods into American ports free, but you take away the opportunity of the American workman to make a livelihood and hand that opportunity over to the workmen of the world. You see nothing but the South; you know nothing of the North or of its needs; you have destroyed the fabric of prosperity; you have created adversity, poverty, want, and despair throughout the land.

The 125 men in the House, representing the 23,000,000 people living on farms, dictate to all the rest of the American people without knowing anything at all of their needs.

Massachusetts, New York, New Jersey, Pennsylvania, Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Missouri, and California—12 States—elect 230 of the 435 Members of the House. These 12 States have 50 per cent of the population, three-fifths of the voters, five-sixths of the wage earners in manufacturing institutions, fifteen billion of the twenty billion of value of manufactured products, 50 per cent of the farm values; they pay $282,000,000 of the $380,000,000 collected from internal revenue, $33,000,000 of the $43,000,000 paid in corporation taxes for 1914, $24,000,000 of the $28,000,000 income tax; they have four billion out of the five billion of savings deposits, and are certainly entitled to the consideration which their importance in the fabric of America's activities justifies, but they have not had it under the present administration. Do you wonder that they complain?

You have passed legislation to regulate the conduct of the ten thousand different kinds of business in which the American people are engaged, in which they have $250,000,000,000 of capital invested, and not a man north of Mason and Dixon's line, not even a Democrat, was allowed to serve on the committee that drafted the legislation and engineered it though the House. None but men living in that section whose business is cotton raising were given an opportunity to make a suggestion as to what the legislation should be.

You have thrown the business of the country into chaos by this legislation. No man knows how he is to be affected by it. The Clayton bill does more to disturb the business of the country than any legislation which has been considered by this or any other Congress during my recollection, and yet it will be noted that the industrial and financial interests of the North, where the greatest development along these lines has taken place, had no part in the preparation of the legislation which so vitally affects these interests; that no Representative of either the Democratic or Republican Party north of the Mason and Dixon line was permitted to assist in the preparation of the Clayton antitrust bill.

The section of the country represented in Congress by men having experience in business and understanding the country's business needs was ignored in the preparation of this bill, and the subcommittee of the Judiciary Committee which framed the bill consisted of three southern Democrats—FLOYD, of Yellville, Ark., a town of 400 people, at the foot of the Ozark Mountains, where no business transaction exceeding $1,000 has probably ever been heard of; CLAYTON, of Eufaula, Ala., a town whose most important business is conducted by a man who sells hard-boiled eggs; and CARLIN, of Alexandria, Va., a town which Mark Twain said "was the most finished city in the world, the last nail having been driven in it, and that grass was growing on its streets."

Do you wonder, and can the people of America wonder, that the business of the country is paralyzed by legislation coming from such a source?

The people of the United States will not continue to submit to this kind of administration of their affairs. They have the right, when they select men to speak for them, to expect these men to speak along economical and conservative lines. They have a right to expect their representatives here to protect their rights, conserve their interests, and protect their investments; not to destroy them or to use them merely as instrumentalities to fill the Treasury of the United States for the purpose of feeding a lot of job holders.

The people are the Government. They have the power. They can supply the remedy, and that remedy is to elect men to the Congress of the United States and to the Presi-

dency who will represent not only the South but the North as well, and not only the agricultural interests but the industrial interests of the country; men who will conserve and not destroy industry; men who will encourage investment, not drive it away; men who realize the importance of prosperity and who believe in the encouragement of American business, in protecting the American market for the American people; who have a comprehensive knowledge of the Nation's needs in all its varied industries, and who will legislate to meet these needs and protect them from invasion by the products of European factories and workshops.

The motto of the American Government should be "the welfare, the prosperity, and the happiness of the American people." The legislation should tend toward opening the American workshop, giving the American workman employment, bringing happiness to American homes. In short, our policy should always be America first.

Tuttle Standard-Barrel Bill.

EXTENSION OF REMARKS

OF

HON. THOMAS C. THACHER.

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 6, 1915,

On the bill (H. R. 4899) to fix the standard barrel for fruits, vegetables, and other dry commodities.

Mr. THACHER. Mr. Speaker, the Tuttle bill (H. R. 4899), entitled "A bill to fix the standard barrel for fruits, vegetables, and other dry commodities," is substantially the same as what is known as the Weeks bill, which passed the Senate last winter. The Tuttle bill fixes a standard barrel for fruits and vegetables, and also fixes a standard barrel for cranberries of the same dimensions as the standard cranberry barrel authorized by the legislatures of the principal cranberry-producing States, including Massachusetts, New Jersey, and Wisconsin. Permit me to state that in 1913 the total crop of cranberries of the United States amounted to about 700,000 barrels, of which a little over one-half, or about 400,000 barrels, were produced in the sixteenth district of Massachusetts, the district which includes Cape Cod, and which district I have the honor to represent in Congress. We import no cranberries, but we export a considerable quantity, which I trust may be increased, to Canada and Europe.

Mr. Speaker, I believe that this bill benefits alike the fruit and vegetable growers and also the consumers. At present there is an universal distribution of the products of the field which by the trainload cross the State lines daily, furnishing the food supply of the people. Should not the Congress facilitate this traffic instead of leaving the regulation of the size of barrels, for example, to the legislatures of the 48 States, who, because Congress does not act, pass legislation without uniformity, which is a serious handicap to this interstate trade? That at present a shipper is unable to comply with the regulations of the different States with any one package was well pointed out by the testimony before the Committee on Coinage, Weights, and Measures of the House of Representatives on March 18, 1914, by Mr. N. P. Westcott, of Onley, Va., representing the Eastern Shore of Virginia Produce Exchange, a cooperative organization of about 3,000 small growers.

He stated on page 10 of the printed report of these hearings:

We are constantly confronted with this fact: Every State has a law fixing the size of barrels. In this bill you would not be doing any new thing. You are not really establishing an innovation, you are not imposing a requirement where no requirement has existed before.

The effort is to substitute for all these various standards a uniform requirement, so that the farmer, the small farmer more especially, can understand just what the standard is.

We ship our goods into 40 different States. Every one of those States has its own law fixing the size of the barrel. But there is no uniformity in the requirements of the different States. There is the greatest confusion. We find that one State may have a standard which is below that of another State, and then we go into still another State and find that the standard established by that State is above the standard established in some other State. For instance, if we want to sell sweet potatoes in Massachusetts, we find we have to put 150 pounds of sweet potatoes in a barrel, and 172 pounds of Irish potatoes. In some other States it is a question of volume. The whole thing is vastly conflicting, confusing, and chaotic.

If we were to adopt a barrel, if we could adopt a barrel that would meet the requirements of the most extreme of the State laws in States, for instance, in which the requirements were not as high as the requirements in our State, we would be selling our goods in competition with the local producers, and thus we would be at a great disadvantage.

In the actual conduct of our business we have found that that difference in the requirements of the various States has imposed every year upon our producers a large aggregate expense which is a waste. It does not mean anything; it does not serve any useful purpose in our work of distributing these goods.

It puts a tax upon our industry which has to be paid, partly by the farmer and partly by the consumer, in the cost of the goods.

He also stated, on page 11:

I believe that this measure is more in the interests of the individuals and unorganized farmers than any other person or interest in the United States of America.

Mr. Speaker, I believe that if the Members of the House will take the trouble to read the statements of Mr. Westcott and Mr. John C. Makepeace, president of the Cape Cod Cranberry Growers' Association, and Dr. Stratton, the director of the Bureau of Standards, and other experts they will be convinced forthwith of the necessity for the passage of this bill.

Mr. Speaker, it may be asked why should there be a barrel of different size for the cranberries, and also why should not the provisions of the bill be permissible instead of mandatory. While I should like to dwell upon the wonderful development of the cranberry industry, with which so many able men on Cape Cod are identified, I shall confine myself to merely stating here some of the reasons why these cranberry growers and experts have found a special barrel for cranberries absolutely necessary.

REASONS FOR A SPECIAL CRANBERRY BARREL.

They are as follows:

First. It is the only berry or small fruit shipped in barrels and is entirely different in character from any other commodity marketed in barrels. Trade customs and general convenience demand this.

Second. It is a perishable fruit, and must be treated as such throughout the process of storing, curing, transporting, and marketing.

Third. While produced mostly in three States—Massachusetts, New Jersey, and Wisconsin—it is marketed in every part of North America.

Fourth. For such a wide distribution the package must be suitable. An act of legislation can not, of itself, make any other sized barrel suitable for cranberries.

Fifth. All berries must reach destination tightly packed. This means they must be well shaken and pressed into barrel. A barrel with little curvature of stave is necessary for this purpose.

Sixth. Cranberries can not be stored in barrels or other packages having great bulk; the small size of the fruit retards circulation of air, which is essential to prevent deterioration.

Seventh. The flour barrel—7,056 cubic inches—was tried in the early days of cranberry shipments and found unsuitable, and its use had to be eliminated. It gave too large a mass of fruit; its contents were short lived and liable to fermentation. It was impossible to pack it so as to arrive at destination in tight condition.

Eighth. The cranberry barrel is embodied in laws of the principal States where cranberries are grown commercially, and this standard is universally recognized and accepted by the buying trade throughout the country.

Ninth. Time and experience have demonstrated that this barrel is the most economical and convenient size for marketing cranberries. It is well defined by State laws and well known in the trade, affording the best possible guaranty against short measure.

Mr. Speaker, I believe that the reasons why the provisions of this bill should be mandatory and not permissible are equally strong. They are as follows:

REASONS FOR THE MANDATORY PROVISIONS.

First. There is no reason for establishing a standard unless it is mandatory. A "permissive standard" is a misnomer. You may as well have a "permissive dollar," a "permissive bushel," a "permissive yard."

Second. In practice nine hundred and ninety-nine out of a thousand of the intelligent producers, distributors, and those having to do with administration of standard-measure laws want mandatory national standard barrels for the same reason that they want standard bushels—to prevent fraud, to insure uniformity, to inspire confidence, to facilitate trade.

Third. It is a mistaken idea that the small isolated producer is protected by the right to ship in any sized barrel. A standard-sized package of produce will command a standard price. A package which is off size is without a standard of value and affords a splendid excuse for the unscrupulous dealer to pay the shipper whatever he likes. Such a package is always a handicap to its contents and an expense to the original user.

Fourth. There is economy and profit in the use of standardized packages, and the farmer or producer, be he ever so small or isolated, knows it, and will always aim to reap the benefits

of it. He is not the fool that advocates of a permissive standard represent him to be; they are trying to picture a man who does not exist.

Fifth. It is a mistaken argument that the small isolated producer can not readily obtain supplies of standard packages. Distribution is surprisingly complete, even to the most remote producing localities.

Sixth. The argument that an innocent producer may by mistake get hold of an off-sized barrel, and thereby be liable to punishment, is hardly worthy of serious consideration. Off-sized barrels are going to be increasingly difficult to obtain. This innocent producer is not prevented from putting his produce into any sized barrel he sees fit to use, so long as he does not try to make an undersized barrel take the place of the national standard package in trade; if he persists in this, it is questionable how long he is entitled to the designation of "innocent."

Seventh. Moreover, the farmer who thinks he wants the right to use any sized barrel in order to save himself labor or expense or to save prosecution is putting forth much effort to prevent others from getting what they need and at the same time is building up a lot of trouble for himself. When he encounters the pure-food regulation requiring net weight to be stamped on packages, he will be obliged to provide himself with weighing apparatus and stamps and use them for each package—a considerable work to undertake. With a uniform standard package, weighing of each is unnecessary.

Eighth. Why should not the producer or farmer, be he large or small, expect to deal on the basis of standardized, uniform, and well-known measures, the same as everyone else?

Ninth. Enforcement of law becomes exceedingly difficult for officials and unsatisfactory to public when permissive standard is attempted.

Tenth. The distribution of common products of the field is universal. Thousands of carloads cross State lines daily. It is the food supply of the people. It must move smoothly, without interruption, without danger of hold up. Stop this traffic a day and distribution is seriously affected; stop it a week and there is suffering in the centers of population. It is the duty of Congress to facilitate this movement, instead of leaving its regulation, as to packages, to the legislatures of 48 States, which are obliged, because of the inactivity of Congress, to take separate action for their own protection. This State legislation lacks uniformity and is a serious hindrance to interstate trade, a hindrance which, as to barrel laws and regulations, is having an amazing annual growth and calls for immediate check. The time has arrived when a shipper can not comply with the barrel regulations of all States with any one package, try as hard as he may.

Mr. Speaker, in conclusion, inasmuch as both mandatory features and the provisions for a special barrel for cranberries are necessary and as a standard barrel for fruits and vegetables will benefit alike the farmers and fruit growers, the distributors, and last, but not least, the consumers, I ask the Members of the House to join together in the support of this splendid bill, upon which the distinguished Representative from New Jersey has given so much intelligent work. I sincerely trust that this meritorious bill may receive the hearty indorsement of the Members of this House.

Indian Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. JOHN H. STEPHENS,
OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 9, 1915,

On the bill (H. R. 20150) making appropriations for the current and contingent expenses of the Bureau of Indian Affairs, for fulfilling treaty stipulations with various Indian tribes, and for other purposes, for the fiscal year ending June 30, 1916.

Mr. STEPHENS of Texas. Mr. Speaker, the gentleman from Mississippi [Mr. HARRISON] seeks to amend the item in this bill seeking to pay each member of the Choctaw Tribe $200. The item is as follows:

That the Secretary of the Interior be, and he is hereby, authorized to pay to the enrolled members of the Choctaw and Chickasaw Tribes of Indians of Oklahoma entitled under existing law to share in the funds of said tribes, or to their lawful heirs, out of any moneys belonging to said tribes in the United States Treasury or deposited in any bank or held by any official under the jurisdiction of the Secretary of the Interior, not to exceed $200 per capita in the case of the Choctaws and $100 per capita in the case of the Chickasaws, said payment to be made under such rules and regulations as the Secretary of the Interior may prescribe: *Provided*, That in cases where such enrolled members, or their heirs, are Indians who by reason of their degree of Indian blood belong to the restricted class, the Secretary of the Interior may, in his discretion, withhold such payments and use the same for the benefit of such restricted Indians: *Provided further*, That the money paid to the enrolled members as provided herein shall be exempt from any lien for attorneys' fees or other debt contracted prior to the passage of this act.

The amendment offered by him at the end of the above provision, now in the bill, is as follows, namely:

Provided, however, That the provisions of the preceding paragraph of this act with respect to the Choctaw Tribes shall not be operative until Congress shall have determined the rights of the Mississippi Choctaws whose names do not apear upon the final rolls of the Choctaws in Oklahoma.

Mr. Speaker, if this amendment should be adopted by this House, it would cause much suffering among the Choctaw Indians now legally on the rolls in Oklahoma. It is well known that these Indians are mainly dependent on their cotton crops for money to live upon. The low price of cotton this year has left many of these Indians without anything for their support, and unless this Congress gives them this money many of them, including women and children, will suffer for the necessaries of life. I submit that this House should for this reason give these Indians the payment that the Department of the Interior has asked for, namely, $200 per capita. This is their money, and if they have to wait for their money until the Harrison bill passes both Houses of Congress and becomes a law they will never get their money from the United States Treasury. Mr. Speaker, the Secretary of the Interior opposes the passage of the Harrison bill in the following letter just received by me. It is as follows, namely:

REPORT OF THE SECRETARY OF THE INTERIOR ON THE HARRISON BILL (H. R. 12586).

THE SECRETARY OF THE INTERIOR,
Washington, January 8, 1915.

MY DEAR MR. STEPHENS: I have the honor to refer herein to a communication of August 12, 1914, from Hon. C. D. CARTER, then acting chairman of the Committee on Indian Affairs of the House of Representatives, with which was inclosed a copy of H. R. 12586, entitled "A bill to reopen the rolls of the Choctaw-Chickasaw Tribe and to provide for the awarding of the rights secured to certain persons by the fourteenth article of the treaty of Dancing Rabbit Creek, of date September 27, 1830." He also referred to H. R. 4536 and requested that I consider the two bills together and make a report thereon.

Upon examination of H. R. 4536, I find that said bill is identical with H. R. 19213, introduced by Mr. HARRISON of Mississippi in the Sixty-second Congress, second session, upon which last-mentioned bill the department submitted to your committee a report dated July 2, 1912. H. R. 12586, introduced in the present Congress by Mr. HARRISON, is a similar bill to the above-mentioned bills except that in said H. R. 12586 an additional paragraph is included in section 2 to provide for the enrollment of all persons who were identified as Mississippi Choctaws by the Dawes Commission in its report of March 10, 1899, commonly known as the McKennon roll, and of all persons identified as Mississippi Choctaws by the Dawes Commission from March 10, 1899, to March 4, 1907, whose identification was approved by the Secretary of the Interior but whose names did not appear on the final citizenship rolls of the Choctaw and Chickasaw Nations.

The claims of Mississippi Choctaw Indians to recognition as citizens of the Choctaw Nation of Oklahoma and to share in the property of said nation are based upon article 14 of the treaty of September 27, 1830. (7 Stat. L., 335.) Pursuant to the terms of the treaty, a large number of Choctaws were transferred from Mississippi to the country west, later known as Indian Territory. These Choctaws who so removed and their descendants now constitute the main body of what is known as the Choctaw Nation. There were, however, a considerable number of Choctaws who remained behind in Mississippi, some of them under the provisions of article 14 above mentioned.

Said article 14 provided that the persons who claimed thereunder should not lose the privilege of a Choctaw citizen, but if they ever removed were not to be entitled to any part of the Choctaw annuity. The Indians who remained behind under the provisions of said article 14 received either land in Mississippi or scrip, which gave the applicants the right to enter public lands in certain Southern States. A part of said scrip, however, was later commuted by a money payment. Some of the fourteenth-article claimants later made their way west and joined the main body of the tribe in the Indian Territory. The Choctaw Council by various acts recognized the right of said absentee Mississippi Choctaws to remove to the nation, and actually invited them to do so.

Under the provisions of the Atoka agreement with the Choctaw and Chickasaw Tribes contained in the act of Congress of June 28, 1898 (30 Stat. L., 495), the supplemental agreement contained in the act of July 1, 1902 (32 Stat. L., 641), and later acts of Congress for the purpose of carrying out the provisions of said agreements, the claims of individual Mississippi Choctaw Indians to be identified and to be enrolled as entitled to share in the property of the Choctaw Nation were fully considered by the Commission to the Five Civilized Tribes and by the department after full hearing, at which the claimants had ample opportunity to present all the evidence which they could procure in support of their claims. Very few claimants were able to prove descent from an ancestor who received or applied for benefits under the provisions of article 14 of the treaty of 1830.

The history of the Dawes Commission enrollment work relative to Mississippi Choctaw claimants is very fully set out in a communication of April 14, 1914, from William O. Beall, at one time secretary of the Commission to the Five Civilized Tribes. A copy thereof is inclosed for your information.

For your further information as to the history of the Mississippi Choctaw claims and of the department action in the preparation of the final rolls there is inclosed a copy of department letter of July

2, 1912, to the chairman of the Committee on Indian Affairs of the House of Representatives.

Judge William H. H. Clayton, in his decision in the case of Jack Amos *v.* The Choctaw Nation, a copy of which may be found in the appendix of the annual report of the Commission to the Five Civilized Tribes for the fiscal year ended June 30, 1901, said that no treaty or acts of the Choctaw Council or of any officer of the Choctaw Council since the treaty of 1830 could be cited, or at least he had not found them, whereby any right or privilege had been conferred, granted, or recognized in or to a Mississippi Choctaw so long as he remained away from his people, and that no right was recognized or conferred upon such absent Indian except upon the condition that he should remove to the nation, and the right was not to be consummated or enjoyed until actual removal.

Mississippi Choctaw Indians who, while the opportunity was theirs under the privileges accorded them, refused to emigrate with the tribe to the new country west, and who never shared in the burdens and hardships of the pioneer life incident to the establishment of the new tribal government west of the Mississippi, have at this late date (now that the tribal property of the Choctaw Nation made valuable by the emigrants is being divided per capita among the enrolled recognized citizens of the nation) no equitable right to share in said property.

With respect to the persons who were identified by the Dawes Commission as Mississippi Choctaws under the provisions of the act of Congress of June 28, 1898 (30 Stat. L., 495), but who failed to remove and make settlement in the Choctaw-Chickasaw country, as required by the act of Congress of July 1, 1902 (32 Stat. L., 641, secs. 41, 42, 43, and 44), it may be said that, irrespective of their unfortunate condition of poverty and ignorance, there is no ground, legal or equitable, for holding the Choctaw and Chickasaw Nations responsible for the failure of said identified persons to comply with the law as to removal and settlement. No obligation rested upon the United States to provide means for the removal of such Indians.

Referring to the class of claimants whose names were contained in an identification roll submitted by the Commission to the Five Civilized Tribes on March 10, 1899, but never approved by the Secretary of the Interior, your attention is invited to the fact that the commission soon recognized the inaccuracy and incompleteness of that roll and requested the department to disregard it and to return the same to the commission. In order that there might be no doubt as to the standing of said roll, it was disapproved by the department on March 1, 1907. The larger part of the persons whose names were contained on that disapproved roll were afterwards placed on the approved identification rolls, and those who complied with the law as to removal and settlement were enrolled on the final rolls of Mississippi Choctaw Indians.

In the investigation and examination of Mississippi Choctaw claims made in 1900 and the years following by the Commission to the Five Civilized Tribes every effort that was possible to be made was made by said commission to reach all persons who had any equitable claim to recognition as Mississippi Choctaws, and especially to find those who were full-blood Choctaw Indians.

H. R. 4536 and H. R. 12586 in effect provide, so far as the Mississippi Choctaw claimants are concerned, a general reopening of the rolls of the Choctaw Nation, necessitating a review of all the cases which had been adversely decided by the United States courts, the Department of the Interior, and the Choctaw and Chickasaw citizenship court, as well as the consideration of claims not heretofore presented or considered, and empower the Secretary of the Interior to determine the rights of the claimants upon such evidence as may be produced by the applicants, without regard to any adverse judgment or decision heretofore rendered by any court, or Commission to the Five Civilized Tribes, or the Department of the Interior, and without regard to any condition or disability heretofore imposed by any act of Congress.

The records of the department show that Mississippi Choctaw claimants have been to an unusual extent the victims of numerous extortionate contracts, and the correspondence in many cases indicates that contracts were obtained through misrepresentations as to the facts, and in some cases that such contracts were obtained from claimants who believed that the persons obtaining the contracts were Government agents. Your attention is invited to the report of Inspector McLaughlin, of this department, which report appears in print in the CONGRESSIONAL RECORD of July 10, 1914, commencing on page 13022.

Referring to section 9 of said bills I am of the opinion that, in view of the large amount of tribal property yet to be disposed of and of other matters affecting the tribes, it would be inadvisable to abolish the tribal organization of the Choctaw and Chickasaw Nations at the present time.

In view of the facts as presented to me I am of the opinion that no legislation should be enacted for the reopening of the rolls of the Choctaw Nation for the benefit of the Mississippi Choctaw claimants.

Very truly, yours,

FRANKLIN K. LANE,

Hon. JOHN H. STEPHENS,
Chairman Committee on Indian Affairs,
House of Representatives.

Mr. Speaker, this same bill of Mr. HARRISON'S, H. R. 12586, was by myself as chairman of the Indian Affairs Committee of this House submitted to a subcommittee of five members of that committee. That subcommittee made an adverse report on the bill to the full committee. This bill is now the pending business before our committee, and I submit that it would be highly improper for this House to pass upon this great question by adopting the Harrison amendment to this bill, which amendment, if adopted, would presuppose the action of that committee and decide upon the merits of the Harrison bill, H. R. 12586, above alluded to, and override the adverse report of Secretary Lane and of the subcommittee of the Indian Committee on the Harrison bill.

Mr. Speaker, that report is as follows:

REPORT ON H. R. 12586.

JANUARY 2, 1915.

Hon. JOHN H. STEPHENS,
Chairman Committee on Indian Affairs, Washington, D. C.

SIR: Your subcommittee appointed to investigate and report on H. R. 12586 begs leave to submit the following observations:

A careful and painstaking investigation of all treaties, laws, and other records bearing on this claim, including hearings lasting from April 1, 1914, until August 27, 1914, was gone into by your committee.

H. R. 12586 directs:

1. The Secretary of the Interior to enroll certain Mississippi Choctaws upon the rolls of the Choctaw Nation in Oklahoma with a full participation in their tribal estate.

2. To reopen the Choctaw rolls for the adjudication of 20,000 or more alleged claimants.

There are some Choctaws still remaining in Mississippi who have persistently refused and successfully resisted all efforts of the Federal Government and the Choctaw Nation to have them move West and affiliate with the tribe.

The testimony before the subcommittee discloses many thousands of persons of doubtful descent, African and other, living in Mississippi and surrounding States, who have attempted to assert claims as Choctaw Indians.

Such Indians of real Choctaw blood as still reside in Mississippi appear to take little interest in the claims asserted by their alleged attorneys. On the other hand, those claiming remote Indian blood and of doubtful descent have manifested much interest in being enrolled and sharing in a division of the Choctaw funds in Oklahoma.

The contention of these latter seems to have been inspired and augmented by certain attorneys who have sent agents among these people advising them that they were Indians and taking contracts for their enrollment for a contingent fee of from 30 to 40 per cent of recovery, and in many instances a small cash retainer in addition.

According to statements and admissions of these attorneys and their agents, two firms alone, those of Cantwell & Crews, of St. Louis, Mo., and Ballinger & Lee, of Washington City, D. C., and Ardmore, Okla., hold contracts with 15,596 individuals, carrying provisions for fees aggregating $10,882,815.

The testimony further shows that a syndicate for the purpose of securing the enrollment of Mississippi Choctaws and a participation in the tribal estate of the western Choctaws has been formed under the name "The Texas-Oklahoma Investment Co.," capitalized at $100,000, $25,000 of which has been paid in and used. The directors of this corporation are S. L. Hurlbut, of El Campo, Tex.; H. Masterson and W. A. Smith, of Houston, Tex.; and T. B. Crews and H. J. Cantwell, of St. Louis, Mo.

This claim of the Mississippi Choctaw attorneys for enrollment of their clients and participation in the Choctaw Nation's estate is by no means a new contention. The claim was, under direction of law, fully adjudicated by the Commission to the Five Civilized Tribes (House Doc. 274, 55th Cong., 2d sess.) and afterwards by the Federal court, to which appeal was taken (Jack Amos et al. *v.* The Choctaw Nation, Decisions of United States Courts in Indian Territory, 465), both decisions being adverse to the Mississippi Choctaw contention for enrollment.

In rejecting the claim of nonresident Mississippi Choctaws the Commission to the Five Civilized Tribes said, in part:

"This historical review of the acquisition of this territory by the Choctaw Nation and its subsequent legal relations to it makes it clear in the opinion of this commission that the Mississippi Choctaws are not under their treaties entitled to all rights of Choctaw citizenship, except an interest in the Choctaw annuities, and still continue their residence and citizenship in Mississippi." (House Doc. 274, 55th Cong., 2d sess.)

In affirming the decision the United States District Court for the Central District of Indian Territory closed its decision with the following paragraph:

"To permit men with, perchance, but a strain of Choctaw blood in their veins, who, 65 years ago, broke away from their kindred and their nation, and during that time, or the most of it, have been exercising the rights of citizenship and doing homage to the sovereignty of another nation, and have become strangers to the people, to reach forth their hands from their distant and alien homes and lay hold on a part of the public domain, the common property of the people, and appropriate to their own use, would be unjust and inequitable. It is therefore the opinion of the court that the absent Mississippi Choctaws are not entitled to be enrolled as citizens of the Choctaw Nation. The action of the Dawes Commission is therefore affirmed and a decree will be entered for the Choctaw Nation." (Jack Amos et al. *v.* The Choctaw Nation, Decisions of United States Courts in Indian Territory, 465.)

An appeal was taken from these decisions by the attorneys for the Mississippi Choctaws to the Supreme Court of the United States and the Jack Amos case was dismissed upon motion of the attorneys for the Mississippi Choctaws (190 U. S., 873).

Several years subsequent to the date of these decisions excluding the Mississippi Choctaws from enrollment this matter was again taken up and readjusted by the legally constituted authorities of the Federal Government and the Choctaw and Chickasaw Nations in Oklahoma, by which agreement the Mississippi Choctaws were given additional time for identification and establishment of bona fide residence in the Choctaw Nation in Indian Territory. (Supplemental agreement, "An act to ratify and affirm the agreement with the Choctaw and Chickasaw Tribes of Indians, etc.," approved July 1, 1902.)

The Choctaw Nation in Oklahoma has dealt justly and liberally with the Mississippi Choctaws, always granting them full citizenship in their nation with all emoluments thereto whenever they would agree to affiliate with the tribe, and the Choctaw Nation in Oklahoma is under no legal, equitable, or moral obligation to enroll the Mississippi Choctaws as citizens of the tribe in the West at this time.

By the agreements negotiated between the Federal Government and the Choctaw Nation all native western Choctaws were required to be on the reservation by June 28, 1898, or stand debarred from enrollment and participation in the tribal estate forever thereafter, and this rule has been strictly adhered to.

The time for establishment of residence on the reservation was extended to the Mississippi Choctaw claimants until July 1, 1903, giving the Mississippi Choctaws five years to move on the reservation after the time for establishment of such residence had been closed to the native Choctaws.

After 11 years were consumed by the Commission to the Five Civilized Tribes in making up the rolls of the Choctaw and Chickasaw Nations, such rolls were affirmatively closed by action of Congress on March 4, 1907.

The rolls of the Choctaw Nation were held open to the Mississippi Choctaws from 1830 until March 4, 1907, giving the Mississippi Choctaws 77 years in which to complete enrollment, with full benefits of citizenship.

The Federal Government as such is neither legally nor equitably obligated to enroll Mississippi Choctaws with the Choctaws west, and is under only such moral obligation to the Mississippi Choctaws as is due to dependent North American Indians who were originally occupants and owners of the soil and who have been deprived of their patrimony by white settlers.

The passage of H. R. 12586 would completely upset and undo 11 years of careful, painstaking work of the Interior Department in settling the affairs of the Five Civilized Tribes, turn the wheels of progress backward for more than 20 years, and, as has been said by President Taft, "open up a Pandora's box of troubles which the life of the present generation might not see closed."

The passage of H. R. 12586 would doubtless result in stupendous claims of millions of dollars against the Federal Government on the part of the Oklahoma Choctaws because of a division of their funds among persons whom the Federal commissions and Federal courts have decided were not entitled thereto.

Its passage would lend encouragement to grafting attorneys with contracts for enormous attorneys' fees, running into millions of dollars, and hold out inducement for procuring additional contracts from spurious claimants.

Your subcommittee therefore recommends that the Harrison bill (H. R. 12586) be not favorably reported by the House Committee on Indian Affairs.

Respectfully submitted.

C. D. CARTER, *Chairman.*
J. D. POST.
ROBT. P. HILL.
P. P. CAMPBELL.

Mr. Speaker, this bill, in plain language, would direct the Secretary of the Interior to within nine months put on the rolls of the Oklahoma Choctaws all of the Mississippi Choctaws, and, in effect, this bill would do so without regard to any adverse judgment or decision of any court or commission or of the Department of the Interior or any act of Congress.

Mr. Speaker, in all of my legislative history I have never found a bill that proposes to set aside with impunity acts of Congress, judicial opinions, and the acts of the Department of the Interior. The only thing it does not set aside is the attorney's fees, but confirms them in the following language, namely:

Any contract now or hereafter made between any applicant—

For enrollment—

and attorney * * * shall govern the amount of such fee.

The subcommittee hearings show that this bill was drawn by a firm of attorneys whose contract fees run into the millions, and the gentleman from Mississippi [Mr. HARRISON] stands sponsor for this legislative monstrosity.

Mr. Speaker, this is the gentleman who, on the floor of this House during the debate on this bill, caused the following colloquy (see RECORD of January 8, 1913, page 1301):

Mr. STEPHENS of Texas. Mr. Chairman, will the gentleman yield?

Mr. MILLER. Yes.

Mr. STEPHENS of Texas. Mr. Chairman, the gentleman has studied this matter and has been investigating it for a number of years, and I know that he has greatly benefited all of us by his arguments. The question I desire to ask is this: Whatever equities these Indians may have—those that have never moved to Oklahoma and still reside in Mississippi—must be against the United States Government for misleading them and not against the Choctaw Indians who are in Oklahoma and who have obeyed the Government in every respect, and who have had the lands patented to them and have had possession of them for 75 years.

Mr. MILLER. Mr. Chairman, I could not quite agree with that statement of the gentleman from Texas.

The CHAIRMAN. The time of the gentleman from Minnesota has again expired.

Mr. HARRISON. Mr. Chairman, I yield the gentleman two minutes more. Mr. Chairman, I want to ask the gentleman a question. I notice that in 1910, on February 2, the gentleman who just asked that question used this language in offering an amendment to the Indian appropriation bill to take care of the Mississippi Choctaws. That was four years, practically, after the final rolls had been closed. Among the other language used by the gentleman from Texas, chairman of the committee, he said this:

"Mr. Chairman, there are yet 400,000 acres of land unallotted and funds unallotted still belonging to the Choctaw tribe, and before these funds are allotted, before this land has gone from the power and possession of the United States and into the hands of innocent purchasers, these Mississippi Choctaw Indians should be protected, and every one entitled to enrollment should be enrolled and receive their pro rata share of the tribal estate. If that is not done, they will be knocking at the doors of Congress for the next 50 years, stating that their claims were rejected when they were just. It is the duty of this Government to ascertain who its wards really are and to legally enroll them and set apart to them their property; and if we do not treat them thus justly and fairly, we will have committed a great moral wrong. This moral obligation rests upon us and can never be paid until justice is done to these Mississippi Choctaw Indians."

Mr. Speaker, this unfounded and misleading statement made by the gentleman from Mississippi does me a great injustice in this: He tried to make the false impression on the House that I was then advocating by my amendment the same thing that he is now by his amendment trying to accomplish.

Mr. Speaker, the two amendments are as wide apart as the poles. My amendment is found on page 2218, CONGRESSIONAL RECORD of February 22, 1910, and is as follows, viz:

Mr. STEPHENS of Texas. Mr. Chairman, I have an amendment which I desire to offer—

And so forth.

The CHAIRMAN. The Clerk will read—

And so forth.

Provided, That said commission—

Meaning the Dawes Commission—

shall be required to enroll all of the Mississippi Choctaw Indians who removed to the Indian Territory, now Oklahoma, prior to February 1, 1907, and made application for citizenship, where it appears by said application that the applicant or ancestor of the applicant has received patent of land under the fourteenth article of the treaty of 1830, or scrip in lieu thereof, if found entitled to enrollment.

Now, Mr. Speaker, this amendment was a direction to the commission to enroll only Indians who removed to Oklahoma prior to February 1, 1907, and made application for citizenship. The gentleman from Mississippi [Mr. HARRISON] stated to the House, as I have before quoted, that—

I notice that in 1910, on February 2—

It should have been February 22—

the gentleman who just asked that question—

Meaning myself—

used this language in offering an amendment to the Indian appropriation bill to take care of the Mississippi Choctaws.

He then proceeds to read what I said about the Mississippi Choctaws in Oklahoma—and not in Mississippi—who had removed to Oklahoma and there applied for citizenship. I made no reference whatever in my resolution or speech thereon to the Mississippi Choctaws in Mississippi, and did not then, do not now, and never have, advocated the placing of the Mississippi Choctaws residing in Mississippi on the rolls, and the gentleman from Mississippi shall not make the false impression on the country that I have done so. To do so would be a great injustice, if not a crime, against helpless wards of the Government.

Pay of Rural Letter Carriers.

EXTENSION OF REMARKS

OF

HON. RICHARD W. AUSTIN,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, December 30, 1914,

On the bill (H. R. 19906) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1916, and for other purposes.

Mr. AUSTIN. Mr. Speaker, I desire to trespass upon the time of the House long enough to express my views on the provision of the pending bill directing that the pay of a rural carrier on a route of 24 miles shall be $1,200 per annum, or $100 per month. That is what we had in mind last year when we voted an increase of $100 per year, and little did we dream that any change in our plain intentions would be effected without our knowledge or consent. I am sure after full investigation and consideration we were all virtually of one mind, namely, that these efficient and worthy carriers deserved and were entitled to this increase in compensation.

I not only favored the increase, but was and am still of opinion an allowance should be granted to cover the cost and maintenance of the carrier's outfit. He should be treated in this matter of extra allowance like a mounted city carrier.

We have not only had to meet this plain disregard by the present administration of an act of Congress and an injustice to a deserving class of officials, but an attempt to have us change the method of paying for the Rural Mail Service by legislating out of office 43,534 rural letter carriers—have them practically lose outfits, stock, and so forth, to the value of $20,000,000—and substituting an unsatisfactory contract service. In this connection I wish to quote some official figures, which testify to the high standing of the men engaged in this service. It is a record that should command the admiration of every Member of Congress, as well as every American citizen. Listen to this: Last year, out of this great army of 43,534 men, representing every State and practically every county, only 375 were removed, and of this number 74 for intoxication and 38 for incompetency. I venture this excellent record can not be excelled by any 43,534 men in other occupations or callings in this or any other country. This showing makes the rural letter carriers' roll one of honor.

The vote cast against the special rule clearly demonstrated that the Members of this House, regardless of politics, were unwilling to do an injustice to the rural carriers, whose unselfish sacrifices, untiring efforts, and hard work have built up the Rural Mail Service, made it a Nation's pride, a blessing and a boom to the farmers, and aided in increasing the revenue of the Post Office Department until for the first time in years it shows a surplus.

The attempt to inflict an injustice of the kind mentioned upon the rural letter carriers was not only an unexpected shock to the Members of Congress, but has been condemned by the press of the country and the millions of farmers, who know and justly appreciate the splendid service rendered them by the carriers.

In the fight to maintain the justness of their cause no agency outside of Congress has rendered the carriers such valuable service as the Rural Free Delivery News of this ctiy. It has always been their active and faithful friend and champion.

This contract scheme was never proposed until it was clearly demonstrated that the new tariff law was a failure, not only in furnishing prosperity and employment to our people, but a decided failure by many millions of dollars in supplying sufficient money to meet the running expenses of the Government, even under an administration pledged to strict economy. Because this tariff law would not produce sufficient revenue it was deemed best, right, and patriotic to cut off fifteen or eighteen million dollars of the amount needed per annum for the Rural Delivery Service, turn out of office 43,534 honest, capable, and faithful carriers, and take from the deserving farmers, the mainstay, the backbone of this Republic, the blessing of an efficient, up-to-date mail service. If economy was required, if Government expenses needed reduction, why accomplish it at the expense of the honest and industrious farmers? If placing this service under contract in order to save money is the correct thing to do, then a greater amount could be saved by putting all Government work or officials under contract, from Cabinet officers and Members of Congress, all down the line. The administration did not think it extravagant to spend $37,000,000 for building railroads in far-away Alaska, or $40,000,000 to purchase second-hand ships for a so-called merchant marine. The people of this country are not going to permit any administration or political party to cripple or destroy the present high-standard rural mail system.

The people demand that this service be continued and extended, and they further demand substantial Government aid in the construction and maintenance of their public highways. The question of transportation from the farm to the markets, rural credit, the making of country life more comfortable and attractive are uppermost in their thoughts, and they expect their Representatives in Congress to find an early way and method of bringing about these desirable results.

If we neglect, fail, or refuse to heed their demands, which are just and reasonable, they will soon find others who will write upon the statute books their decrees.

Post Office Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. WILLIAM A. CULLOP,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, December 30, 1914,

On the bill (H. R. 19906) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1916, and for other purposes.

Mr. CULLOP. Mr. Speaker, the bill under consideration, making appropriations for the Post Office Department for the fiscal year ending June 30, 1916, carries the enormous amount of more than $320,000,000. This is the largest sum ever appropriated for this department for any one year in its entire history. This department is self-sustaining, and therefore pays its own way. The department comes in direct contact with the people, and serves them as no other department of the Government. It renders service to more people than any other, and for this reason its efficiency and expense should be carefully looked after in order that it shall meet every requirement demanded by the people.

Each year it is the policy of the Government to extend its usefulness to the public and make it, if possible, of greater service and reduce the expense to the public. Only recently its service to the people has been extended very much for their benefit by adding the Parcel Post Service, which has reduced the cost of transportation on small packages, bringing the producer and consumer closer together, affording markets for products heretofore wasted and extending the opportunities for merchants and their customers. This has proven a great boon to the people, and will be of much greater benefit as the system is developed, carrying larger packages and reducing the cost of the service. The people are beginning to realize the value of it, and as they become better acquainted with it they will utilize more extensively the splendid opportunities it affords.

The Post Office Department employs and requires more people to operate it than any other department of this great Government, and its employees come in direct contact daily with more people all over the country than any other. Its opportunity to be potential among the people, to direct thought, and mold public opinion is greater than any other department. Its thousands of city and rural carriers and postmasters are in constant touch with the people, and both have and exercise the opportunity to manufacture public sentiment. They would differ from other people if they did not exercise this opportunity. They constitute a formidable army, penetrating every neighborhood in this great country, couriers of the news from house to house, arousing interest which manifests itself through public channels and frequently decides the fate of questions of great public concern.

I know that some hold that the men thus employed do not exercise this opportunity, but all who maintain this position indulge in a theoretical view which is an idle dream and one that will never be realized. This is a Government of parties, and well it is for the welfare of the people who support it. Parties are essential to its good administration. Contending parties for power serve as checks and balances for good administration, for economical expenditures, and for wise, progressive, and constructive legislation. Changes are made from one party to another for the purpose of improving the administration of public affairs, securing economy, improving the public weal, and the adoption of wise, progressive, and constructive legislation.

Bipartisan cooperation has always proven futile to secure the proper safeguards essential to wise, frugal, and progressive administration. It is destructive of the principle upon which our Government was founded, a Government of parties, one to guard the work of the other, to criticize, so that the people may investigate and understand the purpose of every public act. Bipartisan administration fails to produce this result and therefore falls short of this beneficial purpose.

Partisanship is defensible if properly exercised, as it is a proper means for the protection of the rights of the citizen and an assurance to him of a better administration of his Government.

The right to select public officials should not be abridged, but should be extended as public requirements are enlarged. The tendency of late to abridge this privilege is the result of the growth of centralization of power, which sooner or later will prove injurious to the welfare of the citizen and result in the administration of public affairs inimical to the best interests of the people who must bear its burdens and execute its laws. The sooner this power is decentralized—the sooner the rights of the people thus taken away are surrendered back to them—the better it will be for the future of this Republic.

For years the tendency to centralization of power has been growing with alarming rapidity. It augurs no good for the public. It is taking the people's Government away from them, and the farther it is taken away the less interest they will have in it and the less fealty for it. A cardinal principle upon which this Government was founded was the closer the relation between the Government and the people the more the people would be interested and the more enduring and substantial the Government would be, the greater its benefits to the people. We are drifting gradually but certainly away from this cardinal principle, one of the best in our faith.

No more striking example of this is to be found than in this great department. In 1910 President Taft, by a blanket Executive order, placed all assistant postmasters under the classified service. Thus with one stroke of the pen thousands of men who held office for a fixed term of four years without examination to determine their qualifications—and many of whom could not have passed—had their tenure of office fixed for life. Again, in October, 1912, this same President, by Executive order, placed fourth-class postmasters, without regard to qualifications, under the classified service, again changing the fixed tenure of office of thousands of officials into a life tenure. Both of these were rewards for political services. This last order was so obnoxious to the public sense of propriety that President Wilson modified it by throwing all these offices open to competitive examination. Here were examples of the abuse of Executive authority in rewarding "political heelers" for political assistance. A more glaring example of "machine methods" search would be made in vain to find.

Would any man attempt to defend or even justify this bold effort other than for party expediency? This transferred the selection of more than 50,000 public officials entirely away from the people, beyond any voice of theirs, to a commission here in Washington City. Is this method employed for the selection of officials calculated to increase the interest of the people in their Government? Is it fair to say to the people. "You can pay the official, must accept his service, but shall have no voice in his selection"? Does anyone flatter himself with the belief that this will bring the Government closer to the people and carry out the hope of its founders?

Are not the people qualified to select the officials who are to serve them? Has the spirit of Jefferson forever vanished, no longer a living hope of the endurance of the great Republic? Has the doctrine of Alexander Hamilton taken root and supplanted that of the immortal Jefferson? Can it be that the people are degenerating from the high plane of liberty established by Jefferson and zealously guarded for over a century by freemen who accepted his doctrine as the established faith for the perpetuity of this Republic, after a century of trial forming the most glorious achievements ever penned by the historian in recording the march of the nations of the world? The century which has elapsed since he set in motion the splendid achievements of this great Republic, which bear the impress of his wisdom more than that of any other man who participated in its founding or in its administration since it was founded has not been in vain, but the patriotic sentiment has grown in strength, increased in wisdom, and further inspired with patriotism, and the people now are better qualified for self-government and abundantly more able to select their own officials and regulate their own domestic concerns.

The centralization of power thus assumed will soon call down upon it the condemnation of the people who constitute this Republic and believe in the wholesome principles of self-government, and decentralize the arbitrary power which has been attempting to fix a life tenure of officials on the people of this country. That it is inimical to their best interest is rapidly becoming apparent to them as well as obnoxious to a good administration of public affairs. The people stand as a unit for good public service, and if left to them to select their officials for a fixed tenure, they will have good service, a vast improvement over what they now have. It is not true that the people who oppose the present system of selecting their officials are "spoilsmen," and if those who uphold the system have no better argument to sustain it than to denounce those who oppose it as "spoilsmen" their defense is hopeless, and must yield to public censure.

Is there any good reason to be offered why the people should not elect their postmasters as they do other public officials for a fixed period, let them appoint their subordinates and hold them responsible for the administration of the offices, and then if it is satisfactory they can be reelected, and if not satisfactory some one else can be selected for the place? Would not this be bringing the Government closer to the people, requiring them to have more interest in it and soliciting a closer scrutiny by them of public affairs? Are they not qualified as electors to perform this function as committed to them? Why not? They are empowered now with the franchise to elect many officials for most important positions, and certainly if qualified to elect the officials who fill these positions they are equally as well qualified to name the persons who are to fill them. To clothe them with this power would deepen their interest in the affairs of the Government.

It is not alone sufficient to extend to the people the right to elect their postmasters, but it should go much further and invest them with the power to elect other Federal officials now appointed by the President, and this would bring about a much better administration in these offices and assure a much more satisfactory service. If this plan was adopted, it would reduce the operating expenses of this Government at least $25,000,000 per year and furnish a more efficient and satisfactory administration of public affairs as well as elevate the standard of public service. The right to reelect and continue such officials as the patrons desired should be preserved, and hence the objection that frequent changes would demoralize the service would be obviated.

Elections for this purpose could be held at the same time as the quadrennial national elections, and hence would entail no additional cost to the people. Having it at that time would insure a full vote, and thereby secure the expression of the patrons of the office.

The method now employed is most unsatisfactory to the people, as it deprives them of the right and opportunity to select their own officials and secure a high and faithful standard of service. In a government like ours the people do not take kindly to the selection of their local Federal official by a commission who are not in touch with local conditions, the likes and dislikes of the patrons of the office; they believe, and correctly so, that they know better than any commission of strangers who should be selected for these public positions. They pay for the service, use it, and public justice requires they should name the officials. The system now employed is indefensible, and people resent it as an encroachment upon their personal privilege, the usurpation of a function which they should be permitted to perform. This resentment is yearly growing stronger and will continue to do so until the method is changed. It is a menace now to the administration of public affairs; its strength in directing the course of public business must not be overlooked or its influence minimized. We have in the classified service of the Government, outside of the Army and Navy, about 400,000 public officials whose combined salaries annually amount to approximately $480,000,000, too much power and too valuable a patronage to be committed to any three men serving as a commission in the city of Washington or elsewhere. This great army of officials permeate every part of the country, exerting influence in the selection of candidates for office, in the elections, molding public opinion, and directing legislation. Instead of the people's servants, they are attempting to become their masters. These are in office for life. The same commission which secures their appointment passes upon their qualifications, can prevent their removal and continue them in office. These men are loath to see undone the work they have done; they passed upon their qualifications; they object to having their judgment set aside, their verdict reversed. They have declared their competency and resent any attempt to establish their incompetency.

The system is hostile to the principles of our Government, because the people have nothing to say in the selection of such officials. Consider what this system is bringing upon the people. Already bills are pending in Congress for the enactment of an old officers' pension law, and behind it is this vast army of Federal officials pressing the passage of such a law. Some have proposed these officials shall be retired after 30 years' service, or at the age of 65 years, on three-fourths pay. What a burden that would impose on the taxpayers of this country, a burden from which they never could escape. Once fastened it would remain as long as the present form of government exists. Under such a law it would be possible for an additional expense of $360,000,000 per year to be imposed to pay these pensions. Add this to the already enormous expense of this Government and the taxpayer would have occasion to groan, to appeal for relief. But once enacted, he would appeal in vain. This vast army of public officials is rapidly growing in number, and as it grows the expense will correspondingly increase. As its numbers increase its power in directing public affairs multiplies and soon, if not now, it will be able to shape the destinies of the Republic. This class already is attempting to dictate the policies of the Government, but as it grows stronger it will wield greater influence in shaping the legislation of the country. Their official tenure is for life, and they are independent of public opinion and public requirements. If elected by the people for a given period, they would be more responsive to public wants; and then, if the people desired, they could be reelected as often as their constituents deemed best. In such event they would realize the people were their masters, and they would regard their power as supreme. This would promote good service and a higher order of efficiency in the administration of public offices. In fact, this would enable the people to rule in public affairs. It is idle to talk about the people ruling when they are denied the right to select their public officials. This would strike down the great official "bureaucracy" which for the last 16 years of Republican rule constituted the greatest political machine ever constructed operating under the name of "Civil Service Commission." Every person who watched its administration during that period knows what a farce it was, how ingeniously it was manipulated to secure official positions for partisans as political rewards.

To demonstrate this proposition it is only necessary to call attention to the fact that practically all of the offices filled under it during that period were from one political party. "No others need apply" was apparently the word passed along the line, and no others were admitted in official circles as a rule. Does anyone flatter himself in the belief that such a system will long be tolerated by the people of this country? If any such be found, they should banish the belief at once and forever. The people as a rule love fair play and are determined to have it. They are entitled to have it as much in the selection of their officials as in other public matters.

The sentiment for the election of all public officials is rapidly growing in favor with the people, and it will continue to grow until they secure the cherished privilege—a reasonable one—emphasizing their right to rule by having a potent voice in the selection of those who administer public affairs. In demanding this right they are only contending for the continuance of that great principle which prevailed in the founding of this the greatest of all Republics, emphasizing the sentiment which stirred the patriotism of the men who endured the hardships incident to the formation of this great Government upon the hope that the rights of the citizen should be inviolable and that equal opportunity should be the common heritage of all.

Inland Waterways—National Defense.

EXTENSION OF REMARKS

OF

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 9, 1915.

Mr. MOORE. Mr. Speaker, at the recent convention of the National Rivers and Harbors Congress, Mr. Theodore Justice, of Philadelphia, who has traveled extensively over Europe and whose study of inland waterways in England, Germany, France, and other countries entitles his views to careful consideration, made an address which, in view of the public discussion of our national defenses, is appended to these remarks, under leave granted to extend.

Since Members of Congress themselves have generally abstained from discussing the European war upon the floor of the House, I have taken the liberty of eliminating from the address of Mr. Justice a few paragraphs relating to war conditions that would otherwise have been entirely appropriate.

Mr. Justice's address was as follows:

WATERWAYS FOR NATIONAL DEFENSE.

[Address of Theodore Justice, of Philadelphia, at the National Rivers and Harbor Congress, December 11, 1914.]

"The United States Navy possesses 134 armed vessels, consisting of 21 torpedo boats, 62 destroyers, 20 revenue cutters, and 31 gunboats, all of which, with drawbridges, could pass through the locks of the new Erie Barge Canal, but since these bridges are fixed none of them can now go through. On the other hand, similar craft in the hands of Germany or any other enemy could enter our Great Lakes via the canals of Canada.

"The Middle West has never realized that all of the lake cities of the Middle West could easily be destroyed or held for a ransom equal to the whole cost of our Civil War by an enemy approaching through the Canadian canals, while the United States, owing to the need of dredging a few feet out of the Hudson River and of converting the 198 fixed low bridges over the Erie Barge Canal into drawbridges, is now totally unable to defend the lake cities of the Middle West against possible destruction from a fleet that may reach the Great Lakes via the Canadian Canals.

GUARANTEE AGAINST INVASION.

"We do not require the huge armament of Europe. We have in the Atlantic and Pacific Oceans allies which outweigh thousands of guns and hundreds of thousands of men. We do need, however, to supplement these natural defenses by a military and naval establishment that will guarantee our shores from invasion. This may be supplied in part by an intercoastal belt line of waterways.

NO NATION WAR PROOF.

"Europe will have been consumed in vain, so far as we are concerned, if we do not realize from the terrible conflict now going on that only by being prepared to defend ourselves can we ever be assured of lasting independence and security. Yet every attempt to provide against the ravages of war when it is brought, as any day it may be, to our shores is howled down by those in whose hands we have placed the keeping of the Nation, and the loudest by those highest in office.

"The man who sits on his roof while the property of his neighbors is going up in flames and the burning embers are falling all about him is a subject for pity rather than admiration.

"But the hour of universal peace has not yet struck. The lesson of these recent months is that war lurks in the dark corners of the world.

HISTORY BELIES PROPHECY.

"Two generations and more have passed since Victor Hugo presented to the International Peace Congress of 1849 his conception of a United States of Europe and prophesied its early consummation, yet what a caricature has history made of these prophecies. While our voice should never be raised except in tones of peace, we can not until those who surround us have struck the same note afford to ground our arms and turn our cannon into plowshares.

"The experience of the present European war will revolutionize naval warfare. High explosives utilized by submarines or torpedo boats may send the dreadnaught to the scrap heap. Small craft that can not carry sufficient supplies to remain long at sea may constitute the most effective portion of the navies of the future. For this reason the development of inland waterways becomes of the greatest importance as a means for national defense.

AMERICAN INLAND WATERWAY PLAN.

"By connecting Massachusetts Bay by canal through the Taunton River with Narragansett Bay, Narragansett Bay by canal inside of Point Judith with Long Island Sound, Newark Bay by canal with Delaware Bay, Delaware Bay with the Chesapeake Bay, and the Albemarle and Pamlico Sounds by canal with the Gulf, by connecting Lake Erie through a canal to the Ohio River, or Lake Michigan by canal to the Mississippi, and thence by both routes through the latter river to the Gulf, we may, in the next generation, develop the most complete and effective method for inland defense ever possessed by any country in the world. Many forms of naval craft that can not voyage around the world would be eminently practicable for national defense through such of our inland waterways as are connected with our great seaports.

PREPAREDNESS MEANS PEACE.

"It is being widely said by a certain class of thinkers that 'there is no surer way of provoking war than by being prepared for it.' And they point to the great war now being waged in proof of this assertion.

"Much as we deplore war, much as we desire peace, much as we may earnestly work and pray for peace, based upon the experience of the past, there is no ground whatever to justify us in looking confidently for universal peace in the future.

"Kipling says: 'There are no ten commandments east of Suez.' What we may expect from the Orient is shown in what Germany has experienced in China. Does not this warn us, when treaties are regarded as mere scraps of paper, to be prepared for defense not only against the Far East but the West as well?

* * * * * * *

"There is nothing to provoke war in the United States arming for defense. Indeed, the surest way of preserving peace for the United States is to be adequately prepared. And there is no such easy and peaceful way of securing that strength as by making full use of the inland waterways for purposes of defense.

CHANNELS FOR SMALL BOATS.

"It is manifest that inland waterways in no way lend themselves to aggression upon distant nations, but, on the other hand, are purely for self-defense. Moreover, defensive waterways lessen the likelihood of aggression, inasmuch as they lessen the need of numbers of warships.

"A large part of the coastwise commerce may pass through inland waterways. Therefore such vessels of commerce as do not require to pass along the coast outside may dispense with naval convoy in time of war, and fewer warships of the aggressive battle class are required in proportion as inland waterways are developed and become the ideal channels for submarines and destroyers which may freely pass from one port to another, issuing forth when required for defense. Amply protected by coast fortifications and inland waterways, and with a sufficient number of submarines and destroyers, the United States, secure in herself, depending upon the outside world practically only for luxuries, and sufficient to herself for all the necessities of life, may bid defiance to the world.

DUE TO SINKING OF "MAINE."

"How many of us realize that, but for the incident of the sinking of the battleship *Maine*, the Panama Canal to-day would not have been begun.

"When we were suddenly facing war we found our fleet divided, part of it being in the Pacific Ocean. Each division then was liable to the hazard of being defeated in detail.

"The long, hazardous trip of the *Oregon* around the southern end of the South American continent was a matter of intense daily anxiety to the whole Nation, and aroused the sense of the need of the Panama Canal as a matter of importance in national defense.

"The Nation was thus aroused to the necessity of extending our coast line so that instead of having two small fleets we could, in case of need, unite both sections in one mighty fleet in either ocean."

* * * * * *

THE DEFENSE OF LARGE CITIES.

Referring to the possibility of trouble at Panama and the consequent mobilization of our fleet at that point, Mr. Justice continued:

"Then our greatest cities of New York, Philadelphia, Baltimore, and the Capital at Washington may be at the mercy of united European fleets—a danger that may be averted if the links that now connect New York Bay with the Delaware and Chesapeake are deepened to torpedo-fleet requirements, which

will be safe from attack from battleships, but so protected by our coast line as to have all the advantages of a short inside line or segment of a circle for retreat, and from which offensive warfare may also be made.

"The broad, national value of such an expansion of our waterways will be of far more value to the people of the United States than even that of the Panama Canal, conceding, as I do, quite as much for the national value of the latter as its most sanguine advocate.

CONNECTING THE LINKS.

"Immediate expansion of the short connecting links, that lack only 15 per cent to unite the 85 per cent of deep water already provided by nature, is the most imperative call upon Congress at this moment.

"Therefore I submit the question as to whether it is not incumbent upon the United States to immediately prepare, in advance of all other projects, this greatest of them all—ample facilities for national defense.

"Will any broad-minded and patriotic citizen of the United States not concede that matters for national defense should have precedence at all times over the many other meritorious projects that have been proposed? All of the latter contain great commercial value to the Nation, and I hope that within the course of reasonable time all of them will be developed. But, in the interest of the whole Nation, the greatest project of them all is the immediate preparation for national defense contained within the plans of the Atlantic Deeper Waterways Association extending all the way from Maine to Florida."

Franchise for Women.

EXTENSION OF REMARKS

OF

HON. J. A. FALCONER,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 12, 1915.

Mr. FALCONER. Mr. Speaker, the significance of the issues involved in the votes for women movement is pretty generally understood by the people of this country. Knowledge of the issues involved may or may not lead to the support of the movement. Every question having to do with the economic and moral status of all our people has its opponents as well as proponents. Opinions differ very generally because of the different viewpoints or interests of the individual.

The Congress of the United States, evidently through no desire of its own, is called upon to vote on a constitutional amendment extending to the women of our country the voting privilege on an equality with men. The American woman desires to possess power to exercise her voice in effecting changes in social and industrial conditions essential to higher standards of life.

Mr. Speaker, is this an extraordinary desire, asking for the voting privilege, and to that end demanding that the Congress through this resolution grant to the people of the several States of this Union, through their respective legislatures, the opportunity to register their will on a constitutional question involving their individual and united welfare?

To anyone who has become convinced that this movement found its origin in and is being continuously sustained by the vision of higher standards of living and the desire for a nobler race, the right and the wisdom of affirmative action here in the Congress is a settled conviction.

Why this national and, indeed, sir, world-wide movement? Is there a cause, and, if a cause, does any sane man think it is a passing whim, to be voted down here and thus have an end? Let us see. Foreign countries have been confronted with the question and were early impressed with its justice. Norway, Finland, Iceland, New Zealand, and Australia disposed of the question in the affirmative.

In May, 1914, 22 of the leading countries of the world represented by over 4,000 women met in the seventh quinquennial congress on the International Council of Women in Rome and presented their right to suffrage.

A characteristic of this meeting was the able discussions on economic lines embracing the social, industrial, and political welfare of the peoples of the earth. Comprehensive in scope and sound in reason, this movement is on, and the demand ever increasing. The action of this Congress is a mere incident in a contest that can not fail. Funny stories, the swinging of arms, and great volume of voice attending the arguments of the opposition shall be of no avail in the final analysis. The desired vote will come to the American women and for the sufficient and persistent reasons that there are 9,000,000 wage-earning women in the United States; there are 1,750,000 children working in the mines, factories, and mills in the United States; there are 30,000 women over 65 years of age earning their own livelihood in the United States; there are women working in all trades and professions in our industrial United States; there are 390,000 women out of 490,000 teachers in the schools and colleges of the United States; there are over 1,000 suffrage associations in the United States; there are millions of people outside of these associations who have indorsed the movement; in practically one-half of the territory of the United States suffrage now exists. One-fourth of the States, including Washington, Oregon, California, Idaho, Nevada, Wyoming, Colorado, Utah, Arizona, Kansas, Montana, Illinois (partially), and Alaska have granted suffrage.

Yes; it will come, because it is right, and the individual who opposes it will be as ineffective as the "fly on the ox's horn," or—with apologies to my friend from Kentucky [Mr. THOMAS]—will draw about as much water as a "tomtit tetering on a pump handle"—and the world will laugh.

One of the surprising features of this question is the assumed or real earnestness with which opposition attacks the suggestion of woman suffrage. Mr. Speaker, picture the spectacle of a real live man—a Member of Congress, for instance—quitting all consideration of constructive legislation to combat giving women the franchise. Why any opposition? Is there a man in America who thinks that a woman's vote might lower the standard of American citizenship? Does any normally minded individual, man or woman, venture the suggestion that substantial economic questions involving the welfare of men, women, and children might be less favorably settled by a woman's vote? But the suggestion is made that some women do not want to vote and should not be required to exercise the privilege simply because other women desire it. This objection is met by reminding these overly sensitive souls that those who do not want honors thrust upon them may join the "stay-at-homes" on election day; they will not want for company, for facts produced prove that 40 per cent of the men eligible to vote are "stay-at-homes."

There are men whose phlegmatic brains have never been aroused to an appreciation of the privilege and the rich heritage of casting a ballot having to do with the welfare of this great country. There are men so dead to the possibilities of the ballot in refining and enriching American life, who, "staying at home" on election day, have become so obtuse and dense in matters public that the State, having never benefited by their life, shall miss them very little when they have "passed on" and the worms have perforated their pelt. With such as these, other would-be "stay-at-homes" may join in harmless inactivity. What kind of man is he who does not care to vote? He is the self-satisfied individual who, centered and absorbed in himself, thinks he knows that the world goes well with him, and little he cares about conditions involving his less-favored neighbor. He does not know or, if he knows, he does not care about the struggles and vicissitudes of millions in the thickly populated centers where anarchist and outlaw are bred—bred from a poisoning and festering cause which his vote might help eradicate.

Mr. Speaker, the citizen who fails to vote is not worth while. He is a blank in the governmental fabric-building of our country.

The strong, active citizen, the man who has interested himself in the welfare of his people and his country always votes. He knows, and is a man worth while.

Thousands are engaged in social settlement work shaping the lives of the homeless youth of our land, combating evil, poverty, and distress, and without exception they stand and to-day are appealing to this Congress for the opportunity to register their vote.

Recall, if you will, women who have adorned American history, standing out in American life as earnest workers for the uplift of our people and you will find them recorded favorable to all the voting privileges.

One of the richest features of our national heritage is that of such women.

Elizabeth Cady Stanton, born just one century ago, as a young woman with brilliant intellect she was denied the right to enter any college or higher institution of learning because it was unbecoming that women should hope to hold a class or educational record with men. Barred from our public institutions she took to her father's law office and equipped herself for life's battle. In a convention at Seneca Falls, N. Y., in

1848, she lighted the slumbering fires of women's rights, and until 1902 she blessed our country with a life rich in service.

Lucy Stone (Blackwell), editor of the Boston Women's Journal, exponent of temperance and freedom, was the founder of the National Association of Woman Suffrage.

Mary A. Livermore, a woman of grace and refinement, international lecturer, authoress, urged votes for women.

Lucretia C. Mott, the sweet Quakeress of old New England, lecturer, advocated woman suffrage.

Julia Ward Howe, author of the Battle Hymn of the Republic and founder of the New England Woman's Club, supported woman suffrage.

And, Mr. Speaker, another American woman, whose name is held in highest honor, known as the strongest exponent of temperance and righteous living, and loved because of her useful life, Frances E. Willard, during the last year of her life said that fundamentally woman suffrage was a most important question and should be granted. Frances E. Willard, born in New York State, carrying her useful life into Wisconsin, and from there finally settling in Illinois, where as president of a woman's college, at Evanston, she spent the energies of her life in character building.

Under the great white dome of this Capitol Building, leading to this Chamber, is Statuary Hall, where the several States have done in lasting marble and bronze their favorite sons, there stands a statue of the uncrowned queen of America. The citizenship of the great State of Illinois has honored our country by erecting this statue to the memory of Frances E. Willard, and on the pedestal upon which this statue stands are engraven the words:

Oh, it is women who have given the costliest hostages to fortune.
Out of the battle of life they have sent their best beloved with fearful odds against them.
Oh, by the dangers they have dared, by the hours of patient watching over beds where helpless children lay—
By the incense of ten thousand prayers wafted from their gentle lips to heaven—
I charge you give them power to protect along life's treacherous highway those whom they have so loved.

Who can answer this woman's prayer with a thought of indifference?

A man who thinks and acts the true American will not spend his time and energy opposing so just a cause.

Congressional Report, Third Oregon District.

EXTENSION OF REMARKS

OF

HON. A. W. LAFFERTY,

OF OREGON,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 12, 1915,

On the joint resolution (H. J. Res. 1) proposing an amendment to the Constitution of the United States extending the right of suffrage to women.

Mr. LAFFERTY. Mr. Speaker, it is my belief that every Congressman and Senator should make a regular report to his constituents at least once a year, giving in detail what he is doing and what he is trying to do in their behalf. I hope the time will soon come when each Representative and each Senator will pursue this course. As it is now, the people only hear so much of what is going on as the newspapers want them to hear. In this way the newspapers control the trend of public thought. The special interests control the newspapers. Therefore the special interests control the public. If it is found that some Representative or Senator has proposed something that will benefit the common people, but which would reduce the profits of the special interests, the policy is for the newspapers to either ignore it or to misrepresent and distort it to such an extent as to bring it into disrepute.

There are as many newspaper correspondents in Washington as there are Representatives and Senators. In other words, there is at least one newspaper correspondent for each Representative and Senator. It may be interesting to the public generally to know how these newspaper correspondents are used by their employers to influence and coerce the Representatives and Senators into following such a course of action as is desired.

There is scarcely a Representative or Senator that is not called on each day by the correspondents of the big daily newspapers, unless he has let them know that he will not be controlled by them. In some instances a correspondent is kept here solely to report the doings of one Congressman, and in such cases the correspondent practically makes the office of the Congressman his headquarters. The paper at home, in no uncertain way, soon lets the Congressman know its "policies." Whenever the Congressman makes a speech that fits in with these "policies," he gets a good write up. When he offers a bill in line with these "policies" he is likewise favorably mentioned. But if he gets out of line and runs counter to the "policies" of "the press," he thenceforward gets it in the neck. By this process Congressmen soon learn how to get favorable publicity and how not to get it. The poor Congressman, well knowing that the great majority of his constituents never know him in reality, but only know him as he is pictured to them in his home papers, generally yields to this insidious coercion, and quits trying to do anything except what meets with the approbation of those interest-controlled papers.

I was first elected in 1910, when my district included all of eastern Oregon as well as Hood River, Multnomah, Columbia, and Clatsop Counties. In 1912 I was reelected, although the district had been cut down to one county, Multnomah. The city of Portland makes up the greater part of Multnomah County, and the four daily newspapers of that great city wield a powerful influence on public opinion in the district. Men may say they are not influenced by the newspapers, but all students of the subject agree that when certain facts are dinned into the public ear day after day for a few years, to the utter exclusion of other facts probably of greater importance, the public will forget the more important facts for those that are made the subject of continual publicity. The result of this process is what we call "The power of the press."

Yet the public must educate itself out from under this control or else it will continue subject to the domination of the press, and, as stated, the press is controlled by the special interests.

In this report I propose to give some facts which will be eye openers, and I challenge any Member of this House to call me to account if I misstate any fact, and I challenge any newspaper to call me to account if I misstate any fact.

Public sentiment is a sort of composite thing, and when it once sets it requires time to change it. Looking backward, I can very well see that I was not defeated in 1914 for renomination by any sudden change of sentiment, but I can now see that my defeat in 1914 was due to the bitter fight made on me by the press in 1912 and continued to 1914. I knew that I could not be defeated in 1912 and made no special effort to answer many of the villainous charges that were made by the newspapers that year. But I have found since, to my sorrow, that they sunk into the public mind, and that the slanders of that year militated against me in 1914 and were responsible for my defeat in the primary.

On the other hand, while the time was too short for me to change that public sentiment in time to be reelected as an independent in the fall of 1914, still the fight I made as such independent candidate completely refuted the previous slanderous newspaper campaign that had been waged against me, and when time is given for the public to fully weigh the facts and arguments that I produced during my independent campaign the verdict will again be in my favor. You can not change public sentiment in a day any more than you can sow wheat to-day and reap the harvest to-morrow. But the fight which I made as an independent last fall, and which was fully justified—which was, in fact, demanded by the slanderous campaign that had been made against me—will bear its fruit in due season. I fully retrieved my lost political fortunes in that campaign, and I came out of it with the respect of my enemies. I received nearly 17,000 votes without a party and without a paper, something never before accomplished by any independent candidate in Oregon. I gave up my last dollar, my last ounce of available energy, and almost my health in that fight; but it was either that or disgrace by acquiescence, which would have been worse than death. I am glad I made the fight.

But now for the facts which I am to give the public in this report:

First, the Portland Oregonian is receiving yearly from the Post Office Department a mail subsidy of $69,950.31, and that arrogant paper refused to allow me to tell the voters that fact by a paid advertisement during the late campaign. The Journal is receiving a subsidy of $60,491.69, and Jackson, publisher of that hypocritical sheet, likewise refused me the privilege of telling this fact to the voters through a paid advertisement.

The letter of the Post Office Department to me, dated September 24, 1914, says that it costs an average of 8 cents a pound to transmit, handle, and deliver newspapers and magazines, according to the report of the Commission on Second-Class Mail Matter; and the further letter of the department to me, dated September 29, 1914, states that for the year ending June 30, 1914, the Oregonian sent through the mails at the

1-cent-a-pound rate 956,433 pounds, and that the Journal sent 864,167, and that the Saturday Evening Post sent 37,013,634 pounds. Multiplying the number of pounds sent by the net loss to the Government, 7 cents a pound, you will see that during the past year we gave to the Oregonian and the Journal free mail service amounting to over $125,000, which is far in excess of the pay of the entire Oregon delegation in Congress per year, and that we donated to the Saturday Evening Post $2,590,954.38, which is more than the annual appropriation for rivers and harbors in Oregon.

Yet all three of these papers claim that every honest and fearless Congressman who advocates Government ownership in place of Government subsidy to privately owned enterprises is a Socialist, and that he wants the public to give the poor people something for nothing. They are just simply plain liars, and they know it. The plain poor people do not want the public to give them anything; nor do they want any person or corporation to sell them anything for less than it is worth; nor do they believe in confiscating anybody's property; but they do want common honesty in public affairs, and that is what they are going to have.

The idea of the insolent owners of the Oregonian and the Journal saying that the poor people "merely want those who have something to divide up." That contention on their part is the height of impudence. But what the Oregonian and the Journal want is for the poor people of Portland, who have little, to give to those two papers over $125,000 a year in mail subsidy, and that is exactly what the poor people of Portland are doing. If the Oregonian or the Journal will disprove the figures I here give, I will agree to leave the State, never to return.

The second-class mail graft now amounts to $75,000,000 a year, according to the Post Office Department's letter to me, dated September 29, 1914. In other words, the department advises me by that letter that it costs us $85,000,000 a year to transmit, handle, and deliver the second-class mail matter—newspapers and magazines—and that they pay for the service only $10,000,000, leaving a deficit each year on second-class matter of $75,000,000. The poor people make up that deficit when they buy stamps. Every time a poor widow buys a 2-cent stamp she gives 1 cent to the big, arrogant, bullying newspapers. And these newspapers are not serving the public, but they are the tools of the special interests. They refuse to expose their own graft, and they likewise refuse to expose the graft of the railroads, the banks, the street car companies, and other lines of big business, all of which are living off the sweat from the foreheads of the poor. And when I say "the poor" I do not mean merely the day laborers, but I mean the average man and woman of this country.

Seventy per cent of the wealth of the United States is to-day owned by 200,000 men. The remaining 99,800,000 people are practically slaves. The means of collecting all the annual profits of industry are in the hands of the 200,000 men. That group is headed by the Rothschilds, the Rockefellers, the Morgans, the Goulds, and the Vanderbilts. That group owns all the railroads. It owns all the street car companies and other public utilities. It owns nearly all the big banks and trust companies. It owns the steel and the coal industries. It is rapidly getting control of the lumber mills, the woolen mills, the cotton mills, and all the land of the country.

We will soon have a small leisure class, living in luxury and idleness, as in Europe, and their agents will collect our rents and our interest and all the dividends from the factory stocks and the rest of us will be reduced to serfdom. We will belong to the servant class, or at best to the shopkeeping or struggling professional classes, neither of which will be considered worthy of being addressed on the street by the leisure class, unless it be in the condescending London style, "John, my man, here is a sixpence for you."

How did 200,000 men acquire 70 per cent of the wealth of the United States? How did it happen that such an astounding state of affairs came about without your being apprised of it through the newspapers? The money power obtained all this wealth by acquiring, as stated, all the means of collecting the annual profits of industry—the railroads, the street railways, the electric-light and gas plants, the banks and the trust companies, and the big mining and manufacturing industries, as well as mortgages upon all the lands from which hundreds of millions of unearned interest is collected yearly. You did not hear about it while it was going on, because your big newspapers were given a part of the graft to keep you in ignorance. The same gang is still robbing you and the same newspapers are still keeping you in ignorance. Unless leaders arise out of the ranks of the common people who have the stamina to withstand the attacks of these wolves and to fight on and win in spite of them, then we are doomed to the same serfdom as has overtaken all older countries. But I believe we are going to win.

What specific laws would give justice to the public and turn the tide of wealth naturally back to where all would have an equal opportunity to acquire a home and a competence?

Government and municipal ownership of all public utilities, Government control of credit through an enlargement of the functions of the postal savings banks and the issuance of agricultural asset currency, and the Government ownership and operation of all monopolies that can not be controlled by law.

The immense profits that the money power is collecting annually through its public utilities and gigantic financial institutions will be shown by a few figures.

The railroads of the United States in 1913 collected a gross income of $3,057,000,000, or $30.57 from each man, woman, and child in the United States, or $152.85 from each family of five. The average family income per year is only $625, so each head of a family of five is working now over one day out of every six for the steam railroads, as he pays out of his income $152.85 per year to the steam railroads. These railroads are capitalized for $20,000,000,000 and must have rates that will give them dividends on that capitalization, while the best disinterested experts put their actual physical valuation at not more than $10,000,000,000. Therefore, under Government ownership of the steam railroads it is fair to presume that the annual cost of this service to each family would be reduced one-half, or $76.40 per family.

We can not hope for relief by "regulation" through the Interstate Commerce Commission, because after 28 years of that commission rates have actually increased, and they are still going up. And this in spite of the fact that the railroads made more net in 1913 than in 1912—nearly $100,000,000 more. I say, in spite of this showing the Interstate Commerce Commission in 1914 authorized the eastern railroads to raise their freight rates 5 per cent, and "the press" reported next day that President Wilson was delighted, because, in the opinion of the President, the entire country will be prosperous if the railroads are made prosperous.

I do not know how it sounds to others, but to me it is a strange doctrine that we, the people, can make good times permanently for ourselves by raising railroad rates. It reminds me of the man who tried to raise himself over the fence by his boot straps. But from the viewpoint of the money power it is logical enough. They say to us in effect: "We now have 70 per cent of all the wealth; let us acquire the remaining 30 per cent from you and we will give you a full dinner pail in the meantime—we will employ labor."

The Portland Railway Light & Power Co. for the year 1913, the latest year for which I have complete official figures, collected gross $6,723,742. Its operating expenses and taxes were $3,298,310. Its net earnings, all of which were sent east to Philadelphia, New York, and London, were $3,425,432, or over half of its gross collections. Yet the company, through the Portland newspapers, would have the public believe it is barely making a living.

The company's gross income for 1913 was the largest in its history, as was also its net income, and both its gross and net annual incomes have steadily increased each year since 1907, during which time all private business has declined. The company collects yearly from the citizens of Portland $26 per head, and sends over half of this money back East to the money power. This company's own records show that it issued all of its stock 65 per cent paid, and that only $5 per share has ever been paid in cash. Therefore, according to the company's own books, its stocks are 95 per cent water. Upon these stocks the people of Portland are called upon to pay dividends at the par value of $100 per share when, as stated, only $5 per share in cash has been paid in on the stocks.

Cleveland, Ohio, now has 2½ cents street car fares under practical city ownership. Let anyone doubting this assertion write a letter to the mayor of Cleveland. No newspaper will ever tell you of the success of the Cleveland demonstration for fear the "movement" would spread.

San Francisco, during the past three years, has built and is operating as a city utility the great Geary Street line. It is costing the city less than 2½ cents to carry a passenger. The profits are being used to pay off the bonds and to extend the municipal lines. So successful has the San Francisco experiment proved to be that the privately owned system there has already made overtures to the city to sell out its entire plant to the city. The newspapers tell you nothing about this because the "disease," as the interests call it, might be aided in spreading thereby.

But the money power gets in its greatest graft through the loan of credit. There are only $3,500,000,000 in the United States—$35 per capita. That is our total stock of money—gold, silver, and paper. Yet the money power has loaned to the farmers and small home owners alone $8,000,000,000, or nearly three times as much money as there is in existence. On this loan they are collecting in interest annually the enormous sum of $500,000,000. You may be aided in comprehending how much interest $500,000,000 is when I say that it would build and fortify the Panama Canal and leave a surplus of $100,000,000. It would build two trunk lines of railroad from the Atlantic to the Pacific, a distance of 6,000 miles, at a cost of $80,000 per mile, and leave remaining $20,000,000. Think of it! The farmers and small home owners pay to the money power each year in interest enough money to build two trunk lines of railroad from New York to San Francisco, and for the loan of what? Not money, but credit. How does the money power manipulate things so as to loan $8,000,000,000 on real estate alone when there are only $3,500,000,000 in existence in the United States? They do it by having their trust companies borrow from their banks, the trust companies merely giving their notes for the money and depositing bonds as collateral security, and then loaning the money out to the farmers and small home owners.

In a few weeks the money finds its way back into the bank, and the process is repeated. The same dollar is loaned over and over again. Each time some public-utility bonds or stocks are deposited as collateral in place of the cash. So the money power is really loaning credit to the farmers and other real estate owners based on the bonds and stocks they hold. In that way the money power realizes another source of income from its railway, street railway, gas, and electric light bonds and stocks. In that way the money power has gotten 70 per cent of all the wealth of the United States, and it is gradually and surely getting the other 30 per cent.

We must call a halt. We must turn the tide of wealth back toward the people. That is what Government ownership of public utilities and Government control of credit and direct Government loans to the farmers will do. That is what I stand for. That is why the money power has temporarily downed me. It is for my constituents to say whether they will help me in my fight, now that they know the facts. If I come back, it will be a greater victory for the public than if I had never been defeated, for I have certainly defied the powers that be. If I can come back in spite of that, I can accomplish something and inspire confidence in others when I get back.

My first public service of consequence in Oregon was the filing of a suit for John L. Snyder, of Columbia County, before Judge Wolverton, United States judge at Portland, on September 16, 1907, to compel the Oregon & California Railroad Co. to disgorge the 2,300,000 acres of land which it still owns in Oregon, and which it received under the acts of Congress of April 10, 1869, and May 4, 1870, upon the express provision that it would sell the lands "to actual settlers only in tracts not greater than 160 acres to any one settler and for prices not exceeding $2.50 per acre." That was a test suit, and was the first case ever brought in any court to compel the company to live up to the law. I filed a notice lis pendens and prevented the company from ever selling another acre of the land pending the litigation. One year later the Government intervened and filed its forfeiture suit. My suit was for enforcement, and the Government's suit was for forfeiture. The judge ordered my suit and the Government's suit consolidated. The case is now in the Supreme Court of the United States, and I am doing all in my power to bring it to an early final decision. It is not yet set for argument for a day certain, but it is expected that it will be argued early this year. I shall appear and argue in favor of the enforcement theory. I shall fight this case as long as it lasts, and I shall do all within my power to have the 2,300,000 acres sold to actual settlers in small tracts. I am chafing under the long delay of the case, but if it had not been for me the case would never have been started; and having been started, if I had not kept up the fight it would have died long ago. At least, that is my honest belief about it. No newspaper has had a word to say in favor of prosecuting the case. The railroad company has maintained a press bureau in Oregon to control public sentiment and to suppress unfavorable agitation in the valley papers in reference to the long and disgraceful delay of this case.

I favor conveying Oregon's 16,000,000 acres of forest reserves in trust to the State, to be owned and operated by the State in perpetuity for forestry purposes without any power of alienating an acre of the land and allowing the State only to cut the ripe trees each year, permitting the young trees to grow up and replace the old, thus preserving our great national forests forever, but giving to Oregon home rule and the benefit of her own great natural resources. More than one-fourth of the State's area is now in the forest reserves and kept off the tax roll. Under my bill the State would get the profits from the sale of the ripe timber each year, which would reduce taxes in the State at least one-half. The total value of Oregon's national forests is estimated to be $400,000,000. If the sale of ripe timber each year only netted the State 3 per cent, it would turn into the State treasury $12,000,000 annually, and that is more than half the State, county, and city taxes in Oregon. The local timber barons and private lumber manufacturers are strenuously opposed to my plan, and their newspapers are opposed to it of course. They do not want any competition from a State-owned and operated forest. Of course they do not put their objection on that ground, which is their real ground, but they have their hypocritical vassals and newspapers assert that the conveyance in trust to the State would be the first step toward putting the lands in the hands of the "exploiters." They know that under a conveyance in trust to the State for forestry purposes only, allowing no power of alienation of the land, it would be impossible for any "exploiters" to get control. They are themselves the "exploiters," and they do not want any competition from the people.

All of the measures I have herein advocated I have proposed by bills in Congress. I shall propose them again and with success, if I am ever sent back to Congress, as I believe I will be. It requires a majority who are not afraid of the newspapers, and who are not afraid of the money power, to pass any law for the benefit of the public.

During my four years in Congress I have voted for every measure calculated to give any measure of relief to the public, however slight. I had as much to do with the enactment of the parcel post as any Member of the lower House. That was in 1912, during Mr. Taft's administration. I secured the first vote on the measure ever had in Congress, when I offered an amendment to the Post Office appropriation bill providing for a parcel post. My amendment was voted down and the bill went to the Senate, where Senator Bourne, as chairman of the Senate Committee on Post Offices and Post Roads, secured an amendment to the bill providing for the parcel post. The parcel-post law as passed was not as far-reaching as I favored. I wanted the Post Office Department to carry all packages now carried by the express companies, and to thereby supersede the express companies. As it is, we have taken away from the express companies, which are owned by the railroads, at least $100,000,000 a year and given it to the people in lower transportation rates on small parcels. But now the Interstate Commerce Commission by its recent order, applauded by the President, allows the eastern railroads to raise their rates 5 per cent on freight, and to thereby collect from the people several times the amount that we saved to the people by the parcel-post law. That is how we are making progress—backward.

I worked and voted for the bill to appropriate $35,000,000 to build a Government railroad in Alaska. That will be a great help to this country as well as to Alaska, and while it will be the severest possible test as to the feasibility of Government railroads, because of the rough and frozen country, I believe it will demonstrate that Government owned and operated railroads are a success even under the most unfavorable conditions.

Of course I shall vote for President Wilson's ship-purchase bill, the bill which has been introduced both in the House and Senate with his approval. I wish the country owned enough ships to carry all of our commerce on the seas to all parts of the world. Then every man and woman fortunate enough to be a citizen of this country could some time during his or her life visit the other parts of the globe in safety and comfort and at small expense.

The President stated in his address to us December 8, 1914, that as soon as the Government ships shall establish new trade routes the Government will withdraw from the business and turn it over to private shipowners. The money power now owning all transportation lines is too wise to be fooled by that promise, even though no one doubts that the President made it in good faith. But anyone as wise as are the agents of the money power knows full well that when Government owned and operated ships are once put into commission they will prove so successful in reducing rates and in improving service that this country will never consent to give them up to any private corporation. Therefore the money power will try to prevent the ship-purchase bill from coming to a vote. If it comes to a vote, they will try to kill it or to nullify it by amendment.

I voted for the constitutional amendment providing for direct election of United States Senators, which became effective during my service. I voted against the Underwood tariff law and against the war-tax law. I voted for the regional reserve banking law and for the anti-injunction law.

It was my pleasure to be the first Congressman ever to introduce bills providing for an eight-hour day for women in the District of Columbia and for public ownership of the street railways in the District of Columbia. Later Senator LA FOLLETTE took up the eight-hour law and put it through, and Congressman ROBERT CROSSER, of Cleveland, Ohio, took up the street railway ownership bill and it has been favorably reported. The money power will try to prevent the Crosser bill from coming to a vote this session, but I shall vote for it, of course, if I get a chance. Public ownership in the National Capital would be a demonstration to the rest of the country that would have a powerful effect in favor of the people against the money power.

It has been charged that during my four years in Congress I have sent out more pamphlets than any other Congressman or Senator, and I am proud to plead guilty to that charge. I paid out of my salary for the printing of the pamphlets. My district has given me the high honor of serving four years in Congress, and I am glad that I have devoted the little salary attached to the office to their benefit and to my own education.

During my service here I also visited Europe for two months, something that I hope each one of my constituents will be able to do sooner or later. What I learned of human conditions and progress through the trip, I consider the best part of the education of my life. All that I am, all that I may ever be, and all that I may ever have will be devoted to the welfare of the people of this country.

Immigration.

EXTENSION OF REMARKS
OF
HON. H. H. SELDOMRIDGE,
OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 7, 1915,

On the bill (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States.

Mr. SELDOMRIDGE. Mr. Speaker, I am emphatically opposed to the passage of the amendment inserted by the Senate in the immigration bill which provides that all members of the African or black race shall be excluded from admission into the United States. The language of the amendment as drawn, in my opinion, would clearly exclude from admission to this country any negro American citizen, or any member of his family, who should leave this country temporarily and seek to return. The purpose of the amendment is to defeat this legislation. The President would be justified in vetoing the bill if this language should be retained, and the Congress would never override his veto.

The debate in the Senate when this amendment was under consideration discloses the fact that it was considered solely in relation to its effect upon African immigration from the West Indies. No Senator seems to have opposed it upon the ground of its effect on our own negro citizenship. It is a source of regret that we have such deep racial antagonisms in this country. These antagonisms will always exist and, in my judgment, can never be removed by any legislation. The Creator, in His wisdom, ordained that men should separate into different races, and that they should dwell apart under conditions of their own making. All efforts to bring about racial amalgamation will only lead to strife and degeneracy. There is no reason, however, why one race should not deal justly and fairly with other races. We have a race question in this country which we brought upon ourselves, and we should not strengthen antagonisms, but rather strive to remove them. Few people in the history of mankind have accomplished more for themselves in as short a period of time as members of the African race living in the United States. We should be most considerate in any legislation affecting their interests. Whether we will it or not they are a part of our body politic; their future is related to our future; we should endeavor in every way to minister to their welfare; they should have equal rights to all the advantages of citizenship which we enjoy. What education and environment will do for the Caucasian it can do for the Mongolian and African if given time and patience. I believe the time will come when this Nation will be obliged by force of circumstances to adopt a more friendly attitude toward the Japanese and Chinese peoples. We can not place upon them the stigma of inferiority and at the same time expect them to open their doors to our trade and commerce. There must be exclusion of undesirables of every race in order that our American ideals and institutions may be guarded and developed; but when individuals of so-called inferior races have fitted themselves by education and training to properly understand our Government and are willing to conform to our standards of living there is no reason why we should deny them entrance to our country under proper and salutary conditions. This amendment goes far beyond the purpose of this bill, and therefore should be defeated.

Immigration—Glassworkers' Wages in Belgium.

EXTENSION OF REMARKS
OF
HON. J. HAMPTON MOORE,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 7, 1915,

On the bill (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States.

Mr. MOORE. Mr. Speaker, some doubt having been expressed as to the accuracy of my statement that the wages of glassworkers in Belgium were far below those paid to similar workmen in the United States, I desire to extend my remarks, under leave granted, by inserting an extract from a brief submitted to the Ways and Means Committee two years ago on behalf of American plate-glass establishments in Pennsylvania, Ohio, Illinois, Michigan, Indiana, and Missouri. A perusal of this statement will be interesting, in view of the amendment offered by the gentleman from Indiana [Mr. CULLOP] in favor of the exemption of Belgium glassworkers from certain features of the immigration bill. The statement referred to is as follows:

BELGIAN WAGES LOW.

"The foreign plants have the advantage of labor that is better trained and more skillful than American labor, as abroad the trade descends from father to son, and here the laborer has to be trained and developed.

"The rate of wages in Belgium, the chief producer and exporter of plate glass, is less than one-third that which is paid in this country, and enables the manufacturers there to produce glass cheaper than any other country in the world.

"The producing countries are Belgium, Germany, Austria, France, England, Italy, Spain, and Russia. As Belgium produces more glass than any of the other countries, at the lowest cost, and exports 95 per cent of its product, we submit herewith a report of the consul general residing at Brussels giving rates of wages in Belgium, to wit:

"UNITED STATES DAILY CONSULAR AND TRADE REPORTS, OCTOBER 31, 1912, PAGE 566.

"FOREIGN WAGES AND COST OF LIVING.

"[From Consul General Ethelbert Watts, Brussels, Belgium.]

"According to data published by the Government, wages in Belgium are lower generally than in any other European country. The Annuaire Statistique, which gives the official figures for 1910, shows the following daily wages:

Number of wage earners.	Daily wages.	Number of wage earners.	Daily wages.
Male, under 16 years:		Male, over 16 years—Continued.	
4,667	Less than $0.10.	1,653	$1.25–$1.35.
12,748	$0.10–$0.19.	4,357	$1.35 and over.
15,090	$0.19–$0.29.	Female, under 16 years:	
10,128	$0.29 and over.	3,575	Less than $0.10.
Male, over 16 years:		8,480	$0.10–$0.19.
20,883	Less than $0.29.	6,946	$0.19 and over.
28,638	$0.29–$0.38.	Female, over 16 years:	
62,195	$0.38–$0.48.	6,609	Less than $0.19.
87,011	$0.48–$0.58.	22,420	$0.19–$0.29.
100,367	$0.58–$0.67.	21,349	$0.29–$0.38.
65,781	$0.67–$0.77.	13,429	$0.38–$0.48.
50,874	$0.77–$0.87.	5,362	$0.48–$0.58.
21,134	$0.87–$0.96.	2,233	$0.58–$0.67.
13,832	$0.97–$1.06.	652	$0.67–$0.77.
5,776	$1.06–$1.16.	395	$0.77 and over.
3,668	$1.16–$1.25.		

"About 65 per cent of men workers over 16 years earn less than 68 cents. Of the women, 67 per cent earn less than 39 cents and 93 per cent less than 58 cents.

"In 1907 inquiry was made at the public schools of 18 towns, distributed over the country, into the quantity and kind of food each one of the children had had during the preceding 24 hours. The answers compiled have shown that 21.33 per cent of the children were insufficiently nourished.

"The rates of wages paid to Belgian plate-glass workers are no higher than the general rates above given, while the average rate of wages paid by the American plate-glass manufacturers is about $2.30 per day."

Immigration—Belgian Amendment.

EXTENSION OF REMARKS
OF
HON. SIMEON D. FESS,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 7, 1915,

On the bill (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States.

Mr. FESS. Mr. Speaker, I can not support this amendment, not because I do not sympathize with the suffering of the Belgians, but at such times we must avoid taking any position that violates this Nation's obligation to maintain strict neutrality.

Such exemptions extended to citizens of Belgium might be demanded by other countries. Since the 1st of last August the people of this Nation, as well as of all the world, have had an object lesson that taxes the brain of the greatest of our time.

When mankind is forced to witness the horrors of war, and especially of modern war, immediate causes are sought. The inevitable impatience of an aroused public seizes upon the first and most probable explanation of the crisis. It is not easy to suspend judgment until a balance of elements can be weighed.

In the frightful holocaust into which Europe has been thrown, which has involved much of Asia as well, mankind asks why the assassination of an heir to a throne by a citizen of a foreign country should cause such horrors, which have been rightly called the crime of all ages. How could a quarrel between two European countries produce such universal warfare among the most enlightened and progressive people of the earth?

The cause can not be located in the capital of Bosnia. It did not occur on June 28, 1914. It was not a difference between Austria and Servia. It was not the assassination of Archduke Ferdinand and his consort. That was but an incident, and the acute difference between the two countries was but an occasion. The war reverts to causes of vastly larger significance. It is the world struggle, or the first phase of it, predicted by scholars and statesmen in the last century. It possesses many elements—industrial, commercial, political, religious, and, especially, racial. To this must be added the personal, which is but temporary. While the Balkan question is of nearest significance and the Eastern question of equal importance, the future course of events will most certainly prove that the real cause is found in the fear aroused by the growing and aggressive influence of Russia.

When Bonaparte, at the beginning of the last century, with a half million soldiers invaded Russia and invested Moscow and was compelled to retrace his steps with less than 50,000 troops, all that was left out of the entire army not lost either by death or capture, he announced to the world a coming final struggle, not between the Latin and Anglo-Saxon, as heretofore prophesied, but between the Anglo-Saxon and the Cossack. While his generation regarded this announcement as an effusion from a brain that was jaded by defeat, later generations realized the significance of the statement. Russia in the Crimea, in the Balkans, in Poland and Finland, and in the Far East, are but comments.

If the Tsars have had an ambition some day to rule this planet, they have thus far moved in the right direction. Behold that wonderful country, with an area of one-sixth of the inhabitable globe, and not a foot of territory detached. Starting from the Baltic on the west, one may travel toward the rising sun, a distance of 7,500 miles, to the eastern ocean without leaving Russian territory; then, starting in the frozen seas of the north, he may travel in the direction of the glacier's movement a distance of 2,500 miles and still be on Russian soil. Within this vast area will be found a population of 172,000,000 people, the most prolific in the world. Vast as is this territorial domain, the actual boundary lines do not measure the Russian power. Its sphere of influence over countries not Russian must be considered. Its power is felt in the Danubian Provinces and the Balkan States, most of which are peopled by Slavs. It has already covered all of Turkestan, Afghanistan, Baluchistan, Pamir, and is now extending over Persia. This mighty empire has financed the railroad building in Persia, and over these fingers of steel she touches the southern waters on the English line of commerce from the Orient to the Occident. This influence already impinges upon England in India and in recent times has threatened China. These ominous movements were not without contests. The advance to the Black Sea produced the Crimean War, while her activities in that region saw numerous Balkan uprisings. Her advance eastward was checked by the war with Japan, while her activities in the region of Tibet called forth the English expedition headed by Younghusband. Our own country was most aroused over the great Eastern question during the Boxer uprising in China, which offered a pretense to Russia and other countries for the partition of China. It is not too much to say that the integrity of the Celestial Empire is due to our own country's decisive stand.

This empire expansion may not mean land hunger; it may express Russia's method of fulfilling the decree of her greatest mind—"a nation to become a world power must take her position upon the sea." While Russia in area is larger than either North or South America, while it is many times larger than all Europe, and while in resources it has the promise of being the greatest food producer on earth, as well as the richest in mineral wealth, yet its entire ocean trade is but a bagatelle as compared with the trade in the port of the city of New York. Russia's western outlet through the Baltic is next to no outlet at all. She is virtually closed out from the west. Her fight to get to the Black Sea was long and fierce; and while she won the fight to keep a fleet on that sea, the struggle ended in a virtually closed sea. The Crimean War promised her an outlet until Italy, England, and France joined Turkey and denied Russia the right to take her fleet out of the Black Sea. Turkey's position in Europe is due to the friendly assistance of Italy, England, and France, who are dominant in the Mediterranean, neither of which is willing to see Russia in a position of influence in the Mediterranean. Russia, closed out of the middle sea, will take care that the countries between her and the open sea shall not become provinces of her rivals, especially when the intervening countries are of the Slavic race.

As Gortchikoff pointed to the importance of an outlet into the Mediterranean, so Witte pointed to the possibility, as well as the importance, of an outlet to the Pacific. The fulfillment of this purpose saw the governmental construction of the Trans-Siberian Railroad, to connect the Occident with the Orient. This completed enterprise was not a commercial success, since its eastern terminus, Vladavostok, was a winter port, icebound for half the year. When Japan, at the close of the war with China, demanded from China an indemnity of $180,000,000 or concessions in Manchuria, and when China, unable to pay the indemnity, agreed to make the concessions, Russia proposed to assist China in the payment, and, in turn, in due time secured concessions in the East Chinese Railroad from Harbin to Port Arthur, which supplied the indispensable summer port in the Orient.

Differences growing out of this transaction led Japan finally to demand Russia to withdraw troops from this portion of China. Troops of all other countries had been withdrawn after the Boxer episode. Russia's failure to do this is the occasion for Japan's bombardment of Port Arthur and the Russo-Japanese War. Russia was again denied an ocean outlet for the time at least. No one will seriously doubt the ability of this "Giant of the North" to go to the sea in her own good time. With Russia in control of an overland route from the Orient to the Occident, England sees a commercial rival which will test her supremacy in the world of trade. The English policy for at least 100 years past is to be and remain the world's carrier of commerce. She has the ships, the coaling stations, the open ports, the cables, and all that enter into a great sea power. Her ships if placed side by side would reach 14 miles. Gibraltar, the most heavily fortified citadel on earth, commands the occidental terminus, while Hongkong, the most heavily fortified citadel in Pacific waters, is at the oriental terminus of what promises to be the greatest trade route of the world. Between them are coaling stations at convenient distances. This line of 13,500 miles and which requires at least 51 days of sailing for the rapid freighters is but a cordon of English stations in English waters or waters open to these boats. A great freighter en route with bunkers filled with coal would be at its own coaling station before its coal would be exhausted.

On the other hand, the Russian overland route will require but 17 days to cover it, or almost one-third the time required over the water route. No one will doubt which route the mails will take, or the small packages, the parcel post. The only question will be whether the freight will take the shorter route. It will be a question of rates. Can Russia with a Government-owned railroad compete with England?

These parallel trade routes controlled by the two rivals have new significance when studied in the light of Russia's impinging on China and India, her extension of influence over Persia to the South Sea, and her activities in the Balkan region as well as on the western borders. The question at once arises what means the line-up of the parties in the present war. England has always heretofore stood with Turkey against Russia.

Without England's influence Turkey long ago would have been driven out of Europe. Commercially this was expected, but religiously it was unnatural. To-day England is with Russia against Turkey. The significance of this is yet to appear. It would seem from every point of contact England should be with Germany against Russia, but not so. This reversal of the course of history and self-interest causes thoughtful students to predict a contest between Russia and England in case this war ends with defeat for Germany. They assert if Germany ceases to be a bulwark against Russian aggression in the west, England must make the contest. Few thoughtful people, students of world politics, will deny the strength of this assertion, otherwise history has no lesson for the future.

With the last 75 years of Russian activity before us it becomes of intense interest to note the movements of this country in the days preceding the outbreak which now has involved half the population of the world.

June 28: Ferdinand murdered in Bosnia.

July 9: Results of Austrian investigation made known.

July 23: Austria presents ultimatum to Servia and asks for reply within 48 hours.

July 24: Russia begins military preparations.

July 25: Servia rejects the conditions.

July 25: Sir Edward Grey proposes a conference of representatives of England, Germany, France, and Italy to mediate between Austria and Russia.

July 26: Grey repeats his request. Russia announces she can not remain indifferent to Servia's fate.

July 27: Grey appeals to Germany.

July 28: Austria declares war on Servia.

July 29: Russia's mobilization announced.

July 29: Germany asks England's aid in case of war.

July 30: England declines.

July 30: Germany asks Russia why the mobilization, when mediation had been requested by the Czar, upon which the Kaiser was acting. Reply was to the effect that it was not intended to be offensive to Germany.

July 31: General mobilization in Russia discovered. Germany asks its discontinuance. Russia replied it was but partial and could not be discontinued. Germany issues an ultimatum.

July 31: England asks Germany and France whether they will respect Belgian neutrality. France agrees, but Germany expresses a doubt.

August 1: Kaiser reports to King George if France and England will remain neutral he will remove his troops from French frontier and respect Belgian neutrality.

August 1: France orders general mobilization.

August 1: Germany orders general mobilization.

August 1: French aviators alleged to have dropped bombs in Nuremburg; Russian troops alleged to have crossed into German territory. Germany declares war on Russia.

August 2: England assures France that English fleet will protect the northern coast of France.

August 2: Germany's ultimatum to Belgium.

August 2: Germans cross into Luxemburg and enter French territory.

August 3: English fleet mobilized. Italy declares neutrality.

August 3: Belgium appeals to England. England announces she will protect Belgium.

August 4: England presents ultimatum to Germany. British Army mobilized. Germans cross Belgian border.

August 4: England declares war on Germany.

August 5: Germans besiege Liege.

August 6: Austria declares war on Russia.

August 7: Germany makes second offer to Belgium and was refused.

August 7: Montenegro declares war on Austria.

August 9: The Japanese fleet sail for Kiaochau.

August 10: France declares war on Austria.

August 11: England declares war on Austria.

September: Turkey joins Austria.

This recital of rapid movements of the most horrible conflict of all history leads away from Servia's offense to Austria to a contest of the giants. In the time it takes to tell it, from a state of profound peace throughout the Old World universal war exists. Most natural the query, Why all this? What have these nations at stake?

Within the borders of Servia are found dangerous juntas whose activities have spelled murder. The Servian King met death at their hands, and now the heir to the Austrian throne has met a like fate The Austrian ultimatum to Servia demanded of the latter Austria's collaboration with Servia for the suppression of these organizations. Servia, mindful of the fate of Bosnia and Herzegovina, declined to accept the ultimatum on the ground that it was a virtual loss of Servian independence. She proposed to leave that item of the ultimatum to The Hague tribunal. The 48 hours given Servia to decide was sufficient announcement to Europe of the critical situation. On the 9th of July the London Times warned Servia of the danger. A few days later the Frankfurter Zeitung warned Austria of precipitation. Many European papers encouraged Servia to friendly positive action. The episode at once became a European question rather than a dispute between Austria and Servia. It but reminds the world of the sensitive Balkan problem. For more than 60 years whenever one of this group of States—Roumania, Bulgaria, Servia, Montenegro—shows an uprising all Europe is alarmed. This is no less true when either Greece or Turkey displays activity. Turkey in Europe has been a constant bone of contention during most of the last century. These Balkan States present a veritable moving-picture performance ever since the Crimean War of the fifties. That part of Europe's map has served as a national checkerboard upon which the great powers are the chief players and upon which every move changes the position of the nations involved. It at the same time affects all the nations whose interests might become involved. The Prussian seizure of Schleswig in 1864 is a good example. The Venetia episode of 1866 is another. The Franco-German War of 1870 has a similar effect. The Berlin Congress of 1878 by reversing prior adjustments was far-reaching in arousing Russia to a possible future situation. The Austro-German alliance of 1879 and the triple alliance of 1882 are momentous scenes in this national play, as were the Anglo-French entente of 1904 and the triple entente of 1907. Alliances and counter alliances are at best ominous. All these have more or less significant meaning in the Balkan realm, any one of which might have involved all Europe.

In this present contention between Austria and Servia the latter insists she is fighting for her independence and national autonomy. The former places her aggression upon national honor and continued existence. While Servia is justified in desiring autonomy, she deserves punishment for the crimes of the hordes within her borders. While Austria is justified in demanding redress, the world doubts the justice of her demands, the extent to which they go. The crime of an irresponsible junta within a nation does not justify spoliation of the nation.

Why should Russia become so active so suddenly against Austria? Russia has ever claimed the Balkan problem as hers. In most cases she has been a participant and in all cases an interested onlooker. Russia will never willingly submit to any other great nation dominating these countries. The real reason may be found in her hope that she will some day hold the key to Europe by occupying Constantinople and by controlling the Bosporus and Dardanelles, which will give her the long-deferred entrance to the middle sea, where she will become a party to all the problems of the Mediterranean. This position would give her the dominance in Europe. While this is the real crux of Russian concern, she has a more plausible ground for immediate action in her demands for independence of the Balkan States, which are largely Slavic in nationality. The gateway leading from the Cossack domain into the waters that connect with the Mediterranean is more likely to be open to Russia when under Slavic rule, although independent, than under Teutonic, which is Russia's fear in the present war. National rumor has it that Austria hopes to exercise an overlordship over the Balkans, and Germany hopes to establish an empire in Asia Minor.

Up to date Russia's control of Turkey in Europe and entrance into the Mediterranean has been successfully obstructed by England. Her advance westward has been checked by the Teuton. Her ambition has thus been defeated by England and Germany. Then why is England an ally of Russia rather than her racial kinsman the Teuton? England is recognized as Europe's most progressive country in matters of modern government. She has more points in common with us than any other nation. Russia is the one great power in Europe that is retrogressive, somewhat autocratic, if not despotic, as revealed in her administration in Poland and Finland and in the Jewish pogroms of recent years. Two countries could scarcely stand for more diverse policies than these great rivals. They represent two distinct civilizations. They are organically and constitutionally differentiated. The one is matured, while the other is still struggling with primitive conditions. This is the basis of the general belief widely prevalent in portions of the world, that if Russia is not held back by the German bulwark England will be compelled to meet her in combat in due time. This is the forthcoming struggle to which Europe's greatest military genius referred at the opening of the last century.

Germany's position is partly racial, partly political, and partly commercial, all of which are intensified by her geographical situation. Here is a compact nation almost totally surrounded by countries that might become enemies. She has devoted the most of the last 50 years to national development. Her population has reached about 70,000,000. Her people are the most virile in Europe. Her growth of industries has surpassed all other countries. Her research in science has led the world. She enumerates on her rolls leading men in all lines of invention and discovery. She has become a rival in every domain of advancement. With this development there has grown apace the spirit of militarism as reflected in the army equipment and personnel. Her soldiers are the most perfect fighting machines on earth. The military policy has proceeded upon the basis that Germany must either fight or be so well prepared as to command peace. Hence the attention given to soldiery. In the course of this policy the Empire has had an unbroken progress of peaceful growth for over 40 years. Yet who can say that this very preparation is not the specific item which opened the batteries of warfare? Is it credible that without this equipment the world would now be at war?

True, the Kaiser, upon the invitation of the Czar, was endeavoring to mediate between Austria and Servia. All Europe seemed to turn to the Kaiser as the one man who could call off Austria, his ally. But while he was negotiating Russia was mobilizing. This was placed upon the ground that the Kaiser would not seriously interfere with Austria. A dispatch from the eastern border of Germany declared the whole frontier was full of Russian soldiers and inquired what the Government was doing to protect its citizens. In the midst of these provocations the German ultimatum was given. This haste precipitated war. The world will likely hold the Kaiser responsible because he did not withhold until a conference of powers could be had. The Kaiser will defend his position on the ground that the Czar was playing for time to mobilize his army, which necessitated much time because of the vast territory over which the army must pass. To thus withhold, contends the Kaiser, would be to knowingly play into the hands of an enemy which must be crushed or suffer national disgrace and destruction.

France entered the war because of the obligation of the Triple Entente. The conviction is well defined that she desired to be on the ground when Germany would be compelled to return Alsace-Lorraine, wrested from her in the Franco-German war of 1870. It appears there is little, if any, resentment in Germany against France for her action, as it was anticipated. Her reply to Germany was that she would go with her interests. Belgium, the caldron of Europe, is the one pitiable country. Her life depended upon her neutrality. She had no choice. It seemed death either way she looked. She is the one country of which it can be truthfully said, "She will be ruined if she does and ruined if she does not." If she resists the German army, she will be laid waste. If she permits it to cross her borders, she thereby, in a sense, becomes her ally and will be laid waste by the allies.

While the world will concede the critical situation of Germany, due to the entrance of France, and while it will grant the possibility of Germany's charge of the violation of Belgian neutrality on the French border, it will be slow to agree with the position of the German chancellor who openly avowed the violation of neutrality and placed it upon the necessity of national defense. Such claim will not appease the Christian world's condemnation of such treatment of a prosperous and happy nation of 7,000,000 people, rendered hopeless and helpless objects of pity the world over. If treaties are not made to be kept, lives and property should be respected. The suffering of the innocent is the greatest argument against a resort to arms to redress wrongs. Belgium is the greatest comment upon this fact known to history.

All the world asks why England entered this conflict. Germany agreed to withdraw from the French border and not to violate Belgian neutrality if England would keep France neutral. England's inability to do this left her to the alternative of remaining neutral or risking all in a world-wide war. She responded to the appeal of Belgium's King and entered the vortex as a defender of the principle of respect for treaties of neutrality. While much of the world applauded the heroic position, it asks why she did not require Japan to respect Chinese neutrality when a Chinese railroad on neutral soil was seized by Japan. This latter incident has dampened our ardor somewhat.

In view of the entrance of Turkey, this war may mean more to England than to any other country. If the Mohammedan influence could make it a holy war, what will be the attitude of the 52,000,000 Mohammedans in British India, of the 9,000,000 in Egypt under a British protectorate? In case England's Empire may be called to suppress insurrections in the Far East, what will be the effect upon Australia, New Zealand, South Africa, and Canada, which may be called upon to give assistance?

Most scholars of constitutional and political history believe the time will come when these wholly independent entities will ask the privilege of complete autonomy in national as well as local affairs. When England's defense is broken the tie that binds is loosened. It is the cementing quality of the Empire. England has been a great civilizer; wherever her flag goes her language follows; her laws, her customs, her religious freedom, her institutions, her civilization. Her commerce pervades the entire world. Her language is spoken by 160,000,000 people. It can be heard in every port of the world. The mere fatality of this Empire which to-day encircles the globe should be appalling to the inhabitant of the island of Great Britain, as well as to all who appreciate what the nation has stood for.

The outcome can not be predicted. Germany and Austria must fight alone, save what help they obtain from Turkey. Italy can not join them, notwithstanding the treaty of alliance. Her internal situation will not permit Italy's assistance of an ancient enemy—Austria. Such a step would undoubtedly produce a revolution. Her geographical situation, with her three sides exposed to the sea controlled by England and France, makes her helpless as an ally of Germany. She will remain neutral, unless she joins the allies. The Balkan States will naturally remain with Russia as against both Austria and Turkey. With this line-up, it is difficult to see how Germany can succeed. She will be able to feed her people for some time, unaided by the outside world. With Italy neutral, she will be able to secure some supplies from the outside. Her army is the finest-trained soldiery of history. Her discipline will enable her to continue gaining victories for some time. But to win permanently against such odds does not seem possible. The end of the struggle is not in sight, nor any indication of it. It will furnish the supreme test of all history, and may continue at length.

The burden of debt alone is the greatest determinant. It costs Germany and Russia each $15,000,000 daily. Since August 1 the increase of debt has been as follows: England, $2,250,000,000; Germany, $2,825,000,000; France, $1,140,000,000; and other countries in proportion.

The United States must maintain a neutral and friendly relation to all countries. This people must reprove its prejudices, suppress its bitterness. Feelings must give place to judgment now, if ever. We are a composite people. In our civilization we have all the national elements now at war. Here in the United States are more Germans than in any city of Germany. Here are more Irish than in Ireland. Here are more Italians than live in any city of his native country. In New York City alone are more Jews than live in Jerusalem. We have the French, the Belgian, the Russian, and the Balkan. In every quarter of our country we find representatives of the countries at war. We can agree that the war is the crime of the century, but not all the cause is found in one nation. Aside from Belgium, causes are found in all the countries in arms. Our country must keep friendship with all, that we may, when the time comes, offer mediation by interpreting the various peoples to each other and finding a common ground for a settlement of differences. This is our crowning opportunity.

To this end we must avoid undue complications. We should not invite trouble on the sea. We can protest on behalf of respect for treaties and the rights of neutrals. We may insist upon our commercial rights without an offensive intermeddling in the affairs of other nations. We must keep cool-headed and maintain a balance of judgment in times of world-wide distress, which disarranges much of the sea trade of the world. This does not mean we are to remain silent when the most fundamental rights of neutrals are violated under the claims of conditional contraband. In this welter of war it is difficult to conceive of probable results which could justify the suffering. The careful observer predicts some possibilities. It is not improbable that the suddenness in which half the world's population was transformed from peaceful, happy citizens into warlike nations, driven by a spirit of hatred, may compel a larger participation in government by the people and less authority in the rulers. This does not intimate a lack of loyal support of the ruler, for in times of war a nation's citizens loyally support the army and its leaders. Note the position of the Socialists in Germany, Ulsters in Ireland, and Boers in South Africa, as well as Jews in Russia. While our own people are more or less volatile, it is not possible to go to war without consulting public opinion. Indeed, public opinion usually goes beyond our leaders. This world war may therefore see a lessening hold of monarchy and a deepening grasp of democ-

racy. This result would be rational and not far-fetched. It already reveals the danger of militarism, which may subject civil to military authority. Many students of world politics predict disarmament as the most likely and vital result of the war. This may come from sheer compulsion. Already Europe's armed camps are taxing the producers to feed the nonproducers. Whenever any country must depend upon the outside world to feed its people it is an important situation, demanding thoughtful attention. But when a country can not raise enough within its borders to feed its nonproducing population, it is ominous and means, sooner or later, bankruptcy. This position is reached in places in Europe.

The campaign in armament is frightful and must cease. It long ago reached the danger point. This war has demonstrated that preparedness does not prevent war. Then why continue the campaign? The way out is disarmament and a resort to deliberative council to adjust differences. This is a suggestion of the federation of Europe over the plan of our own Government in which differences will be carried before a judicial tribunal for hearing and adjustment. The suggestion is not far-fetched. It is possible, and the settled conviction that brute force, tried out on the battle field by instruments of death that know no humanity can not be excused by our Christian standards, may compel a federated Europe to succeed a government by armies and navies.

No one would seriously argue that the European condition would justify our Nation to refuse national defense while Europe remains an armed camp. The disarmament must come as a world movement, in which our Nation will gladly join. As we now find ourselves, we must hold aloof from entangling alliances ready to bring the warring nations together for settlement. In the meantime we can not gain any prestige for this great work by allowing great nations to override treaties, violate neutral rights on the sea, without protest.

While the heart of all America goes out to the suffering of other lands, we pledge our devotion to our own national ideals and beg the near opportunity to bid the warring countries to seek better methods of adjustment than the test of battle. Herein lies this Nation's greatest opportunity. To this end we must stand for law and order, for respect for treaties, for the rights of all nations, great and small. We must be ready to interpret each warring nation to the other and, if necessary, be the just man armed, that we may fulfill our mission as the peacemaker when half the world is in arms.

Immigration.

EXTENSION OF REMARKS
OF
HON. S. KIRKPATRICK,
OF IOWA,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 7, 1915,

On the bill (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States.

Mr. KIRKPATRICK. Mr. Speaker, this Senate amendment to the immigration bill in which we are requested to concur, if enacted into law, would prohibit the landing of blacks and negroes on our shores.

Now, if there were none of the race in this country, it might be well to consider the propriety of continuing the segregation of the Caucasian and the African races; or if, by consent of the latter, their race could be transported to the country from which they originally came, then, in such event, I would agree to seriously consider an effort of that character. Still such a measure would be a trial of no small magnitude.

Mr. Speaker, these people are here and make up fully one-tenth of the composite of our entire population. Why were these people brought here? For what purposes? Nearly 300 years ago the ancestors of this race were caught up by force in the wilds of Africa and brought to America, shackled as slaves, and soon became a commodity and subjects of barter and sale, and in this connection I can find some palliating excuses and mitigating circumstances.

The introduction of this race into this country even as slaves has been in a measure a blessing in disguise, and as evidence of this we have but to compare the condition of the race here with that of their counterpart across the sea.

The impending crisis brought about by their presence here came and our people would no longer tolerate the rights of property in human flesh, and the shackles of 4,000,000 slaves were loosened at one fell stroke of the pen, enforced and supported by the militant power of the sword, and on my own volition I became a party to the contract in support of the fact declared through the instrumentality of President Lincoln that the Union of the States could not exist under such conditions.

Slavery is dead, and its twin relic, Mormonism, is dying. In my home town there are fully 100 colored voters, and with a magnanimity unparalleled these men, though dark in color, expressed their confidence, their appreciation, and gratitude for my action in assisting in the abolition of the bondage which had oppressed their race, and I can not harmonize my actions in the past with turning my back on these people now.

The blacks were loyal to our forefathers in their struggle for liberty in the days of the Revolutionary War. They participated in many of the engagements of the War of 1812, and they were likewise faithful to the Union in the War between the States.

The cuticle covering of this race is darker than that found among Anglo-Saxons, but there burns within the breasts of this unfortunate people a firm belief under existing laws of their divine right to "life, liberty, and the pursuit of happiness."

Female Suffrage.

EXTENSION OF REMARKS
OF
HON. JOHN H. STEPHENS,
OF TEXAS,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 12, 1915,

On joint resolution (H. J. Res. 1) proposing an amendment to the Constitution of the United States extending the right of suffrage to women.

Mr. STEPHENS of Texas. Mr. Speaker, the resolution under discussion, and on which we must soon cast our votes as Representatives of our constituents, is a resolution of great importance to our country. The question is, Shall we as legislators permit woman to step down from the high plane of social and moral superiority where the chivalrous men and voters of our common country have placed her to engage in politics? If we do, we will open up a Pandora's box of evils from which, in my judgment, she will never escape until she is dethroned as the queen of our homes, as the idol of society, as the sex to whom all true men owe allegiance, and would now protect from serious wrong, even if they should lose their lives thereby. When she descends to the lower level of the politician she comes in competition with men and assumes the duties and responsibilities of men in choosing officers and in running the Government. Men are admittedly on a much lower moral plane than women, and woman suffrage will therefore bring her down to the level of the common herd of mankind, which God forbid!

Mr. Speaker, the resolution under discussion is as follows:

Joint resolution (H. J. Res. 1) proposing an amendment to the Constitution of the United States extending the right of suffrage to women.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article be proposed to the legislatures of the several States as an amendment to the Constitution of the United States, which, when ratified by three-fourths of said legislatures, shall be valid as part of said Constitution, namely:

"ARTICLE —. SECTION 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of sex.

"SEC. 2. Congress shall have power, by appropriate legislation, to enforce the provisions of this article."

Mr. Speaker, this question has been passed upon by the Democratic caucus of this House and it adopted a resolution declaring that this question should be passed upon by the States separately. I shall vote against this resolution because I do not believe in national female suffrage for the following reasons:

At present no exigency can be shown to exist for demolishing the very foundation of State sovereignty and investing the Central Government with the power of determining the quality of the electorate, thereby taking from the States the very corner stone of self-government.

Woman suffrage would increase the negro's power in politics, as the per cent of negro women to all women over 21 in the United States is 9.9 per cent—census of 1910—while the per cent of negro men to all men is only 9.1 per cent. In the 11

Southern States the per cent of negro women to all women is 35.3 per cent, while the per cent of negro men to all men is 33.6 per cent.

Who would doubt that negro women would vote more generally than white women?

In 1910 Michigan defeated woman suffrage by about 700 majority, in 1913 the same State defeated it by over 96,000. Ohio defeated woman suffrage in 1912 by 87,455, in 1914 by 182,905. The per cent of voters voting for woman suffrage having declined greatly from 1912 to 1914 in Ohio and from 1912 to 1913 in Michigan, which shows beyond question that the tide has turned against woman suffrage, the fallacy of which has been proved in the States where it has been tried from 2 to 44 years.

Every vote given in Congress for the submission of the question furthers the cause of woman suffrage, for the people generally believe such a vote will not be given unless the Congressman believes it would be beneficial to our form of government to change from State to Federal control.

Rural Credits.

EXTENSION OF REMARKS

OF

HON. RALPH W. MOSS,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 14, 1915.

Mr. MOSS of Indiana. Mr. Speaker, I desire to avail myself of the privilege given to me to extend my remarks on rural credits by reprinting certain parts of my remarks on this subject made in the House of Representatives on the 16th day of October, as follows:

Many bills dealing with rural credits have been introduced in Congress. In the main these several bills represent the individual views of their authors. There are two bills, however, each of which represents the conclusions of a group of men after careful study and wide consultation. I refer to the Moss-Fletcher bill, framed by the United States Commission on Rural Credits, and the Bulkley-Hollis bill, framed by the joint Subcommittee on Banking and Currency of the House and Senate. I desire to present a comparison of these two bills, referring to them as the commission and committee bills, respectively.

The commission bill seeks to organize a system of pure mortgage banks, limited to loans on rural real estate for productive purposes and within certain limitations as to amounts which can be loaned to any one person. This principle was accepted by the committee practically as proposed. Their limitation as to purpose and amount is more severe, while their central bank is given the right to purchase mortgages on urban real estate. The proposal to exempt capital stock, mortgages, and bonds from all State and National taxation was also accepted and appears in the committee bill. This was the most radical feature of our bill, and the only one which contains a subvention from the public or a special privilege which in effect amounts to a subvention. In Indiana mortgages are now taxed at their face value; the average rate of taxation is around 3 per cent. It can readily be seen that an exemption from such taxation is the equivalent of large favor or indirect subsidy from the Government. On the other hand, our commission deemed this concession of vital consequence, and that without this exemption it would be impossible to organize such banks in many States of the Union. As some States tax mortgages at full value, some tax them only partially, while others exempt them entirely, uniformity of conditions can not be produced in any other manner. Again, the credit instrument created is a land bond. This bond is in the nature of a duplicate for the mortgage on which it is based and instead of which the bond is issued. To tax both bond and mortgage is to impose double taxation on debt. The commission frankly rested its bill on the acceptance of this feature, and, in my opinion, no bill can be drawn which will be successful in operation without the incorporation of this provision. The acceptance of a land bond as the credit instrument to be issued by the banks, based on their assets and credit capital under rigid governmental supervision and without express Government guarantee, is the basis of both bills.

The essential feature of mortgage credit as proposed by rural credits and as differentiated from other investment banking is a guaranty fund maintained by the bank issuing land bonds to insure the prompt payment when due of both principal and interest on the bonds. The principal security for the ultimate repayment of all liabilities is the land values pledged under mortgage; but to guard against temporary default in payment by the real borrower, the mortgagor, and thereby insure the prompt redemption of every promise to pay to the real lender, the bondholder, the banks issuing these land bonds are required to collect and to maintain a security fund pledged for this particular purpose, and which can not be diverted to any other purpose. This surety fund is required to bear a certain fixed proportion to the volume of bonds in circulation. Both bills seek to provide this insurance but devise different machinery and distribute the burden in different degrees between the borrower and the shareholder. Each bill requires certain cash and credit capital; broadly speaking, the commission bill requires the carrying of a larger cash capital and the committee bill pledges a larger credit capital. In addition to the capital and surplus of the bank, each bill authorizes the accumulation of a special redemption fund out of the interest charges. This reserve is mandatory on part of the commission bill and is permissive in the committee bill. The commission bill requires the bank to maintain a 5 per cent special fund, which is accumulated out of the administrative charges or profits of the bank. The burden of this fund is thus laid exclusively on the stockholders of the bank. The shareholders receive the profits and are required to meet the losses.

Mr. BORLAND. Mr. Speaker, will the gentleman yield for an interruption there? I would like to ask him a question for information.

Mr. MOSS of Indiana. Certainly.

Mr. BORLAND. What becomes of this redemption fund? Where is it invested, and how is it reserved?

Mr. MOSS of Indiana. Mr. Speaker, I will say to the gentleman that I will discuss that matter in a moment.

The committee bill authorizes but does not require the central bank to create a special redemption fund, but secures it by imposing a higher interest rate than could be otherwise charged; that is, by charging a rate on mortgages in excess of the 1 per cent margin which is permitted to be charged as an administrative charge, thus imposing this fund directly and wholly on the borrowers. To state this feature more clearly, each bill limits the bank for its services to a charge not exceeding 1 per cent on the face of the bonds it may have in circulation; but the committee bill permits the bank to increase the interest rate higher than the 1 per cent and to hold the additional interest money as a special surety fund. At the close of a five-year period the bank may make application to the Federal Reserve Board for permission to prorate among the borrowers any balance which may remain in the special fund after paying all losses.

I think that answers the gentleman's question.

Mr. BORLAND. Not quite. What is done with the fund in the meantime? Is it invested or loaned out, or is it held in cash?

Mr. MOSS of Indiana. It is held by the regional bank and, of course, invested as it invests any portion of its capital.

Mr. TOWNSEND. It is a balance held by the regional banks?

Mr. MOSS of Indiana. Yes; it is a special fund held and invested for a special purpose. To go a little further—I do not wish to go into details, as I do not have the time—I may state that this special reserve fund must be segregated as to States, and is held as a special fund to secure the loans held in that particular State. For instance, if the regional bank were to accumulate such a fund to secure Indiana loans, the rate would be imposed only upon the borrowers in the State of Indiana. It would be held by the regional bank as a separate fund to be applied in liquidation of any losses which may arise out of loans made in the State of Indiana; and when this reserve is finally prorated it would go back to the borrowers in Indiana. I think that is a fair statement, is it not, Mr. BULKLEY, of the special reserve fund?

Mr. BULKLEY. That is a fair statement, as far as it goes. I want to make a statement of my own at the proper time.

Mr. MOSS of Indiana. The bill does not require this fund to be thus prorated; it only permits it.

It is thus possible under the terms of the bill for the bank to accumulate a reserve fund which in reality belongs to the borrowers, but which it is not compelled to pay over to the rightful owners. Under the commission bill the bank can in no instance charge a higher interest rate than the 1 per cent over its rate on the land bonds. The net result of the committee method of raising this guaranty fund, even if the balance were to be faithfully prorated to its real owners, the borrowers, would, in my opinion, be to impose higher interest rates during at least the first five-year period.

Both bills are identical in requiring all long-time loans to contain a compulsory amortization provision. This feature makes

these banks to be saving institutions in the best sense of that term and prevents any person going in debt through their agency for long periods of time without a gradual saving, which is applied toward the reduction of the principal of his debt. Both bills fix the limit of mortgage indebtedness at 50 per cent of the actual value of the land mortgaged and require the banks to hold valid first mortgages equal in face value to the land bonds outstanding. The commission bill fixes the maximum rate of interest charged on farm mortgages by the rate paid on the land bonds; the committee bill lets the legal rate in the various States control unless modified by the order of the Federal Reserve Board. Under the powers given to this board in the committee bill it can name the interest rate for any local association, provided such rate does not exceed the legal rate in the State where such association is located and without undue discrimination between locals in such State.

The commission bill presents an outline for a system of independent banks, each having the full functions of a mortgage bank, and in its organization, administration, and supervision closely modeled after the national-bank law. This law admirably adjusts itself to the machinery of the bank with independent functions, as that was the character of all American banking institutions until the adoption of the Federal reserve system. The committee bill agrees with the commission bill in seeking to organize a system of mortgage banks after American models, but chose the Federal reserve system as the guide. In order to accept this form of organization, a central bank with large capital was authorized to be chartered in each Federal reserve district, which has the sole power to issue land bonds. It is at this point that the two bills diverge so widely in their administrative organization that they can not be harmonized. If either bill is to be accepted without substantial modification, Congress will have to choose between a strongly centralized system and a decentralized one; between independent banks, each exercising the full functions of mortgage banking and a central bank with federated members and the functions of banking divided between the central organization and the federated members, but with the supreme control vested in the central.

It is in the latter power given to the central bank in the committee bill which centralizes power more strongly than in the Federal reserve system. In the latter scheme of banking, member banks are not deprived of their privilege to solicit business independently of the central bank or to contract a line of lawful business which is within their ability to handle. An independent national bank, in becoming a member bank, is permitted to act with all its former independence within the limits of its loanable funds. At its own peril it may discount paper which is not prime within the definition of the banking law and which will not be rediscounted by the regional bank. The penalty imposed by the new system on such action is the refusal of rediscount; but no member bank will apply for such rediscount as long as its own reserves are ample to meet its demands, and it is easily within the range of possibilities that many member banks will rarely apply to the regional bank for rediscounts. It is evident that State banks are not applying for admission to the federated system, though the door stands wide open and every special privilege granted by law to member banks is being jealously guarded for their exclusive benefit.

This liberty of independent action is not extended to mortgage associations in the committee bill, and we do not have under its terms that happy compromise between centralized and decentralized systems which secures the conservatism of centralization without destroying the utmost development of local business and the fullest utilization of local opportunities. The committee bill reduces all mortgage associations to the level of mere local societies without independent funds, power, opportunity, or prestige. The general character of the proposed mortgage associations is thus described by Senator HOLLIS, one of the joint authors of the bill:

> These local associations will approximate the size and functions of ordinary building and loan associations. The office may be in a country store or with a local insurance agent. They will never have a large amount of money on hand. A single officer will care for their simple routine. They will not receive deposits subject to check or loan money on anything but first mortgages.

If to the Senator's description is added the fact that these local associations can not sell or assign a mortgage to any purchaser except to a local association within the system or to the regional bank, their extreme dependence is very well depicted. The local associations can grant loans only as the regional bank will accept mortgages from the local on assignment, and under the terms of the bill the regional bank can exercise full liberty of action and can decline any or all mortgages tendered by any local association. As exclusive territory is allotted to each local association, it follows that only those farmers can be accommodated under the terms of this bill whose mortgages are accepted by the regional bank. The question of giving service to the patrons of the local association is decided, not by the officers of the bank where the farmers live but in the offices of the huge regional bank, located perhaps hundreds of miles away in some other State.

The general scheme of the Federal reserve system is not well suited to the functions of mortgage banking. As applied to commercial banking, the efficiency of the reserve system lies in its ample powers to rediscount prime securities held by member banks. The National Government under our Constitution is given the sole power to issue money, and in the new banking system this power is delegated to the regional banks under certain conditions. The regional banks can control the volume of money available for rediscount purposes, and in this way can accept all lawful business which any member bank may tender. It thus has ample power to insure the proper discharge of all its responsibility.

The regional bank in the rural credit system of banks does not have such power, and it can not be delegated to it. The regional bank can not issue bonds except as it may find a purchaser for them; it can not sell its shares except on the same terms. The regional bank in the one system has the power to issue money and can thus increase the supply of currency; the regional bank in the other system does not have the power to secure money by issue, but is dependent upon negotiating the sale of its securities in the open markets of the world. This is a very important difference in fundamental powers. Because of this power of issue it is very proper that the first bank be given a monopoly of supplying credit. Under the limitations imposed on the second it is fatal to the largest usefulness of the system to clothe it with exclusive rights and jurisdiction.

As the question of independent or federated banks is a fundamental one to determine the administrative machinery, and, I also believe, to determine the ultimate success or failure of any system which may be organized, I wish to discuss it in some detail. As stated, the history of European mortgage banking is against the federated and in favor of the independent bank. The history of our own country is equally emphatic when rightfully studied. The building and loan societies are conducting a business in many respects similar to the proposed scheme of mortgage banking. In Indiana we have modified our State law to permit them to issue land bonds, and the State acts as fiscal agent in both appraising the lands and in holding physical custody of the mortgages to secure outstanding bonds.

Mr. PLATT. Will the gentleman yield?

Mr. MOSS of Indiana. With pleasure.

Mr. PLATT. Before the gentleman gets too far into that I want to see if I get the gentleman's main point. The gentleman does not object so much to the federated scheme of mortgage associations as to the fact that none of them will be allowed to sell bonds on their own hook. Is that the idea?

Mr. MOSS of Indiana. Precisely. I am aiming my argument against that feature of the committee bill which does not give any liberty of independent action to the local bank to take advantage of local opportunity. It is my belief that in many sections of the United States where agriculture is well developed that independent mortgage banks will be stronger than any system of federated banks.

These associations are moving gradually but surely in the direction of making farm loans on the amortization or fixed payment plan. No financial institutions in the United States can show a better record for achievement than can these associations, and this record has been made as independent societies which have been able to attract capital to their enterprises by reason of their solvency, their successful management, and to the most important fact that they are devoted to the permanent improvement of local interests.

Under the terms of the committee bill there can be but one bank in every Federal reserve district which has the power to issue land bonds. No member bank of the federated system—that is, no local mortgage association—has the right to dispose of its mortgages except to a bank within its own system. All mortgages must be assigned to the central bank or disposed of to some other local association. These associations must either be able to accept all applications for loans or else will have to exercise the right of selection among applicants. That will mean that certain citizens will be favored and others equally deserving will be denied service by a governmental agency, and one endowed in part at least with public moneys. It ought to be accepted as an axiom that where the Federal Government enters a field of legislation it should fully occupy that field. That is, the law should be broad enough in its terms that any citizen who can comply with its terms, and is willing to do so, may secure service or protection under the statute. But under the committee bill a monopoly of issuing credit

instruments is given to one agency with the full knowledge that such institution can not serve all qualified citizens who apply for service, and which may, indeed, be able to serve but a very small portion of the public who are entitled under the law to share its benefits.

For example, a local mortgage association is organized in my home county, which is one of the best agricultural counties in the Union. Under the terms of the committee bill any resident owner of farm lands within the territory assigned to the association is entitled to make application for a loan for certain specified purposes. The association, however, can grant loans only as the central bank will accept mortgages on assignment. The central bank can secure loanable funds only as it may be able to sell shares and land bonds. It is easily conceivable that the central bank will not be able to supply the money to accept all or even a considerable portion of the loans applied for. Under the terms of the bill it may refuse to accept any mortgages. The operations of the various central banks are under the direct supervision of the Federal Reserve Board; it is left to the discretion of this board to purchase all or any part of $50,000,000 of land bonds in any one year. Here are all the elements for undue favoritism if not for political pressure. If the result of the system is not to give lower rates and more favorable terms, it is a failure; if important advantages do follow and are given to only a portion of the applicants, we will have strong dissatisfaction if not political scandals and absolute political manipulation.

Mr. SMITH of Idaho. Will the gentleman yield for a question?

Mr. MOSS of Indiana. I do.

Mr. SMITH of Idaho. If the prevailing rate of interest in the various localities is to govern on these loans, where is the farmer to secure special benefits from the proposed legislation?

Mr. MOSS of Indiana. Under the bill framed by the commission, the bank could not charge the farmer borrower a rate more than 1 per cent higher than it paid to the bondholder. The bonds are freed from taxation, and are made absolutely safe investments by safeguards which have been thoroughly proven. Naturally, under these conditions, the rate will fall to the lowest level which the prevailing financial conditions will permit. The farmer borrower benefits directly, because his rate will fall precisely in the same degree that the rate on the bond falls. I am positive that under open competition among banks this administrative charge will fall well below the maximum of 1 per cent. Whatever reduction is made in this charge means an equal reduction in the farmer's rate. In Europe well-established banks charge only thirty-five one-hundredths of 1 per cent for their services. As land bonds are sold at as low a rate of interest as Government bonds, it follows that farmer borrowers get their money at an interest charge of only thirty-five one-hundredths of 1 per cent higher than the Governments of Europe borrow for public purposes. When the system becomes well established in this country, under exemption from taxation, it is absolutely certain that interest rates on farm mortgages will closely approach the rates of money paid by municipalities, States, and Nation for money for public purposes. We are not asking for greater results.

There can be no justification for that provision in the committee bill which forbids a local association from assigning its mortgages to any purchaser except the central bank or a local association federated with the central bank. The central bank is not obligated to accept the mortgages when offered by the local association, but the local association is forbidden to dispose of its securities in any other manner. The result is that the activities of the association are limited to whatever business the central bank may allot to it. The requirements of different sections of our country for capital will vary widely. Generally speaking, that section where farming is most highly organized after intensive methods will absorb largest volumes of money. It is in such sections that local tax rates will be highest, and therefore the favors extended under the bill will be greatest. It is in such sections that a volume of capital can be attracted to local securities based on local real estate. If these transactions could be granted the exemptions from taxation, the aggregate volume of such capital would be immense. The rates in such communities would be lower than those now generally prevailing over large areas of average farm territory in the United States, and the consequent advantages to agriculture would be transcendent. To illustrate this thought, I may say that we in Indiana are selling tax-free 4½ per cent bonds at a premium. These bonds are issued by the various townships in our State, and are sold by inserting advertisements in our local and State papers. There are many million dollars of these bonds now in circulation, and more are being sold every business day in the week.

Mr. CULLOP. Mr. Speaker, will the gentleman yield?

Mr. MOSS of Indiana. With pleasure.

Mr. CULLOP. Will the gentleman permit a correction? They are county bonds instead of township bonds, but the property of the township in which the improvements are made and for which they are issued is alone taxed to pay the bonds so issued.

Mr. MOSS of Indiana. The gentleman's statement is technically correct. The county issues the bonds, though they are township bonds in every sense of the word, and are issued by the county in order to avoid our extremely low constitutional limit in our State of 2 per cent. By this legislative device it is often possible for a township to exceed its constitutional limitation of indebtedness. The county is in no sense responsible for any payment in case of default in payment.

Last April the great State of Tennessee offered an issue of State bonds bearing a rate of 4½ per cent at par, and not a single subscription from any source was received. At that very moment hundreds of lots of township bonds bearing 4½ per cent were being sold in Indiana at a premium. Indiana farmers were denied the benefit of this low rate on money because of our law taxing mortgages. In Ohio a change of law, whereby municipal bonds were made subject to taxation, stopped the sale of such bonds until the rate of interest be raised. Under date of September 26, the Brazil Trust Co., a local financial institution in my home county, purchased $12,000 of local bonds at par and accrued interest; on the same day Mr. Thomas Wirt, a citizen, took $2,000, paying a premium to secure them. In contrast to these modest transactions, which are truly representative of a very large volume of similar transactions, I may mention that the State of Tennessee has had serious trouble to place an issue of its State bonds. If press reports be true, a bankers' commission representing the State, and working in cooperation with the United States Senators from that State, failed to sell an issue of a million dollars in bonds at 6 per cent, and the Secretary of the United States Treasury only succeeded in negotiating the sale by making a special deposit of $400,000 of public funds in the bank which purchased the $1,000,000 of Tennessee State bonds.

The city of New York recently paid a syndicate of bankers 6 per cent for a hundred-million-dollar loan; at the same moment bonds bearing a rate of 4½ per cent and issued by our townships are actively selling among our own people at a premium. Yet the committee would have us believe that it will require an elaborate selling agency, under control and domination of the Federal Reserve Board, to sell bonds based on improved Indiana farms and underwritten by an association of Indiana farmers, for this is the committee plan.

The method of securing capital stock for the proposed regional banks does not insure that these banks will be able to discharge the full duties imposed upon them under the terms of this bill. Of course, a failure at this point is a failure of the whole system. The bank in each reserve district can be organized with a minimum capital of $500,000; this amount must be subscribed by the Secretary of the Treasury if the full amount is not taken by other subscribers within 90 days from date of offering. The power of the Secretary to subscribe to the capital stock in these banks is limited to the first issue. Thereafter all increases in capital must be secured from the federated associations, individuals, or the governments of States. The local associations are not required under the terms of the bill to take capital stock in the regional bank in excess of 10 per cent of their own capital, but under the ratios fixed in the bill the central bank is compelled to sell nine dollars in capital stock to individuals, firms, corporations, and States to every dollar which is required to be subscribed by the local association. The power of the central bank to issue land bonds is limited by its amount of capital stock. It therefore follows that if any central bank were to meet with difficulty in selling its capital stock it would be embarrassed in accepting mortgages from the local associations, and could not furnish these associations with loanable funds.

Personally I am opposed to the placing of the system of rural-credit banks under the control of the Federal Reserve Board. This board is rightfully to become a powerful agency in the control and supervision over commercial banking. The removal of the Secretary of Agriculture as a member of this board, as suggested in the early drafts of the Federal reserve act, was an expression by Congress that this board was to devote its services exclusively to commercial banking. Surely no friend of rural credits would propose to remove the Secretary of Agriculture from a board which was to control and supervise rural banking. Under the committee bill this board is given the extreme power to control the interest rates, subject only to the State laws of usury.

It is not conceivable that the Federal Reserve Board will ever order a lower rate in rural-credit banks than in commercial

banks. It is the high rate of the commercial banks that this movement is projected against. Ultimately we propose to organize a system of personal credit rural banks. The mortgage bank is but the first step in the campaign for a complete system of rural banking with short-time and long-time credit for the farmers of the United States. This campaign can never be successful if we place the absolute control over interest rates in the same board which supervises and virtually manages the commercial banks of the Nation. There will be competition between the two systems of banks. This is inevitable and it is desirable; but what chance will there be for successful competition if at the very beginning a monopolistic system of banks is created, with the supreme control—even to the extent of dictating absolutely the rates of interest to be charged—given over to the same body or board which will supervise the system of commercial banks of the Nation?

Whatever may be said of the defects of the commission bill, it is free from monopolistic control and is not guilty of seeking to appropriate public money for private uses. Its opportunities are open to all citizens on equal terms. The farms of the United States are now valued at nearly $40,000,000,000, agricultural products were never selling at a higher level of values, and no generation of farmers since the days of Adam have ever enjoyed so great advantages or had such splendid opportunities. The one crying need is better credit facilities that our farmers may go forward, feed and clothe the world, and enrich themselves by their industry. Here is the most inviting field for the investment banker in the wide world to-day. It is a field which will absorb vast sums of money. In looking about for sources to secure these funds we need not deceive ourselves—this money must come from the American people. The present world war will utterly destroy the so-called world's market for our securities. We will be called upon by impoverished Europe to buy back existing issues of American securities rather than to place new issues in their markets. This striking change in economic conditions has come about since the committee bill was written, but it should be apparent that we must finance our own enterprises. For this reason among the others enumerated it will be an act of folly to enact a monopolistic system of subsidized banks and deny to private capital and private initiative all opportunity to enter this vast field of investment and share a part of the great burden of improving American agriculture.

Woman Suffrage.

EXTENSION OF REMARKS

OF

HON. FRANK W. MONDELL,

OF WYOMING,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 12, 1915,

On House joint resolution 1, proposing an amendment to the Constitution of the United States extending the right of suffrage to women.

Mr. MONDELL. Mr. Speaker, under the privilege granted to extend my remarks in the RECORD I shall insert in the RECORD certain facts relating to and arguments in favor of woman suffrage.

Hundreds of organizations have indorsed woman suffrage. The following are a few of the most important:

International Council of Women, about 7,000,000 members, and national councils in a score of countries.
General Federation of Women's Clubs, 1,700,000 members, and fully half of the State federations.
American Federation of Labor, 2,000,000 members.
Woman's Christian Temperance Union, 300,000 members.
Anti-Saloon League.
International Nurses' Association.
National Grange, over 1,000,000 members.
United Mine Workers, nearly 1,000,000 members.
International and National Bricklayers and Masons.
National Letter Carriers.
National Teachers' Association and many State associations.
International and National Women's Trade Union Leagues.
Ladies of the Maccabees, 50,000 members.
Tri-State Grain Growers' Association.
National College Women's League.
International Retail Clerks' Protective Association, 300,000 members.
Western Federation of Miners.
National Association of Post Office Clerks.

POLITICAL PARTIES INDORSE SUFFRAGE.

Equal-suffrage planks have been adopted in more party platforms this year than ever before.

The Republicans have recommended the submission of a constitutional amendment to the voters in New York, Maine, New Jersey, Pennsylvania, Iowa, and Vermont, while in Illinois, Maryland, North Dakota, Montana, and Arkansas they have gone further and declared for the principle. The Democrats have recommended the submission of a constitutional amendment in New York, New Jersey, Massachusetts, Illinois, and Connecticut, and have come out in favor of the principle in North Dakota, Pennsylvania, and Vermont. The Progressives and Socialists have adopted suffrage planks practically everywhere.

In several of the States where women already have full suffrage, both Republicans and Democrats have this year for the first time adopted planks calling for a Nation-wide woman suffrage amendment to the Constitution of the United States.

WHERE WOMEN VOTE.

Norway.

Municipal franchise granted tax-paying women	1901
Full franchise granted tax-paying women	1907
Municipal franchise extended to all women	1910
Full parliamentary franchise extended to all women	1913
Approximate number of women having the full franchise	500,000
Percentage of women eligible who use their vote	20 to 55
Population:	
Men	1,155,773
Women	1,236,009
Total	2,391,782

Finland.

Municipal franchise granted tax-paying women in country districts	1863
Municipal franchise granted tax-paying women in city districts	1872
Full franchise granted all women	1906
Number of women having the franchise	707,000
Percentage of eligible women who vote	54 to 60
Population:	
Men	1,520,810
Women	1,538,514
Total	3,059,324

Sweden.

Municipal franchise granted tax-paying widows and spinsters	1862
Municipal franchise granted all women on the same terms as men	1909
Approximate number of women having the municipal franchise	1,400,000
Percentage of women eligible who vote	15.2 to 32.9
Total population	5,521,939
Men	2,698,975
Women	2,822,968

HISTORY.

Sweden was the first country in the world to extend to women any measure of suffrage whatever.

Iceland.

Municipal suffrage granted tax-paying widows and spinsters	1882
Municipal suffrage extended to all women	1909
Full suffrage extended to all women	1914
Approximate number of women eligible	11,000
Estimated percentage of eligible women who vote	50 to 80
Total population	85,188
Women	41,083
Men	44,105

Denmark.

Municipal franchise granted tax-paying women and wives of men who pay taxes	1908
Number of women enfranchised	422,999
Percentage of women eligible who vote	38 to 70
Total population	2,757,076
Men	1,337,900
Women	1,419,176

New Zealand.

Municipal suffrage granted all women	1886
Full suffrage granted all women	1893
Approximate number of women eligible	300,000
Percentage of eligible women who vote	74 to 85
Total population	1,008,468
Males	531,910
Females	476,558

HISTORY.

New Zealand was the first country to give full suffrage to all women.

Australia.

State suffrage granted in South Australia	1895
State suffrage granted in West Australia	1900
State suffrage granted in New South Wales	1902
State suffrage granted in Tasmania	1903
State suffrage granted in Queensland	1905
State suffrage granted in Victoria	1908
Full suffrage granted throughout Federated Australia	1902
Number of women having franchise in Federated Australia	1,100,000
Percentage of women eligible who vote	40 to 60
Total population	4,455,005
Females	2,313,035
Males	2,141,970

Isle of Man.

Full parliamentary suffrage granted to women property owners	1881
Full parliamentary suffrage extended to women taxpayers	1892
Total population (1911)	52,034
Males	23,953
Females	28,081

England and Wales.

Municipal suffrage granted women	1869
Women made eligible to city and county councils	1907
Total population (1911)	36,075,269
Males	17,448,476
Females	18,626,793

Scotland.

Municipal suffrage granted women on the same terms as men	1881
Women made eligible to city and county councils	1901
Total population (1911)	4,759,445
Males	2,307,603
Females	2,451,842

Canada.

Municipal suffrage granted property-owning widows and spinsters:

Ontario	1884
British Columbia	1888
Northwest Territory (now Alberta and Saskatchewan)	1888
Prince Edward Island	1888
Quebec	1892

Municipal suffrage granted tax-paying widows and spinsters:

Manitoba	1888
New Brunswick	1886

Municipal suffrage granted to all property-owning women, including married women whose husbands are not voters:

Nova Scotia	1887

The United States.

School suffrage granted certain classes of women subject to various restrictions:

Kentucky	1838
Kansas	1861
Michigan	1875
Minnesota	1875
Colorado	1876
New Hampshire	1878
Oregon	1878
Massachusetts	1879
Vermont	1880
New York	1880
Mississippi	1880
Nebraska	1883
Montana	1887
New Jersey	1887
North Dakota	1887
South Dakota	1887
Arizona	1887
Oklahoma	1890
Connecticut	1893
Ohio	1894
Delaware	1898
Wisconsin	1900

Suffrage on taxation and bonding propositions granted certain classes of women subject to various restrictions:

Montana	1887
Iowa	1894
Louisiana	1898
New York	1901
Kansas	1903
Michigan	1908

Municipal suffrage granted all women:

Kansas	1887

Vote for presidential electors, for certain county and certain State officers, and for all municipal officers granted all women:

Illinois	1913

Full suffrage granted all women:

Wyoming	1869
Colorado	1893
Utah	1896
Idaho	1896
Washington	1910
California	1911
Kansas	1912
Oregon	1912
Arizona	1912
Alaska	1913
Montana	1914
Nevada	1914

Wyoming.

Full suffrage granted	1869
Number of women eligible (Bull. U. S. Census for 1910)	28,840
Estimated per cent of women eligible who vote	80 to 90
Population (1910), total	145,965
Males	91,670
Females	54,295

HISTORY.

Wyoming is the pioneer equal-suffrage State in America, full political equality having been the basis of its government as long as it has had a government at all. Very significantly, the words "equal rights" form the motto on its State seal. The very first legislative council, after its organization as a Territory, passed, in 1869, a bill providing that women should have the same rights as men to vote and hold office; and when it was admitted as a State in 1890, before any other State had given women the vote, equal suffrage was made a part of its constitution.

During the early days of woman's enfranchisement in Wyoming several ineffectual attempts were made to secure a repeal, but for nearly half a century now the status of the women of Wyoming has been unquestioned in their own State. At the time statehood was applied for a determined opposition was made in Congress to the admission of a Territory with a woman-suffrage clause in its constitution. So violent was the feeling that the Territorial delegate in Congress, Joseph M. Carey, now governor of the State, telegraphed the legislature that he feared statehood would not be granted if the suffrage clause were not abandoned. The legislature, which was then in session, telegraphed back, "We will remain out of the Union a hundred years rather than come in without woman suffrage."

* * * * * * *

Colorado.

Full suffrage granted	1893
Number of women eligible (bulletin U. S. Census Bureau, 1910, "Females of voting age for certain States")	213,425
Estimated percentage of registered women who vote	75 to 85
Total population (1910)	799,024
Males	430,697
Females	368,227

HISTORY.

Colorado conferred suffrage upon women in 1893 by enactment of a law which was submitted to the voters and carried by a majority of only a little over 6,000. In 1901, after women had been exercising the privilege for eight years, the measure carried by implication as a clause of a constitutional amendment by a majority of 18,000. (It has been frequently stated that the majority for equal suffrage was on this occasion 30,000, but this is an error.)

No attempt at repeal has ever been made. On the contrary, practically every public man of importance in the State has at one time or another placed himself on record as commending the participation of Colorado women in public affairs, while not six men of standing have been induced to assert over their own signatures that woman suffrage has brought about one single evil, or even that it has failed to effect improvements.

Owing to the fact that conditions are more like those in the typical American Commonwealth than conditions in any of the other States that have enfranchised women—with the exception of Washington and California, in which the measure is still very young—Colorado has been chosen for most of the investigations that have been made into the workings of equal suffrage. The few unfavorable reports that have appeared—all, it must be said, in publications of known anti-suffrage tendencies—have called forth an avalanche of indignant refutation from the most representative men of the State.

In 1898, as a result of certain misrepresentations, a statement approving equal suffrage was issued, signed by the governor, three ex-governors, both United States Senators, two ex-Senators, two Representatives in Congress, the chief justice and two associate justices of the supreme court, three judges of the court of appeals, four judges of the district court, the secretary of state, the State treasurer, the State auditor, the attorney general, the mayor of Denver, the president of the State University, the president of Colorado College, and the presidents and officers of numerous women's clubs.

In 1899 the Colorado Legislature passed, by a vote of 45 to 3 in the house and 30 to 1 in the senate, a resolution declaring that during the time that equal suffrage had been in operation women had used the vote as generally as men, with the result that better candidates had been selected for office, election methods had been purified, the character of legislation improved, civic intelligence increased, and womanhood developed, and recommending the adoption of the measure by all the States and Territories of the Union.

In 1911, as a result of an attack upon the workings of equal suffrage in Colorado, the men of the State formed the Colorado Equal Suffrage Aid Association in order to supply accurate information with regard to the system and to correct misrepresentations. Its president is ex-Gov. Alva Adams, and its vice president and secretary are Hon. I. N. Stevens and Hon. Omar E. Garwood, both leading lawyers. On its executive committee are United States Marshal Dewey C. Bailey, ex-Congressman John A. Martin, District Attorney George A. Carlson, ex-Judge Grant L. Hudson, Judge Harry C. Riddle, Congressman EDWARD T. TAYLOR, Congressman A. W. RUCKER, District Attorney Walter M. Morgan, Deputy City Auditor Joseph J. Vick Roy, Dr. Barton O. Aylesworth, formerly president of Colorado Agricultural College, and Hon. W. W. Garwood, a leading lawyer.

EXTENT OF WOMAN VOTE.

While no accurate figures are available, it is probable, judging from estimates furnished by various State and county officials, that 75 to 85 per cent of the eligible women actually cast their ballots. The number of women voting varies with the importance of the election or with the special interest to women in the issues involved. * * *

EFFECT UPON LEGISLATION.

(For a more detailed list of laws attributable to the influence of women in Colorado, see Senate Document No. 722, Sixty-second Congress, second session, speech of Hon. EDWARD T. TAYLOR, delivered in the House of Representatives April 24, 1912.)

The statutes of Colorado present a most imposing array of laws affecting the welfare of women, children, and the home. A large number of these must unquestionably be attributed to the work of women. In this State, where the sexes are more evenly distributed than in any of the other older suffrage States, the women voters have used their political power to influence legislation more consciously and deliberately and over a longer period of time than anywhere else. Women have introduced many of these laws into the legislature, where in most sessions they had the advantage of women members to look after them.

Every woman's club has its legislative committee, which scrutinizes every bill introduced and makes recommendations as to whether it should be supported or opposed. Among the laws most easily traceable to women's influence are measures making mothers joint guardians with the fathers over their children; raising the age of protection of young girls to 18; establishing a juvenile court; making parents responsible for the offenses of delinquent children when they have, by neglect or any other cause, contributed to such delinquency; forbidding the employment of children in certain industries; making the wife the head of the family in cases where she provides the principal support; providing for supervision of lying-in hospitals and maternity homes conducted by private individuals; compelling men to support their families and making wife desertion a felony; providing penalties for the punishment of male and female procurers; making it a felony for any person under 18 to work as a servant or employee in any house of ill fame; making immoral solicitation a felony; imposing heavy penalties upon men for living upon the earnings of immoral women; forbidding the insuring of the lives of children under 10 years; establishing State parental schools; establishing a State home for dependent children, two of the five members of the board to be women; requiring that at least three of the six members of the board of county visitors shall be women; establishing a State industrial home for girls, three of the five members of the board to be women; requiring one woman physician on the board of the insane asylum; providing for the care of the feeble-minded; making father and mother joint heirs of a deceased child;

establishing a State traveling library commission, to consist of five women from the Colorado Federation of Women's Clubs, to be appointed by the governor; prohibiting the gift or sale of cigarettes to children; prohibiting the sale of opium; making employers liable for industrial accidents; removing the emblems from the Australian ballot (an approach to an educational qualification for voting); establishing the indeterminate sentence for prisoners; making the Colorado Humane Society a State bureau of child and animal protection; providing for the teaching of humanity to animals in the public schools; establishing mothers' pensions; creating a minimum-wage board to determine minimum wage for women; establishing an eight-hour law for women; providing for the initiative, referendum, recall, and for direct primaries. Before the franchise was granted women's property rights had already been fairly well secured, and now the last discriminations have been removed, so that, with respect to property, women are on a basis of perfect equality with men, the old laws of dower and courtesy having been replaced with measures even more favorable to women.

	1896
Full suffrage granted	
Number of women registered (bulletin United States Census Bureau, 1910, "Females of voting age for certain States")	85,729
Estimated percentage of eligible women who vote	85 to 90
Total population, 1910	373,351
Males	196,853
Females	176,488

HISTORY.

In 1870, before Utah was admitted as a State, the Territorial legislature passed a measure adopting equal suffrage, and for 17 years women voted at all elections and acted as delegates to political conventions and members of Territorial and county committees, but they were not eligible to office. In 1887 Congress passed a bill taking away the rights granted by the Territorial legislature, and during the remaining nine years of the Territorial period Utah women were without the vote. In 1896, however, when statehood was conferred, equal suffrage was included in the constitution. Since then women have been unquestionably accepted on an equal political footing with men in all respects.

EXTENT OF WOMAN VOTE.

In a letter to the author, January 17, 1912, H. T. Haines, commissioner of the State bureau of statistics, said that women vote in as large or larger numbers than men—from 85 per cent to 90 per cent of those eligible casting their ballots.

* * * * * * *

EFFECT UPON LEGISLATION.

Since their enfranchisement they have aided in securing measures providing for equal pay for equal work for teachers; raising the age of protection for young girls to 18; establishing free public libraries in cities and towns; requiring in all schools and educational institutions supported wholly or partly by public funds systematic instruction in psysiology and hygiene, including the effects of stimulants and narcotics; providing for a course of free lectures every year at the capital on sanitary science, hygiene, and nursing; providing for a curfew bell at 9 p. m. to keep children off the streets at night; making it a misdemeanor for any minor to buy, accept, or have in his possession cigarettes, tobacco, opium, or any other narcotic; providing for the protection of dependent, neglected, or ill-treated children and for the punishment of the persons responsible; requiring the establishment of kindergartens in towns of a specified size; prohibiting traffic in women; giving cities the power to suppress and prohibit disorderly houses; prohibiting pandering; prohibiting the employment of children in certain industries; prohibiting the employment of women more than 9 hours a day or 54 hours a week; providing for medical examination of school children; authorizing boards of health to take certain steps to protect the public against venereal disease; providing for sanitary inspection of slaughterhouses and other places where foodstuffs are prepared; creating a juvenile court commission; creating a minimum wage for women; requiring that seats shall be furnished where women are employed; providing for mothers' pensions; making mothers equal guardians with the fathers over their children; compelling wife deserters to pay a specified amount for the support of their families; giving local option on the liquor question. Women have practically the same rights over their independent property as men, the old laws of dower and courtesy having been superseded by more modern statutes.

Idaho.

	1896
Full suffrage granted	
Number of women eligible (bulletin United States Census Bureau, 1910, "Females of voting age for certain States")	69,818
Percentage of women registered who vote	75 to 85
Total population, 1910	325,594
Males	185,546
Females	140,048

HISTORY.

In 1895 the Idaho Legislature voted unanimously in the senate and 33 to 2 in the house to submit a woman-suffrage amendment to the State constitution, and in 1896 the measure carried by a majority of 5,844.

EXTENT OF WOMAN VOTE.

Despite the unsettled state of the country, which makes it difficult for women to get to the polls, women in Idaho have exercised their rights as fully as men, and sometimes in considerably larger numbers, the percentage of eligible women who vote ranging from 75 per cent to 85 per cent.

* * * * * * *

EFFECT UPON LEGISLATION.

In the first session of the legislature after they got the vote women aided materially in getting through a measure of the utmost importance to the young State, namely, an antigambling law. In the six sessions since then they have helped to secure measures raising the age of protection for young girls to 18; prohibiting the employment of children in certain industries; creating a juvenile court; creating a State humane society; increasing the control of married women over their independent property; establishing libraries and reading rooms and a State library commission, consisting of the president of the State university, the State superintendent of public instruction, the secretary of state, and the attorney general; providing for a department of domestic science in the State university and for a course of lectures on the subject in the Academy of Idaho; establishing an industrial school; providing for the inspection and regulation of places where foods and drugs are prepared; providing for the commission form of government; providing antitrust regulations; establishing measures for the control of the sale of liquor; prohibiting persons of lewd lives, both men and women, from voting; establishing a nine-hour law for women; creating mothers' pensions; prohibiting traffic in women; giving cities and villages the power to regulate and suppress prostitution.

TESTIMONY FROM IDAHO.

Idaho extended the franchise to women in 1896. After 16 years her public men are practically unanimous in declaring it to have been an unqualified advantage to the State. Statements, unsolicited, from some of them are herewith given:

Hon. John M. Haines, governor of Idaho: "I am clearly of the opinion that woman suffrage has brought us much that is good in politics and very little, if anything, that is bad or even questionable. The influence of women in politics has been good and always in favor of clean candidates and honest administration."

Hon James H. Hawley, ex-governor of Idaho: "I have stood for woman suffrage for 41 years. Woman exercises the franchise quite as intelligently as man, and with a higher degree of conscientiousness. All our best women vote, and by so doing exert a powerful influence for good in the administration of public affairs."

Hon. JAMES H. BRADY, ex-governor: "Politically the effect of woman suffrage has been immeasurably uplifting and beneficial. Woman suffrage has been an unqualified success, not only in Idaho but in all the other Western States that have adopted it. The West has but set the pace for the rest of the country in giving justice to women."

Hon. Frank W. Hunt late ex-governor: "Woman suffrage has purified politics. The woman vote compels parties to select the cleanest and best material for public office."

Hon. WILLIAM E. BORAH, United States Senator: "The presence of woman in politics, armed with the power to enforce her demands, has been substantially for the benefit of society. It is sometimes argued that women will vote largely with their brothers or husbands, but I have observed that there comes a time upon certain questions when the husband and brothers vote with the women."

Hon. Weldon B. Heyburn, late United States Senator: "The general tone of political affairs in the State has been improved since the adoption of woman suffrage. In particular, greater care is exercised in the selection of candidates for office. While the women of Idaho do not, as a rule, participate personally in the primaries and conventions, the fact that they are able to express their will with respect to men and measures at the polls exercises a powerful influence."

Hon. BURTON LEE FRENCH, United States Representative: "I confess that I was not in favor of woman suffrage at the time it was adopted by the State, in 1896. From practical experience with it, however, I have become a convert. I believe it has raised the moral tone of political life throughout the State, particularly in county politics. Forty per cent of the voters are women (although women form a minority of the population). They are much more independent than men. They will not vote the straight ticket unless they approve the individual candidates. They are free from blind party loyalty, which sometimes leads men to vote for a man whose record is bad simply because he is on their party ticket."

Hon. Ralph P. Quarles, former justice of the supreme court: "Equal suffrage has resulted in much good in Idaho. The participation of women in the conventions of our various political parties and in elections has a tendency to relegate the professional politicians and bring forth a better class of people."

Miss Margaret S. Roberts, president of the Columbian Club: "In Idaho we women do not want to take the men's place. We want to do the work they haven't time to do. The men are busy developing the country. We want to see that the homes and the children are properly cared for. To do that we need the ballot. Nothing puts the fear of God into the hearts of men like the ballot in the hands of good women."

Washington.

	1910
Full suffrage granted	
Number of women eligible (bulletin United States Census Bureau, 1910, "Females of voting age for certain States")	277,727
Percentage of women registered who vote	85 to 95
Total population, 1910	1,141,990
Males	658,663
Females	483,327

* * * * * * *

EXTENT OF WOMAN VOTE.

Shortly after Washington women got the vote, an initiative petition was circulated for the recall of Mayor Hiram C. Gill, of Seattle, because of his policy with respect to commercialized vice. The referendum on this petition—which, it is generally admitted, could never have received the requisite number of signatures but for the women voters—brought out a record woman vote. Out of the 72,000 voters registering, 23,000 were women, although in Seattle men greatly outnumber women; and of the 23,000 registered 22,000 actually cast their ballots. Gill, who had been elected by a majority of 4,000, was recalled by a majority of 6,000. In the next city election he presented himself as a candidate for the mayoralty, and received the nomination, but was defeated—again by woman votes. In 1914, secure of Gill's defeat, the interest put in the field a man whose election they particularly desired. Mayor Gill, in his manifesto, acknowledged his conversion, promised a clean administration, and was elected by the help of the women's vote. After election he adhered strictly to his promises. Women are also credited with having brought about the recall of the mayor and city commissioners of Tacoma for the same reasons that they had opposed Mayor Gill. In the State elections of 1912 women polled a large vote and are credited with having elected the gubernatorial candidate of their choice, Ernest Lister, although he was not a member of the dominant party which overwhelmingly carried the rest of the State ticket.

* * * * * * *

EFFECT UPON LEGISLATION.

Since women were enfranchised they made an excellent record. Among the measures which they introduced or to which they gave special support, the following were successful: Measures creating an eight-hour law for women; establishing an industrial welfare commission to fix hours of employment, standard conditions of labor, and minimum wage for women; providing for workmen's compensation; creating a teachers' retirement fund; creating mothers' pensions; adopting the model Iowa red-light injunction and abatement act for the suppression of disorderly houses; regulating the milk industry; providing for juvenile courts; providing for penalties for child desertion; creating a State school for delinquent girls; introducing improvements into the public-school system and establishing free kindergartens; providing that school buildings

may be used as social centers; abolishing the death penalty; and adopting the initiative and referendum.

California.

(For further data on the history and results of woman suffrage in California, see "What California's women did with their ballots," by Lewis Edwin and Mary Bartol Theiss, Pictorial Review for March, 1913, and "How the women of California are preparing for citizenship," by Lewis Edwin and Mary Bartol Theiss, Pictorial Review for April, 1913.)

Full suffrage granted	1911
Number of women eligible (bulletin U. S. Census Bureau, 1910, "Females of voting age for certain States")	671,386
Estimated percentage of women registered who vote	85 to 99
Population (1910):	
Men	1,322,978
Women	1,054,571
Total	2,377,549

HISTORY.

In 1896 a woman-suffrage amendment to the State constitution was submitted to the voters by the California Legislature and defeated by a vote of 26,744. In 1911 the amendment was submitted for the second time and carried by a majority of 4,000.

This was an even greater victory than the one preceding, as conditions in California are even more typical of American civilization in its most advanced stage than those in Washington. It doubled the number of women voters, and added to the number of presidential electors elected by the votes of both men and women as many as Utah, Idaho, and Wyoming or of Washington and Colorado put together.

EXTENT OF WOMAN VOTE.

Never in the history of American politics has there been such a registration of voters as that immediately following the enfranchisement of the California women. In Los Angeles, where the first city election was held, practically all women of voting age hastened to place their names upon the rolls, and from 95 per cent to 99 per cent of those registered actually cast their ballots, outnumbering the men in almost every district.

* * * * * * *

The results of this investigation indicate that about 251,847 women voted at this election—Secretary of State Frank C. Jordan puts the figures at 313,883. This is an average for the 37 counties, taken at random, of 61.3 per cent of the registered women voting.

EFFECT UPON LEGISLATION.

The women's first care after their enfranchisement was to put through a most extraordinary legislative program, which, while it was probably not designed, except incidentally, to demonstrate the fact that they knew how to use their political power when they got it, actually did serve that end most admirably. The list of laws passed in this one session is as follows:

The mothers' pension law, granting aid to needy parents in order to keep the children at home rather than have them committed to institutions.

The health-certificate law, requiring a certificate of freedom from venereal diseases of all men before obtaining marriage licenses.

The minimum-wage law, creating a commission to investigate the conditions of industry of women and children, with power to invoke a minimum wage in industries paying less than a living wage.

The red-light abatement and injunction law, placing the responsibility of disorderly houses upon the owners and lessees rather than upon the inmates, and forbidding such houses.

The joint guardianship law, giving mothers equal rights over their minor children.

The juvenile court law, separating dependent from delinquent children.

The extension of the eight-hour law for women to include workers in apartment houses and nurses in training.

The age-of-consent law, raising the age from 16 to 18.

The State Training School for Girls, providing a separate institution for girls, with the most approved correctional methods and thorough vocational training.

The teachers' pension law, granting pensions of $500 a year to all teachers who have been in service 30 years.

The net-container law, specifying that packages shall show the amount of net contents.

The weights-and-measures law, providing for a complete standard of weights and measures and regular inspection of dealers.

The Roberts bill, forbidding the destruction of any foodstuff fit for human consumption.

The State civil-service law, bringing practically all State employees under the merit service.

The creation of a State housing and immigration commission to prepare for the coming of immigrants with the opening of the Panama Canal.

Prison reform: All sentences except for murder are made indeterminate; strait-jackets and cold showers are prohibited; and arrangements are made for the payment of wages to State prison convicts and for assistance to discharged prisoners.

The milk-inspection law, providing for strict regulation of dairies.

The white-slave law, prohibiting traffic in women between counties.

The tuberculosis law, providing for the reporting of all such cases.

Amendment to the liquor laws, forbidding the sale of liquor between 2 and 6 a. m.

The creation of a commission to investigate the question of old-age pensions.

The workmen's compensation law, requiring compulsory compensation for injuries, and establishing a system of State industrial insurance.

The water-conservation law, establishing a water commission with authority over all water in the State. Conservation is a subject in which the women in California have taken keen interest.

The psychopathic parole law, providing for the parole of persons mentally abnormal but not dangerously insane, under the custody of psychopathic parole officers.

The billboard law, limiting billboards to 10 feet in height and prohibiting spite fences of more than that height.

The bastardy law, requiring fathers to help support illegitimate children.

A law providing for the sterilization of inmates of insane asylums and certain convicts.

The creation of mosquito-control districts.

The requirement of the wife's signature to legalize the assignment of a man's wages.

The amendment to the child-labor law raising the age limit of child workers from 12 to 15.

THE PROOF IN CALIFORNIA.

[From the Woman's Journal, Jan. 2, 1915.]

The vote at the last three gubernatorial elections in California was as follows:

In 1906	312,030
In 1910	385,713
In 1914	926,689

The vote in 1910 was almost 124 per cent of that in 1906. If the same percentage of increase had held true, the vote in 1914 would have been 478,294. But instead of increasing to 124 per cent it increased to 241 per cent. The reason was that women voted in 1914. If 478,294 men voted in 1914, then the number of women voting must have been 448,395. In other words, women would have cast 48 per cent of the vote and men 52; men would have cast only 4 per cent more of the vote than women, although the number of adult men in California is 16 per cent greater than the number of adult women.

Whatever the exact proportion of men and women voting, it is patent that the women of California are fully awake to their new responsibilities.

Kansas.

Municipal suffrage granted	1887
Full suffrage granted	1912
Estimated number of women eligible	439,000
Estimated percentage of women eligible who vote	60 to 80
Total population (1910)	1,690,949
Males	885,912
Females	805,037
Full suffrage for women granted in	1912

In the election of 1914, which was the first general State election following the enfranchisement of Kansas women, it was estimated that women cast 40 per cent of the vote. Out of a total of 87,220 ballots, 37,318 were cast by women, as opposed to 49,902 cast by men. In 1912, which was a presidential years, the vote of the men was only 50,904.

* * * * * * *

Oregon.

Full suffrage granted	1912
Estimated number of women eligible	168,300
Percentage of women registered who vote	No figures available.
Total population (1910)	672,765
Males	384,265
Females	288,500

HISTORY.

The granting of full suffrage to women in Oregon in 1912 ended the longest continuous organized struggle for enfranchisement ever made in this country. There the amendment was submitted six times. * * *

EXTENT OF WOMAN VOTE.

There has been no general election since the women got the vote, and no figures have been kept for the local elections. It is reported, however, that the women have taken advantage of every opportunity so far to avail themselves of their newly acquired rights.

* * * * * * *

Arizona.

Full suffrage granted	1912
Estimated number of women eligible	43,891
Percentage of women registered who vote	No figures available.
Total population (1910)	204,354
Males	118,574
Females	85,780

* * * * * * *

EXTENT OF WOMAN VOTE.

It is reported that women have taken a lively interest in all the local elections which have taken place in Arizona since their enfranchisement, the percentage of eligible women voting about equaling the percentage of eligible men.

* * * * * * *

EFFECT UPON LEGISLATION.

In the legislative session of 1912–13 certain measures in which women had been interested for years, but with respect to which little progress had been made, received conspicuously favorable attention from their representatives. An eight-hour law for women in certain industries was passed.

Alaska.

Full suffrage granted	1913
Estimated number of women eligible	No figures available.
Percentage of women eligible who vote	No figures available.
Total population (1910)	64,356

HISTORY.

In 1912 a Territorial legislature for Alaska was convened, and the first bill to be introduced, and the first bill to pass, was one enfranchising women. There was not a dissenting vote in either house.

EXTENT OF WOMAN VOTE.

There have been no elections since women were enfranchised.

OFFICE HOLDING.

Women have as yet had no opportunity to present themselves as candidates.

EFFECT UPON LEGISLATION.

The mere fact that women were to be on a basis of political equality with men, caused the legislature to place them on a basis of perfect equality in every other way as far as this lay within its power. Section 495 of the Compiled Laws of Alaska reads: "All laws which impose or recognize civil disability in a wife which are not imposed or recognized as existing as to the husband, are hereby repealed; and for any unjust usurpation of her property or natural rights she shall have the same right to appeal in her own name alone to all courts for redress that the husband has."

Illinois.

Suffrage for presidential electors, for county officials, and for all municipal officers granted to women	1913
Estimated number of women eligible	1,567,401
Percentage of women registered who vote	No figures available.
Total population (1910)	5,638,591
Males	2,911,674
Females	2,726,917

HISTORY.

The difficulties of obtaining an amendment to the constitution in Illinois caused the women to turn their attention to an attempt to secure by legislative enactment the large measure of suffrage which the legislature, under the constitution, had the power to extend.

In this they were successful in the summer of 1913. The enactment of this law gives them the right to vote for presidential electors, for State board of equalization, clerk of the appellate court, county collector, county surveyor, board of assessors, board of review, sanitary district trustees, and for all municipal officers except justices of the peace—all the officers not created by the State constitution. They may also vote on all questions or propositions submitted to a vote of the electors of the municipalities or other political divisions of the State. The possession of this much political power will greatly assist them in their efforts to secure a constitutional amendment completing their enfranchisement.

CHICAGO RETURNS SHOW BIG VOTE—OFFICIAL RETURNS GIVE NUMBER OF WOMEN WHO WENT TO POLLS AS 123,991.

Officials returns from the November election in Chicago were available November 28 for the first time. They showed that 123,991 women voted at that time, despite the fact that women had no voice in the most important offices to be filled. This is about 75 per cent of the registration, which was 166,277.

The men's vote in Chicago was 351,741, or about 90 per cent of the registration, which was 394,015.

A SUMMARY OF 10 FACTS ABOUT WOMAN SUFFRAGE.

Fact 1. In the male-suffrage States only about 60 to 65 per cent of the men vote. In equal-suffrage States from 70 to 90 per cent of the women vote; and, as a rule, the men's vote is higher also.

Fact 2. One hundred and forty mayors in cities and towns of the four oldest suffrage States—Wyoming, Colorado, Utah, and Idaho—affirmed that women voted in large numbers, that they were public spirited, and that the vote of disreputable women was a negligible quantity.

Fact 3. The Interparliamentary Union has declared that Colorado has the most advanced laws of any State or country in the world for the protection of women and children.

Fact 4. California, Colorado, Idaho, Utah, Oregon, and Washington give pensions to widowed destitute mothers in order that they may care for their young children at home instead of sending them away to institutions.

Fact 5. In Colorado, Kansas, Oregon, Utah, Washington, and Wyoming women have absolute control over their own separate property and independent earnings; and in Arizona, California, and Idaho, where the community system still prevails, women have control over their property and earnings if living separate from their husbands.

Fact 6. A number of the most progressive and enlightened countries of the world—Norway, Finland, Iceland, Australia, New Zealand, and the Isle of Man—have given full suffrage to women.

Fact 7. In every one of these countries the municipal franchise was granted first and full suffrage granted only after the smaller measure had been thoroughly tested.

Fact 8. Both houses of the Australian Parliament have passed resolutions declaring woman suffrage to have been an unqualified success in that country.

Fact 9. In Denmark, Sweden, England, Ireland, Scotland, Wales, and nine of the Provinces of Canada women have the municipal franchise, and the Parliaments of the first two are on the point of extending the full suffrage. In the cities of Belize, in Honduras, Bombay, in India, and Rangoon, in Burma, the women share whatever municipal voting rights the men have.

Fact 10. Not one country, State, or community which has granted women any measure of suffrage has ever permanently taken it way; but, on the contrary, has enlarged and extended it.

A FEW LEADING QUESTIONS.

Q. Under a representative form of government such as ours who should make the laws?—A. The people.

Q. Do the people make the laws?—A. No; one-half the people are forbidden any share in lawmaking.

Q. Who do make the laws?—A. Men.

Q. Who gave men the right to make the laws?—A. Men.

Q. Do not the laws concern women?—A. They certainly do.

Q. May not women take part in making the laws which they must obey?—A. They may not. Men alone make the laws for women and men.

Q. If a woman transgresses the law, who decides the penalty, tries, convicts, and punishes her?—A. Men.

Q. Who sit on the juries before whom women are tried?—A. Men only.

Q. Is this what the Constitution means by "the judgment of his peers"?—A. Evidently not.

Q. May not mothers help make the laws which decide their legal relations to their children?—A. No; men make the laws; and in only 16 States in the Union and the District of Columbia—besides Idaho and Utah, whose guardianship laws are, in effect, practically equal—has the married mother the legal right to her children.

Q. Why is the law so one-sided?—A. Because it is the product of one sex alone.

Q. Who make the laws which decide the rights of husband and wife in case of separation?—A. Men only.

Q. When a husband brutally assaults his wife who determine the penalty?—A. Men.

Q. Who make the laws concerning the property rights of husband and wife?—A. Men.

Q. Who pay the taxes?—A. Men and women.

Q. Is the property of women taxed the same as that of men?—A. Often higher.

Q. Who assess, collect, and expend the tax money paid by men and women?—A. Men only.

Q. May not a woman who manages her own business have a vote in elections which directly concern her own interests?—A. No; but the most incapable man in her employ may do so.

Q. May not an educated, temperate, moral, and law-abiding woman vote?—A. No; but an ignorant, intemperate, immoral, and law-breaking man may do so.

Q. May not women who teach the boys in our schools vote?—A. No; but the boys they teach, when 21, may do so.

Q. The mothers who have brought forth, carefully reared, and given their sons to the State—may they not vote?—A. No.

Q. Why not?—A. Because they are women.

Q. Would women vote if the privilege were granted them?—A. Judging from experience, they would, since they always have voted in about equal numbers with men in all the States and countries where they have been given a chance.

Q. Why do women want to vote?—A. First. Because they are American citizens, and the United States Constitution says: "The citizen's right to vote shall not be denied or abridged on account of race, color, or previous condition of servitude."

Second. Because they are taxpayers, and it is a principle of our Government that taxation and representation ought to go together.

Third. Because every citizen should help select those who make the laws which he or she must obey.

Fourth. Because every citizen in a free republic is entitled to representation, and no person having but one vote can represent himself and another, even with the latter's consent.

Fifth. Because a vote means power, and women need this power to protect the interests of themselves, their children, their homes, and society.

Sixth. Because politics, which means the government, needs the combined influence of men and women. Without the ballot, woman's influence is indirect, negative, and irresponsible. Votes talk, votes count, votes compel respect, votes decide every question.

—

SOME COMMON QUESTIONS ANSWERED.

[By Sarah Platt Decker, late president General Federation of Women's Clubs and of the Denver Women's Club.]

So much has been said and written on the matter of the working of equal suffrage in Colorado that it is difficult to present it in any new phase. I shall attempt to give only an individual opinion upon the following much-disputed questions:

1. Do the earnest, high-minded women of Colorado vote? Yes, most emphatically. I do not hesitate to say that the best women of Colorado have far more conscience in filling their responsibilities as voters than the men of the same class. It is also true that women of standing in the community have great influence with men who are not particularly interested in public affairs. We are constantly asked by visitors to Colorado, "How do you have time to vote?" as if voting was like eating or bathing. It takes just about one hour in a year to cast all the ballots necessary and allowable.

2. Does not the vote of the disreputable, low class of women counterbalance the better element? No; the women of the half world generally do not vote. They are constantly changing their residences and their names. They do not wish to give any data concerning themselves, their age, names, or number and street. They prefer to remain unidentified. Occasionally some disreputable master compels these slaves to vote for his own purposes, but that is a rare occurrence.

3. Is it not the case that women generally vote as the men of their household dictate? No. Such has not been my observation or experience. Among the laboring classes, if the wife can not vote as her husband desires, and he is not willing she should make her own choice, she refuses to vote at all. I have been surprised at the honest maintenance of opinion in this regard among the wives of laboring men. One of the most cultivated, beloved, and influential women of the State was sitting as a delegate in one party convention not long since, while her husband was at the same time addressing another assembly representing opposite party views. But the situation excited no comment. Suffrage makes women individuals.

4. Has the woman vote wholly purified politics, and has it banished saloons? No to both questions. It would be beyond reason to expect such a result. Women have been in churches and in society since the beginning of time, but there are still vicious minds and sinful deeds in both religious and social circles. The most we assert is that if we pour a clear stream into a muddy one we shall have a "moving of the waters" for betterment. The presence of women at the polls as officers and voters has brought quiet and order, while party conventions are much freer from personal wrangles, profane language, and vulgar allusions, because women are sitting as delegates.

5. Has woman suffrage been a success? Yes. All thinking women admit that we have made some mistakes since we have had the right of suffrage. But that has been the experience of all newly enfranchised people. In the beginning of equal suffrage in Colorado the woman voters had no guide except the traditions and advice of the men of their families and acquaintance. That teaching was the old one of party politics. We followed a blind lead; and to me it was a terrible awakening to discover that my party was just as bad as the other, and the other party fully as high minded in its purposes as mine. But in spite of mistakes, disappointments, or discouragements, there is an indescribable uplift in the thought that one is no longer classed with "criminals, paupers, and idiots." There is a splendid womanly independence in being a voting citizen and an absorbing interest in fulfilling the duty of citizenship, and there is a much more chivalrous devotion and respect on the part of men, who look upon their sisters not as playthings, not as property, but as equals and fellow citizens.

—

ANSWERING THE OBJECTION—ALL WOMEN DO NOT CARE TO VOTE.

THE REAL POINT.

[By Mary Ware Dennett.]

* * * * * * *

1. The first voters got their rights by the original colonial charters, most of them including religious qualifications, and all of them including property qualifications, thus restricting the ballot to relatively few men.

2. After the Revolution, for the sake of the "common defense" and the "general welfare," the religious qualification was removed. A large number of men were then enfranchised, but they did not ask for the vote nor did they promise to use it well or to use it at all.

3. In 1790, by the naturalization act of Congress, another large number of men were enfranchised, which act also enfranchised their descendants, and again they did not ask for the vote nor promise to use it well.

4. When the negroes were given the vote it was not at their request, nor were they required to show that they would make good use of it.

5. The same has been true of the enfranchised Indians.

Now, what is required at present of a man before he can vote in the United States?

He must be 21 years old.

He must be native born or naturalized.

In some States he must be able to read. (In a few Southern States there are additional educational and property qualifications affecting the negro voters only.)

That is all.

He is not asked whether he will use his vote.

He is not asked if all men want to vote.

He is not asked if he thinks the laws need changing.

He is not asked if he will promise to better the laws.

He is not asked to give statistics showing whether men have previously used their votes to better the laws.

He is not asked if he is sure he can still be a good father.

He is not asked to "remain attractive" after he votes.

But all such requirements, and more, are made of women when they aspire to vote.

Mrs. Catt said at the Senate suffrage hearing in April, 1910: "In the 120 years of national life no class of men have been forced to organize a movement in behalf of their own enfranchisement. Yet American women, who have conducted a persistent, intelligent movement for half a century, which has grown stronger and stronger with the years, appealing for their own enfranchisement and supported by a petition of 400,000 citizens of the United States, are told that it is unnecessary to consider their plea, since all women do not want to vote."

Just so long as the opposition can keep the suffragists busy giving promises and proof that women will use the vote to good advantage when they get it, just so long will the opposition keep on asking for more promises and more proof. (Who forms the opposition? Not the organized antisuffragists—they hardly count—but "the special-privileged classes and the professional politicians who are constitutionally opposed to more voters and to the extension of more power to those who vote.")

It is time to stop that sort of work, as suffrage work, and concentrate all our energies on the real point, namely, that the qualifications for voting shall be made without regard to sex.

—

SUFFRAGE AND SOCIALISM.

[By Alice Stone Blackwell.]

In these days the opponents of equal rights for women are continually harping upon socialism. "Suffrage means socialism" is their constant war cry, both in their public addresses and in their official publications.

There are as many different kinds of socialism as there are of Heinz's pickles, and the antis always pick out the most extreme variety, and usually caricature even that. "All Socialists are suffragists," they are constantly telling us; and they predict that granting votes to women will mean the speedy bringing in of the socialist state.

Now, the Socialists themselves do not think so. All Socialists have woman suffrage as a plank in their theoretical platform, but many of them confess that they do not want it to come until socialism comes, just because they believe that it would delay the coming of socialism.

The Socialist Party admits women to membership on the same terms as men, but not nearly as many women as men have joined it. The proportion is said to be about 1 to 10. In every State in the Union the Socialist vote cast at the presidential election of 1912 showed an increase over that cast at the presidential election of 1908. Its average increase in the country at large was 112 per cent. But in every State where women have had the ballot long enough to compare presidential election with presidential election, the growth of the Socialist vote was below the average. The general public does not know these things, but the Socialists know them. They are aware that in the United States not nearly as many women as men believe in socialism. Hence there is a sharp division of opinion among the Socialists, the more consistent members of the party standing up for woman suffrage, while the opportunist Socialists want to keep it from coming until after they have won a Nation-wide Socialist victory.

They recall that at the first election in Los Angeles at which women voted the Socialist ticket was snowed under, and that all the non-Socialist papers attributed it to the women. In short, while the anti-suffragists are declaring suffrage to be a menace because it would bring in socialism, a large part of the Socialists look upon it as a serious menace to their success, because of women's conservatism.

In the 1912 elections not one of the old suffrage States elected a Socialist to the legislature. The States where women had just got the ballot, Washington and California, elected one Socialist apiece, as did Massachusetts and a number of other nonsuffrage States. On the other hand, Illinois, by the vote of men alone, elected four Socialist legislators; and Wisconsin elected seven, and on the same day defeated woman suffrage by an enormous majority. The strongly Socialist wards of Milwaukee, which gave a majority of three and four to one for the Socialist candidates, gave a majority against woman suffrage.

—

SUFFRAGE AND TEMPERANCE.

[By Alice Stone Blackwell, editor of the Woman's Journal.]

Ill-informed antisuffragists often claim that equal suffrage has nowhere lessened the number of saloons.

The Pacific, a journal representing the Congregational Churches of the Pacific coast, said in its issue of December 4, 1912: "Two years ago we had but 200 dry towns in all California. To-day we have about 675." The editor of the Home Alliance, a temperance paper published at Woodland, Cal., gives the exact number of California's dry towns at present as 682.

The State president of the Wyoming Woman's Christian Temperance Union writes the Woman's Journal that before the granting of equal suffrage all Wyoming was wet and that now 90 per cent of the State is dry territory.

The State president of the Utah Woman's Christian Temperance Union writes us that when the Utah Legislature in 1911 passed a State-wide local-option law 110 cities went dry and only 18 went wet—and out of these 18 so-called cities, 16 were mining camps. Every county in Utah but one is now dry.

In Colorado, within four years after the granting of equal suffrage, the number of no-license towns had more than quadrupled, and it has increased still more largely since. When State-wide prohibition was lately defeated in Colorado, Ellis Meredith, the head of Denver's reform election commission, and a strong advocate of the "dry" policy, wrote in the Woman's Journal for November 16, 1912, concerning the result of the election: "It is because under our local option law conditions are so good and dry territory increasing so fast that many people feel we shall come nearer regulating the traffic in this way than by so-called total prohibition, with the police power in all the big towns opposed to it." The organ of the brewers in Denver says Colorado made a great mistake in giving votes to women. So far as we know it is the only paper in the State which takes this ground.

* * * * * * *

Oregon, Washington, Colorado, and Arizona were carried for prohibition in 1914.

In Illinois, since the woman-suffrage bill passed the legislature, in June, 1913, a long string of towns have gone dry through the women's vote; and the liquor interests are making a great effort to have the woman-suffrage law set aside as unconstitutional.

* * * * * * *

Equal suffrage has nowhere led to State-wide prohibition, but it has everywhere led to a large extension of no-license territory. Rev. Dr. B. F. Crary, who was for years presiding elder of the Methodist Episcopal churches in northern Colorado and Wyoming, says of woman suffrage: "Liquor sellers and gamblers are unanimous in cursing it."

An effort is being made by opponents of equal rights in Michigan and elsewhere to show that it is the suffragists and not the antis who are in alliance with the liquor traffic. The audacity of this is enough to make a mummy smile. Suffragists as well as antis are divided in opinion as to whether license or no license is the wiser policy; but the liquor interest is practically unanimous in its conviction that votes for women would be bad for its business. Moreover, it is willing to back up that conviction with unlimited cash.

Asked why the liquor interest opposes equal suffrage, Mrs. A. J. George (herself an advocate of license) answers, "It does not." This is so contrary to universal knowledge that it is hardly worth denying.

The official organ of the Retail Liquor Dealers' Association in Wisconsin bears the inappropriate name of "Progress." It fought equal suffrage bitterly all through the campaign of 1912, and afterwards boasted editorially of having helped to defeat it. Mrs. Maud Wood Park, who took part in the Ohio campaign of 1912, says she never saw anything like the ferocity of the fight the liquor dealers put up against it. She brought home samples of the antisuffrage cartoons that were hung up in the barrooms, and no doubt she would be willing to show them to anyone who calls to see them at the office of the Boston Equal Suffrage Association, 585 Boylston Street.

* * * * * * *

At the elections held in Illinois outside of Chicago on April 7, 1914, the women voted dry much more generally than the men. Thus in Rockford, 5,155 women voted dry and 1,048 wet; 4,480 men voted dry and 5,155 wet; in Bloomington, 3,806 women voted dry and 2,311 wet; 2,655 men voted dry and 3,896 wet; in Freeport, 2,890 women voted dry and 1,877 wet; 1,984 men voted dry and 2,867 wet; in Pontiac, 1,137 women voted dry and 364 wet; 768 men voted dry and 797 wet, and so on.

According to the official returns published in the Chicago Tribune of April 22, 1914, in all 121,315 women voted dry and 67,418 wet, while 144,925 men voted wet and 98,179 dry. Out of the 329 townships that voted, there were only 20 where a majority of the women voted wet. There were 115 townships formerly wet that went dry, and 83 of these went dry because of the women's vote. There were 41 townships formerly dry that stayed dry, and 13 of these stayed dry because of the women's vote. Of the women 64.3 per cent voted dry and 35.7 per cent wet; of the men 59.7 per cent voted wet and 40.3 per cent dry.

On April 21, 1914, a large number more cities and villages went dry, largely by the women's vote.

—

CATHOLIC OPINIONS.

1. There exists a widespread belief that the Catholic Church is officially opposed to woman suffrage. In a reply to a direct question concerning the church's attitude, His Eminence James Cardinal Gibbons, under date of March 27, 1914, stated:

"The church has taken no official attitude on the subject, but leaves the matter to the good judgment of her children as to what they think best. The statement that the church is opposed to the enfranchisement of women is incorrect."

2. Most Rev. Patrick W. Riordan, archbishop of San Francisco, Cal., in a letter to his pastors, read in all the churches of his archdiocese on Sunday, August 11, 1912, said:

"While our Catholic people, with the high ideals which the church holds before them, ought to be models of right living and exemplars of the highest Christian virtue, they should also possess a high degree of civic virtue. The enjoyment of the privileges and blessings of citizenship impose correlative duties and obligations which no citizen should ignore. Among these duties the chiefest is voting. * * * In California woman suffrage is now an accomplished fact. Women ought not, therefore, to permit their traditional love for the virtues of the home, their innate dignity, and becoming reserve to prevent them from discharging the chiefest of civil obligations. I wish, therefore, that you would take a seasonable opportunity of advising our new electors to register, that they may be at all times prepared to give their services in making California a model State and of handing down to their children that come after them a tradition of righteousness and of unselfish patriotism."

3. Right Rev. Paul P. Rhode, auxiliary bishop of Chicago, Ill., on hearing that many foreign women hesitated to register without the sanction of the church, issued the following letter, which was read in all the churches of Chicago on Sunday, March 15, 1914:

"Catholic women of Illinois, in complete harmony with the teachings of the church, should all accept the new prerogative of their citizenship with which they have been invested by the extension of suffrage to them by law. Conditions demand that they be not reluctant to exercise their right of voting, but, on the contrary, that they take a lively interest in the political life of the country. * * * Let the Catholic women remember the debt of gratitude to society and to the State for the benefits which they and all enjoy under its protection. When entering the polling place or voting booth no other motives should actuate them than the welfare of the State, the good of society, and, above all, the protection of the family life of the Nation and of sound principles."

4. Rev. Joseph H. McMahon, Ph. D., rector of the Church of "Our Lady of Lourdes," New York, in a lecture delivered January 15, 1913, said in part:

"It is well for Catholics particularly to take note of this, as far as there is a tradition it is in favor of woman suffrage. * * * To say that the exercise of the right to vote will mean that a woman must neglect her home duties is to utter a smug commonplace that shows how little given to reflection we are. * * * Purify your social life, but do not be guilty of the stupidity of saying that the exercise of the right to vote would degrade any virtuous woman in the world. As long as you send your daughters out into the busy market place, with all its dangers, and expect them to escape the pitfalls, which are, alas, too common, please do not commit intellectual suicide by declaring that they can not vote because their modesty or reserve might suffer."

5. Rev. John A. Ryan, of St. Paul's Seminary, St. Paul, Minn., author of the "Living Wage," stated under date of March 24, 1914:

"I am in favor of woman suffrage because I believe that its net results would be beneficial to the community as a whole and to working women in particular."

6. Rev. J. E. Ross, C. S. P., of Chicago, Ill., author of "Consumers and Wage Earners," said:

"It is not only just and proper to give women the vote, it is good policy, for we need the influx of their humanity in dealing with our problems. Man has by long absorption in commerce been trained to think in terms of property, whereas woman by immemorial custom has been trained to think in terms of humanity, the home, husband, and children. I would give women suffrage for three reasons: That they need it for their own spiritual and intellectual development, as well as for a protection against man-made laws; that men need that women should vote; and that there is no reason against giving them the suffrage." (From the New World, Chicago, Ill., Jan. 9, 1914.)

7. Rev. George M. Searle, C. S. P., of San Francisco, Cal., under date of April 16, 1914:

"It is true that I am and have been all along in favor of woman suffrage. I regard the argument so commonly advanced about woman's sphere being the home as simply and obviously absurd. One might as well say that the doctor's sphere is his office or the hospital or his patients' homes. The point is that no time needs to be taken from one's regular duties in order to vote. It is quite plain that with regard to moral questions the interests of morality would be advanced by woman suffrage."

—

WOMEN IN THE HOME.

[By Susan W. Fitzgerald.]

We are forever being told that the place of woman is in the home. Well, so be it. But what do we expect of her in the home? Merely to stay in the home is not enough. She is a failure unless she does certain things for the home. She must make the home minister, as far as her means allow, to the health and welfare, moral as well as physical, of her family, and especially of her chidren. She, more than anyone else, is held responsible for what they become.

She is responsible for the cleanliness of her house.

She is responsible for the wholesomeness of the food.

She is responsible for the children's health.

She, above all, is responsible for their morals, for their sense of truth, of honesty and of decency, for what they turn out to be.

HOW FAR CAN THE MOTHER CONTROL THESE THINGS?

She can clean her own rooms, but if the neighbors are allowed to live in filth she can not keep her rooms from being filled with bad air and smells or from being infested by vermin.

She can cook her food well, but if dealers are permitted to sell poor food, unclean milk, or stale eggs she can not make the food wholesome for her children.

She can care for her own plumbing and her refuse, but if the plumbing in the rest of the house is unsanitary, if garbage accumulates and the halls and stairs are left dirty she can not protect her children from the sickness and infection that these conditions bring.

She can take every care to avoid fire, but if the house has been badly built, if the fire escapes are insufficient or not fireproof she can not guard her children from the horrors of being maimed or killed by fire.

She can open her windows to give her children the air that we are told is so necessary, but if the air is laden with infection, with tuberculosis and other contagious disease she can not protect her children from this danger.

She can send her children out for air and exercise, but if the conditions that surround them on the streets are immoral and degrading she can not protect them from these dangers.

Alone she can not make these things right. Who or what can?

The city can do it, the city government that is elected by the people to take care of the interests of the people.

And who decides what the city government shall do?

First, the officials of that government; and, second, those who elect them.

Do the women elect them? No; the men do. So it is the men and not the women that are really responsible for the unclean houses, unwholesome food, bad plumbing, danger of fire, risk of tuberculosis and other diseases, immoral influences of the street.

In fact, men are responsible for the conditions under which the children live, but we hold women responsible for the results of those conditions. If we hold women responsible for the results, must we not, in simple justice, let them have something to say as to what these conditions shall be? There is one simple way of doing this. Give them the same means that men have—let them vote.

Women are by nature and training housekeepers. Let them have a hand in the city's housekeeping, even if they introduce an occasional house cleaning.

—

WOMAN'S PLACE.

[By Mary Alden Hopkins.]

A woman keenly interested in the well-being of children approached a legislator to ask his support of a bill concerning medical examination of school children. The delicate susceptibility of the legislator was outraged by the unwomanliness of her "lobbying." He rebuked her sternly for meddling in politics, ending with the impressive words: "Madam, a good woman stays at home to take care of her children."

The woman withdrew, somewhat puzzled. The compulsory-education law took her children out of her home to put them in a schoolroom, and too exalted idealism forbade her trying to influence school policies. As she thought about the matter, she decided that the puzzling contradiction lay in limiting "home" to the cubic space included between house walls, cellar, and roof. It seemed to her that wherever her little children went she must go; that she must concern herself with all that touched her children's interests; that her "home" was really the entire city, the State, the country, perhaps the whole world.

Here are two incidents that confirmed her in her decision:

The water supply of Fairholm was contaminated by the sewage from the towns up the river. Typhoid fever floated leisurely down with the current, pausing for its handful of lives from each town. The city council said decisively that the city could not build a filter plant without increased taxation. At the words "increased taxation" the majority of the men assured their wives that the best method was to boil the water. They squelched wifely discussion by remarks like, "My dear, if you want a new filter plant you must change our State constitution on the bonded indebtedness of third-class cities."

That sounded more like politics than like woman's concerns, and the housewives set to boiling. Mrs. Homer, among others, boiled water to drink, water for bathing "above the neck," water for washing vegetables; and scalded her hands along with the dishes. She forbade the children's tasting water outside the house. Disobedient Jimmy on the baseball field drank water from a tin bucket without getting the fever; Janet sipped dubious drinks at the ice-cream emporium, likewise without harm; while little Josie, despite hours of conscientious thirst, got the fever from milk in her own blue china mug. The cow's drinking water had not been boiled. The mothers of Fairholm had not attacked the source of danger, because of their narrow definition of "home."

Mrs. Roscoe canceled her subscription to a certain magazine because it contained too many articles on tragic conditions among city working women. Said Mrs. Roscoe: "If I bring up my own five children well in my own home I can be excused from worrying about sweatshops 500 miles away." But the dinky little winter coat she bought for Bobby had sewed into its wellfinished seams some slivers of scarlet-fever germs. The manufacturer had found it cheaper to send his work out into tenements for "finishing," and no city has adequate official inspection of tenement-house sweatshops.

Story after story could be told of food contaminated before it entered the house; bread handled warm by a scrofulous baker; shiny red apples sold to school children by a vender with a loathsome disease; food on which flies had tramped; and adulterated raw material. What does it profit a cook to fight vermin in her own cellar if the State inspection of slaughterhouses is lax, the bakeshops insanitary, and street selling unsupervised?

It is a mother's business to buy warm clothing; but the amount of wool in baby's 25-cent shirt is determined by the tariff. Nursery hygiene is written in Schedule K.

More and more each year the initial processes of manufacturing food and clothes slip out of the hands of the mothers into the hands of men whose first interest is money-making. From yeast and soap to Ray's stockings and Dorothy's bonbons, articles come ready-made into the house. Yet the children's welfare still depends upon the wholesomeness of their food and the warmth of their clothes.

What is the mother to do about it? Does her interest in the food begin only as it comes up the back steps? Has she no responsibility for fire-trap buildings, uncensored moving pictures, unkempt parks, and dirty streets because these matters have moved into "politics"—are even election issues whereby candidates stand or fall?

Some mothers say that, since a new method of production has come about, mothers must learn to understand that method. They say that municipal housekeeping is not so very different from family housekeeping. They say that, after all, the Nation is simply an overgrown family, and that, just as a complete family group must have both father and mother, so the Nation needs both father care and mother care. (From Boundaries of Home, in the Congregationalist.)

—

DOROTHY DIX ON WOMAN'S BALLOT.

Women ought to vote because taxation without representation is tyranny, whether the individual who pays the taxes wears trousers or petticoats, and because all just government must rest upon the consent of the governed.

Women form one-half of the population, and as long as they have no voice in the government they are held in serfdom. It is not just that, merely by reason of sex, one-half of the people of the country should rule the other half.

It is folly to say that women are represented by the votes of the men of their family. No man is willing to sacrifice his suffrage and let his father or brother vote for him.

Women should vote because they are unlike men, because they have different aspirations, different needs, a different point of view, a different way of reaching conclusions. Feminine talents, which are invaluable everywhere else in life, should be equally useful in politics.

Women should vote because every question of politics affects the home, and particularly affects the woman in the home. Out of the woman's housekeeping allowance, which has not increased, come the increased profits of the Beef Trust and the Milk Trust and the Sugar Trust and the Canned Goods Trust. If women had a say so in making the laws, they would have long ago clipped the wings of the predatory combinations that have increased the cost of living so greatly.

Women should vote because their vote would supplement man's and, while he looked after the big things, they would look after the little things. The man might interest himself in making his country a world power, the woman voter would see that the street cleaner did his duty so that her children might not be killed by diphtheria.

Women should vote because they would look just as much at the candidate as they would at the platform upon which he stood. It is practically impossible to put the party yoke on women. This has been proved in the States in which women have suffrage. When a clean man was put upon either the Democratic or the Republican ticket and a corrupt man named on the other ticket, the woman vote invariably has flopped over to the good man. It was the women of Denver, irrespective of party, who kept Judge Lindsey in office after the party committees had turned him down, and thus enabled him to continue his great work of child saving.

Women should vote if for no other reason than because women, if they had a chance, would be just as potent a factor in politics as they are in religion. They would compel men's interest in the subject.

Everybody knows that if women ceased going to church, shut up all the missionary societies and preachers' aid societies, nine-tenths of the churches would have spider webs growing across their doors inside of a month. Practically all of the men who go to church and contribute to religious causes do so at the instigation of wife, mother, sister, or sweetheart.

The majority of good men are responsible for the rottenness of politics and for our plundered and misruled cities, because they are careless about voting, and often do not trouble to vote at all. Women would have a better civic conscience, and if they were given the ballot they

would not only vote themselves, but see that their husbands and brothers and sons did.

It is often said that if women had suffrage, it would increase the number of votes cast without affecting the result, as every woman would vote like her husband or her brother or her father. The chances are that the influence would work the other way, and men vote with their women folks.

In America the majority of girls are given a better education than boys. They go to school longer, and they read more after they are out of school than young men do. There are also millions of middle-aged women banded together in all sorts of study clubs all over the country, and it is folly to claim that these women are not as well qualified to understand any political question as their husbands are.

That all women would not vote wisely, that they would be swayed by eloquence, by the personal charm of the candidate, that even the ballot would not bring the millennium to women is freely conceded. But the majority of men are Republicans or Democrats for no better reason than that their fathers were before them, and this is still a very badly governed world. Yet no one would advocate that man's most precious right—the right of suffrage—should be taken away from him.—Dorothy Dix.

—

THE JUSTICE AND THE EXPEDIENCY OF WOMAN SUFFRAGE.

[By Maud Nathan.]

I believe in equal suffrage because it is just and because it is expedient. In a democracy, where the people are supposed to govern themselves, the ballot is the direct method of self-expression. A government that denies expression to one-half the people can not justly be termed a democracy. How can the men represent the women? A man casts one vote, representing his own views; if there are three women in his household, each with dissenting views, how can his one vote represent theirs? It is not the men alone who have built up this great Republic. All women pay taxes, either directly or indirectly. Six million women are engaged in the industry and commerce of our Nation. Legislation is enacted regulating and controlling their lives, and yet their point of view is not considered. Legislators defer to their constituents, who have the power to reelect them to office or to defeat them.

The trend of modern activities makes it expedient to enfranchise women. One by one woman's duties have been taken away from her and placed in charge of city or State officials, appointed by the mayor or governor, who are elected by the votes of men. Every department of a woman's household is regulated or controlled by officials more or less involved in politics. To procure pure milk for the babies, pure drinking water, meat from nontuberculous cattle, nonpoisonous canned foods, the housekeeper must depend upon the efficiency and incorruptibility of the various commissioners. She also depends upon the fire, police, and street-cleaning departments to protect her home.

Her home is no longer isolated; it is part of the community. Whereas formerly her interests centered in her home, they must now embrace the public schools, the public hospitals, the public parks, and playgrounds. The care of the young, the feeble, the delinquent, the sick, and the aged has always been woman's function, but now that philanthropic activities have gradually changed from private to public auspices, women find themselves excluded from their management. Women formerly received little or no education; to-day girls as well as boys are graduated from colleges with trained minds and alert to the necessity of solving economic and civic problems.

The old-fashioned housewifely tasks are no longer pursued in the home; even the clothing is purchased ready made. What, then, are the tasks which prevent a housekeeper and mother from taking an intelligent and active interest in civic and national questions, many of which touch her life very closely? Bestowing upon women the responsibility of citizenship broadens them, makes them more companionable as wives, enables them the better to teach their sons and daughters, by example as well as precept, the true meaning of patriotism, and the duties incumbent upon citizens of a democracy.

—

SUMMING UP THE CASE FOR WOMAN SUFFRAGE.

[By Justice David J. Brewer, of the United States Supreme Court.]

The real question is a practical one. How does woman suffrage work when tried? In this Nation nine States—Colorado, Utah, Wyoming, Idaho, California, Washington, Kansas, Arizona, and Oregon, and the Territory of Alaska—have granted full suffrage (in 1913 the Legislature of Illinois passed a law extending to woman all the franchise rights within the power of the legislature to bestow, including all municipal offices, some State and some county offices, and presidential electors), and in at least the first six of them it has been in existence long enough for substantial results.

One thing is true of all; there has been no organized effort to repeal the grant. Whatever may be isolated opinions, the general mass of the voters are satisfied. Indeed, few have expressed antagonistic views. If the citizens of these States find nothing objectionable in woman suffrage, a natural conclusion is that no injury has resulted. Especially is this true when the declarations of its friends in its favor are many and strong.

Doubtless some opposition may come from personal ambition defeated by the woman voters. Thus Judge Lindsey, of the juvenile court in Denver, who has attracted much attention by his good work in that court, after having been denied a renomination by each of the great political parties, came out as an independent candidate, and was elected mainly, it is said, by the votes of women who appreciated his labors and determined that the young culprits of that city should not be deprived of the benefit of his judgment and experience. It would be strange if the defeated candidates did not feel and express themselves against woman suffrage. But their complaint is really testimony to its value.

The change in the position of woman in the past 50 years must be noticed. Then the only vocations open to her were teaching and sewing. But within the last half century she has entered into active outdoor life and is no longer a necessary homebody. Not that home has lost its charms, or that it will ever cease to be the place which she most loves and where she reigns supreme, but choice or necessity has driven her into varied pursuits, many of them calling for familiarity with public affairs and executive ability.

You see them not only doing clerical work in offices, but acting as shopgirls in stores, or laborers in a factory. Many have charge of large administrations, are presidents of colleges, heads of corporations, and indeed engaging in almost every avocation of their brothers, and doing so with success. There is a host of female doctors. Women have invaded the pulpit and are pastors of churches. They are found in the court room, and not a few are efficient and successful practitioners. Indeed, it may truly be affirmed that they have fully entered into the active life of the world.

Female suffrage will come. Not fully at once, but by varying steps. Woman's broader education, her increasing familiarity with business and public affairs, will lead to it. And why not?

The chief reply is the home. God forbid that it should be jeopardized. But female suffrage will not debase the home or lessen its power and influence. On the other hand, it will introduce a refining and uplifting power into our political life.

Union in effort is the growing lesson of the time. Our first parents, guilty of a mutual sin, were, according to the allegory in Genesis, driven out of Eden, that garden which gave men all things to live with and nothing to live for. Hand in hand they went out of Eden; hand in hand they must enter the new paradise, grander and nobler than the pristine Eden, because wrought out of the thorn-growing earth by their united labors. (Condensed from article in The Ladies' World.)

Woman Suffrage Amendment.

EXTENSION OF REMARKS

OF

HON. CYRUS CLINE,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 12, 1915.

Mr. CLINE. Mr. Speaker, I have no purpose to enter into an argument of the proposition, Shall the right of elective franchise be granted to women? There are grounds for a discussion on both sides of this question. I simply desire to give my views, very briefly, stating the reasons that induced me to support the resolution. Gentlemen say that this question ought to be settled along the same lines of reasoning that were applied to the question of national prohibition. The reasons why the elective franchise should be extended to women occupy entirely different grounds than those for the support of national prohibition. There is no demand that the Federal Government shall invade the rights of a State and supplant the police powers of a State with Federal agencies for the enforcement of woman suffrage. That question is wholly eliminated from consideration in the adoption of the suffrage amendment. The preservation of the police powers of the State for the correction of local wrongs and local evils was one of the controlling elements in the vote against Federal prohibition.

The doctrine that the States ought to be left to the exercise of its police powers where the exercise of those powers are necessary for the preservation of public morals is an unanswerable argument against national prohibition. Neither is there any question of sumptuary rights involved in the adoption of this amendment. That problem was a very serious objection to Federal prohibition. There are two sufficient reasons for voting for this resolution. The State of Indiana permits and encourages women to engage in all lines of commercial, business, and professional activity. She is made personally responsible in her individual contracts and must face her creditors under her obligations with her own money. She is placed on an equal footing under the law with men, with but two inhibitions. She may not encumber or alienate her separate real estate without her husband joining, and she can not pledge her individual property as surety for the debt of another. Very many women in the district I represent are engaged in business, both in associate and corporate capacities. Their investments represent many thousands of dollars. They own stocks and bonds and run their own businesses. The Federal Government reaches its hands into their pockets and takes out what it wants for excise and corporation taxes, regardless of their approval or disapproval. If a woman has an income of more than $4,000 a year, the Federal Government takes a part of it. Her husband, who may have an income of more than $4,000, may go to the polls and vote for and against the man who levies these taxes on his property and directs the expenditure of the Government's collections. His interests are represented in the taxing power. Hers are not. He may say what his policy is by his vote. She can not have a policy, let alone expressing one. Why should not the wife or the daughter whose energies, capabilities, and interests are equal to those of the husband and father have the same rights to protect that property by legislation enacted, through which she speaks, that he has? No man or woman's property ought to be taken from them "without due process of law"; an enforced legal taking of property, without representation, without a voice either of appeal or protest, hardly can be said, morally speaking, to be a taking with due process of law.

The fundamental concept of democracy lies in representation of every individual in the affairs of the Governemnt. Taxation is the most powerful instrument that men can establish in a civil state. In that principle lies the perpetuity of every State and Federal function. It has often been said that "the

power to tax is the power to destroy." Such potential forces in the government of men ought not to be exercised except by representation of every person that may be reached by its activity. On that doctrine and in that theory we divorced ourselves from the sovereignty of Great Britain and made a Government of our own with the right to representation as its chief cornerstone. That fact is persuasive in my decision to support this amendment. Nor shall it be said that we are by the adoption of this resolution invading the rights of the State to determine the condition under which and to whom the State may extend the right of franchise. Under the seventeenth amendment to the Constitution Congress said the Federal power might, if it deemed proper, invade the State and supervise the election of United States Senators and Representatives in Congress. So it may not be said that the passage of this resolution would be an innovation—trespass upon the rights of a State to determine the control of its local elections.

I am impressed also with another fact—that women, as a class, stand for cleaner citizenship and for those things that lead to the purification of public morals and a higher plane of living for the general public. I believe they stand for those larger equities that ought to be recognized in general legislation. If that be true, they are an auxiliary force and ought to be recognized for the betterment of the social state. Furthermore, I have investigated the result of extending the franchise to women in several States where it already exists, and I find no disposition and no purpose of the voter to repeal the statute that created this equality of citizenship before the law.

The War Terror.

EXTENSION OF REMARKS
OF
HON. EDWARD W. SAUNDERS,
OF VIRGINIA,
IN THE HOUSE OF REPRESENTATIVES,

Friday, January 15, 1915.

Mr. SAUNDERS. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an article by Hon. JAMES HAY, which is printed in the Sunday Magazine of the Sunday Star, of Washington, D. C., of January 10, 1915.

The article is as follows:

THE WAR TERROR.

[By JAMES HAY, chairman of the Committee on Military Affairs, House of Representatives.]

Ever since the European war broke out the militarists—and by "militarists" I mean those who advocate a big standing army for this country and the consequent expenditure of tremendous sums of money for military purposes—have been raising with renewed energy the cry that the United States is in danger of attack and invasion by an enemy. The "war terror" has been played on and manipulated in every way possible, always with the exciting and inciting assertion, "Look what happened in Europe! If it could happen there, it will happen here. We must prepare for war. We are helpless. We have nothing with which to stop the first foe that strikes us."

As a matter of fact the United States is in less danger of conflict with a foreign power than has been the case since the war with Mexico. Who is to attack us? And with what means? When peace does come to Europe the great powers and those embroiled with them—Germany, Great Britain, France, Belgium, Russia, Austria, Servia, Portugal—will find themselves bankrupt, their population decimated, their manufactories silent, their commerce a mere remnant of what it once was, their industries destroyed or crippled, their ammunition shot away. Not one of them will be able to contemplate war. All of them will have to address themselves to the gigantic task of conquering the famine or the nakedness that comes in the wake of war. They will be practically penniless—and their credit, so much as they may have, will have to be devoted to their own salvation. In view of the exhausted condition in which they will be, the pictures the alarmists draw of hostile battleships pouring soldiers on our soil, of foreign flags flaunting over our seaport cities, and of this country being unable to stem the tide of invasion, become more than comic.

Who is to attack us when the whole of Europe is past fighting? The militarists answer at once, Japan. But Japan herself has been drawn into the present struggle, and, not yet recovered from the blows she received in her war with Russia, is receiving another setback in her commercial and financial development. Therefore, excluding all Europe and Japan, who is left to turn covetous eyes upon the United States? Not China. Not even the Celestial Empire can be worked up as a bugaboo; for she always has before her the specter of Japanese domination. There are left, then, as material out of which the war bogies may be made, such names as Brazil, Mexico, the Argentine Republic, Chile, the Republics of Central America, Spain, and a few other countries of small means. It is impossible to conceive of any danger of our having a real war with anybody. You can not fight with great powers whose soldiers have been killed. Great powers that have put their all into the biggest struggle in history can not look for new worlds to conquer. To try to recreate the war terror at this time is the very height of absurdity.

But, granting, for the sake of argument, that war may confront us, are we so helpless, so unprotected, and so unprepared as the militarists would have us believe? The report has been circulated time and time again in the newspapers and magazines by men who should have known better that we are without any reserve supplies of war material. Outside of the rifles that are in the hands of our regular troops and the Organized Militia we have in reserve to-day in our arsenals, ready for immediate use, 850,000 rifles. The regulars and the militia have 150,000, making a total of 1,000,000. For these rifles we have in reserve and ready for instant use 206,000,000 rounds of ammunition. We have, it is true, not enough field artillery guns and ammunition; but we have in use with the Army and in reserve 860 such guns, and almost enough ammunition to supply them.

In addition to this we are now making big appropriations—bigger than ever before—for the field artillery, and it is estimated by the Chief of Ordnance of the Army that if we continue these appropriations at the rate on which we had begun long before the European war started, we shall have accumulated in five years the guns and ammunition to meet any emergency. We have also on hand 1,300 quick-firing guns, and, according to plans already laid down, we shall appropriate in the immediate future the money for enough of this type of gun to be ample. Then, as the complement to all this, there are in reserve the necessary clothing, harness, camp equipment, etc., all of which can be thrown into immediate use under the excellent plans for distribution now in vogue in the War Department.

A consideration of the amount of money we spend each year on our Army shows conclusively that we can not be unprepared for war. The Committee on Military Affairs appropriated for the fiscal year that will end June 30, 1915, $101,000,000 for the maintenance of the Army. The fortification expenses carried in the fortifications act, handled by the Committee on Appropriations, were $5,218,250, and the sundry-civil act gave $643,000 for armories and arsenals and $805,428 for military posts. All this runs into a large total, so large that the economists complain of the burdensome taxation made necessary by the maintenance of any military establishment at all. To say that the use of such money in the hands of officers of the United States Army does not make us efficient in a military sense is to attack unjustifiably the ability of a set of men famous the world over for their contributions to military science.

But in order to make more evident what Congress has given to the Army and the consequent results that must have been obtained therefrom, let me call attention to the fact that during the last 10 years the appropriations for the support of the military establishments of this country have amounted to the grand total of $1,007,410,270.48, almost as much as is required to pay all the other expenses of the Government, all the salaries, all the executive machinery, all the judiciary, everything, for an entire year.

Thus, during this period, the Army appropriations have annually been from $70,000,000 to $101,000,000; the Military Academy appropriations, from $673,000 to $2,500,000 a year; for fortifications, from $4,000,000 to $9,300,000; for armories and arsenals, from $330,000 to $860,000; for military posts, from $320,000 to $4,380,000; by deficiency acts, Military Establishment, from $657,000 to $5,300,000; and for Pacific railroads transportation and the enlisted men's deposit fund, a total for the 10 years of $11,999,271.

The totals for the 10 fiscal years 1905 to 1915 have been as follows:

Permanent appropriations (including Pacific railroads transportation and enlisted men's deposit fund)	$11,999,271.00
Fortification acts, armories and arsenals, and military posts in sundry civil acts, and deficiencies for military establishment in deficiency acts	113,071,133.17
Army appropriation acts	868,536,993.31
Military Academy acts	13,802,873.00
Total	1,007,410,270.48

However, in spite of this showing of the great expense of maintaining a small army, the militarists keep up their clamor—particularly at such a time as this, and again whenever a military appropriation bill is up for consideration in the House—that this country be saddled with a great standing army. There is not the slightest need of such an establishment. But if there were some slight indication of trouble with a fully equipped great power, would the people of this country be ready to embark on a policy that would mean the permanent maintenance of a regular standing army of 500,000 men? It would cost this country, at a conservative estimate, $600,000,000 a year to go through with such an undertaking.

Under existing conditions and in the circumstances that surround us it is incredible that anything but disapproval would greet a serious proposal to put such an expense upon the public. It must be remembered that we are not obliged to have an army for offensive purposes. What we need is a force sufficient for defense. And it is the part of wisdom to have such a force with the least expense and the least burden upon the people. It must not be forgotten that we have not the compulsory military service that obtains in every country in continental Europe, and that therefore it would be an enormous if not impossible task to raise under our system an army of 500,000 men in time of peace. Even now, with an army of 85,000, the War Department spends money advertising for recruits, and the recruiting officers are hard pressed to get the men they desire. The expense of $600,000,000 a year would necessitate the immediate imposition of burdensome taxes, far in excess of anything this country has ever known except in the time of the Civil War.

For this reason alone—the heavy taxes—it would be impossible, I am convinced, to increase the Army appreciably without entirely changing our military system. If anybody doubts that the public would protest against the increased taxation, let them remember the objections that were made in person and through thousands upon thousands of telegrams and letters to Members of Congress when the war-revenue bill was in course of preparation by the Committee on Ways and Means. And every discussion of the big standing army question should take into consideration the fact that, while the Europeans pay their soldiers a few cents a day—some of them as little as 2 cents—the United States pays its men $15 a month. And again, in spite of the ridiculously low rate of pay that is the universal rule in Europe, the big powers were swamped under their army and navy debts before they went into the present conflict. A big standing army in the United States is financially impossible, just as much as it is unnecessary from the military viewpoint.

Military authorities, backed by the opinions of many persons high in civil life, insist that we should be provided with an adequate reserve of men, so that we may in any time of trouble have men who will be prepared to enter the Army fully trained for war. In this I concur; but in a country where military service is not compulsory the method of providing a reserve is an extremely complex problem, one that has not yet been satisfactorily solved by anybody. It is proposed, among other things, to have short enlistments, and thus turn out each year a large number of men who will be trained soldiers. Let us examine this for a moment and see where it will lead, and whether any good will come out of it, either for the Army or for the country.

After giving this question of a reserve for the Army the most careful thought, after having heard the opinions of many officers of our Army—and those, too, best qualified to give opinions on a matter of this sort—I am convinced that, under our system of military enlistment, it is impracticable to accumulate, with either a long-term or a short-term enlistment period, a dependable reserve force of fairly well trained men. To use our Army as a training school would destroy the Army as such and fail utterly to create any reserve that could be depended upon as a large body of troops.

The proposal of the General Staff of the Army has been that the men should enlist for two years and then spend five years in the reserve. The five years in the reserve is impossible in this country, because we have no compulsory military service and because it is intended by the authors of the plan not to pay the reserve men. And it is an open-and-shut proposition that men can not be expected to enter the reserve voluntarily, without pay, when the regulations would require them to submit to such inconveniences as applying to the department for leave to go from one State to another or into a foreign country, and when they would be compelled to attend maneuvers, often at distant points, at least twice a year.

Much has been said about other systems, notably that of the Swiss; but Switzerland has compulsory military service, and it is useless to attempt to fashion ourselves upon a system that can not be introduced here—a system that is repulsive to the genius and traditions of our people. The evils of the short enlistment term in an army under the voluntary system are manifold, not the least of them being that if enlistment be for one or even two years in a short time our Army would be a mob of recruits and fail us at any time that we might need a real army.

Moreover, with our present system of four-year enlistments it is hard enough to keep the Army up to the size desired, about 85,000 men, and it is easy to see how much harder it would be to re-create practically a whole army every year, or to get enough recruits to take the places made vacant by the expiration of enlistments every 12 months. The short enlistment, according to the overwhelming sentiment in Congress, is impossible and vicious and it would not create an active, organized reserve, such as Army officers and other prominent men desire to have.

But there is a reserve force in the United States; that is, a body of men who have had military training and could be utilized in time of emergency. In the first place, there will be after 1916 at least 15,000 men discharged from the Army each year after having served their four-year terms of enlistment, and approximately that number are being discharged each year now after the expiration of their three-year terms (the term was lengthened from three years to four in 1912). This means that every year there are being returned into the body of civilians 15,000 men who have learned military tactics and seen military training; in other words, expert soldiers. In the Organized Militia there are about 120,000 men, and at a conservative estimate it can be stated that 20,000 of them, after serving their full term of enlistment, are discharged each year. This provides an annual total of 35,000 men who return to civilian life each year after having been trained as soldiers in the Regular Army and the State militia.

But there is still another source whence come young men who have had good military training. I refer to the military schools and colleges. These—without reference to the high schools in which military training is a feature—turn out each year at least 26,000 who know about fighting, drilling, and marching. They bring the annual supply of trained soldiers in this country up to 61,000. The product of the military school or college does not get so thorough a training, of course, as is given at the West Point Academy, but it is thorough enough to make soldiers out of them in a very short time.

After all, therefore, we are not so poor in actual military reserves as many would have us believe. It can be safely asserted that the United States contains more men ready to go to war with military training behind them than is the case in any other country where compulsory military training does not obtain.

It has been asserted that, while we may have the men, we could not find the requisite number of officers in case of a war emergency. Right here it might be well to point out that when the Civil War started Norwich University furnished in its graduates many drill masters and commanding officers for the Northern Army, just as the Virginia Military Institute performed the same function for the Southern Army. An inspection of the records in the War Department will show how these schools contributed to the brilliance and effectiveness of their respective armies. This I mention as an example of the real efficiency of the numerous military colleges scattered throughout the country.

But even if enough officers could not be obtained from such sources, there need not be any cause for worry on the part of the militarists. To forestall any possibility of a shortage in officers at any time, K. D. McKellar, of Tennessee, a member of the House Committee on Military Affairs, has introduced a bill which is expected to have the sanction of Congress and be voted into law. It provides for the establishment of a military training school in each State, each school to be financed two-thirds by the Federal Government and one-third by the State government. Each will have as its commandant an officer of the United States Army. When all these State military training schools are in full operation, it is calculated, they will turn out every year 5,000 young men trained in all branches of military service. These graduates will not have, perhaps, the perfect training of West Point, but they will be amply instructed for the duty of commanding troops whenever they are needed. They will be qualified in every particular for the successful discharge of the duties of company officers.

The figures I have given, it seems to me, are sufficient to convince any impartial student that this country is on a safe and sane military basis, that we do not depend in time of emergency on the Regular Army of 85,000 men, that we have what is in

reality a tremendous body of men trained to go into war as privates or officers, and that all this is true in spite of the fact that the public is not subjected to that burdensome taxation which has impoverished the masses of Europe for the sake of supporting their war machines.

At the outset of this article I mentioned the fact that the present bloodshed and consequent impoverishment of Europe were enough to shear the "war terror" of all the picturesque "dangers" the militarists have given it. There is one other thing along this same line—the fact that geographically the United States is practically impregnable. Its very vastness is enough to assure the impossibility of conquest by a hostile nation. We are in all important respects a self-sufficient Nation. We can produce all that we need to eat, all that we need to wear. We can manufacture our own ammunition and weapons. We are wealthier than any other part of the world. And it is a long march from New York Harbor to San Francisco Bay, not to mention the distance from Chicago to New Orleans.

It would be interesting to hear the estimate made by the militarists of just how many men a hostile country would have to throw into our midst for the purpose of beating us and conquering us. I personally have never seen or heard such an estimate. I doubt if anybody has been able to imagine it, much less to figure it out. Also, before any men could get here, they would have to traverse thousands of miles of water, and would have to overcome our fleets, escape our submarines, and dodge the mines that would be used to protect all our harbors.

The lessons of the European war are being studied and learned by our experts. The efficiency of submarines, the deadly effect of carefully laid mines, the comparison of the battleship with the torpedo—all these things are now being mulled over every day in the Navy Department. We are definitely embarked on the policy of maintaining a great and powerful Navy. Last year Congress appropriated for more submarines than were requested by the Secretary of the Navy. Unquestionably there will be another generous appropriation for a similar purpose in this session. Isolated as we are, safe in our vastness, protected by a great Navy, and possessed of an Army sufficient for any emergency that may arise, we may disregard the lamentations and predictions of the militarists.

The mention of submarines reminds us that, as the Navy is being amply provided with this branch of her fighting apparatus, the Army is now forging to the front among the powers in the development of aviation as a military science. Last July the House Committee on Military Affairs reported to the House a bill, which became a law, creating the aviation squadron. The committee also reported a bill, which was enacted into law, appropriating $250,000 for the purchase of the best and newest type aeroplanes. I refer to this because it is an example of the fact that this country does not neglect anything that can be done to make herself efficient in a military sense, so long as this does not bring in its wake a burden of taxation that simply would not be tolerated by the people.

So much has been said by the alarmists regarding our alleged lack of reserve material for fighting that I secured from the War Department and reproduce here a table showing exactly what we have now in reserve, what is about to be put into reserve, and what is needed to complete the reserve. This table is the first complete statement I have seen of the situation, and is as follows:

Memorandum of the state of preparation in the principal items of fighting material of the United States Army for entering upon a war that would require the equipment of an army of about 460,000 mobile troops and 50,000 Coast Artillery troops.

	On hand.	Additional provided for by appropriation.	Total provided for.	Total in project.	Required to complete project.
Rifles	1,037,000	36,749	1,073,749	600,000	.....
Pistols and revolvers	145,579	31,271	176,850	172,378	97,020
Sabers	68,763	5,000	73,763	41,006	11,006
Ball cartridges, caliber .30, models of 1906 and 1898	196,000,000	45,000,000	241,000,000	196,000,000	.....
Pistol and revolver cartridges	31,196,227	11,500,000	42,696,227	31,942,600	.....
Personal equipments (sets)	476,161	27,839	504,000	504,000	.....
Horse equipments (sets)	55,122	3,200	58,322	94,349	39,227
Machine guns	1,236	66	1,302	1,633	331
Field batteries complete, 4 guns each	169	46	215	325	110
Ammunition trains	.....	3	3	63	60
Harness, wheel (sets)	2,808	527	3,335	7,500	4,165
Harness, lead (sets)	5,412	1,071	6,483	16,000	9,517
Ammunition for field artillery, rounds	177,800	402,200	580,000	1,137,000	557,000

In my discussion of the Army here there has been nothing of a political or partisan nature, just as in Congress there could not be anything materially political in the handling of the appropriations for the Army. Through Republican and Democratic administrations the land military forces have been treated in response to the spirit of the American people. By that I mean that both Democrats and Republicans have responded to the underlying and cardinal fact that the spirit of this country is unalterably opposed to a big standing Army. Our people are against it. They would not favor it. They would recognize the folly of paying out hundreds of millions of dollars every year for such a purpose. They see too clearly that there is no need for it; and, too, there is the belief in the mind of almost every American that when the time comes he can take care of any military emergency that may confront him. He has done it in the past. He can see no reason why he can not do it in the future.

My service on the House Committee on Military Affairs has covered 18 consecutive years, and in all that time there has been nobody at its head who did not realize the utter impossibility, the absolute absurdity, of seriously proposing to saddle on the country the unnecessary burden of a standing army comparable to the armies of continental Europe. Each year the militarists clamor for tremendous appropriations and vast bodies of troops, and each year, with unfailing regularity, the congressional representatives of the people ignore these claims. The action of Congress on a matter of this sort must be taken as a direct reflection of popular opinion throughout the country. If the people wanted a big standing army, they would have had it long ago. Congress would have yielded to their importunities if there had been any importunities to hear.

And the reason they do not want an immense military establishment is because they refuse to regard with serious eyes the "war terror" that is held up to their gaze by the militarists every year.

Woman Suffrage.

REMARKS
OF
HON. S. KIRKPATRICK,
OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 12, 1915,

On the joint resolution (H. J. Res. 1) proposing an amendment to the Constitution of the United States extending the right of suffrage to women.

Mr. KIRKPATRICK. Mr. Speaker, I am frank in saying to this House and to the world that I am not a full-fledged suffragist. I am also frank in saying that I am on horseback, going in that direction, and it is an adage as old as the recollection of man that it does not pay to stop in the middle of a stream to trade horses.

The right of petition was denied to the Colonies, but when the representatives of a people like those whom we have with us on this occasion rise to the dignity of seeking an audience with this the greatest legislative body on earth, then, in my judgment, it is high time to take notice. Hence I am going to vote for submission.

Go to the polling places of this country and you will pass billingsgate on the outside and hell's gate in the interior. Some may say this would be an ordeal for woman, but her presence will clean these Augean stables as none other can or will. Even though the road to success be paved with obstacles, those who bear the cross will in the end be crowned. It was a woman last at the cross and first at the sepulcher.

The result of the vote in this House may not be all that is desired on the part of these women, but the faces of Jane Addams and her coworkers will not be turned aside by reason of temporary defeat.

These are the closing scenes of the first real battle, and the friends of good government and clean politics will remain on the firing line, and no effort of mine will ever menace their pathway to ultimate success.

Some have said that women clothed with the ballot would not inquire as to real live, practical issues. Let me say, that while in Kansas during the recent campaign I listened to a legion of inquiries from women along the following lines relative to the fitness and qualifications of candidates; that is, "Is he honest?" "Does he drink?" "Does he provide for those dependent upon him for support?" "Does he gamble?" "Does he pay his

honest debts?" "Does he use profane language?" and so forth. Mark ye well, all ye who have to run a gantlet like this. I have passed through 26 biennial political campaigns and without a single exception all parties have undertaken to pave their way to success by advertising their meetings in burning capitals, that is, "The ladies are specially invited," and so forth. Yes, Mr. Speaker, men are willing to use women as mops attached to the end of a stick or as "shoofly's" to secure their election. In this I have no false pride or illusions, but my statements are borne out by the facts in the case, and I trust that none of the germs of hypocrisy will be used to place me in a false attitude.

In this, as well as in all other political questions, no one has to turn the searchlight of investigation on me. I do not harbor any resentment against those who differ with me, but I am willing to accord to the patriotic, intelligent women of America a hearing in the court of last resort.

Report of John L. McLaurin, State Warehouse Commissioner, to the General Assembly of South Carolina.

EXTENSION OF REMARKS

OF

HON. ROBERT L. HENRY,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 15, 1915.

Mr. HENRY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a report of John L. McLaurin, State warehouse commissioner, to the General Assembly of South Carolina.

The report is as follows:

REPORT OF JOHN L. MCLAURIN, STATE WAREHOUSE COMMISSIONER, TO THE GENERAL ASSEMBLY OF SOUTH CAROLINA, JANUARY, 1915.

Gentlemen of the General Assembly:

Under an act passed at the extra session of the general assembly last year, and approved October 30, 1914, the sum of $15,000 was appropriated for the purpose of establishing and putting into operation what is commonly known as the State warehouse system. That system has been organized and is now in operation, and the expenditures up to this time are less than $2,300, including all bills payable.

This report covers the period of operation from the middle of November, as we could not get our blank forms before that date.

Beginning so late in the season, in the face of unprecedented financial conditions, a small appropriation, and an amendment forced on the bill in the House forbidding payment of rent for warehouses until after all of the operating expenses were paid in full, I only attempted to organize the system and perfect the machinery, depending upon this general assembly to enlarge the powers and provide the means for its development.

We now have 28 warehouses, with an aggregate capacity of 45,000 bales.

I will file a supplemental report as to the amount of cotton on hand, rates of insurance, and every item of financial transactions.

PLAN OF ORGANIZATION.

I did not have funds to pay insurance in advance and operating expenses, as the standard warehouses connected with a bank have, and I devised a form of contract taking over warehouses at a nominal rental of $1 per year, allowing the lessor to fix the rate of storage and pay all operating expenses, including 3 cents per bale per month to the State, which I calculated, if 50,000 bales were stored for 10 months, would pay the expenses of the system.

This does not, however, carry out a proper conception of a State warehouse system, which should provide as follows:

First. Cheap storage, with a low interest rate, so as to encourage the gradual marketing of the crop.

Second. Reducing the cost of marketing by bringing farmer and spinner into direct contact, eliminating middlemen's profits, to the advantage of producer and manufacturer.

Third. Transforming cotton into a negotiable security that will pass current in the money markets of the world and afford an acceptable collateral for use under the agricultural section of the new currency law.

The last named has been accomplished, but I have not been able, under the terms of the present law, with the $15,000 appropriation, to build warehouses, nor have I been able to equip them with proper fire protection and mechanical appliances for handling cotton so as to give the cheapest storage obtainable. As I have stated, I have only been able to lease them at a nominal rental.

I desire also to call your attention to the fact that there is no authority provided under the warehouse act for me to aid persons with cotton on storage to negotiate loans, nor is there any authority to make sales of cotton to either domestic or foreign spinners.

WHAT CAN BE DONE.

After careful investigation I am prepared to say that the State of South Carolina can build warehouses and store cotton at a rate of 10 cents per bale per month and put by a sufficient amount in a sinking fund to pay for the property in a period of 20 years.

With a compress, and with authority to act, I could sell cotton direct from such a warehouse to the foreign mills, saving the charges of from six to eight middlemen in each case.

A small commission on such loans or sales would soon pay for warehouses and provide funds after that for constantly adding to the number.

MIDDLEMEN'S PROFITS.

If the State had one plant, as a beginning, located in Columbia, with a compress, just at this time, the sale of a single cargo of cotton in Europe at 25 cents a pound, which is being paid there, would have a tremendous moral effect in advancing the price of cotton. The enormous profits which have been made in buying cotton at 6 cents and shipping it to Europe is well illustrated by a statement made to me in writing by a well-known citizen and former newspaper writer of this State, that certain brokers in Savannah made up a pool and floated bonds for a half million dollars to finance the purchase of several vessels in which cargoes of cotton were shipped to Germany. This cotton was sold there, these gentlemen stated to my informant, at a net profit of 14 cents a pound.

If any argument were needed, this mere statement should be enough. Here is one man producing a bale of cotton at a loss of $20; here is another making $70 clear for finding a market. What excuse has a Government for existence which can not correct such gross inequalities in the distribution of wealth?

In time of peace I have seen the estimate of expense from farm to mill placed at from $7 to $10 per bale. A saving of $5 per bale would amount to $5,000,000 annually. When we consider that the price of cotton is fixed abroad, and that which is sold abroad makes the price of that entering into domestic consumption, it is easy to see that an increased price in the foreign market would raise the price of every pound sold to our own mills.

CREDITS LOCKED UP.

No man can accurately predict the length of this war, nor just what the consumption of cotton will be, but this is a 16,000,000-bale crop, and it is evident that a large surplus must be carried over into 1916. The borrowing power of this surplus cotton will be fixed by the price which we are able to force for the cotton which enters into consumption. Never in the world has there been a finer spirit shown than by the South in this great crisis. There has been the utmost forbearance on the part of the merchants and banks, with the most perfect willingness on the part of the farmer to warehouse his cotton and give the receipts to his creditor to enable him to finance himself.

This great holding movement I attribute in large measure to the agitation in South Carolina and Texas for State warehouse measures, and the extra sessions of their legislatures. This has been the potent factor in this splendid holding movement, and the present advance of 2½ cents from the low level is due largely to these two States. It has saved millions of dollars to the South, but it has nearly reached its limit, and something further must be done.

Seven hundred and fifty thousand bales of cotton, with all its potential credits locked up, is paralyzing the industries of this State. With the same conditions existing all over the South, it means that the purchasing power of our section is curtailed, and business all over the country stagnates.

This condition will continue until these credits are unlocked by a sale of cotton.

Other factors are now coming in to sustain the price of cotton, and if a foreign selling movement can be started, while there may be recessions in prices, we are over the worst. Foreign spinners are buying futures in New Orleans and New York at constantly advancing prices. The short sellers know that spots will be demanded, and that they are in for a loss if the holding movement continues, and it can only be successfully continued by taking advantage of the high price offered abroad.

The marketing of cotton is of world-wide import, because when the gold standard was finally adopted cotton became the corner stone of international finance. There can be no solid improvement in business until our cotton goes abroad and starts the tide of gold to these shores. It is through cotton that the United States controls the balance of world trade, and the great aim of the South should be not only to export its cotton from southern ports but that the gold which it yearly brings in should be deposited in southern banks instead of going to New York to maintain a supremacy which rightfully belongs to the section which produces the only distinctively gold crop.

REDUCTION OF ACREAGE.

Of course any student of the economic situation realizes that the future price of cotton is going to depend upon the acreage and production of 1915. One of the reasons why cotton is now advancing, under very difficult conditions, is that astute observers gather from the wheat acreage figures, recently made public by the Agricultural Department, that acreage reduction is becoming a certainty. If the June acreage report on cotton confirms the small-grain figures, there will certainly be a sharp advance in prices.

Last year the cotton States had 6,253,000 acres of winter wheat. This year there is about 15,000,000 acres. The increase in South Carolina is, I regret to say, only 20 per cent, while Alabama shows an increase of 185 per cent, Mississippi 125 per cent, Georgia 118 per cent, and North Carolina 75 per cent. Add to this the enormous increase in oats and rye, and the knowledge of the fact that the *increase* is taken from the lands heretofore in cotton, and it would appear that there must be a reduction now of about 40 per cent in the cotton acreage.

It must also be remembered that fertilizers will not be used as heretofore.

If intelligent restraint is exercised as to acreage, and we can find an outlet abroad, the price of cotton will within one year compensate us for the sacrifice which good citizens are now making to prevent the confiscation of our property, not through the lack of money, but the destruction of credits.

THE TRUST PRINCIPLE.

The principle upon which rests the prosperity of this country, as a whole, is cooperation. The power concentrated in the hands of a few to fix prices makes the so-called trust. Every article entering into consumption, except raw cotton, has its price fixed in this way. This price should never be so high as to check the consumption nor so low as not to yield a fair profit to the producer.

With all the other business interests of the country conducted upon this basis, we have reached the point where it is impossible to continue to raise cotton at a profit unless the producers control the surplus and, through it, fix a minimum price for the commodity.

Voluntary organizations among 20,000,000 people scattered from the Atlantic to the Rio Grande will always fail. The warehouse systems of South Carolina, Louisiana, and Texas are attempts, through our State governments, to secure that cooperation which, in the nature of the case, is otherwise impossible.

The civilization of South Carolina and the well-being, directly or indirectly, of every citizen depends upon our cotton crop. Therefore

the conservation of its profits demands and should have our best thought and wisest statesmanship.

It costs, including interest on the investment, 10 cents a pound to produce cotton. If more is placed on the market during the fall than can be absorbed at a profit the price must fall to a point under the cost of production to induce purchase on the investment basis.

To secure its full intrinsic value we must, to some extent, not only control production, but provide the means to withhold the surplus from the channels of trade, so as at all times to maintain the equilibrium between supply and demand.

If the Southern States last August had each had warehouse systems in operation, it would have been easy to have secured concert of action through the heads of the respective systems, and, under the ruling of the Secretary of the Treasury, a comprehensive use of State warehouse receipts would have transformed our cotton into a negotiable security which would have prevented the terrible depression of the past three months. We could have established 12 cents a pound as a minimum price for cotton, and 75 per cent of that value would have been the loan basis. This would have established prices, and the domestic mills would have taken cotton at that price, and knowing that it could go no lower, would have been spared the heavy expense they are now undergoing in making hedge sales and continuing a form of speculation which has ruined many of the ablest mill men in the South.

In finance, England is the model for all the nations. Here is what she did for her Indian and Egyptian cotton planters: She passed a decree forbidding more than 40 per cent of the lands heretofore in cotton to be again planted in cotton. *In addition, she has been lending money direct to the cotton planters to purchase their cotton from them at a stated price, and they have fared far better than the people in this country.*

I think that the following extract from the London Statist of November 28, 1914, will be of interest to you in this connection:

"At the beginning of this month the Egyptian Government announced that it was enabled, owing to the action of the British Government, not only to provide for advances being made to cultivators on their cotton crops, but also to purchase from the fellaheen whose crops are too small to allow them to obtain an advance on them, and who might otherwise be compelled to sell their cotton at prices much below the ruling rates. Therefore, it was prepared to buy from small cultivators in lots not exceeding 100 cantars, and to pay at the prices fixed by the Government's agents at various places. The prices so fixed are low. We learn that the mere fact that the Government has fixed a minimum price has gone far toward allaying the apprehensions that have been excited, for the fellaheen are not coming forward to sell in large numbers at the prices fixed. In other words, knowing that the Government will buy at a fixed rate, they are waiting in the hope that the trade may bid somewhat higher. It is earnestly to be wished that it may do so. In any event, the alarm which had seized the fellaheen that they might be obliged to sell at ruinous rates has greatly abated, and there is a much better feeling amongst them. Furthermore, the trade, seeing that the price can not fall below what has been fixed by the Government, is likely to bid somewhat higher; while the readiness of the Government to lend upon cotton tends greatly to restore confidence."

Germany did much the same thing for the protection of beet sugar. This is the big-money crop of Germany. When the war began Germany immediately bought the beet sugar and provided ships from Holland and Norway. England had been in the habit of buying this sugar and was obliged to have it. She winked at this action on the part of Germany, until England got her supply, and then she declared an embargo. It is not far from the truth to say that Germany largely financed her war by selling her sugar crop to England, and England appears to be trying to finance her war through the cotton crop of the South.

If cotton were a monopoly in Germany, England, or France, who doubts that they would promptly nationalize it and hold the balance of the world in tribute by its power?

No other country has such a monopoly as the South has in her cotton.

Germany has pursued the policy to which I have called attention with her potash. England has pursued this policy with her gold, by becoming the world's banker. Sweden and Norway do the same thing with iron and steel.

No people have such an opportunity as we have, through our State governments, to establish a credit system of our own, entirely independent of outside aid. All that we have to do is to make our own ports cotton-distributing centers and our own banks the depositories for the gold for which our cotton sells, instead of being, as we now are, the mere agents and vassals of New York and London.

A STEP FORWARD.

The present warehouse act is but a small beginning in so great a work, but it is a distinct step forward.

I realize that the fiscal condition of this State precludes the possibility of a large appropriation, but there are two pieces of property in the city of Columbia belonging to the State, or virtually belonging to the State, which can be acquired and made to answer the purpose of the warehouse commission at comparatively small cost.

SUGGESTIONS.

The State has an equity in the State dispensary property, on Gervais Street, of about $100,000. The State owns the 8 acres on which is situated the Richland Distillery. No one is using these buildings and they are rotting down. The purchasers of the State dispensary property are willing to let the State have it back. It has a three-story brick warehouse, with a sprinkler system, capable of storing 7,500 bales of cotton.

Why not utilize the money invested in one property to develop the other?

There would be nothing to buy, then, except a compress, and if the sinking fund were authorized to borrow money it could be repaid from the profits which would accrue. The commission, on placing a few cargoes of cotton in Germany at present prices, would pay for the entire plant. There is absolutely no risk, because the property purchased and its improvements would stand for itself and be self-sustaining.

I recommend to your earnest consideration that the sinking-fund commission be authorized to use the proceeds arising from the sale of the old State dispensary building to provide a compress and suitable warehouse facilities on the property known as the Richland Distillery, so as to enable the State warehouse commissioner to build modern warehouses, with every mechanical appliance, to give cheap storage.

AMENDMENTS SUGGESTED.

I suggest that the law creating the warehouse system be amended in the following particulars:

1. That the State warehouse commissioner be authorized to make sales, when requested by parties having cotton on storage, to either foreign or domestic spinners, and that you provide the sum of $10,000 to be used in the inauguration of this feature.

2. That the provisions in the act as to certain counties being permitted to build county warehouses to operate under State management, so as to get the advantage of the State receipts, be extended to all the counties of the State, and thus localize the system in the various counties, and thereby cheapen the cost of operation without weakening in any way the strength of the State warehouse system.

Cotton from these county warehouses could be shipped on milling rates, via the compress, and go at one rate of freight from the farm to a mill in Europe or elsewhere.

INSURANCE RATES.

One of the most expensive features connected with the operation of the State warehouse act is the heavy rate of insurance. If there is any way in which it can be done through the sinking-fund commission, so as to get a cheaper rate of insurance, I would be glad to avail myself of the opportunity.

I think, however, if I am given the funds to put in the double-sprinkler system, to which I have called your attention, that, under the rates now offered, I could get insurance at 10 cents per hundred instead of the present rate, which averages about 2.25 per hundred dollars.

I will include in my supplementary report, as directed by the act, a list of the warehouses, locations, names of managers, amount of cotton on storage, and such other details as may be necessary for your full information.

I have the honor to be, your obedient servant,

JNO. L. McLAURIN,
State Warehouse Commissioner.

So, Mr. Speaker, from this strong and illuminating report we find what England, Germany, and France have done and are willing to do for the tillers of the soil while the cruel effects of the war is working havoc with their people. Well might America emulate their example and lift up and do even-handed justice to her cotton farmers.

National Woman Suffrage.

EXTENSION OF REMARKS

OF

HON. GEORGE J. KINDEL,

OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 12, 1915,

On House joint resolution 1, proposing an amendment to the Constitution of the United States extending the right of suffrage to women.

Mr. KINDEL. Mr. Speaker, it was not my intention to make a speech on the national woman-suffrage amendment; but since it has been charged on the floor of the House by the gentleman from Alabama [Mr. HEFLIN] that those representing suffrage States would not dare to vote according to their honest convictions, if opposed to the present amendment, I could not refrain from availing myself of the privilege of extended remarks, and thus explain, in a measure, why I, from a suffrage State, voted against the proposition of national woman suffrage now before the House.

Mr. Speaker, notwithstanding I firmly believe in women sharing in the affairs of government, and that they should enjoy every privilege vouchsafed to man, I can not and do not believe that the people of Colorado should dictate to the people of other States that they must adopt the same rules of enfranchisement for their citizens that prevail in Colorado.

In the South the rank and file of women are not educated up to the average of the standard of the women of my section. The southerners know this; therefore their vigorous protest to outsiders to dictate what they term as being strictly local affairs.

In my opinion the States that desire woman enfranchisement should do as Colorado and the other 10 States have done, namely, hold an election and vote for its adoption independent of any other State or of the Nation. When that question was up in my State, I voted against it, because I, of German origin, believed women to be above politics, and that we should regard them as our queens and treat them accordingly, as the beloved queens of our most sacred edifice—the home. Since the women have had the franchise in my State I had hoped that they would make a much better job of government than we men folks have done. That there are some of the most estimable, intelligent, and patriotic women engaged in politics it would be folly to deny.

The most prevalent trouble I find is the indifference and the apathy of most good women to study political questions, and then their neglect or refusal to vote, this being generally emphasized in my own family and kinsfolk.

Mr. Speaker, in my maiden speech in the House I pointed out that the women of Wyoming, who have been voting for 45 years, were not feasting on prunes, because prunes were too high priced, for the reason of the discriminative freight rate

from California to Wyoming points, which is $1.63 per hundred, while if they are shipped on farther to New York, 2,000 miles away, and where women do not vote, they are but $1.10 per hundred. It is to be noted that the women of Wyoming did not heed my suggestion, for they reelected the estimable gentleman, Mr. MONDELL, at the recent election, which would seem that they prefer prunes at $1.63 as against $1.10 for twice the distance, which is only one of many discriminatory rates they pay for the privilege of voting for their representatives in the two Houses of Congress. The women seem to forget, though they have been told repeatedly, that everything they put in their mouths and on their backs is subject to transportation tax, which I shall here demonstrate as always excessive in my section.

The women of Colorado, who have had the man-given right of voting since 1903, scarcely have done any better than their sisters in Wyoming. In my colleague, Mr. TAYLOR'S district, the same discriminatory rates as to prunes and many other commodities prevail, notwithstanding that we in Colorado have women State senators and legislators. It is to be observed that our commercial condition has grown worse and will continue to do so if transportation discrimination is allowed to go on unchecked.

I shall here mention a few facts, and in so doing my purpose is twofold: First, to point out again to the good womenfolk of my section that here was and is a splendid field for real reform; and, second, to leave a legacy to my successor and colleagues who, either in ignorance or indifference, complacently subject our State to these injustices.

In Colorado we pay as much as 40 mills a ton per mile rate on coal, in spite of the fact that it is a down-hill haul, like a toboggan slide. Can you beat this for coal rates in any anti-suffrage State?

Our sugar rate from California to Colorada is 60 cents per 100 pounds, while if it is destined to Missouri River points—antisuffrage States, 600 miles longer distance—then it is only 50 cents per 100 pounds.

I present here a table of commodity rates, being carload and less-than-carload rates on boots and shoes, both leather and rubber, from Boston and New York to various western commercial centers. I present these rates only as an example of the hundreds of commodity rates in effect to the points named.

Rates per 100 pounds on boots and shoes.

BOSTON TO ST. LOUIS.

	Leather.		Rubber.	
	Less than carload.	Carload.	Less than carload.	Carload.
All rail	$0.88	$0.88	$0.88	$0.76
Sea and rail	.83	.83	.83	.72
BOSTON TO OMAHA.				
All rail	$1.43	$1.43	$1.43	$1.31
Sea and rail	1.38	1.38	1.38	1.27
BOSTON TO COLORADO COMMON POINTS.				
All rail	$2.50	$2.50	$2.50	$2.50
Sea and rail	2.34	2.34	2.34	2.22
BOSTON TO WESTERN COLORADO POINTS.				
All rail	$3.15	$3.15	$3.15	$2.40
Sea and rail	2.99	2.99	2.99	2.03
BOSTON TO SAN FRANCISCO.				
All rail	$2.75	$2.75	$2.00	$1.50

Who can reconcile the following rates? Rates on beer and cotton piece goods in carloads from New York to western Colorado points and New York to Pacific coast points, 1,000 miles greater distance, but less rate.

From New York, N. Y. to—	Beer in wood, carload.	Cotton piece goods, carload.
Mississippi River points	$0.35	$0.55
Western Colorado points (Mr. TAYLOR'S district)	1.05	2.11
Pacific coast points	1.00	1.10

In southern Colorado, where my colleague [Mr. KEATING] hails from, the following discriminations prevail:

The first-class rate from New York via Galveston to Trinidad, Colo., is $2.34, while from New York via Galveston to Omaha—in an antisuffrage State—it is but $1.38. Yet Omaha, which is 200 miles farther in distance, is given a 96-cent less rate per hundred on first-class goods. Expressed in percentage, to Trinidad it is 70 per cent higher rate than it is to Omaha.

In 1895 the rate on rails and all products of the Colorado Fuel & Iron Co., located in Mr. KEATING'S district, was $1.60 per hundred. By the suit in court, before the Interstate Commerce Commission, we reduced the rate to 45 cents per hundred from Pueblo to Pacific coast points. This matter being out of woman's sphere, I venture that not one in a thousand women gave it a thought, much less any consideration, whatever.

When the express rates were attacked by me about eight years ago in two trials, and reduced from $8.50 to $5.70 per hundred from New York to all Colorado common points, exceptionally few women took any notice of the issue; likewise, when my case, known as No. 951, reduced the rate from Chicago to Colorado points on first-class goods from $2.05 to $1.80 per hundred. According to the sworn statement of the railroad officials, this has saved our section a million and a half dollars a year, and yet only a few women of the type of the late Sarah Platt Decker and Mrs. Helen Grenfell, who did such heroic work in the recent coal strike, also Mrs. Eliza Lentz, who is a member of the Suffrage Association of Colorado, have commented on the importance of my efforts or expressed their approbation.

On my vote on the suffrage question the last-named lady, Mrs. Lentz, sent me a message, saying:

> I was glad you voted nay on woman suffrage for all the States. You and President Wilson were wise. Let each State decide for itself, as Colorado did. * * * I am a member of the Suffrage Association of Colorado, but I stand by our noble and wise President always.
>
> (Signed) ELIZA LENTZ.

There is as much occasion to battle for fair transportation rates to-day as there ever was. Are not our passenger rates grossly out of line East and West? Are not our Pullman rates nearly a hundred per cent higher for the first half than the second half of the distance to Chicago? Are not our Denver freight rates 100 per cent higher per ton per mile than any city of its size in the Union? What more than freight rates have militated against our industries, and which lost us four soap works, two woolen mills, a million-dollar paper mill, a million-dollar cotton mill, tin-can factory, stove works, match factory, and so forth?

Are not our express rates 130 per cent higher west of Colorado common points than they are east of the Mississippi River points, and are not our parcel-post rates on edibles between New York and Colorado common points over 200 per cent higher than the express rates? Are not the parcel-post book rates from New England States to Colorado points 100 per cent higher than from same point via Colorado to China (12 cents as against 6 cents)?

For several years past the merchants of our country have agitated the reduction of letter postage from 2 cents to 1 cent. Surprising as it may seem, I have not heard of one woman's club joining in this movement. If our Post Office were run on proper lines, some of the big publishers, like that of the Saturday Evening Post and the Ladies' Home Journal, would not enjoy 1 cent a pound periodical rate, which gives these two journals and many others an advantage of 7 cents per pound over the general public rate, which amounts to an advantage for the Curtis Publishing Co. on these two journals alone of $3,624,232.29 per year, which is only a small part of the graft of $75,000,000 per year on second-class mail matter. Does anyone challenge this statement?

When the women voted for Representatives in the last election, did they for a moment consider the advisability of selecting champions that were pledged to right this gross injustice, which robs the millions to make a few publishing houses rich? Here is food for thought. You will observe that my statements of facts and figures are never questioned. I have always believed that politics is business and that fair transportation rates are one of the economics; i. e., that legislative bodies are intended to regulate and control. Are they doing it? If not, why do not the women voters get busy? Has anybody heard any protests on the part of enfranchised women on this question?

In conclusion I quote a paragraph from the remarks of the gentleman from North Carolina [Mr. WEBB], as published in the RECORD under date of January 12, as follows:

> The suffragists have always claimed that the reason why none of the woman-suffrage States had been voted "dry" was because there were so many more men than women in those States. Two years ago Colorado voted "wet" by about 40,000; this year by 10,000 "dry." As

the same proportion of men and women still exist, it must have been the men and not the women who caused that State and the other three to join the dry column. The women of Colorado can not claim the credit. The proportion of women to men in Colorado is much greater than in the three other States that voted "dry." At any rate, if they voted "wet" two years ago and "dry" now, it was not the women's vote that made the State "dry," but the general public sentiment which was worked up for prohibition, the same as the sentiment for prohibition in Virginia was worked up, where men alone vote.

Here I am reminded by Robert Burns to be charitable:

Gently scan your fellow man,
Still gentler sister woman.

Halting Coal Shipments.

EXTENSION OF REMARKS
OF
HON. J. HAMPTON MOORE,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

Friday, January 15, 1915,

On the bill (H. R. 20189) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. MOORE. Mr. Speaker, extending my remarks on the Delaware River project, under leave granted by the committee, I submit that a port which does an annual business of more than 26,000,000 tons, valued at $1,200,000,000, as the port of Philadelphia did on the Delaware River in 1913, is entitled to generous consideration at the hands of Congress, more especially since that same port collected in revenue for the use of the Government approximately $200,000,000 in the 10 years from 1904 to 1913, inclusive. The average revenue collections at Philadelphia approximate $20,000,000 per annum, which is substantially $3,000,000 more than has been spent by the Government in improving the Delaware River since the foundation of the National Government. There is no other inland river that can show such a fine commercial record nor such momentous serviceability to the Government. It excels in shipbuilding as it does in commerce, being not only the birthplace of the American Navy but the rendezvous for shipbuilding establishments that have produced a greater number of our merchantmen and naval vessels than any other river of the United States.

In the year just passed the arrivals from foreign and coastwise ports at Philadelphia numbered 5,626 vessels and the character of their cargoes was as varied as the products of nature. Close to the greatest of anthracite-coal fields, surrounded by industries supporting a population running far into the millions, trading with all the nations of the earth, and serving all the States of the Union, the port of Philadelphia is as fairly entitled to rank as a port of the Nation as any other, and yet some Members of Congress, without fully appreciating the situation, I am sure, would treat the Delaware River as a local enterprise and would hold down appropriations for its betterment upon the ground that the Government is unduly taxed when it contributes to the support of a 35-foot channel that leads out of Pennsylvania by way of New Jersey and Delaware to the sea.

SMALL APPROPRIATIONS UNECONOMICAL.

It is the purpose of this address to call attention to the inadequacy of appropriations thus far made under the 35-foot-channel project to properly complete the work. The long and short of it is that we have not had enough money under the project approved June 25, 1910, to economically keep up with the work as the Army engineers intended should be done. The total cost of this project was estimated at $11,000,000, and the plan was to complete it in six years. That would have necessitated appropriations of about $2,000,000 per annum. But the Government has not kept up to that standard and much of the money appropriated has been diverted to maintenance, so that the entire project is only 26 per cent complete, as per the last official report. The fact that small appropriations for a great project like this are neither wise nor economical ought to be self-evident. It was painfully proven when, in October last, the *Crown Point*, a British vessel, which did not wait to avail itself of the high tide, went aground for a spell in the upper Delaware below Port Richmond. It was about that time that the channel work was being held up because the moderate appropriation previously made by Congress had been exhausted. But when it developed a few weeks ago that the Navy Department, which sought to break down a coal combine, desired to come to Philadelphia for Pennsylvania coal, which it could obtain much cheaper than elsewhere, concluded not to use its big colliers because of the depth of channel on the upper Delaware, the seriousness and wastefulness of a lack of appropriations were forcefully apparent.

I believe with the Pilot Association for the Bay and River Delaware and with the Maritime Exchange authorities at Philadelphia that there is a sufficient depth of water on the flood tide at Philadelphia to properly care for the naval vessels referred to, but I do not believe we can lightly overlook the harmful consequences and the wasteful tendencies of reducing or withholding the money necessary to promptly complete for commercial and naval purposes so valuable a national asset as the Delaware River. Unless Congress shall keep up the appropriations to an amount commensurate with the importance of the project, which ought to be at the rate of $2,000,000 per annum, the delay in final completion must necessarily prove expensive and detrimental to the public interest.

PRESENT DEPTH AND RISE OF TIDE.

There is now an assured depth of 30 feet at mean low tide in the Delaware River from Philadelphia to the sea. Upon that there is a rise of tide of from 5 to 6 feet. The 35-foot channel is going along just as rapidly as the appropriations will permit. With a 40-foot channel assured to New York, 35 feet to Boston, Baltimore, and Norfolk, there is every reason why the oldest, and in tonnage the second, of the ports of the country should be given the biggest help that Congress can afford. It is a willing work horse of the Nation, producing its full share of commerce and revenue, while it also exercises for the inland States the functions of a steady and economical export center for all their products. Despite the handicap which the river has suffered, it is constantly entering of record new steamships and new steamship lines the business of which is not in any sense confined to Philadelphia or Pennsylvania.

NAVY SEEKING CHEAPER COAL.

In connection with the coal contracts to which I have made reference I desire to submit certain correspondence, together with data pertaining to the facilities of the river and harbor, and the extent of the business which they now sustain.

From the testimony of Assistant Secretary Roosevelt, of the Navy Department, before the Committee on Naval Affairs in December last I extract the following:

"Mr. ROOSEVELT. * * * Last year it was determined to see if real competition could not be secured in the purchase of steaming coal without in any way lowering the quality of the coal purchased. The essential things which had brought about the elimination of real competition were:

"1. The restriction of the mines to a limited area.

"2. The restriction to the owners or selling agents of these mines.

"Investigations were made by the department as to the possibility of enlarging this field. It was found that if Pennsylvania coals could be used there was a prima facie saving of 15 cents per ton for delivery at Philadelphia over delivery at Hampton Roads, the Hampton Roads coal all coming from the West Virginia fields. The quality of various Pennsylvania coals was examined, and one coal was given a practical steaming test. As a result of the preliminary examination, it had passed a thoroughly successful test and was put on the accepted list of the Navy. I will add that the coal from Pennsylvania was used the other day on the trial trip of the battleship *New York* when she exceeded her contract speed by about 1 knot."

THE OPPORTUNITY AND THE CHANNEL.

On January 5, 1915, in consequence of information received by me, I addressed the following letter to the parties named:

JANUARY 5, 1915.

Messrs. J. H. WEAVER & Co.,
Land Title Building, Philadelphia, Pa.

GENTLEMEN: I have been advised that you have a contract with the Navy Department to supply it with 200,000 tons of bituminous coal from Pennsylvania mines, to be delivered via the Delaware River, and that after partial delivery the question has arisen as to further shipments because of channel depths in the vicinity of Port Richmond. If there is such a contract and there has been such a stoppage of delivery for the reason stated, I should like to be apprised of the facts, since my information as to harbor depths at Philadelphia would not seem to justify the withdrawal of Government colliers on that account. You will further oblige me if you will let me know whether, in this connection, there has been any diversion of coal shipments from Philadelphia to any other ports.

Very truly, yours,

J. HAMPTON MOORE.

And in reply thereto received the following:

PHILADELPHIA, *January 12, 1915.*

Hon. J. HAMPTON MOORE,
Washington, D. C.

DEAR SIR: We have your favor of the 5th instant, and in reply beg to say that in April, 1914, the Navy Department sent out Schedule 6609, asking prices at New York, Philadelphia, etc., and among other classes they asked for a price on 600,000 tons at Hampton Roads.

We conferred with the Hon. Franklin D. Roosevelt, stating that in asking for 600,000 tons at Hampton Roads exclusively he was discriminating against Philadelphia for Pennsylvania coals. After some thought he withdrew the former specifications and issued a supplementary schedule calling for a price on 600,000 tons to be supplied at either Hampton Roads, Baltimore, or Philadelphia. This was actuated by a desire to get better prices and at the same time give all the fields a fair opportunity to compete.

We, along with others, on June 18, 1914, submitted a price, which resulted in the Navy Department awarding to us a contract for 200,000 tons at Philadelphia. This had hardly been done when it was intimated to us that the large colliers could not come to Philadelphia on account of insufficient water in the Delaware River channel; whereupon we got in touch with the Philadelphia Maritime Exchange, Pilots' Association, War Department, United States engineer's office, Philadelphia, the Philadelphia & Reading Railway, and the department of wharves, docks, and ferries, Philadelphia, copies of correspondence with them being attached, and which should remove any doubt as to the ability of the large colliers coming to the piers at Philadelphia and depart in safety.

The Navy Department subsequently assigned several vessels to Philadelphia, among which was the collier *Proteus*, which reported at Port Richmond November 1, 1914, and we gave her a cargo, as you will find from the copy of commander's note of November 7, attached, wherein he reported that it was his opinion that it was not safe to send these large colliers to Philadelphia.

Learning of this we again took the matter up and visited the several departments in Philadelphia, who did not care to give a letter but who stated that there was absolutely no doubt as to the safety for such ships to navigate the Delaware River; in fact, we inclose a copy of a letter from the pilots' association, wherein you will note that they state they have piloted 41 vessels drawing 29 feet and over and 262 vessels drawing 28 feet and over in six months prior to the date of their letter.

It is our firm belief, which is concurred in by others, that there is no danger in sending these large colliers to Philadelphia for coal; indeed, the steering gear of the *Proteus* broke and they were compelled to steer by propellers, which possibly annoyed the commander of the *Proteus* to such a degree as to actuate him to write the Secretary as he did.

The Navy Department has taken only a very small amount of the coal contracted for, and as our coal is highly satisfactory for their use we are hopeful that something can be done to induce the Navy Department to send their large colliers to Philadelphia.

We give all credit to the Assistant Secretary, Mr. Roosevelt, for awarding us the contract as he did. He has not only helped to treat Philadelphia fairly but it has resulted in a very substantial reduction in price to the Government. That is to say, had an opportunity not been given Pennsylvania shippers to bid he would have certainly confronted a very much higher price in the southern fields.

Very truly, yours,

J. W. WEAVER & Co.

DIVERGENT VIEWS ON NAVIGATION.

Since receiving that letter I have read the reports of the commanding officer of the U. S. S. *Proteus*, following his trip to Port Richmond, and also that of the Navy hydrographer, and I note that the latter supports the captain of the *Proteus*, stating, however, that a vessel of her type "could undoubtedly run the river successfully many times," thus in turn confirming the views of the Delaware River pilots with regard to vessels of that type. But, so far as the Navy Department is concerned, the reports of these officers prevail for the present and apparently until, through larger appropriations, the channel shall be deepened in the vicinity of Port Richmond, presuming of course that vessels such as the *Proteus* are to load at their full capacity.

It is most unfortunate that such a question should have arisen, but sometimes it is good for a port as it is good for a nation to have a little plain speaking, and the truth is that while Philadelphia does an enormous business with all the nations of the earth and with all the States of the Union, it has not received that equitable governmental consideration to which it is fairly entitled. It is well that the facts should be fully understood. The people of Philadelphia and of Pennsylvania, as well as those of New Jersey and Delaware, are proud of their noble river and the splendid record it has made. They provide for it terminals and facilities for shipping to which the Government should freely and liberally respond. The pilots who guide the ships from the city and the sea stand up for the river, as the maritime interests earnestly and loyally defend it, but it needs Federal consideration to a greater extent than heretofore and it deserves the treatment already accorded to rival ports.

I append hereto the views of the Philadelphia Maritime Exchange and of the Pilots' Association for the Bay and River Delaware, with respect to the channel depths. These are incident to the attitude of the Navy Department in the matter of the shipment of coal upon colliers of the *Proteus* or 19,000-ton type:

THE PHILADELPHIA MARITIME EXCHANGE,
Philadelphia, September 9, 1914.

GENTLEMEN: We are in receipt of your communication of the 9th instant having reference to the depth of water in the Delaware River Channel. In your letter you refer to a telephone conversation with this exchange, when you were informed that there was a depth of 30 feet of water between Philadelphia and the sea at mean low tide, and that a vessel drawing 30 feet, when loaded, would safely take cargoes from this port.

At this writing we see no reason to change our views, although we are informed that owing to the discontinuance of maintenance operations by the Government dredges, caused by the failure of appropriations, there has been a slight shoaling in various sections of the river, but that said shoaling is of very soft material and would not interfere with the passage of high-powered steamers. There is a rise of 6 feet of tide in the Delaware River.

Very faithfully, E. R. SHARWOOD, *Secretary.*

—

THE PILOTS' ASSOCIATION FOR THE
BAY AND RIVER DELAWARE,
319 Walnut Street,
Philadelphia, Pa., January 4, 1915.

In reply to your letter of January 4 would state that 29 or 30 feet can be taken up and down the Delaware Bay and River to or from the port of Philadelphia with safety.

On October 21, 1914, the U. S. S. *Mars*, drawing 29 feet, was taken to sea from League Island, without stopping anywhere or touching the ground anywhere. The U. S. S. *Proteus*, drawing 29 feet, was taken to sea from League Island on November 4, 1914, and made but one stop, which was Reedy Island. After leaving Reedy Island her steering gear got out of order, and she went on down for several miles, being steered by her propellers, and she did not touch the ground anywhere. On December 4, 1914, the U. S. S. *Jupiter*, drawing 28 feet, went to sea without anchoring from League Island.

We have piloted 41 vessels drawing 29 feet of water and over and 262 vessels drawing 28 feet and over.

The pilots do not concur with the commander of the U. S. S. *Proteus* that it is not safe for ships of the *Proteus* type to come up the river and go down drawing 29 or 30 feet.

Very truly,

JOHN P. VIRDEN, *President.*

BIG BUSINESS OF THE PORT.

For the information of the House, and in support of the argument that the Delaware River is a national stream of great importance, I append the report of the statistician of the Board of Commissioners of Navigation for the River Delaware and its Navigable Tributaries for the year 1914:

REPORT OF STATISTICIAN.

PHILADELPHIA, PA., *January 5, 1915.*

To the President and Members of the Board of Commissioners of Navigation for the River Delaware and its Navigable Tributaries.

GENTLEMEN: Although the last five months of the year just closed was a very unsatisfactory period for the foreign trade because of the European war and interruption of shipping, it is gratifying to note the great growth of the business between this port and the Pacific coast in consequence of the opening of the Panama Canal. Since the opening of the canal last August the American-Hawaiian Steamship Co., the Luckenbach Steamship Co., and the Dodge Line have established regular services between Philadelphia and the Pacific coast ports, bringing in record cargoes of canned goods, dried fruits, salmon, lumber, wine, and other products of California, Oregon, and Washing-

ton, returning with cargoes of manufactured goods. In addition to the regular lines of steamships, several transient vessels have arrived here and returned to the Pacific with general cargoes.

While the shipments of wheat during the last three months of the year were heavy, the exports for the year show a slight loss compared with the same period of 1913. From January 1 to December 31, 1914, the exports of wheat totaled 19,273,883 bushels, compared with 19,627,691 bushels for 1913. Exports of oats for 1914 were 2,437,436 bushels, compared with 385,239 bushels for 1913. While all other commodities show a slight decrease, the greatest loss is shown in the export of refined petroleum, only 141,887,342 gallons having been shipped from the various refineries to foreign ports, as against 229,690,238 for 1913.

The imports show gains in the receipt of bananas, copper ore, crude petroleum, molasses, sugar, and laths.

Anthracite-coal shipments to foreign and coastwise ports for 1914 were 1,448,710½ tons, compared with 1,460,478 tons during 1913. The bituminous-coal shipments for the 12 months ending December 31, 1914, were 2,459,148 tons, as compared with 3,456,562 tons during the same period of 1913.

The arrivals from foreign and coastwise ports during 1914 numbered 5,626 vessels, with a gross tonnage of 9,859,976, as against 5,908 vessels, with a gross tonnage of 10,358,389 for 1913. Of this fleet 1,297 vessels, with a gross tonnage of 4,590,781, were from foreign ports, compared with 1,467 vessels, with a gross tonnage of 5,345,203, for 1913. The coastwise arrivals for 1914 numbered 4,329 vessels, with a gross tonnage of 5,269,195, as against 4,441 vessels, with a gross tonnage of 5,013,186, for 1913.

The sailings for 1914 to foreign and coastwise ports number 5,598 vessels, with a gross tonnage of 9,822,414. For 1913 the sailings were 5,870 vessels, with a gross tonnage of 10,470,871. The foreign sailings for 1914 numbered 1,287 vessels, with a gross tonnage of 4,480,430, as against 1,438 vessels, with a gross tonnage of 5,359,787, for 1913. The coastwise sailings for 1914 numbered 4,311 vessels, with a gross tonnage of 5,341,984, compared with 4,432 vessels, with a gross tonnage of 5,111,084, for 1913.

Attached are tables showing in detail the business of the port.

Respectfully submitted.

ARTHUR F. RENNER, *Statistician.*

TABLES THAT TALK ELOQUENTLY.

I also append three tables taken from the report of Col. George A. Zinn, Board of Engineers, United States Army, in charge, to the War Department, relating to freight, imports and exports, and shipbuilding on the Delaware River during the year 1913.

TIMELY SUGGESTIONS FROM HIGH AUTHORITY.

I also submit the following extracts from the annual report of the director of the department of wharves, docks, and ferries of the city of Philadelphia for 1913, which are unusually appropriate in view of the controversy that has arisen:

"There is no disposition to criticize the United States Engineer Department in its management of the work, which it is believed to be handling in a most efficient manner, but Philadelphia's and Pennsylvania's Representatives in Congress must strenuously urge their colleagues to recognize the importance of the Delaware River and to make appropriations for its improvement on a much more liberal scale than heretofore. The $1,000,000 or the $1,500,000 per year which has been allotted for the past few years is insufficient and should be largely increased.

"It must be remembered that the necessary funds for maintaining the 30-foot channel, amounting approximately to $300,000 per annum and over, come first out of these appropriated amounts, thus reducing by a large percentage the amount available for work under the 35-foot project, and postponing by just so much the completion of the larger work. It is not possible to reduce these maintenance charges; in fact, a considerably larger annual amount should be allotted for this purpose, so that not only should the 30-foot channel be maintained, but that the various sections of the 35-foot channel as soon as completed be immediately placed under maintenance operations.

* * * * * * *

"More money is needed both for maintenance and original dredging, probably $500,000 per annum for the former and $2,500,000 per annum for the latter if the channel is to be completed within a reasonable time. These are large sums, but this is a day of large improvements, and this work is one of them. No saving can be effected by doling out money for it in a spirit of miserly, mistaken economy, and the work dragged out for an inordinate number of years as was the 30-foot channel work, as under these circumstances it will be a source of credit and satisfaction to no one and of expense and chagrin to everybody interested in the commerce of the Delaware River."

Indian Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. J. B. THOMPSON,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 9, 1915,

On the bill (H. R. 20150) making appropriations for the current and contingent expenses of the Bureau of Indian Affairs, for fulfilling treaty stipulations with various Indian tribes, and for other purposes, for the fiscal year ending June 30, 1916.

Mr. THOMPSON of Oklahoma. Mr. Speaker, in the various questions in this bill affecting Oklahoma I am, of course, deeply interested. I wish conditions were such that the ever-recurring Indian question could now be finally settled, the affairs of the Five Civilized Tribes wound up, and their funds paid out and distributed among them while they yet live. In expressing this view I am sure I reflect the sentiment of all Oklahoma people, Indian as well as non-Indian. Our people occupy a very peculiar position in the winding up of this great Indian estate. They have no interest in it whatever except to see that it is honestly distributed and goes into the hands of those who are

entitled to receive it. They are compelled, by reason of the Indians and their property being located in Oklahoma, to bear the additional expense rendered necessary by the large volume of probate business.

There are pending in the probate courts of our State more than 40,000 probate cases, whereas there would not be 4,000 if it were not for these Indian estates. Where there is so great a volume of business, and where, as is often the case, these estates are of great value by reason of being underlain with oil and gas, naturally some graft, some misappropriation, and some wrong will occur. I do not say such has not occurred in Oklahoma, but I do affirm that the proportion in Oklahoma has been no greater than in other States when the volume of business transacted is taken into consideration. I go further, Mr. Chairman, and say—and the election returns will bear me out in this statement—that the people of Oklahoma will not elect to office any man who does not stand for the strictest economy and the most scrupulous honesty in the administration of these Indian estates.

I repeat, our people occupy a peculiar position in the winding up of these Indian estates. Without any interest in them, except to see that justice is done, they bear the burden of increased court expense to distribute these estates, and in payment they are held up to ridicule and denounced as thieves and grafters every time some guardian betrays his trust. I resent this, for the people of Oklahoma are as honest as any citizenship in any State in this Union, and they are much more interested in seeing the Indians' estate preserved for the benefit of the Indians than are the outside people, for they know that when that estate is dissipated and gone if any of these Indians become a charge upon society it will be the Oklahoma people who will be taxed to bear that burden.

AID TO COMMON SCHOOLS.

I had hoped that the item for $275,000 in aid of our common schools would not be objected to, as it has been, and stricken from this bill on a point of order. Of course we all know this item will go back and be carried in the bill when it finally becomes a law. The justness of this provision, when it is understood that more than 10,000,000 acres of our land is nontaxable, can not be disputed. Some day when the injustice of requiring the property owners in the towns and cities and the owners of personal property in the country to pay all the taxes for the support of all our various and multiplied forms of government—city, school district, road, township, county, and State—is fully and fairly presented to this Congress, not only will $275,000 annually be appropriated but the vast loss which the Oklahoma school system has sustained by reason of these lands being nontaxable, and which will amount to many millions of dollars, will be given to Oklahoma.

MISSISSIPPI CHOCTAW CLAIM.

I shall not attempt a discussion of the Mississippi Choctaw claim. Men of great ability, members of the Indian Committee, who have given that matter many months of thought, after extensive hearings and much argument, have made a report on the subject, accompanied by the hearings, and they will discuss it. I am sure the House, after hearing what they have to say, will be in position to pass on this matter finally and not delay further payment to the Oklahoma Choctaws and Chickasaws on account of this troublesome question.

PER CAPITA PAYMENT.

It is with the payment of the $200 per capita to the Choctaws and the $100 per capita to the Chickasaws that I want to deal. The conditions in Oklahoma render these payments of the greatest importance to our people, noncitizen as well as citizen. These payments will distribute among our people, in round numbers, $5,000,000 in money. No better or more opportune time for the distribution of this money could be chosen than the present. Our people are staggering under the blow of a great disaster. In Oklahoma during the year just passed we produced a cotton crop which will exceed a million and a quarter bales, of value in excess of $75,000,000 in an ordinary year. This cotton has been thrown upon the market under conditions brought about by the European war, for which our cotton farmers are not responsible, and the producers have not realized more than $45,000,000 for this great crop. This Congress, on two different occasions, by its vote has refused to extend our farmers any relief from the crushing blow which fell on them, and they, alone and unaided, have been compelled to bear the loss of $30,000,000 in the value of the products of their toil. This small payment of $5,000,000 will go a long way toward restoring normal conditions in our sorely afflicted State. Mr. Chairman, interest rates are high in Oklahoma—from 10 to 36 per cent. Seven million dollars or more is on hand, bringing the Choctaws and the Chickasaws less than 4 per cent interest. I do hope, under the circumstances, that this small payment will not be denied our people.

Address by Hon. J. W. Alexander, Chairman of the Committee on the Merchant Marine and Fisheries of the House of Representatives, Before the Boston Chamber of Commerce January 5, 1915.

EXTENSION OF REMARKS
OF
HON. RUFUS HARDY,
OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 15, 1915.

Mr. HARDY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address by Hon. J. W. ALEXANDER, chairman of the Committee on the Merchant Marine and Fisheries of the House of Representatives, before the Boston Chamber of Commerce January 5, 1915.

The address is as follows:

ADDRESS BY HON. J. W. ALEXANDER, CHAIRMAN OF THE COMMITTEE ON THE MERCHANT MARINE AND FISHERIES OF THE HOUSE OF REPRESENTATIVES, BEFORE THE BOSTON CHAMBER OF COMMERCE, JANUARY 5, 1915.

Mr. President and gentlemen, on September 4, 1914 (2d sess., 63d Cong.), I introduced in the House of Representatives (H. R. 18666) a bill to authorize the United States, acting through a shipping board, to subscribe to the capital stock of a corporation to be organized under the laws of the United States, or of a State thereof, or of the District of Columbia, to purchase, construct, equip, maintain, and operate merchant vessels in the foreign trade of the United States, and for other purposes. The bill was referred to the Committee on the Merchant Marine and Fisheries, of which I have the honor to be chairman.

That I would introduce such a bill, and the time when it would be taken up by the committee for consideration and public hearings on it held, were given wide publicity through the press. I was disappointed that those who should be interested in all matters affecting our merchant marine, and especially those opposed to the measure, did not appear and give the committee the benefit of their views and afford the committee an opportunity to weigh their objections to the measure. If any interests opposed to the bill had indicated a desire to be heard, the hearings would have been extended over a reasonable period of time to give them an opportunity to do so.

Suffice it to say, none came, and in due course the bill was reported to the House of Representatives, where it is now pending on the Union Calendar.

On December 8, at the beginning of the present session, the President, in his address or message to Congress, referring to this, among other important legislation, said:

> But I think you will agree with me that this does not complete the toll of our duty. How are we to carry our goods to the empty markets of which I have spoken if we have not the ships? How are we to build up a great trade if we have not the certain and constant means of transportation upon which all profitable and useful commerce depends? And how are we to get the ships if we wait for the trade to develop without them? To correct the many mistakes by which we have discouraged and all but destroyed the merchant marine of the country, to retrace the steps by which we have, it seems almost deliberately, withdrawn our flag from the seas, except where, here and there, a ship of war is bidden carry it or some wandering yacht displays it, would take a long time and involve many detailed items of legislation, and the trade which we ought immediately to handle would disappear to find other channels while we debated the items.
>
> The case is not unlike that which confronted us when our own continent was to be opened up to settlement and industry and we needed long lines of railway, extended means of transportation prepared beforehand, if development is not to lag intolerably and wait interminably. We lavishly subsidized the building of transcontinental railroads. We look back upon that with regret now, because the subsidies led to many scandals of which we are ashamed; but we know that the railroads had to be built, and if we had it to do over again we should, of course, build them, but in another way. Therefore, I propose another way of providing the means of transportation which must precede, not tardily follow, the development of our trade with our neighbor States of South America. It may seem a reversal of the natural order of things, but it is true that the routes of trade must actually be opened—by many ships and regular sailings and moderate charges—before streams of merchandise will flow freely and profitably through them.
>
> Hence, the pending shipping bill, discussed at the last session, but as yet not passed by either House. In my judgment such legislation is imperatively needed and can not wisely be postponed. The Government must open these gates of trade and open them wide; open them before it is altogether profitable to open them or altogether reasonable to ask private capital to open them at a venture. It is not a question of the Government monopolizing the field. It should take action to make it certain that transportation at reasonable rates will be promptly provided, even where at first the carriage is not profitable; and, then, when the carriage has become sufficiently profitable to attract and engage private capital, and engage it in abundance, the Government ought to withdraw. I very earnestly hope that Congress will be of this opinion, and that both Houses will adopt this exceedingly important bill.

On December 9 the bill S. 6856 was introduced in the Senate by the senior Senator from Missouri, Senator STONE, and referred to the Committee on Commerce, and was reported back to the Senate with amendments on December 16, where it is now pending.

This course was taken to meet the wish of the President that this legislation might receive early consideration in the Senate, and while the general supply bills were being considered in the House.

In explaining the provisions of the bill I shall address myself to the amended Senate bill S. 6856. I assume that the bill in its amended form has the approval of the President.

The bill provides that the United States, acting through a shipping board, may subscribe to the capital stock of any corporation or corporations now or hereafter organized under the laws of the United States or of any State or of the District of Columbia, the object of such corporation to be the purchase or construction, equipment, maintenance, and operation of merchant vessels in the trade between the Atlantic, Gulf, or Pacific ports of the United States and the ports of Central and South America and elsewhere to meet the demands of the foreign commerce of the United States, or to charter vessels for such purposes and to make charters or leases of any vessel or vessels owned by such corporation to any other corporation, firm, or any individual to be used for such purposes, subject to the approval of the shipping board.

The initial stock of the corporation shall not be over or in excess of $10,000,000, the shares to be of the par value of $100. The capital stock of the corporation may be increased from time to time by the shipping board, with the approval of the President, as the interests of the corporation may require.

The United States shall subscribe for 51 per cent of the original stock and each increase. The remainder may be subscribed for by the public, or by the United States if not subscribed for by the public.

The United States, through the shipping board, with the approval of the President, is authorized to purchase or construct vessels; to transfer them to such corporation; and to pay for same the Secretary of the Treasury is authorized to issue and sell what are known as Panama Canal bonds.

The bill further provides that upon the transfer to such corporation of the vessels purchased or constructed as herein provided such corporation shall issue to the United States in payment therefor its gold bonds, bearing interest at not less than 4 per cent per annum, such bonds to constitute a first lien upon the vessels transferred and upon all other property of such corporation. The bonds received by the United States in payment for such vessels shall not be less at their par value than the amount expended by the United States in the purchase or construction of the vessels. The Secretary of the Treasury, in his discretion and with the approval of the President, may sell such bonds to reimburse the Treasury.

Such corporation shall make provision for sinking fund and for depreciation charges, under rules and regulations to be prescribed by the shipping board.

The vessels purchased or constructed under the act shall be entitled to registry under the laws of the United States and shall be subject to our navigation laws, but may engage only in trade with foreign countries or with the Philippine Islands, Hawaiian Islands, and the islands of Guam and Tutuila.

The Secretary of the Treasury, the Postmaster General, and the Secretary of Commerce, subject to the direction of the President, are to constitute the shipping board. They are vested with power to vote the stock of the United States in such corporation and to do all other things necessary to protect the United States and to carry out the purposes of the act, and with the approval of Congress the shipping board may at any time sell the stock of the United States in such corporation.

The President is given power to charter, lease, or transfer such naval auxiliaries and vessels belonging to the War Department suitable for commercial uses and not required for naval or military purposes in times of peace and vessels now owned and operated by the Panama Railroad Co. to the corporation to be created by the act, the vessels purchased or constructed by the United States to be of a type, so far as our foreign trade may permit, suitable for naval auxiliaries. The President is authorized, upon written notice to the corporation or corporations using vessels under the provisions of the act, to take them over for use as naval auxiliaries or for other purposes and at a reasonable price for rental.

Detailed statements of all receipts and expenditures under the act are required, and the sum of $10,000,000 is appropriated to carry out the provisions of the act.

While the bill provides that the vessels purchased or constructed by the shipping board shall be operated through the corporation therein provided for, the Government retains control through stock ownership and the powers to be exercised by the shipping board. This will insure that the vessels may be employed in such foreign trades as will develop and extend our foreign commerce and at reasonable rates therefor.

If the vessels are chartered to any other corporation, firm, or individual, the terms and conditions of such charter parties shall be approved by the shipping board, which will insure fair treatment to the shippers. I have no doubt these powers will be exercised by the shipping board with wise discretion, with a view to the extension of our foreign commerce by private enterprise whenever and wherever possible, but at all times keeping in mind the general welfare and that no unreasonable limitations will be placed on private enterprise. On the other hand, all things reasonable will be done to encourage and aid private enterprise to engage in and to develop our foreign commerce. The concern of the Government will be to see that ample facilities are afforded at reasonable rates. If capital is timid or can not be had, or if for any reason private enterprise fails, the Government will undertake to develop the trade routes and to perform the service in the interest of all the people of the United States.

We occupy an anomalous position as a nation. Although our foreign commerce amounts to more than four and a quarter billions of dollars annually we are dependent upon the ships of other nations to carry 92 per cent of our commerce; and at this time, with five of the great maritime nations at war, we are practically limited to the shipping of Great Britain. It is manifestly to the interest of Great Britain to cripple and, if possible, destroy the commerce of the nations with which she is at war.

Our rights as a neutral nation to trade with the belligerents is fully recognized by international law and our duties clearly defined. I would not relinquish any of our rights as a neutral nation or fail to perform every duty imposed upon us as such.

Either belligerent has a right to demand impartiality from neutrals, whereas, on the other hand, neutrals have a right to demand such behavior from either belligerent as is in accordance with their attitude of neutrality. Neutrals have a right to demand that in their intercourse and, in especial, their commerce with the enemy shall not be suppressed; whereas, on the other hand, either belligerent has the right to punish the subjects of a neutral for breach of brockade, carriage of contraband, and the like, and accordingly to visit, search, and capture neutral merchantmen. This latter right should be exercised by a belligerent, however, in a reasonable way, and should not be used to hamper or destroy commerce of a neutral and to promote her own commerce.

Great Britain and France have agreed with our Government that cotton shall not be regarded as contraband, and we are now free to ship cotton to any of the belligerents. The lack of ships and exorbitant freight rates are the obstacles in our way, and it is proposed to remove these obstacles by the proposed legislation. But the proposed legislation is of far-reaching importance to our commerce in time of peace as well as in time of war.

It is well known that the great merchant fleets of England have been the growth of centuries. The strongest lines have been built up by the great exporting and importing houses in England, who have used the merchant ships to extend their trade to every quarter of the globe, and their profits have been made not only from the transportation of their commodities, but from the barter and sale of them as well.

The time was when the merchants of Boston owned ships and loaded them with their wares and sent them into all the ports of the world, and those ships came back laden with the commodities of other nations. If this bill is enacted, will the great commercial interests of Boston be slow to share in its benefit?

We have a greater opportunity now than ever before to develop our trade with South and Central America. It is possible now to get cargoes for South America, but ships outside the conference lines must usually return in ballast.

Why is this so? Read the report of the Committee on the Merchant Marine on shipping combinations and you will find that an effective weapon used by the conference lines to shut out all competition is a system of deferred rebates.

Will not the inducement be very great for the exporters and importers of Boston to organize a company with ample capital, charter Government ships, establish regular and frequent service to South America and other nations, and in this way promote the welfare of New England and add to the wealth and prestige of this great port?

The same may be done by all of the other great ports on the Atlantic, Gulf, and Pacific coasts, and in that event the Govern-

ment will not have any occasion to operate ships to develop our foreign trade in that direction.

But many objections are urged against Government ownership and operation of ships, some trivial and others worthy of serious consideration. It will be possible for me to notice only a few of them in this address.

It is an interesting circumstance and worthy of note that every bill pending before my committee intended to build up our merchant marine provides for Government ownership in some form. Some of them would have that control exercised through the Navy and would provide for the construction of naval auxiliaries of a type suitable for commercial purposes in time of peace, while others give emphasis to the importance of building merchant vessels, but of a type as far as the commercial requirements of our foreign trade may permit suitable for naval auxiliaries. As I have already pointed out, the bill vests in the President and the shipping board the power to utilize the naval auxiliaries, the vessels belonging to the War Department and the vessels owned and operated by the Panama Railroad under the conditions named to carry out the provisions of the act.

It is urged that under Government ownership it would be impossible to operate merchant ships except at a loss. Possibly, but the statement to carry weight with thinking people should have substantial proof offered in support of it. The objection may not have any more merit than the statement that there are plenty of ships available but no cargoes.

It is also urged, and with more plausibility, that the cost of operating ships under the American flag is so great that they can not compete with foreign ships.

Mr. Phillip Manson, of New York, a man with large experience in the shipping business, in a letter addressed to the editor of the Journal of Commerce, in answering this objection, has this to say:

I can prove to you that the increased cost of operating under the American flag is not as great as alleged by those who would put the American ships on the same basis as foreign ships. Nevertheless, it does cost more to operate American ships, and as a consequence American shipowners in the foreign trade quite naturally operate their ships under a foreign flag.

They do this not that they can not operate profitably under the American flag, but because they can operate more profitably under a foreign flag.

The profits in the steamship business are so large that frequently the entire cost of a new ship is earned in two years. You have only to examine the annual statements of earnings of the regular lines for further confirmation.

As the Government will be content with only a fair return on its investment, it will not be influenced, as are private owners, by a desire for the greater profits under a foreign flag.

The same interests that would have us expend vast sums in the increase of our Army and Navy, at a time when the armies and navies of Europe are daily becoming relatively weaker than in years preceding the war in Europe, view with alarm the proposal to appropriate $10,000,000 out of the Treasury and utilize $30,000,000 of Panama Canal bonds to build up our merchant marine and characterize the proposal as a waste of the people's money. The objection is laughable, if not convincing.

If it were a proposition to spend millions of dollars in subsidies to favored shipping concerns it would be regarded in the same quarters as worthy of the consideration of statesmen.

But whether we would build up our merchant marine by discriminating duties or by Government ownership experience teaches us that obstacles will be thrown in our way—that we will tread on the toes of somebody.

It is hardly necessary for me to discuss the desirability of having an American merchant marine. There should not be any difference of opinion on that point. The fact that we pay a sum variously estimated to be from $200,000,000 to $300,000,000 annually to vessels under foreign flags to transport our commerce should be a sufficient reason. It is a very important item in the adjustment of our trade balance with other nations.

The Government has no supervision or control over passenger or freight rates on ocean-borne commerce. The lines charge all the traffic will bear without reference to the cost of the service. The investigation recently made by the Committee on the Merchant Marine into steamship conferences and agreements in the domestic and foreign trade disclosed that in the three years prior to 1913 ocean freight rates increased from 50 to 200 per cent, and that the increased cost of the service bore slight relation to the increase of the rates. The profits of the regular lines in most of the trade areas were exceedingly large.

If this bill becomes the law, it will serve at least a twofold purpose in the trades in which Government-controlled vessels are employed.

First. Lines of vessels may be projected to Central and South America and elsewhere, as needed to improve our mail facilities and meet the demands of our foreign commerce.

Second. It will not be necessary for the Government to furnish vessels to carry all of the traffic, but the Government will have the power to keep the rates for mail, passenger, and freight service within reasonable limits.

It is right here the shoe begins to pinch.

The establishment of the Government line from New York to Panama had the effect of cutting the rates to less than half what they formerly were, and yet no one, so for as I know, has ever complained that the lower is not a reasonable rate. It saved the Government many millions in the construction of the canal; at the same time the Government vessels carried but a small part of the material for the work.

Some express the fear that it will create a Government monopoly of the shipping business. If the prophesies of some are fulfilled that monopoly will be short lived. But it is not intended to create a Government monopoly; nor in my view is it desirable to do so, if privately owned vessels will perform the service and give us facilities to expand our foreign commerce equal at least to the facilities enjoyed by foreign nations to competitive markets.

By whatever means we may rehabilitate our merchant marine in the foreign trade, whether by subsidies, by discriminating, or by Government owned or controlled ships, we should not be content to carry less than one-half of our foreign commerce in vessels under the American flag.

This legislation is intended to promote American commerce, to aid our industries and shipping interests in opening up new and profitable trade, and the Government will be only too glad to cooperate with privately owned lines or vessels to that end. If private capital is ready to take over this business and perform the service, they can charter Government ships at reasonable rates.

It has been gravely urged as an objection to this bill that the shipping board to be created by this act would blindly purchase or have constructed a job lot of vessels without reference to their type or suitableness for the trades to be served.

I assume that it will be the concern of the proposed shipping board to investigate with utmost care the type of vessel needed by the Government or by private corporations, firms, or individuals, and if vessels can not be purchased, to cause them to be built. More than 550,000 tons of German and Austrian shipping is interned in American ports, and fear is expressed that should the Government buy any of these ships it might violate our duties as a neutral and involve us in serious trouble with some of the other belligerents.

A sufficient answer should be that we have never had a President more careful to observe our international obligations than the present occupant of the White House, Woodrow Wilson.

But it is asserted that we are vesting too much power in the President. Those who make the assertion seem to forget that the Congress vested in the President of the United States the power to build the Panama Canal and to make the laws governing the Canal Zone, and that the Congress has vested in the President the power to build the Alaska railroad.

IS THERE A SHIP FAMINE?

In the New York Herald of Wednesday, December 2, 1914, Mr. James A. Farrell, president of the United States Steel Corporation, is quoted as saying:

At present there is no lack of shipping facilities, as there are more ships than cargoes to all parts of the world. We are now sending ships from one port to another in ballast because we can not get cargoes for them. We need more trade, not more transportation.

Mr. Farrell's statement has been given wide publicity by the opponents of the administration shipping bill now under discussion. If time would permit, I could overwhelm you with testimony that the statement of Mr. Farrell has no foundation in fact.

In the New York Journal of Commerce of December 3, 1914, a paper unfriendly to the proposed legislation, the following report of the shipping and chartering market is made:

LIGHT OFFERING OF TONNAGE, RATES CONTINUE TO SOAR, WITH OWNERS DEMANDING ADDITIONAL ADVANCES.

There is an urgent demand for steamers for December and January loading in several of the trans-Atlantic trades, particularly for grain and cotton; but the scarcity of available boats and the almost prohibitive terms demanded by owners serve to greatly restrict trades. Tonnage is also wanted in other of the trans-Atlantic trades, as well as for the West Indian, South American, and long-voyage business. A few boats were reported for grain cargoes to various European ports at the highest rates recorded during the recent rise.

The New York Journal of Commerce of December 4 states:

FOREIGNERS STILL BUYING OUR WHEAT—FREIGHT ROOM SCARCE—RATES REACH NEW RECORD.

Despite the difficulties attending shipments, grain exports continue from day to day apparently without abatement. * * * Actual shipments of wheat from Atlantic and Gulf ports have from July 1 to November 30 already averaged 1,000,000 bushels a day, according to official figures, while there is enough business booked ahead to keep up this pace for some weeks.

The result of all this is the extreme scarcity of ocean freight room, a factor that is undoubtedly restricting the volume of sales which, it

is asserted, would be larger than they are now if there were any certainty as to shipments. As it is, many buyers are taking chances, and rates are now the highest on record. It was said yesterday that 21 cents had been paid for berth room to Genoa, while as high as 7s. had been paid for cargo boats, with the prediction that 10s. would be paid before long. December boats are almost unobtainable, while January offers are very scarce. Practically anything that will float is being taken, and even boats so small that they can carry only 40,000 bushels have been chartered, whereas an ordinary cargo boat takes from 150,000 to 200,000 bushels.

The demand for American grain comes from all countries, and Italy is particularly urgent. Her agents are willing to take the grain at the prevailing market price without question if the transportation can only be arranged.

In the Journal of Commerce of December 5, 1914, the following report is made:

OCEAN FREIGHTS.

Rates on full cargo steamers for December and January advanced further, and the prospects are that even higher rates will prevail within the next few days, as boats of all sizes in near-by positions are exceedingly scarce, and the owners are holding for rates that a few weeks ago would have appeared absurd. For a good-sized, prompt boat 20s. was paid for a trip on time charter from Norfolk to the west coast of Italy, and a boat for December-January delivery was paid 7s. 4½d. on grain from the Atlantic range to the west coast of Italy. There is an urgent demand for boats for grain, cotton, and general cargo to Europe, and tonnage is also wanted in a number of other trades, but the cargo will not stand present rates in many cases. Shippers of cargo such as coal, timber, etc., are seeking to cover a part of their orders with sailing vessels; but up to the present but little has been accomplished, owing to the scarcity of vessels of suitable class.

In the Journal of Commerce of December 7, 1914, appears the following:

FIVE MILLION TONS OFF SHIP MARKET—LOSS IN SUPPLY OF VESSELS SENDS UP FREIGHT RATES.

A total of 5,000,000 tons in mercantile ships have been lost for a time to the world's commercial activities, bringing an era of high charter and berth rates as one of the direct and important results caused by the European war.

With 7 shillings 9 pence the top figure paid for grain tonnage and 20 shillings per gross ton per month for a general cargo boat, rates for full cargo steamers continue their upward advance, with little indication that the crest of the ascending movement has been reached. Throughout the past two weeks factors in the chartering market have been watching rates increase, and in view of the extraordinary tendency in this direction have not been inclined to commit themselves as to future prospects. The dominant factors in the present chartering situation are as follows:

1. The complete tie-up of the German and Austrian mercantile marines, with their many ramifications in the seven seas, is an important factor in the movement of the world's commerce.
2. The continued withdrawal of British steamers from commercial service for use by the Admiralty. This has been variously estimated, but authorities figure that at least 500 vessels formerly employed in commercial services are now unavailable.
3. The improvement in the foreign exchange situation, enabling the financing of cargoes, creating a speculative activity in exports of food products, shippers being assured of quick and profitable returns.
4. The increasing demand for grain from Europe, it being estimated that export purchases in this country were amounting to 1,000,000 bushels a day.
5. The comparatively low levels at which war-risk insurance is obtainable, removing one of the important obstacles that hampered commerce at the outbreak of hostilities.
6. The reduced services by the regular lines operating to Europe, forcing American manufacturers who have taken contracts for supplying war materials to charter vessels in order to make agreed deliveries.
7. The high space rates charged by the regular lines, berth charges being from 100 to 250 per cent higher than before the war.
8. Owners of vessels available for charter are demanding compensation on a time basis in order to avoid losses in the event of being held up by the British authorities for examination and the probability of delay at the discharging ports in Europe, where the best dock facilities have been commandeered by the warring Governments.

In the same article, under the heading "Predict 10 shillings for grain," it is stated that—

Chartering factors who were interviewed on Saturday declared that 10 shillings for grain tonnage was a probability before the end of the year, while rates for other commodities would also continue to advance.

The New York Times, a journal unfriendly to this bill, in its issue of Sunday, January 3, 1915, has this to say:

AVAILABLE SHIPS NOT TO BE HAD—BUT SHIPPING MEN SAY THAT GOVERNMENT OWNERSHIP SHOULD NOT BE ATTEMPTED.

The favorable report made in the Senate the past week on the bill for the purchase and operation by the Government of a fleet of vessels to handle American export business owing to conditions brought about by the European war has had the effect of focusing the attention of shipping men, exporters, and vessel charterers on the measure. While there appears to be a great diversity of opinion among merchants in these lines as to the measure of relief to be experienced by the Government entering the field as an ocean carrier, it is almost unanimously agreed that something must be done to remedy conditions if the export business of the country is not to come almost to a standstill.

In the Journal of Commerce of December 22, under the headline "Steamer market strong," the following statement is made:

The continued shortage of tonnage hampers chartering greatly, as the orders for prompt boats are considerably in excess of the available supply.

Other quotations might be made from the same or other journals to disprove the accuracy of the statement made by Mr. Farrell. In fact, the above statements and the further facts I shall submit for your consideration show conclusively that there are absolutely no foundations for the statements of Mr. Farrell.

The Charleston Evening Post of December 30, 1914, contains the following item from Savannah, Ga., of that date:

OCEAN FREIGHTS DEPRESS COTTON—EXCESSIVE CHARGES FOR TRANSPORT KEEP PRICES DOWN AT HOME.

Owing to scarcity of neutral ships and the risks which must be taken in transporting freights, the trans-Atlantic rates on freight room from Savannah are now showing at new record high levels.

The quotations per bale on cotton yesterday compared to normal times, according to a representative exporter here, were:

To Bremen, present rate $18.75, against $1.75 a bale.
To Gothenburg, present rate, $11.25, against $3.
To Rotterdam, present rate $12.50, against $8.75.
To Havre, present rate $5.50, against $2.
To Genoa, present rate $5.50, against 2.75.
To Liverpool and Manchester, present rate $4.35, against $1.75.
To Barcelona, present rate $5, against $3.25.
The average price of a bale of cotton now is $35.

Cotton factors here pointed out that the effect of the enormous increase in freight rates was largely responsible for the low prices the staple now is bringing in domestic markets. It would be impossible, they said, to pay more than $35 a bale here, meet the high freight charges, and sell the cotton at even a modest profit in European markets.

The Washington Evening Star of December 31, 1914, contains the following:

OCEAN RATES ON COTTON INCREASED BY THE WAR.

Increases in ocean freight rates for cotton from Galveston to European ports since the outbreak of the war range from 55 cents to $2.85 per 100 pounds. Before the outbreak of hostilities rates to Liverpool, Havre, and Bremen were approximately 45 cents per 100 pounds; to Barcelona and Genoa, 65 cents; and to Gothenburg and other Scandinavian ports, 50 to 65 cents. Rates for other commodities have advanced proportionately.

Present quotations to these ports are: Liverpool, 1 per hundred pounds; Havre, $1.20 to $1.25; Bremen, $3 to $3.25; Gothenburg, $2.50; Barcelona and Genoa, $1.25. For many years the highest ocean rate for cotton to any European port was 60 to 65 cents per hundred pounds, and as low as 30 to 35 cents were recorded.

Scarcity of neutral tonnage is given as the reason for the high rates prevailing to Bremen. Those to Liverpool, Havre, Barcelona, and Genoa are much lower, due to the ability of the shippers to secure British ships.

A recent ruling of the British Admiralty requiring a ship flying the British flag touching at any port of the United Kingdom to give 48 hours' notice of intended sailing adds another difficulty.

Under this ruling when a vessel is offered for charter ship agents must accept the offers promptly and then wait at least 48 hours before they can secure the vessel. Because of this delay, they say, cargo space can not be as promptly offered shippers as heretofore.

On December 24 the secretary of the National Lumber Manufacturers' Association inclosed to me a resolution adopted at the regular meeting of the manufacturers of yellow-pine lumber, held in New Orleans on December 9, 1914, stating, in substance—

that the lumber manufacturers and exporters are unable to make shipments because of the shortage of vessels on the high seas, and that the absence of ocean transportation is creating a congestion of lumber at the docks and export mills, as well at at interior sawmills, compelling such mills to close down and thereby throwing out of employment thousands of men who would otherwise be wage earners, and calling upon Congress to adopt such measures as may be necessary to provide for an increase in facilities for ocean transportation, to the end that the products of the United States may be freely moved to the markets of the world.

In the report of the Committee on Commerce to the Senate, accompanying the ship-purchase bill, a vast fund of valuable information on the question of the shortage of ocean tonnage and the enormous increase in freight rates is given.

After discussing the many obstacles in the way of rehabilitating our merchant marine and referring to present conditions, the report states:

There is at present a lack of vessels, even of those flying foreign flags, and a far greater lack of vessels under our own flag. This has resulted in a grievous advance of freight rates to almost all portions of the globe. The least advance which has come to the knowledge of your committee is 10 per cent on Asian business, but on certain goods, such as steel and iron, rates have advanced more than this. To South Africa the advance has been 20 per cent; to South America, 25 per cent; and to European ports, from 50 to 1,000 per cent, depending upon the merchandise carried and the ports of destination. The present rate upon cotton from Galveston to Bremen is ten times that which prevailed a year or more ago; this in spite of the fact that cotton is not contraband and that the belligerent Governments permit its free passage. As this report is written, shipowners, chiefly foreigners, are reaping a rich harvest of profits at the cost of American producers, whose prices are necessarily diminished in proportion to the excessive tax put upon their wares for the benefit of the owners of ocean transportation lines. When it costs $15 a bale merely to transport cotton across the ocean it is evident that this charge is a heavy handicap upon our entire cotton-producing interest at a time when we have the largest crop in our history.

While Germany is willing to pay from 19 to 21 cents per pound for our cotton, the producers of cotton in the South are only receiving from 6½ to 7 cents per pound for their product. The difference is absorbed by the transportation companies, chiefly English.

Need I ask a great body of intelligent business men like yourselves what this means to the prosperity of our country? Great Britain and France have finally agreed that cotton shall not be regarded as contraband of war if transported to the ports of the

belligerents in Europe in neutral ships—American ships. It is stated in the press that Germany is anxious to purchase from two to three million bales of our surplus cotton at 19 cents to 21 cents per pound. What would it mean to the agricultural and commercial interests of the South if the cotton crop of the South could be sold at from 10 to 12 cents per pound? What would it mean to the manufacturers, jobbers, and bankers of the North if the South were able to realize on her cotton crop and discharge her debts to the manufacturers and jobbers of the North? What a great help it would be to us in increasing our trade balance with Europe if we had the vessels to move this crop at reasonable rates to the markets of Europe, particularly to Bremen, and how much better would it be under existing conditions if these ships were Government controlled, which would insure a reasonable transportation charge instead of the current rate of $15 per bale for cotton?

The report of the Committee on Commerce further states that since July 1, 1913, the New Orleans Cotton Exchange certifies that the rates on cotton from New Orleans to Liverpool have advanced from 28 cents on July 1, 1914, to 85 cents on December 11, 1914—or more than 200 per cent since July 1, 1914.

In a memorandum from the Treasury Department to the Committee on Commerce concerning the rise in freight rates from New York to Liverpool the following rates are shown:

Grain from December 12, 1913, to December 12, 1914, from 2d. to 8d.
Cotton per hundred pounds from December 12, 1913, 30 cents, to December 12, 1914, 75 cents.
Flour per hundred pounds from December 12, 1913, 14 cents, to December 12, 1914, 26 cents.
General cargo, per ton, from December 12, 1913, 17s. 6d., to December 12, 1914, 30s.
Provisions per ton from December 12, 1913, 20s., to December 12, 1914, 30s.

The memorandum referred to quotes the following from the New York Journal of Commerce of December 12, 1914:

The full cargo steamer market continues exceedingly strong, influenced by a steady demand for tonnage and a very limited supply of same available before the middle of January. The bulk of the demand continues to come from the shippers of grain, cotton, coal, and general cargo to European ports, principally to the Mediterranean, and rates have advanced steadily, until at the present they are at their highest, with every indication of further advances being recorded within the next few days.

The memorandum further states:

This scarcity of ships has resulted in the tremendously increased freight rates, as shown by the above table. Comparing the rates current on December 12, 1913—when world conditions were normal—with rates at the present time—December 12, 1914—when available tonnage has been greatly diminished through the effects of the war—we find the following very marked increases in the trans-Atlantic freight rates for the staple articles of export: Freight on provisions, 50 per cent; on general cargo, 70 per cent; on flour, 86 per cent; on cotton, 150 per cent; on grain, 300 per cent.

And yet wise men, captains of industry, assert "at present there is no lack of shipping facilities, as there are more ships than cargoes to all parts of the world."

While this may be a temporary condition, and it may be argued that our shipping policy should not be framed to meet the extraordinary conditions prevailing, growing out of the war in Europe, yet the public mind has been brought to realize our utter helplessness as a Nation in times like this when dependent upon foreign countries for transportation facilities and the necessity of having a merchant marine of our own. I am not one of those who are willing to continue the policy of laissez faire. The disease is chronic and calls for a heroic remedy. I can well understand and discover a motive for the opposition to this bill that comes from the shipbuilding industry and from the great interests that control the domestic shipping and foreign lines, but it seems to me that those who oppose the bill on the ground that the Government should not engage in the transportation business are not aware of the great activities already assumed by the Government and the vast sums of money expended, the purpose of which is to promote the financial welfare of the American people.

As was said the other day by Mr. BULKLEY, Member of Congress from Ohio, in discussing rural-credit legislation and advocating Government aid and answering the objection made by a distinguished gentleman whose name is now mentioned as a possible candidate for the Presidency in 1916:

If he means that our Federal Government has no function but to gather taxes and to keep order; if he means it is not proper for the Federal Government, through its departments, to enter into such business as may best promote the prosperity and moral and material interests of the people, and that without regard to whether such business may be primarily of some incidental benefit to an individual or a class, then he is not abreast of the spirit of the times.

For years the Government has spent many millions annually, for which it has no hope of being reimbursed, in the improvement of rivers and harbors, and it has not hesitated to continue this expenditure for the general welfare because of the fact that it involves certain direct benefits to communities, to shipping interests, and to owners of docks and wharves. We have constructed great irrigation works to be sold to settlers at actual cost, and we allow them many years to make payments, yet we do not charge them interest on the investment. We have given away countless acres of the public domain to homesteaders for the purpose of developing our country, encouraging agriculture, and the increasing of numbers of home owners. Yet we do not hear that the direct beneficiaries of these vast gifts from the Government have lost their virility by having had the door of opportunity opened to them by a beneficent Government.

The Government maintains diplomatic and commercial representatives in foreign lands, and no one questions the propriety of the necessity of this service, though its direct primary benefits can go only to travelers, importers, exporters, and those who have investments abroad, the vast majority of the American people being benefited only indirectly. Public opinion has approved the building of the Panama Canal, though some of our citizens will receive from it more direct benefits than others. Public opinion approves the building of the Alaska railway, though in the development of that great country certain private owners will secure a greater benefit than the rest of us.

And referring to the bill under discussion, Mr. BULKLEY adds:

And now we are proposing to put Government money into the purchase and construction of ships, the operation of which will unquestionably benefit the whole country, but more directly those communities which are situated on the seaboard, those merchants who have foreign connections, and the seamen who may be employed in operating the ships.

Although the Government has assumed the function of deepening our rivers and harbors and has built the Panama Canal, at an expenditure of nearly $400,000,000, in the interest of our national defense and to promote our world commerce, and is building a railroad in Alaska to develop its vast wealth, and although the Government is reclaiming the arid lands of the West and proposes to reclaim the swamp lands of the South, and has spent millions for the extermination of the boll weevil in Mississippi and other cotton-growing States, and for the eradication of the cattle tick in Texas, and for the reforestation of large areas of waste land in the Appalachian Range of mountains—all great and worthy projects—wiseacres say it will not do for the Government to enter upon the operation of ships in the foreign trade; that to do so is going outside of legitimate Government functions. We can deepen our harbors for the great ships of other nations; we can dig the Panama Canal to give the shipping of other nations ready access to our markets and to the markets of the Occident and Orient, but it is out of the question—it is unthinkable to these wise men—that the Government should engage in the shipping business to promote the welfare of our own Nation on the high seas. These gentlemen seem to overlook the fact that the Government is already and has been for years past engaged in operating a line of ships to the Panama Canal Zone. These ships are operated under the charter of the Panama Railroad Co., of which the Government became the owner of the stock when it acquired the property of the French company. The Government is not only operating the ship line, but it is operating the Panama Railroad, and has been doing so since we began the construction of the Panama Canal.

It seems to be taken for granted by those who object to this bill that it would be impossible for the Government through the corporation named in the bill to render economical and efficient service in the ownership and operation of ships in our foreign trade. The United States Steel Corporation and the Standard Oil Co., through their agents, can operate ships to advantage in extending the foreign markets for their commodities, but it is unthinkable that the Government should use like instrumentalities to do so in the interests of all our people. It is not altogether the fear that the Government would not by the proposed instrumentality be an efficient agent in restoring our foreign commerce under the American flag; but the real basis of the opposition to this bill from many quarters lies in the fact that the Government would be a potent instrument in regulating ocean freight rates in the interest of the vast agricultural and manufacturing and commercial interests of this country and take away from the shipping combines the power they have exercised for many years past to charge all that traffic will bear, and thus hinder the healthy expansion of our trade.

Mr. Drake, vice president of the Panama Railroad Co., in a letter to me of date September 7, 1914, states:

I acknowledge receipt of your letter of the 16th instant and take pleasure in submitting the following replies to your specific inquiries:
First. The average rate on freight between New York and the Canal Zone at the time the Government took over the operation of our line was $8 per ton. This was gradually reduced to the present rate of $3.50 per ton for rough goods and $4.50 per ton for general cargo.
Second. The reductions made by our line similarly affected the rates of the other lines, all of which were of foreign registry, that operated between New York and the Isthmus, because shippers would not pay higher rates for their service than for ours.
Third. Our line has not been operated at a loss.

So much for the Government-owned line of merchant vessels in operation between New York and Panama, which is an object lesson worthy of thoughtful consideration.

OPPOSITION TO THE BILL—WHERE DOES IT COME FROM?

Let me give you a chapter from the recent investigation of the so-called Shipping Trust.

AMERICAN SHIPPING INTERESTS.

As I have said, this bill has the approval of the administration—in fact, is an administration measure—and it is believed will bring the much-needed relief to the commercial interests of the country.

There has developed, however, considerable opposition from certain quarters. The cry of paternalism has been raised, the criticisms of Government ownership have been advanced, and several of the large news and financial papers of the eastern cities appear daily with editorials denouncing the administration's policy. These papers, being the recipients of large incomes from advertising contracts with the steamship companies, are naturally opposed to a plan inimical to interests of their customers. This fact may affect their vision. The greatest opposing power, however, to the policy of the Government is the steamship companies themselves.

An investigation of the shipping question and the interests that are involved reveals some very interesting facts. In the report of the proceedings of the Committee on the Merchant Marine and Fisheries in the investigation of shipping combinations the methods of the shipping interests are fully set forth. It is shown that a regular system of agreements and pools prevails, against which the independent shipper has no chance to live.

The committee, in its recommendations, states:

The committee believes that the disadvantages and abuses connected with steamship agreements and conferences as now conducted are inherent, and can only be eliminated by effective Government control; and it is such control that the committee recommends as the means of preserving to American exporters and importers the advantages enumerated, and of preventing the abuses complained of.

In the investigation by the committee it developed that certain ships were regularly used solely for the purpose of killing competition. To quote the exact words of the report:

Thus, in the North Atlantic passenger traffic, the evidence presented in the suit against the Hamburg-American Line et al. shows that in about the year 1908 the conference lines authorized the appointment of a committee for the purpose of selecting fighting steamers to destroy the competition of nonconference lines. This committee, according to the evidence, would select suitable steamers from any of the conference lines to sail on the same days and between the same ports, the regular rates being reduced to a point sufficiently low to secure the traffic. As already stated in this report (p. 46), "the evidence in the Government's suit shows that such opposition sailings were repeatedly instituted against certain independent lines. Any surplus of passengers which were booked for the fighting steamer, but which could not be carried by the same, would be transferred to other conference line steamers at the reduced rates. The expenses and loss from the lower rates, resulting to any line whose vessels had been selected, were distributed over the members of the conference. It was thus a case of all the lines, united in conference, opposing every sailing of a single opposition line. By distributing the loss over the several members of the conference, each constituent line would suffer proportionately much less than the one line which was fighting the entire group, and which would inevitably soon exhaust its resources in the conflict with the combined power of the large lines with their superior speed and better third-class accommodations."

The report shows that the same methods are still in vogue, not only in passenger but in freight traffic as well.

The shipping interests look with concern upon the entrance of the Government into the field, therefore they oppose the Government's policy of purchasing ships. It is believed that it is not so much Government competition that is feared, for it is generally acknowledged that there is sufficient business, but they fear that the entrance of Government-owned ships will mean Government regulation of rates and seriously interfere with the existing control of the conference lines over the foreign commerce of the United States.

THE PERSONNEL OF THE SHIPPING INTERESTS.

The question arises as to who composes the American shipping interests. An examination of the personnel of those interested in the various steamship lines reveals the system of interlocking directorates and a community of interest probably unparalleled in the history of modern financiering. By consulting Moody's Manual of Railways and Corporations and the volume entitled the Directory of Directors, one can readily appreciate that the administration, in its desire to benefit the people, has "stepped on the toes" of the most powerful financial interests of the country.

The same interests are associated both in the foreign and coastwise shipping. The most prominent shipping corporations controlled by American interests are owned by the International Mercantile Marine, a New Jersey corporation. This company owns the capital stock of the Oceanic Steam Navigation Co. (Ltd.), known as the White Star Line, which flies the British flag; the International Navigation Co., which owns the American Line (American flag) and the Red Star Line (Belgian flag); and the Dominion Line. The parent corporation also owns the controlling interest in the Leyland Line. The Atlantic Transport controls the National Steamship Co. (Ltd.). The number of steamers owned by these corporations on July 1, 1913, including those under construction, was 137, with a gross tonnage of 1,280,410 tons, exclusive of tugs, lighters, and so forth. A large majority of their ships are under foreign flags. Moody's Manual states that the majority of the stock of the International Mercantile Marine is deposited under a voting-trust agreement. The voting trustees are J. P. Morgan and Charles Steele, both members of the Morgan firm, J. Bruce Ismay, P. A. B. Widener, and Lord Pirrie; transfer agents are J. P. Morgan & Co.; and the register of certificates, Guaranty Trust Co., of New York. Among the directors are J. P. Morgan, Charles Steele, George W. Perkins, and E. J. Berwind.

The fleets of the United States Steel Corporation, Standard Oil Co., and the United Fruit Co. have been registered under the American flag. While the Standard Oil Co. and United Fruit Co. have considerable fleets of ocean-going vessels, the United States Steel Corporation has only a limited number of ocean-going ships, this fleet being composed principally of Lake steamers. An examination of the personnel of the directors of these companies shows that J. P. Morgan, George W. Perkins, and Elbert H. Gary are on the executive committee of the United States Steel Corporation, and that Mr. William Rockefeller, largely interested in Standard Oil, serves on the board of directors of the National City Bank with Mr. J. P. Morgan and Mr. Frank A. Vanderlip and others, who it will be later shown are largely interested in coastwise shipping. The United Fruit Co. is largely composed of Boston interests, though it is said the Standard Oil Co. interests are large investors.

Investigation of the coastwise shipping interests develops a situation equally interesting. Nine-tenths of the Atlantic coast shipping is owned by the railroads and two corporations. The report of the House Committee on the Merchant Marine and Fisheries says:

The steamers of the railroad-controlled lines, combined with those of the Eastern Steamship Corporation and the Atlantic, Gulf & West Indies Steamship Lines, number 199, or 84.7 per cent of the above-mentioned total for the 28 lines, and represent 516,055 gross tons, or 93.9 per cent of the total gross tonnage. Not only do the railroads and the two shipping consolidations dominate more than nine-tenths of the tonnage, but it is significant that very few of the principal routes on our entire Atlantic and Gulf coasts are served by more than one regular steamship line.

The railroad-controlled lines referred to in the report of the committee are the Southern Pacific, or Morgan Line, the Old Dominion Steamship Co., and the Ocean Steamship Co., or Savannah Line. These, with the Eastern Steamship Co. and the Atlantic, Gulf & West Indies Steamship Lines, generally known as "AGWI," constitute practically the entire coastwise shipping for the Atlantic seaboard. It is a remarkable fact that the interests allied in the ownership and control of all these coast lines are also associated in the foreign American shipping. Taking the companies in the order above named, we find that in the Southern Pacific Mr. Henry W. De Forrest, a prominent director, serves on the board of the National Bank of Commerce with Mr. Henry P. Davidson, with J. P. Morgan & Co., with Mr. Frank A. Vanderlip and Mr. William Rockefeller, of the National City Bank. Mr. L. F. Lores, another director, is on the board of the Seaboard Air Line Railroad and part owner of the Old Dominion Line. Mr. Ogden Mills, another director, is associated with the Pacific Mail Steamship Co., and he, with Mr. Cornelius Bliss, another director, are on the board of the United States Trust Co., on which board the same interests are found dominant.

The Old Dominion Steamship Co. is controlled by the Atlantic Coast Line, Seaboard Air Line, Southern, Chesapeake & Ohio, Norfolk & Western Railroads. The same interests appear here. Mr. Frank A. Vanderlip, of the National City Bank, appears on the boards of two of the railroads. Mr. Charles Steel, member of the firm of J. P. Morgan & Co.; Mr. Elbert H. Gary, chairman of the board of directors of the United States Steel Corporation; Mr. Victor Morrowitz, a prominent member of the board of the National Bank of Commerce, and others of the same interests are found on the boards of these railroads. The Merchants & Miners Transportation Co. was, until recently, owned by the New York, New Haven & Hartford Railroad, which, from recent investigations by the Interstate Commerce Commission and the Department of Justice, was disclosed to have been controlled by J. P. Morgan & Co. The Government required the railroad to sell the Merchants & Miners interests. The new owners, however, belong to the same aggregation. The chairman of the board of directors of the Merchants & Miners is on the board of the Atlantic Coast Line Railroad, of which J. P. Morgan & Co. are the fiscal agents, and others have similar affiliations. The Ocean Steamship Co. (the Savannah Line) is owned by the Central of Georgia Railroad. On its board are found gentlemen who are interested in New York banking houses with the Morgan and Rockefellers.

The Eastern Steamship Co. is a holding company which controls and operates 11 different steamship lines of the New England coast and controls practically the entire trade of that region. According to Moody's Manual, on June 30, 1913, the New England Navigation Co. owns two and a half million dollars in the stock of this company. Mr. J. P. Morgan is a director of the New England Navigation Co. The Eastern Steamship Co., it is understood, is financed and largely controlled by Hayden, Stone & Co., of Boston and New York. G. L. Stone and J. W. Hayden, of that firm, are on its board of directors. The same firm are understood to control the Atlantic, Gulf & West Indies Steamship Lines, of which company G. L. Stone is vice president and H. R. Mallory, a member of the board of directors of the Eastern Steamship Co., is president. This company owns the majority of the stock in the Clyde Line, the New York & Cuba Line, Mallory Line, and the entire stock of the New York & Porto Rico Line and the Texas City Steamship Co. Mr. Edward J. Berwind, one of the directors of the Atlantic, Gulf & West Indies Steamship Lines, the holding company for the various subsidiary lines, is also a director of the Guaranty Trust Co. and on the board of directors of the National Bank of Commerce with Vanderlip and others. Mr. Berwind is also the head of a big coal company in New York City, whose business is that of furnishing coal to the various lines, one of which is said to be the Hamburg-American. His brother, Mr. John E. Berwind, is also an official of the Porto Rico Line, and is president of the Maritime Register, the leading shipping paper of the country.

To sum up the entire situation, an investigation will prove that over 90 per cent of the regular line coastwise and practically the entire foreign American shipping is allied through interlocking directorates with the National City Bank, United States Trust Co., National Bank of Commerce, Guaranty Trust Co., all of which have for their fountain head the Rockefeller-Morgan-Perkins interests.

It is against this aggregation that the administration, representing the American people, finds itself. The shipping interests realize that the entrance of the Government into the field will break the chain by which they have the independents shut out. Government-owned vessels are what they most fear, for it means a breakwater, a protection for the independent who now dares, at his peril, to invest a dollar in shipping against the powerful organization, but who would be willing to invest if fair play were allowed. It is said the same interests own or are interested in several of the big eastern newspapers. The vision of these papers is colored and others are affected by revenues of steamship advertising. Therefore you find a stalwart opposition by the eastern newspapers to the Government policy.

The act of August 18, 1914, admitting foreign-built ships to American registry for the foreign trade is good, but of what benefit is it when the small investor meets the death throttle of underbidding competition, such as a congressional investigation proves is in vogue? The Government-ownership bill is spoken of as an "emergency measure." It should not be so called. European Governments have in the past laid the foundation for their merchant marine by Government protection. The bill for the Government ownership of vessels which will bring relief to the American people should be properly called the Magna Charta of American shipping, proclaiming freedom from the feudal barons of maritime commerce.

The present administration has to its credit much constructive legislation of vital importance and benefit to the American people. It has set about the task of making a start in the rehabilitation of our merchant marine in the over-seas trade.

Criticism of any plan proposed may be expected. For decades we have been halting between many opinions and have failed to agree on any plan. A concrete proposition is now pending before the Congress. For the most part the people and the independent shipping interests approve the plan.

The administration is fully aware of the powerful interest opposed to it. While heed will be given to just criticism, the commercial interests and prosperity of 100,000,000 of American citizens are in the balance and should outweigh the selfish interests of the few.

The President and the Committee on Commerce in the Senate and the Committee on the Merchant Marine in the House have presented this measure to the Congress and to the country as a rational measure to meet a great emergency, and I hope that after due consideration it may have the approval of this great commercial organization.

I am sure we all cherish the hope that some day in the near future we may have an American merchant marine that will meet the demands of our expanding commerce and reflect credit upon our Nation.

Woman Suffrage.

EXTENSION OF REMARKS
OF
HON. FINLY H. GRAY,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 12, 1915,

On the joint resolution (H. J. Res. 1) proposing an amendment to the Constitution of the United States extending the right of suffrage to women.

Mr. GRAY. Mr. Speaker, the resolution before this House raises the one primary question of the necessity of an amendment to the Federal Constitution to enable the right of suffrage to be granted to women.

The Federal Constitution does not prevent or in any way forbid woman suffrage in any State in the Union. No amendment of the Federal Constitution is required to allow the people in every State in the Union to grant the full right of suffrage to woman. Without any amendment to the Federal Constitution the people of many States of the Union have already granted the full right of suffrage to woman. Without any amendment to the Federal Constitution the people of every State in the Union may grant the full right of suffrage to woman. Without any amendment to the Federal Constitution the people of every State in the Union may grant the right of suffrage to woman as fully, effectually, and completely as if all the States had acted together or as if this amendment had been made and the action was by the General Government.

The Federal Constitution did not prescribe any of the qualifications for suffrage. The Federal Constitution did not prescribe the qualifications for suffrage to be exercised by men. The Federal Constitution did not limit the right of suffrage to men. The question of suffrage was debated in the Constitutional Convention, and on full consideration it was decided by the delegates from every State in the Union which was to form the Central Government that suffrage was a question for the people of the different States and not one to be exercised by the Central Government.

We are asked to assume jurisdiction here to grant to women what their home people have full power and authority to grant to them. We are asked to assume jurisdiction here and to submit to the legislatures of the different States for decision a question which the people of their home State have a right to have submitted to them for their own decision. We are asked to assume jurisdiction here and to usurp the power of their home people and take it away from them and transfer it not alone to their own legislatures but to the legislatures of the different States.

The two greatest protections which the founders of our Government provided for the preservation of our free institutions were the separation of jurisdictions and the division of powers to safeguard against concentration in the hands of a few and the direct vote of the people to safeguard the will of the many.

Our dual form of government was framed with a view to prevent such concentration and to preserve such exercise of power. In this separation of jurisdiction the Central Government was given power over all questions as between the different States and as between citizens of different States, and as between the States acting as a whole under the Central Government and foreign nations, and all questions which the people of the different States could not act upon separately for themselves. And the people of the different States reserved to themselves the exercise of power and jurisdiction over all other matters. This was the principle upon which the different States and the Central Government were to exercise power and jurisdiction in unison and as a harmonious whole. And in still further pursuance of this principle the power of the General Government and the authority of the several State governments were divided into the legislative, the judicial, and executive departments acting separately and independent of each other.

This amendment would not of itself destroy our dual form of government and the division of powers, and it might never seriously jeopardize these great safeguards. It would only establish a precedent for those who come after us to justify the Central Government assuming jurisdiction to take other matters from the direct vote of the people. A precedent of procedure to give effect to a good principle may be used with equal force to justify the same procedure to give effect to a bad prin-

ciple. It would only pave the way; it would only make a breach and an opening through which in time the Central Government might absorb the powers reserved to the people in the different States and concentrate the same in the hands of the few.

If this qualification can be prescribed by the Central Government, other qualifications for suffrage can be fixed by the same power and authority, and the Central Government could likewise go into all the matters of civil and religious life—the education of the people, the control and direction of charitable and benevolent institutions, the law of all business operations, and the agencies of commerce, industry, and trade; and to include all that the Central Government could thus acquire jurisdiction and control of would include all the civil relations of man.

The amendment to the Federal Constitution providing for the election of United States Senators by direct vote of the people is urged as a precedent in support of the proposed amendment. But this amendment not only involved a question peculiarly and wholly pertaining to the General Government and providing for the election of one branch of the National Legislature, but was one to recover back to the people the right of the direct vote, and one which the people of the different States could not act upon separately and determine independently for themselves. And likewise the amendment to the Federal Constitution to empower the General Government to impose an income tax is urged as a precedent in support of this amendment to enable the General Government to assume jurisdiction to grant what the people of every State in the Union already have the full power to give. The collection of an income tax is purely a Federal question, and the amendment was to enable the General Government to provide revenues for the support of the General Government, and from the very nature of which the same could not be considered and determined upon by the people of the different States separately for themselves.

It is likewise insisted that the Federal Constitution was amended to grant suffrage to the colored man, and that certainly the same jurisdiction can be invoked to grant the right of suffrage to women. But it must be understood that the action by the National Government to enfranchise the colored men was taken under extraordinary circumstances and by reason of the existence of extraordinary conditions and was more in the nature of a revolution than a civil proceeding. It was not only taken as a war measure, but by reason of slavery and involuntary servitude the colored race was prejudiced before the electorate of the States where they were to become citizens and from whom they would be compelled to obtain the right of suffrage. By reason of such prejudice existing, consideration from the electorate of those States was at once foreclosed and precluded against them.

But no such odium or prejudice exists against women in any State in the Union, and certainly no such prejudice as to call for extraordinary proceedings and the withdrawal of the submission from the direct vote for determination indirectly by legislatures. But if such an odium or prejudice ever existed, it can not be said to exist to-day to such an extent as to invoke the extraordinary proceedings of the Central Government assuming jurisdiction to grant that which every State in the Union has the full power to grant by the direct vote of the people. The voters of many States of the Union have not only already granted to women the full right of suffrage, but so general and rapid is the policy of equal suffrage being approved by the people that even before this amendment could be ratified by the legislatures of the different States in the regular course of proceedings for amending the constitution many other States, by the direct vote of the people, would have already granted to women the full right of suffrage. No such prejudice against women exists. It is a difference of opinion and conviction among women as well as men as to the wisdom of the proposed extension of the right of suffrage to woman with the additional responsibilities, obligations, and the burdens of government to be assumed by its exercise.

The fundamental principle of a pure democracy is the direct vote of the people, both in the enactment of legislation and in the election of legislative and administrative officials. While the pure democracy is the safest government under which to preserve the rights, liberties, and the welfare of the people, it is not conveniently and practically workable in a government with jurisdiction over a large population and a wide area of territory. The practical democracy with such jurisdiction is where the people by their direct vote, exercised under the safeguards of the ballot, enact the primary and fundamental laws fixing the rules and limitations to which all legislation must conform, and by such direct vote electing the legislative body to make laws in conformity therewith and choosing public officials for the administration of such laws. This is the legislative system we have in force in the United States to-day. It embodies all the safeguards of a pure democracy and all the merits and advantages for legislation in detail of representative government; and as long as this system of government is preserved the rights, the liberties, and the welfare of the people will be secure and safe from infringement.

Many persons asking Congress to submit amendments to the Federal Constitution do so acting under the belief that the submission of the same will be to the people throughout the different States for their decision by direct vote. They do not understand that amendments to the Federal Constitution are submitted to the legislatures of the different States, and that, where the question involved is one which can be acted upon by the people under the State governments, has the effect to take the submission away from the people for their decision by direct vote and transfer it to the legislatures of the different States for determination indirectly.

The necessity and vital importance for observing judicial, legislative, and executive procedure is not always fully appreciated by many earnest and sincere men. They are honest and believe that the end to be reached justifies the means employed. Many honest and sincere men, for the punishment of certain crimes, believe in taking the law into their own hands for execution. They do not realize the importance or appreciate the necessity of always and uniformly observing the constitutional rights guaranteed to the accused—the right to have counsel, the right to have compulsory process for the production of witnesses in his own behalf, the right to face the accusing witnesses, and the right of impartial trial by jury. They believe the accused is guilty of the crime and mistake the purpose of all who are holding out for a constitutional trial as seeking to justify the crime or to aid the accused to escape punishment. They do not know that they are endangering their own lives and liberty. They do not know they are jeopardizing their own safety and welfare, establishing a precedent, paving the way and breaking down the constitutional safeguards thrown around them for their own protection. And so it is with many earnest and sincere men in support of a principle or policy which they conscientiously believe to be vital to the enjoyment of human right and the welfare of society. In overlooking procedure and in seeking to promote their cause, without regard to precedent established, they would endanger the stability of free institutions and jeopardize the safeguards for the preservation of constitutional government.

But I resent the charge of boldness against women in asking for the right of suffrage. There is nothing immodest or unbecoming a woman in manifesting an interest in public affairs and a desire to participate in the administration of government. It is her right to make such claim, and in the exercise of which she is entitled to every respect and consideration accorded to women who, likewise acting upon conscientious convictions, oppose woman suffrage. This charge has been disproven by the experience in every State where the people have already granted the right of suffrage to women. And likewise I resent the charge against the intelligence of women, their ability to exercise the right of suffrage and participate in self-government. Their intelligence everywhere measures up with men. In schools and colleges women as often lead their classes and graduate with equal honors. In every line of intellectual activity where women have applied their minds they have achieved equal success and attainments. And there is no defense against the principle of equal suffrage. There is no defense against the principle of political equality. There is no defense against the right of those who must obey the laws to have a voice in making them. There is no defense against the right of those who pay taxes to have a voice in their assessment and expenditure.

But even these high considerations would not justify the Central Government assuming jurisdiction where the people in every State of the Union have the power under the direct vote, with all the safeguards thrown around the ballot, to grant the full right of suffrage as effectively and completely as if the General Government had assumed such jurisdiction and acted, unless the public will is shown thwarted and defeated or been found impossible of expression by reason of influences operating locally.

With the right, the power, the means at hand, and every facility and instrumentality provided for the people in every State of the Union to consider and determine for themselves by direct vote under all the safeguards thrown around the ballot every qualification for suffrage, and to grant the full right of suffrage to women, and to consider and determine upon any other like measure, as effectively and completely as the Central Government could act if the Federal Constitution was amended for that purpose, no necessity is shown for such

amendment. No necessity is shown for an amendment to the Federal Constitution to secure the full and proper consideration of woman suffrage or the speedy advancement or the immediate consummation of such object or of any cause or any meritorious principle or policy.

No necessity is shown for establishing a precedent nor for paving the way, nor for making a breach in our system of free institutions by, over, or through which to dethrone or supplant the direct vote of the people in the enactment of primary and fundamental law, nor for the invasion of our dual form of government, the separation of jurisdiction, and the division of powers created by our forefathers to safeguard against usurpation and the concentration of authority in the hands of the few.

A Home.

EXTENSION OF REMARKS

OF

HON. A. W. LAFFERTY,

OF OREGON,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 18, 1915.

Mr. LAFFERTY. Mr. Speaker, I desire to say a word about the institution which we call the home. By this I mean an established place of abode for the family.

It was my good fortune to be born and raised in such a domicile. It was a home on the farm. It was a house situated upon a small piece of ground through which brooks ran. Upon a part of the land trees grew. My father and mother dwelt there in peace and happiness.

In the springtime it was my pleasure to wander among tender wild flowers, to listen to the song birds, and to inhale the perfume of crab-apple blossoms. Through the early autumn days I listened to the rustle of the ripening corn and gazed into the fleecy clouds floating in the ocean blue overhead. The snows of winter only meant rosy cheeks, sleds, Santa Claus, and happiness for all the children of the neighborhood.

It was there and amid those surroundings that the spark of ambition was kindled in my breast. It was the same ambition that I cherish still. It was an ambition to some day have a home of my own and to help all others to share the same blessing.

My motives have been misconstrued and I have been called low, mean, base, and vile. In the past four years I have learned more of the ways of the world than I ever knew before. In that time I have become a seasoned and hardened soldier, and from this day forward my blows struck in the cause of justice will be better aimed.

History reveals a continual struggle of the poor to acquire homes. My happy experience as a child came about only because my birth happened to occur during the pioneer period of the West. It was a time when land was cheap and when the first homes were being carved out of the virgin forests. It was a day which preceded the mortgage. The profits of those same lands are now going to the money kings, and much of the land of that vicinity is now occupied by tenants.

In years gone by the sturdy poor pushed forward and went to new lands, when the money kings had acquired title to those that their labor had improved. Where is the American who knows the dramatic circumstances under which his ancestors took leave of the other side? Nearly every such case would show a pathetic struggle for a home that would bring tears to the eyes of anyone who might know the story. Perchance it was a sunny day at London, Liverpool, Plymouth, Southampton, Dublin, Havre, Bremen, Hamburg, Copenhagen, Glasgow, or one of the ports of southern Europe. A weaver, a fisherman, a day laborer, or a peasant and his wife of advancing years had come to the dock. They were there to bid a fond farewell which would be the last on this earth to a young married son or daughter, who was going to sail away for America. They were to look for the last time on this earth upon their own flesh and blood. But they were willing to make the sacrifice. Their child was going where it would have what had been denied to its parents—a home.

When I went to Oregon in 1905 I soon learned of its great possibilities for homes. My heart went out in sympathy to the poor who were struggling to obtain homes there. It was a State of large area and sparse population, except for the city of Portland and a few of the older-settled valleys in the western part of the State. I found that 16,000,000 acres—one-fourth of the State's area—had been placed in permanent forest reserves. I found that poor settlers on homesteads outside the forest reserves were being harassed by Federal agents, and that their claims were being canceled upon every possible pretext. I found that the same Government agents who were so severe on the poor homesteaders were letting a great railroad company get away with 2,300,000 acres of the best lands in western Oregon, contrary to the plain letter of the statute, which provided that every acre of these lands should be sold by the railroad company "to actual settlers only, in quantities not greater than 160 acres to any one settler and for prices not exceeding $2.50 per acre."

Here was my chance to do something. I took case after case for homesteaders, agreeing to make no charge unless they won and secured their patents. In 1907 I was consulted by John L. Snyder, of Columbia County, who had made settlement on a quarter section of the railroad land grant. This was a chance to file a test suit to see whether or not that law meant what it said, and accordingly, on September 16, 1907, in the Federal court at Portland, I filed a suit for Mr. Snyder to compel the company to give him a deed. Later the Government intervened in the suit I had started. That was nearly eight years ago and the case has just reached the highest court in Washington. I expect to win the case in the Supreme Court and to compel the sale of the 2,300,000 acres to actual settlers. If the court decides in my favor, receivers will be appointed and all persons desiring to acquire a home on these lands will be given an equal opportunity to do so. Doubtless all the lands except the few claims now covered by actual settlers would be disposed of by the receivers through a drawing system. The land would make 15,000 homes of 160 acres each, or 60,000 homes of 40 acres each. Less than 100 settlers are now on the land. I shall recommend that the lands be disposed of in tracts of 40 acres to each settler, and through a drawing system.

In the midst of this land-grant litigation I was elected to Congress, and partly because of my promise that I would use the powers of the office to see that the case was not permitted to die in the courts. I kept my word, and my first speech in this House—July 15, 1911—was delivered for the purpose of calling the attention of Congress and the Attorney General to the snail-like progress of the case and to the importance of pushing it to a final decision. Since that speech was delivered the answer of the railroad was filed in the court of first instance and the case has gone forward with reasonable speed.

A few days after I delivered that first speech a former Member of this House, whose name I will give to anyone desiring it, called at my office in company with a man whom he introduced as James Y. Iddings, of San Francisco. He said he and Mr. Iddings, with others not named by him, were engaged in building a new line of railroad in Oregon from Coos Bay to Grants Pass, to be called the Coos Bay & Eastern Electric Co. He called with Mr. Iddings three times in less than 10 days. They first asked me to introduce a bill to give their proposed company a right of way over the public lands and also over the railroad lands. I told them such a law was unnecessary, as a general statute already gave such a right over the public lands and that over private lands a condemnation suit was necessary. They said they would desire my services in several matters. I told them that I could be of no further service to them or their company. Later I saw this former Member on the floor of the House many times. No Coos Bay & Eastern Electric Co. was ever organized so far as I know. A few days after I declined to have anything to do with the scheme a newspaper campaign was started against me that has not stopped yet. I state these facts for what they are worth. I believe I was tried out to see if I would take money that I knew I was not earning by accepting employment for the Coos Bay & Eastern Electric Co. And I believe that it was because it was found I could not be reached that the poison was turned loose through the newspapers.

I shall return to Oregon shortly to continue my fight for the majesty of the law and for the rights of those whom the Congress of the last generation said should have homes upon this railroad land grant. I shall continue my fight for common honesty in public affairs.

My fortunes to-day are at their lowest ebb. Were I to be taken ill the day I arrive home, I should have no place to go but to the Multnomah County farm. But I am not discouraged. I believe in a Divine Providence. I believe that things will presently grow brighter. I believe I shall return here in triumph and live to witness complete victory in the battle for justice in which I have enlisted.

And when I have finished this life I hope that I will have made it easier for all to acquire homes in Oregon. But if I fail, my conscience will not upbraid me because I did not try when I had the power placed in my hands, and it will be with peace and contentment that I shall fill one of the graves waiting for the present generation in Oregon. There we shall lie side by side—whether friends or enemies in life—gone to a common hereafter. May each Oregonian of my day, whether friend or foe, pauper or millionaire, have a final resting place such as that described by the late Senator Latham in his eulogy in the Senate upon Edward Dickinson Baker:

The restless waves of a great ocean will moan for ages to come beside his grave, and his honored ashes will rest in peace in the shadow of that lone mountain, the natural monument for the loved and lost of our new empire.

The Income Tax.

EXTENSION OF REMARKS

OF

HON. WILLIAM E. HUMPHREY,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 19, 1915.

Mr. HUMPHREY of Washington. Mr. Speaker, of all the inequalities, misfits, and demonstrations of misinformation and lack of wisdom in the present tariff law perhaps the misshapen, abortive, and sickly child, born of ignorance and egotism, called "the income-tax section," is the most troublesome, annoying, and complicated, and "past all understanding." The "authors and finishers" of this monstrosity did not know what it meant, and none since then have arisen wise enough to tell us.

I print herewith some clippings taken from the Washington Herald in reference to this matter:

[From the Washington Herald, Jan. 1, 1915.]

VAGARIES OF THE INCOME-TAX LAW.

When all the vagaries of the income-tax law have been located and classified Congress should proceed to the task of amending that loosely drawn measure. A number of its provisions are not susceptible of logical interpretation; some of them are amusing, even though unjust and harmful. For instance, the Commissioner of Internal Revenue had no choice but to interpret the law as putting a premium on divorce or the living apart of husband and wife.

The law actually imposes a penalty upon married persons living together. Under a ruling of the Commissioner of Internal Revenue an unmarried person or a married person not living with husband or wife shall be allowed an exemption of $3,000. When husband and wife live together they shall be allowed jointly a total exemption of only $4,000 on their aggregate income. Surely this could not have been the intention of the framers of the law, and yet no other interpretation seems possible.

Another effect of the law, which it is unreasonable to believe was contemplated, is to tax offerings to the church, though in this respect the law might perhaps be regarded as susceptible of a more liberal construction. It has been decided, however, that Easter offerings and fees received by clergymen for funerals, masses, marriages, baptisms, etc., are taxable incomes. Christmas gifts, however, are not so regarded. It would seem that if it is possible to exempt Christmas gifts it should not be obligatory to tax the other free-will offerings. Clearly such gifts to the church and its representatives should not be the objects of taxation. To regard as commercial revenue offerings freely made by the people as a part of their religious duty is not only without justification but repugnant to the higher ideals. Such offerings in reality are not fees, not payment for services, and should not be considered as taxable revenues. Services rendered by the clergy at funerals, marriages, and baptisms are not purchasable; they are free to the poor and lowly; but where gifts are made to the church for its support they should be safe from the hand of the tax collector.

If the collector of internal revenue is compelled to place such interpretations upon the law in the cases mentioned, it is obvious that the law should be amended without delay.

—

[From the Washington Herald, Friday, Jan. 1, 1915.]

SAYS TARIFF AND INCOME TAX OPPRESS THE WOMEN—PREMIUM PLACED ON DIVORCE AND PENALTY ON HOME LIFE, SAYS LETTER TO SUFFRAGISTS.

A protest by a woman against the income-tax section of the Underwood tariff law, on the ground that it discriminates against women, was forwarded some time ago to Dr. Anna Howard Shaw, president of the National American Woman Suffrage Association, accompanied by the following letter:

"DEAR MADAM: I am inclosing a criticism, sound in law and sound in fact, of the tariff act of October 3, 1913, which discriminates outrageously against the voteless American woman. Please have it read before your association and have such action taken to remedy the discrimination complained of as your honorable body may deem fit and proper. Unsurmountable obstacles affecting my position prevent my openly joining your movement, but I am with you in spirit to the end.

"From what I learn from conversations, legislators favorable and women citizens unfavorable to votes for women, I conclude a modified vote for them could be more easily obtained. That modification is, votes for tax-paying women. Indiscriminate or unqualified votes for women appear to be the stumblingblock.

"Sincerely, S. G. E."

The article, which is an interesting analysis of the effect of the law on the women of the country, is entitled "Discrimination against women without votes by the tariff act of October 3, 1913." It follows:

"That the tariff act of October 3, 1913, unjustly discriminates against women can not be denied. Will women supinely submit to such injustice and discrimination? Should they submit? They should not and will not.

"American women having no vote, while abroad this summer, purchased aigrettes and paid their honest money for them to foreign shopkeepers before the new tariff act became a law, but arriving afterwards in their alleged land of the free and home of the brave were, without previous notification, ruthlessly and forcibly despoiled of their property, the said aigrettes, by offensive customs 'subs' of the United States. So much for the effect or operation of the new tariff law on importations by 'voteless American women.' How were 'men with votes' affected in their importations by this same tariff law? We shall see.

WHAT THE MEN DID.

"The United States Government, through the Treasury Department, the same which seized and confiscated the aigrettes from women without votes, willfully and knowingly permitted and assisted 'men with votes' to import dutiable goods during the operation of the high tariff act actually amounting to value of $106,000,000, deposit the same 'in bond' in Government warehouses, retain them there 'duty free,' for several months, and subsequently remove them under the low rates of the tariff act of October 3, 1913, thus defrauding honest taxpayers and the United States Government through evasion of the payment of the lawful higher duty in force or legal at the date of importation. Is this equal or fair treatment of American citizens, or is it a discrimination against women without votes in favor of men with votes?

"It is safe to say no American woman citizen, without votes, escaped the vigilance of the United States Treasury customs 'subs' and retained her aigrette, but has the same Treasury Department been equally vigilant in preventing men with votes from violating the statutes and the treaty with Mexico by smuggling munitions of war across the border of that nation with which we are at peace, as evidenced by the disposition of our battleships in her harbors?

A PREMIUM ON DIVORCE.

"Section 2 of this tariff act, the income-tax law (see A and C, pp. 3 and 5), provides a punitive measure for married persons, and, according to the financial status of single persons, is a protective or prohibitive tariff against matrimony, a financial premium on divorce and separation, or the disruption of the marriage vow, race suicide, and indecent living of married persons, by inflicting upon taxable married persons who live together with their own husbands or wives an annual impost or fine of $2,000.

"Read the law yourself. It places the burden of its construction upon the taxable individual and provides a penalty for misconstruction or violation of its terms. Consult your attorney, if you are in doubt, as to the accuracy of this statement.

"Under section 2 ('C,' p. 5) of the tariff law all taxable single persons and all married taxable persons living apart—that is, separated, divorced, or living alone, or possibly with another person—are allowed an annual exemption of $3,000 each on their individual net incomes. For two such persons the total annual exemption amounts to $6,000. For two taxable married persons who are living together in accordance with moral, civil, and social laws, possibly hampered by a large family and other dependents, the total annual combined exemption for both is limited to $4,000, as against $6,000 annual exemption for two persons living otherwise. This is a fine, impost, or financial loss of $2,000 to each taxable family living together.

PENALTY FOR DECENT LIVING.

"Married taxable persons who are living apart, though they may engage in the white-slave trade, keep houses of ill repute, sell liquor in violation of law, etc., are allowed an annual exemption of $3,000 each, or $6,000 total, which would be reduced by this law to $4,000 total for both should they abandon their dissolute living, reform, and live decently together in holy wedlock.

"Consider seriously these horrible features and provisions of this law. Is it possible that the Congress which passed this law and the President who signed it did so knowingly or in ignorance of its provisions? Either horn of the dilemma is equally indefensible. This loosely and carelessly drawn law is the result of haste, without due consideration by Congress, a 'party caucus law.' Will the decent women and men of this country permit such a vicious law to stand without amendment?

"Bear in mind the fact that the women of this country have been struggling under high prices to provide their families with food and other necessities of life and at the same time paying a tax to the Government, as required by the high-tariff law in force until October 3 last, when the new tariff law went into effect. Since then the cost of living necessities has not been reduced; but, on the contrary, increased.

WOMEN DOUBLY TAXED.

"What has this Congress and the President done for the relief of the woman without a vote other than make empty promises and raise false hopes? I will tell you. They have double taxed her. After collecting a tax from her under the high tariff law, the new tariff law imposes a second tax during or covering the same period during which she had been taxed, viz, from March 1 to October 3, 1913, thus further, through an unfair and unnecessary retroactive tax law, passed as a 'party caucus measure,' without due and careful consideration, study, and analysis, increased her already too heavy financial burden, plus an additional tax, fine, or impost of $2,000, if she be a married woman, maintaining the family by living with her husband, as God and our laws intended she should. Failure to pay this impost subjects her to a further fine or imprisonment by a Government of which she is not a part or in which she has no voice. The party caucuses, in their haste to pass this measure for political purposes, evidently overlooked the well-known fact that it costs more to marry and raise a family decently than it does to live singly. This law in its wisdom provides a remedy, however, which is, if married, break up your family, live apart, and thereby save $1,000 each per annum; if single, do not marry, and thus avoid a Government fine, impost, or loss of $2,000 per annum.

"To the credit of women, in the States where they do vote, let it be remembered, no such atrocious law has ever been enacted by their votes, and never will be. Woman is to the home and children what the compass and anchor are to the ship.

"The women without votes demand of the men with votes the immediate repeal of the unjust and unfair discrimination against women imposed by the tariff law of 1913.

"S. G. E."

[From the Washington Herald, Wednesday, Jan. 13, 1915.]

THE OPEN FORUM—WOMAN WRITER COMPLAINS OF OPERATION OF INCOME-TAX LAW.

EDITOR OF THE WASHINGTON HERALD: Your morning contemporary, on the 8th instant, in an editorial, "Crisis in national finances," in which it predicted all kinds of terrors in increased and new taxes, queries: "Will incomes below $3,000 be taxed to make up the deficit?" As usual that publication is asleep when accuracy is most necessary.

You pointed out in your editorial on the 5th instant, "Vagaries of the income-tax law," some eye openers and thoughts for reflection, both for the United States Government and the penally taxed married woman who dares to live with her husband.

Will you please jog up sleeping contemporary and inform it, that its fears for the future taxation of incomes below $3,000 arrived long ago; in fact, it is provided in the organic law—the income-tax law of October 3, 1913, and has been rigidly enforced by the Treasury Department against married women who live with their husbands.

See income law, page 5, section C, which says: "*Provided*, That only one deduction of $4,000 shall be made from the aggregate income of both husband and wife when living together." The restricted deduction does not apply unless husband and wife live together.

As a specific application of the law to me, please note: "My husband, who is a cripple, most temperate in habits and speech, has a small business, and for the past 12 years has been paying on our small home, works faithfully to keep his family comfortable, and pays his bills promptly. Last February he prepared an honest financial statement of his business from March 1 to December 31, 1913, and was overjoyed to find that he had just escaped payment of income tax under the exemption of $4,000 allowed married persons living together. His joy was not long lived.

"My father, an old invalid soldier, had saved some of his pension money, and just before he died gave to me all he had to help me and the children during a rainy day, when my husband had lost what little health he had, or would pass away. I put it in the bank, getting 2 per cent on it. I tell you I felt like a rich bondholder when I would use this small interest money to buy some little extras for the children or put some of it in the church box on Sunday.

"Our cousin, a young lawyer, whom we consulted without charge—he being in the family—told my husband he must add my interest to his statement, though it was only a very small amount, in order to comply with the law. This almost broke my heart, but we could not be dishonest and cheat the Government, though it would never be found out.

"Adding my interest to my husband's income increased the total above the limit, and I had to pay an income tax on my small amount of that year's interest. I wonder how many other poor women are similarly situated and how a rich Government knowingly could take my money and deprive me and my children of its pleasures, when 1 cent to us is as big as $10 to some other persons. How I will be treated this year I don't know, but being honest with the Government will not lose my soul. These are surely hard times for good women.

"'Stop, look, and listen' would have prevented the French Revolution.

"M. F. S."

Government Ownership and Operation of Vessels Engaged in Foreign Trade.

EXTENSION OF REMARKS

OF

HON. WILLIAM S. GREENE,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 18, 1915.

Mr. GREENE of Massachusetts. Mr. Speaker, I present a letter addressed to me by the Boston Chamber of Commerce and also the report of a special committee of said chamber of commerce upon the bills H. R. 18666 and S. 6856, providing for Government ownership and operation of vessels engaged in foreign trade. The conclusions of the special committee and their recommendations are also presented, showing their disapproval of Government ownership and operation of vessels in the foreign trade.

Also an article published in the New York World of the date of January 10, 1915, as the result of an interview with me upon the request of the publishers of the New York World.

The matter is as follows:

BOSTON CHAMBER OF COMMERCE,
Boston, January 16, 1915.

Hon. WILLIAM S. GREENE,
House of Representatives, Washington, D. C.

DEAR SIR: The board of directors of the Boston Chamber of Commerce at their meeting on January 14 unanimously adopted the report of the chamber's special committee on merchant marine, in which it recommended that the chamber oppose the bills now pending in both Houses of Congress (H. R. 18666 and S. 6856), providing for Government ownership and operation of vessels engaged in foreign trade, for the reasons set forth in the report, a copy of which is sent you herewith. The committee also makes specific suggestions as to the preferable methods of creating a strong and enduring merchant marine.

In arriving at its conclusions, the committee not only carefully considered the proposed measures now pending in Congress, but invited JOSHUA W. ALEXANDER, chairman, and Congressman E. W. SAUNDERS, of the House Committee on the Merchant Marine, and ex-Congressman J. Sloat Fassett, who addressed the members of the chamber at a public dinner and presented the arguments for and against the proposed measures. This was done in order that the chamber should not take action until it had been fully informed upon the different phases of the question.

After careful consideration of the arguments presented, the board of directors are unanimous in their opinion that the present bills for Government ownership and operation of merchant vessels would discourage private capital and personal initiative, and deter the development of an American shipping industry, so vital to the commercial progress of Boston, of New England, and of the whole United States.

As a substitute for the plan proposed by the Government, the chamber makes six specific suggestions for creating an American merchant marine, which they believe to be much preferable to Government ownership.

We sincerely hope that you will carefully consider the recommendations and suggestions set forth in the chamber's report, and that you may see your way clear to oppose the bills providing for Government ownership and operation of our merchant marine.

Very truly, yours,

E. J. BLISS, *President.*
JAMES A. MCKIBBEN, *Secretary.*

[Report of committee on merchant marine relative to pending congressional bills providing for Government ownership and operation of merchant vessels "in the trade between the Atlantic, Gulf, or Pacific ports of the United States and the ports of Central and South America and elsewhere."]

JANUARY 9, 1915.

To the executive committee and board of directors:

There is some precedent in the practice of other nations for Government ownership of railroads; there is none whatever for Government ownership of a merchant marine.

Such experience in this direction as exists is either an accident or a fragment. The United States bought a small steamship line from New York to Colon as a part of the assets of the old French Panama Canal Co. and has operated that line as an incident to canal construction (statement of Mr. E. A. Drake, vice president Panama Railroad Steamship Co.), at a nominal bookkeeping profit of about 2 per cent for 10 years, with insurance, depreciation, and interest disregarded—imperative charges of a regular steamship concern, which, if paid by the Government line, would have involved a huge deficit and bankruptcy. The Government of Western Australia has owned and operated a small coastwise steamship line for two years (report of attorney general of Western Australia), with a loss of $114,000 the first year and of $96,000 the second. It is now believed that this enterprise will be abandoned.

This is the net experience in Government ownership which the world affords—two lines, both of them financially failures. Yet the ocean steamship business as a whole, in private hands, is and has been reasonably prosperous—as prosperous, on the average, as other industries, or it could not have procured capital for its great and constant growth. Twenty-five years ago the tonnage of all nations recorded by Lloyd's was 22,151,000; 10 years ago it was 36,000,000; now it is 49,089,000.

There has been almost no increase in the over-seas tonnage of the United States in this period, but the causes are well known. This is not the place for their discussion at length, and they can not be remedied by a mere expedient of Government ownership. Steamers of a Government-owned line would, if built in the United States, cost more than competing foreign-built ships, or, if bought abroad, would cost no less than such competing ships and would cost considerably more to operate. They would, of course, equally with privately owned American ships, be debarred from the subsidies of foreign Governments. A half a century of actual trial proves that under such conditions, and with only such exceptions as serve to prove the rule, American ships can be maintained in over-seas commerce only at an annual loss that finally becomes prohibitive.

MORE COSTLY THAN A REGULAR SUBSIDY.

This inevitable loss under these bills will have to be made up out of the Treasury of the United States through appropriations for the maintenance of the Government-owned steamship service. There is no proof or suggestion that a Government-owned line under the American flag can be operated at any less expense than a privately owned line. In fact, the expense of a Government-owned line would certainly be greater, for it has been established again and again that the Government can not conduct any business so economically as private individuals trained from youth in that business and dependent on it for profit or for livelihood.

Experience has shown that it costs about 20 per cent more to build battleships in Government navy yards of the United States than in private yards under like systems of accounting, and it is a fair assumption that there would be at least an equal contrast in the cost of ship operation. Therefore it is a reasonable expectation that if a subsidy of a given amount were required for the profitable maintenance of a private-owned merchant marine, a Government-owned merchant fleet would demand a subsidy at least 20 per cent, and probably much more than 20 per cent, greater, in the form of appropriations from time to time for the Government steamship corporation, of whose stock the Government holds 51 per cent, while private capitalists may own the remainder.

Without entering on a consideration of the expediency or justice of a subsidy system, it is indisputable that this Government-ownership project involves a particularly wasteful form of subsidy expenditure, inasmuch as trained and responsible private shipowners would be able to provide a given service at a lower cost, or for the same amount to render a more efficient and comprehensive service.

SHIPOWNING A SPECIALIZED BUSINESS.

The proposed bills hold that the Government-owned merchant marine shall be managed by a shipping board composed of the Secretary of the Treasury, the Postmaster General, and the Secretary of Commerce, not one of whom, probably, would have had the slightest experience in or knowledge of the ocean shipping business, which is a profession by itself, complex and difficult, requiring intense application and exceptional aptitude. It is not to be expected that Cabinet ministers, even of the highest general abilities, could compete in this highly specialized calling with men who had made it the one thought and effort of their lives.

The Panama Canal Line is a conspicuous case in point. Its president is and has been Col. George W. Goethals, the distinguished builder of the canal. This Government line, though favored in the transportation of officials and employees, supplies and materials, has failed to earn a sum equivalent to its insurance, depreciation, and interest, which must be regularly met by all private steamship companies.

DOES AN EMERGENCY EXIST?

It is said that an emergency exists because of the great European war, and that this emergency justifies a disregard of all precedents, and demands immediate and extraordinary legislation. We deny that there

is any such extreme emergency. Chartering is active; vessels long idle are being employed; freight rates have advanced. But these higher rates are due in chief part to risks incident to the war, to higher insurance rates, and to an increased cost of coal, supplies, and wages. Shipowners and merchants who have been questioned state that there is ample tonnage offering in the world in general for the reduced amount of trade that is being transacted. In South American commerce especially, on which stress is laid by the proposed bills, there are said to be more ships than cargoes. A widespread business depression, due to the war and other causes, has suddenly reduced the purchasing power of the South American Republics. (The United States & Brazil Steamship Line, under the auspices of the United States Steel Corporation, operates three American freight steamers from New York to Rio de Janeiro and Santos. Norton, Lilley & Co. operate three American freight steamers from New York to Montevideo, Buenos Aires, and Rosario. W. R. Grace & Co. (Merchants Line) and the New York-South American Line both operate American freight steamers from New York to Chile and Peru. The Red D Line operates four American mail, passenger, and freight steamers under ocean mail pay to Venezuela. The United Fruit Co. operates several American mail, passenger, and freight steamers from New York to the Isthmus of Panama and Colombia. The Panama Railroad Steamship Line operates several American mail, passenger, and freight steamships from New York to the Isthmus of Panama, connecting at Balboa for ports on the west coast of South America.) A new American freight steamship line has recently been established to Brazil. Other American steamships naturalized under the new free registry law are scheduled to sail at frequent intervals for Argentina, Uruguay, Chile, and Peru. There is and long has been an American line to Venezuela, and there are two or three American lines, one the Government-owned service to the Isthmus of Panama, aside from the six American lines regularly plying through the canal in the coastwise trade between the Atlantic and Pacific seaboards. The managers of the lines to the farther countries of South America state that because of the prevalent business dullness they are finding it difficult to load their ships and maintain their sailings without the additional handicap of having the Government of the United States as a competitor.

AS TO THE LACK OF COTTON SHIPS.

There is some difficulty in securing a sufficient number of ships on the route from the southern cotton ports to Bremen. But it should be understood that because of mines and other conditions this is an extra-hazardous service. British and French ships, of course, are not available for the carrying trade to Germany, and the German Government has stipulated that cotton shall be brought to German ports only in ships of American register, which are also preferred for the export of German dyestuffs and chemicals. Twelve or more American steamers from the coastwise service have accepted charters in the Bremen cotton trade during the few weeks since that trade was opened.

The information of the committee is that the real difficulty in the Bremen trade is not lack of ships, but lack of marine insurance on hulls and cargoes. A Federal war insurance board has already been instituted for temporary service through the European war. Proposals to extend the authority of this board so that it can assume marine risks for the time being, while conditions remain as abnormal as they are now, are already before Congress. Such an expedient would solve the problem without any need of resort to the costly and dangerous expedient of Government ownership. If proper insurance can be had more ships will be available. There are still suitable American steamships not yet chartered. From this fleet, with return cargoes practically assured, enough tonnage should be had to carry all the cotton required for direct import by Germany. In addition to these steamships there is a large fleet of seagoing sail vessels capable of carrying cotton or other cargoes with reasonable safety if insurance can be had. Indeed, several American sailing craft have been chartered in the past few days for lumber freights from the Gulf of Mexico to the Mediterranean.

A HAZARD TO NEUTRALITY.

There are large considerations of national prudence why any American ships employed to carry cotton or other goods to German ports should be private-owned ships instead of the property of our National Government. Hon. Robert Lansing, the counselor of the Department of State, recently emphasized before a subcommittee of the House Committee on Naval Affairs the grave risks that would be run in the transportation of conditional contraband to a belligerent port in a public ship of the United States. Raw cotton is regarded as noncontraband, but the very appearance of a national-owned ship in belligerent waters is fraught with a peculiar hazard to neutrality that does not attach to the voyage of a private-owned vessel.

An accident or affront to a Government-owned ship would be a vastly more serious affair than a similar happening to an ordinary commercial vessel not of a public character. A Government-owned merchant marine created in the stress of war would be a potent agency for the embroiling of the United States in the terrible catastrophe now convulsing Europe.

GOVERNMENT OWNERSHIP WILL NOT INCREASE TONNAGE.

No considerable increase in the amount of tonnage actually available for the carrying of our over-seas trade in any direction can be anticipated from this proposed expedient of Government ownership. All the American ships and all the neutral ships that could be bought and utilized for this purpose by the Government can be had equally well for charter for export at current rates on application to their present owners. Government ownership has no magic power to increase the tonnage of the world. New ships can not be constructed in either American or foreign yards in a period less than 7 months—9 or 10 months or a year would be required for the largest cargo vessels. The British Government on December 23 proclaimed an embargo on the transfer of British ships to foreign flags without the assent of the British Board of Trade, which in present circumstances would hardly be forthcoming. Dutch, Scandinavian, Spanish, Italian, and other neutral steamers are in such active demand and are earning such unusual rates of freight that it is not probable that our Government could purchase them now without the payment of inordinate prices. A scheme of Government ownership and operation, hazardous and difficult at any time, could be effected at the present juncture only by a prodigious expenditure.

Thirty or more German steamships, some of them of large tonnage, are interned at present in ports of the United States. The Hamburg-American Co., the larger of the concerns owning them, has recently declared that its ships were not for sale. Moreover, last August a rumor that these German steamers might be bought by the American Government immediately drew a notification from both Great Britain and France that the purchase and operation of these belligerent vessels under the American flag would be regarded as an unfriendly act and as a violation of neutrality.

The committee is deeply interested in the real revival and restoration of the American merchant marine in over-seas trade, but is profoundly convinced that an ambitious scheme of Government ownership would discourage and delay and not promote this great object, dear to the hearts of the entire Nation. Shipowners and shipbuilders state that the introduction of these proposed bills has had the unfortunate result of halting private enterprise and defeating important plans for the extension of steamship services and for new construction. No business man, no business corporation, however resolute and resourceful, desires to have as a possible competitor the Government of the United States.

MENACING THE COASTWISE TRADE.

The proposed bills profess, in general language, to provide Government-owned ships only for "the foreign trade"; but this profession is thrown to the winds by an amendment adopted in the Senate Committee on Commerce which includes Hawaii among the regions to which a Government-owned fleet shall operate. Hawaii is not a foreign country. It is not a dependency, like the Philippines or Guam. It is a regularly organized Territory of the United States, and its ports are ports of the United States, exactly as are Boston and New York and Philadelphia and San Francisco. Trade with Hawaii is and has been since 1900 American coastwise trade, in which none but American vessels may lawfully participate. There has not been a word of suggestion or complaint that the war in Europe affected in any way the transportation of merchandise between Hawaii and the American mainland, for which a large, new, and increasing American fleet is available. The inclusion of Hawaii among foreign ports in foreign trade is without a shadow of excuse; all interested in the American merchant marine will rightfully regard it as an ugly menace, as an "entering wedge" to Government competition in the entire great coastwise commerce of this country, reserved for more than a hundred years to American ships and American owners and now employing a vast shipping of upward of 7,000,000 tons. Any plea that the help of the Government is needed in this mighty trade is wholly baseless and indefensible.

THE LEASING CLAUSE.

The amendment added to the bill in the Senate Committee on Commerce, authorizing the Government to charter, lease, or transfer its ships to private corporations, is a frank recognition of the force of the criticism which the original plan has met with everywhere from the representative mercantile bodies of the United States. But this modified proposal also is essentially unsound. So long as merchant ships cost more to operate under the American flag than under foreign flags no Government-owned ships will be chartered by experienced shipowners unless the amount of this additional cost of operation is subtracted from the charter price, leaving that price merely nominal. Under such conditions the Government, of course, will actually be paying a concealed subsidy, which might much better be a frank, open, and stated one.

CONCLUSION.

The committee on merchant marine of the Boston Chamber of Commerce, therefore, disapproves the bills pending in both Houses of Congress (H. R. 18666 and S. 6856) for Government ownership and operation of vessels in the foreign trade for the following reasons:

(a) It is a sound principle that the Federal Government should not engage in a business which under suitable conditions can be conducted to equal or better advantage by private enterprise.

(b) Such an undertaking would be an unwise departure from the traditional policy of the American people, would involve a wasteful expenditure of public money, and would imperil our neutral position in the great European war.

(c) No personal emergency justifies the Government in embarking in the ocean shipping business; increased governmental facilities for marine insurance will largely solve the immediate problem of the cotton trade; Government ownership could not immediately add to the number of ships afloat upon the seas; and wherever there is a real need for vessels they can be as easily supplied by other means without resorting to this unsound and hazardous experiment.

(d) The proposed legislation would discourage private capital and personal initiative, and thereby indefinitely defer the development of an American ocean shipping industry, so vital to the commercial progress of Boston, of New England, and of the whole United States.

We make the following suggestions as to methods for the creation of a strong and enduring merchant marine, which would be preferable to Government ownership and operation as proposed in the pending bills, and urge their consideration by Congress:

SUGGESTIONS.

1. The establishment in the Department of Commerce of a shipping board of five members, after the example of the British Board of Trade and similar organizations of other maritime Governments, such a shipping board to be composed of the Commissioner of Navigation, a representative of the shipowning interests, of the shipbuilding interests, and of the shippers in water-borne trade, and an expert in marine insurance; this board to have general supervision of the American merchant marine.

2. A prompt revision and modernizing of our navigation laws and regulations, so far as they unnecessarily increase the cost of operating American ships as against foreign vessels.

3. An amendment of the ocean mail law of 1891, so that the compensation now paid to 20-knot ships to Europe can be paid to ships of less speed, of the second class, suitable to establish regular mail, passenger, and fast-freight services in naval reserve ships on the longer routes to South America, Australasia, and the Orient.

4. In place of an investment of $40,000,000 in Government ownership and operation a Federal fund of the same amount, to be administered by the shipping board above referred to for the purpose of guaranteeing mortgages examined and approved by the board or for careful loans upon shipping built or purchased for over-sea trade and fitted for auxiliary naval service.

The sum of $40,000,000 devoted to ownership and operation of a Government-owned fleet would produce only a relatively small fleet; but a proper use of a Government fund in the manner indicated would provide a large one, of far greater value to the commerce of the Nation.

5. Annual retainers of a proper amount to citizen officers and men of merchant vessels of the United States, after the practice that has proved so successful, particularly in the British mercantile marine, and special compensation to steamships not under contract for carrying mails but built on designs approved by the Navy Department and pledged to the service of the Government as fuel ships, supply ships, or transports, so that the Government may be able to control an adequate

American auxiliary fleet and a naval reserve of officers and men in time of need.

6. To meet a present condition, an extension of the powers of the existing Bureau of War Risk Insurance to cover marine insurance on hulls and cargoes, with the understanding that this bureau shall be discontinued when the war has ended.

Respectfully submitted.

AN UNSOUND PLAN AND A BAD BUSINESS PROPOSITION.

[By WILLIAM S. GREENE, Congressman from Massachusetts.]

The proposal put forward by the administration that the Government of the United States should own and operate merchant vessels engaged in the foreign trade is one which involves such far-reaching consequences that it would be highly improper to inject into a discussion of the project any element of political partisanship. The whole idea must, in fact, stand or fall upon the test of business principles applied to what is essentially a business proposition.

Apart from the very real danger that our present plan of building up a merchant marine may involve us in serious international complications, my objections to the proposed measure fall chiefly under two heads—that it is not, as its advocates assert, an emergency measure, and that it is not a sound business proposition.

IT IS NOT A MEASURE OF URGENCY.

The plea of urgency is made upon two grounds, first, that the present war in Europe offers a very favorable opportunity to restore the American merchant marine to its former position of glory and profit on the high seas; second, that the people of this country are suffering severe hardship because the export trade to Europe has been practically suspended.

In regard to the first of these points, it is a very short-sighted view of the commercial relations of the world which imagines that all the various circumstances which during the many years of European peace have combined to drive the American mercantile marine out of existence are going to be brought to an end by the present war. It is true that while the war lasts a considerable carrying trade might be developed in American ships, but it is absurd to suppose that once the war is over and the shipping of the present combatants is again free to range the oceans there will not immediately reassert themselves all the conditions which made shipowning in the foreign trade impossible for American citizens.

The building up of a great fleet of American merchant vessels is a project which, in principle, has the support of all Americans; but such a project can not depend for its success upon the existence of temporary and wholly exceptional circumstances 3,000 miles from our shores. If an American merchant fleet is to be created, the measures to that end will have to be based upon the recognition of the fact that the obstacles in the way are of domestic and not of foreign origin, so far as they lie outside the field of ordinary commercial competition.

OBSTACLES INHERENT, NOT COMPETITIVE.

The second argument used to give the shipping bill an appearance of urgency, namely, that American exports are held up because there are no American ships to carry them, will not stand a moment's analysis. There are plenty of vessels lying idle in our ports waiting for cargoes. What keeps them idle is not the fact that they do not fly the Stars and Stripes, but that the conditions of credit, exchange, and insurance have been thrown into the utmost confusion by the war. If the difficulties created by these upheavals in our ordinary commercial arrangements can be overcome, there is no reason why American exports can not be carried in the idle ships now anchored in our harbors or tied up to our docks.

So long as the war continues the risks of the foreign carrying trade will in practice be no less hazardous for an American ship than for other neutral ships, and but little less hazardous than they are for the ships of France, England, and Russia.

If an American ship leaves our shores with a cargo consigned to a European port, it runs neither more nor less risk than any other ship of being seized by the allies if it is bound for a German port or by Germany if it is bound for an English port; and if it is bound to a neutral port with contraband or with conditional contraband, it can be held up by any vessel of the combatant navies which challenges the neutral character of its trade.

Under the actual circumstances, therefore, it is clear that there is no urgency about this shipping bill, for its immediate passage can have little, if any, effect upon the volume of our exports, and in so far as it is designed to create a merchant marine under the American flag it is in the last degree improbable that any legislation carried through without more thorough preliminary investigation can accomplish any useful purpose.

IT IS NOT A SOUND BUSINESS PROPOSITION.

I now come to the question of the proposed Government-owned, Government-operated merchant marine as a business proposition. Concerning this aspect of the matter the first thing the public will want to know, if $40,000,000 are to be taken out of its pocket (as a starter) to set the new commercial armada afloat, is whether the administration proposes to run the enterprise at a loss or at a profit.

If it is proposed to run it at a loss, we may as well give up at once the pretense that any proportion of the capital of the venture will be subscribed by American business men. And even if it were expected that large profits might reward the backers of the scheme there is nothing in the history of American finance to warrant the assumption that any large sum of privately controlled money is seeking investment in an enterprise of which 51 per cent of the shares will be controlled by one shareholder (the Government), who has no direct interest in earning a dividend.

But if it is indeed the hope of the administration that it will be able to run its ships at a profit, it becomes a matter of great difficulty to discover any reasonable grounds on which such a hope can be founded.

COSTS MORE TO RUN OUR SHIPS.

The principal reasons why American ships do not engage in our foreign trade are that it costs more to build a ship in the United States and more to run it under the American law than it does to build it in a foreign country and run it under foreign laws. This is largely a question of the high wages paid to American labor, and, although the right to purchase foreign-built ships would remove the difficulty so far as first cost was concerned, yet the legal requirement that American ships must be officered by American citizens and the fixing of the seaman's wage at a higher average cost than is provided in the foreign service will always combine to keep up the cost of running ships under the American flag.

In open rivalry with the ships of other nations an American merchant marine can only pay its way if it is protected from the competition of cheap foreign labor, just as our manufacturing industries are protected, and just as our ships in the coastwise trade are protected—the former by our tariff laws, the latter by our navigation laws.

I believe that it would be a great advantage to this country to carry its own trade in its own ships. We used to carry 90 per cent of it; now we only carry 10 per cent of it, and we pay foreigners anywhere from one hundred million to two hundred million dollars a year to carry the rest of it. But a great merchant marine can no more be created overnight by a decree of Congress than a great foreign trade can be so created.

Protest Against the Smith-Burnett Immigration Bill.

EXTENSION OF REMARKS
OF
HON. ISAAC R. SHERWOOD,
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES,
Monday, January 18, 1915.

Mr. SHERWOOD. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a protest against the Smith-Burnett immigration bill.

The protest is as follows:

PROTEST AGAINST THE SMITH-BURNETT IMMIGRATION BILL.

Whereas there is now before the Congress of the United States a bill providing for the regulation of the entry of aliens into the United States, known and described as the Smith-Burnett immigration bill; and

Whereas the said bill contains among other provisions requiring educational tests, to which all aliens desiring admission to this country will be subjected, and their inability to meet the said tests will constitute a bar to their admission to the United States; and

Whereas conditions in many foreign lands render it impossible for countless thousands of people to secure an education in the land of their birth, as result of the tyrannical attitude of foreign Governments toward the people of countries that have been taken by force and deprived of their liberty; and

Whereas many people residing within the boundaries of the former Commonwealth of Poland are among these, who, as a result of years of oppression on the part of hostile foreign Governments and their despotic desire to destroy them as a nation and a people, have been deprived of the rights and opportunity to attend schools and colleges in their native land, and have at their first opportunity sought liberty and freedom by immigrating to the United States; and

Whereas the downtrodden and oppressed of every clime for years have looked upon these United States as a land where all honest people, irrespective of nationality or creed, could enter and enjoy the blessings of liberty, freedom, and justice; and

Whereas the history of our country shows that from its very foundation, through its most trying moments, the vote, work, and efforts of immigrants have been the support of this American Nation and this American country and its institutions; and

Whereas the people coming here from Poland and, in fact, the peasants, artisans, and workingmen of European countries in general have upon their arrival proven themselves to be industrious, home loving, moral, saving, and law-abiding—not drones in the beehives of our industries, not parasites upon the country, and not exploiters of their fellow men, but a desirable, healthy, and strengthening element, which has worked hard not only to better their own conditions, but to make this country great and to perpetuate this free Government and its great principles; and

Whereas so far as the Polish and other Slavonic people are concerned there has been no fair, just, and intelligent investigation or report made of the immigration problem by any commission of our Government, for no commission and no Government report upon the subject has included in these conducting the work anyone whom as of, in sympathy with, or familiar with either the language, customs, conditions, or principles of the Polish or other Slavonic people; and

Whereas that a healthy, moral, honest, industrious immigrant coming to this country after the period of helpless childhood as an adult is an asset and not a drain to this country, for the expense of bringing such immigrant to the condition of becoming a self-supporting producer has been before his coming here by the country from whence he comes; and

Whereas we know that literacy or educational tests do not indicate the morals, conscience, honesty, integrity, or industry of an immigrant; and

Whereas the present immigration laws and restrictions which are being rigidly enforced are sufficient to keep out of our country all vicious, unhealthy, and undesirable elements: Therefore be it

Resolved, That we, the members of Branch 520 of Polish National Alliance of United States of North America, residing in the city of Toledo and State of Ohio, citizens of these United States of America, having the well-being and future of this great country and its Government and institutions at heart, and as a part of that element of this country's population which came here from Poland, hereby protest against the enactment of the proposed restrictions requiring educational tests as being unfair, unjust, and un-American. Be it further

Resolved, That a copy of these resolutions be forwarded to the Hon. ISAAC R. SHERWOOD, Congressman from the State of Ohio, for submission to Congress.

JOSEPH S. KARPANTY, *President*.
JOHN GAWRYS, *Secretary*.

Army and Navy Manual for Debaters and Others—Facts Shown by Extracts from the Official Documents—I Challenge Contradiction of These Facts.

EXTENSION OF REMARKS

OF

HON. AUGUSTUS P. GARDNER,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 14, 1915.

Mr. GARDNER. Mr. Speaker, we are the most prosperous Nation on earth, and to the south of us lies the wonderful South American Continent, which we have closed to European colonization by the Monroe doctrine. I simply can not understand how any intelligent student of history can fail to see that we are impotent to defend ourselves and to enforce the Monroe doctrine by moral suasion and financial might alone.

The state of our national defenses ought to be looked into and a comprehensive plan for the future prepared. This inquiry and report should be made by an independent commission, so that unprejudiced minds may be brought to bear on the question. The work can not be done by existing committees of the House and Senate, first, because eight separate committees of the two bodies have jurisdiction of different parts of our national-defense problem; second, because the older members of all those committees, especially in the House, must necessarily be prejudiced in favor of their own work done in the past.

OUR NEEDS.

The General Board of the Navy, of which Admiral Dewey is chairman, is the official adviser of the Navy Department.

For many years the General Board has reported that for purposes of defense against the strongest nation, *except Great Britain*, as a foundation of fighting ships we need 48 battleships, less than 20 years old, and 192 destroyers.

Instead of this we have built, building, or authorized only 37 battleships less than 20 years old, and 68 destroyers.

Admiral Badger, recently commander in chief of the Atlantic Fleet, and Assistant Secretary of the Navy Roosevelt have testified that we need 71,000 men to man only that part of our present fleet which would be useful in time of war and to perform necessary shore duties. This estimate makes no allowance for the additional trained men required for signal and tactical work, etc., on board all the auxiliary vessels, which we must obtain in case of war, nor does it allow for the additional men needed to man the warships now under construction.

Instead of this we have only 52,300 men.

Admiral Badger and Admiral Vreeland testified that we need 100 submarines. (Admiral Vreeland testified that we needed that number for harbor defense alone.)

We have only 58 submarines built, building, or authorized, and many of them are absolutely obsolete and worthless.

We need an ample supply of aeroplanes and a few Zeppelins or other type of dirigibles.

We have only 23 aeroplanes (none of them armored) and not a single Zeppelin or other dirigible.

We need as big guns in our coast defenses as the modern foreign superdreadnaughts carry. The most powerful cannon in any fortification on the Atlantic coast are only 12-inch guns. Superdreadnaughts of the *Queen Elizabeth* type each carry eight 15-inch guns.

We need a large number of men in the Naval Militia and a large number of men in the Naval Reserves.

We have only 7,700 men in the Naval Militia, we have no Naval Reserve, and sailors in the merchant marine are not trained for the highly specialized duties of modern men-of-wars-men.

According to the estimate of the General Staff of the Army, prepared before the outbreak of the European war, we need a field army of 460,000 men, composed of regulars, militiamen, and reserves, ready to take the field at once at the outbreak of war.

According to the Secretary of War's annual report, we have only 29,405 regulars available for a field army, together with 119,087 militiamen if they all came to the front in time of war, and 16 men in the Army Reserve.

According to the last report of the Chief of Staff, United States Army, we need 11,790,850 rounds of artillery ammunition and 646,000,000 rounds of rifle ammunition.

Instead of this, we have on hand and being manufactured only 580,098 rounds of artillery ammunition and 241,000,000 rounds of rifle ammunition.

According to this same report we need 2,834 field and artillery guns. Instead of this we have on hand or being manufactured only 852 field artillery guns.

We need a supply of heavy field artillery such as the armies of Europe are using—9½-inch howitzers, 12½-inch howitzers, and perhaps even 16½-inch howitzers, like the gigantic German guns.

We have only thirty-two 6-inch howitzers and smaller pieces, but none larger.

THE NAVY.

[Extracts from testimony by Congressman GARDNER before the House Committee on Naval Affairs. From official printed report of committee.]

Out of 33 completed battleships do you know that 12 of them are unfitted for service without long delay? That is all on account of the refusal to pay the bill for manning them properly. We have 33 battleships, and 12 of them are in cold storage, where we can not get them when we want them. (P. 1060.)

* * * * * * *

Do you know that if we had gone to war with the rest of the civilized world at the beginning of last August that nine of our battleships would not be ready to fight yet? We have three battleships in reserve, six in ordinary, and three out of commission. That is to say, we have three battleships that need to be put in training, we have six of what Assistant Secretary of the Navy Roosevelt calls the graybeards of the fleet, and we have three in their second childhood. That is the situation in regard to the battleships, and he tells us that to put the vessels in "reserve" into fighting trim takes three months, and that to put the six battleships that are in "ordinary" into fighting trim will take six months, and that would mean the 1st of February, if we had gone to war with the rest of the powers. (P. 1060.) (Reference: Hearings, Roosevelt testimony, pp. 939, 940, 942.)

* * * * * * *

Now, in company with those battleships, to keep them company in cold storage, let us see what we have. We have 15 cruisers, 22 destroyers, 18 torpedo boats, 12 submarines, and perhaps a dozen miscellaneous fighting ships kept in cold storage with the battleships. In other words, we have 80 or more fighting vessels of our modest Navy not fit for battle in case of an emergency. (P. 1061.) (Reference, Asst. Sec. of Navy Roosevelt press memo., Oct. 21, 1914.)

* * * * * * *

We have had testimony here before this committee that it would take five years to get a reserve of 25,000 sailors. (P. 1061.)

* * * * * * *

I charge that our Navy is 18,000 enlisted men short of the number of men that they ought to have in peace as a preparation for war, and, in addition to that, there is a shortage of 4,000 more men in sight. That is, there will be an increase required of 4,000 more men to man the vessels coming in commission in 1915 and 1916. (P. 1061.)

* * * * * * *

In support of my charge I call to witness the evidence of Assistant Secretary Roosevelt, and I also cite the evidence of Rear Admiral Charles J. Badger as it appears on page 482 of your hearings. Both of these men say the Navy is 18,000 men short, not counting the sailors needed for the vessels now building. (P. 1061.) (Reference: Hearings; evidence of Admiral Badger and Hon. F. D. Roosevelt, December, 1914.)

* * * * * * *

The General Board, which actually has made out our war plans, estimates the enlisted forces of the Navy as between 30,000 and 50,000 men short for war. (P. 1061. Reference: Hearings, evidence of Hon. F. D. Roosevelt.)

* * * * * * *

How about air craft? Other nations have been developing air craft. Before the war broke out France had 1,400 aeroplanes and Germany had 1,000 aeroplanes, with other nations in close pursuit. At that time Servia had three times as many aeroplanes as Uncle Sam (p. 1065). Uncle Sam had 23, while one of the other nations had 1,400; and of the 23 which Uncle Sam had, half of them were in the Army and the other half in the Navy, and they were of the oldest type, and none of them were armored (p. 1065).

* * * * * * *

Now, how about the dirigibles and Zeppelins? How many of these do you suppose we have? Uncle Sam has not one single, solitary airship of that kind with which to face his enemy. (P. 1065. Reference: Hearings, evidence of Capt. Bristol.) Page 299 of Capt. Bristol's evidence before the committee shows that France has 22 dirigibles and 1,400 aeroplanes; Russia, 18 dirigibles and 800 aeroplanes; Great Britain, 9 dirigibles and 400 aeroplanes; Belgium, 2 dirigibles and 100 aeroplanes; Germany, 40 dirigibles and 1,000 aeroplanes; Austria, 400 aeroplanes and 8 dirigibles; and the United States 23 aeroplanes (p. 1066).

* * * * * * *

We have, as I said, a dozen aeroplanes in the Navy, and I am informed, or was informed in October last, that only seven of those could get out of their own way (p. 1067). So last year the aeroplane board appointed by the Secretary of the Navy to investigate the whole question recommended an appropriation of $1,300,000 for that year; and that is as far as they ever got, because, according to the evidence of Capt. Bristol, we let the Aviation Service spend the magnificent sum of $350,000 last year (p. 1067).

* * * * * * *

Speaking of the relative standing of the United States Navy—

Let us see how we stood on July 1, 1914, as compared with other nations. On that date the war tonnage of Great Britain was 2,157,000; the war tonnage of Germany was 951,710; the United States had 765,133 tons. (Page 1075. Reference: War Ship Tonnage Bulletin, United States Navy Department, July 1, 1914.)

* * * * * * *

Now let us see how we would have stood if all the vessels which were building on July 1, 1914, had been complete. This is the total of the war tonnage built and building July 1, 1914: Under those circumstances Great Britain would have 2,700,000 tons; Germany, 1,300,000 tons. Who do you suppose comes third? France would be third with 899,000 tons and the United States fourth with 894,000 tons. (Pages 1075 and 1076. Reference as above.)

Did you know that only 1 submarine out of 12 on the Atlantic coast was in condition to dive when the mobilization was ordered last November? (Reference: Hearings, Commander Stirling's evidence.)

ADMIRAL FISKE'S VIEWS.

[Extracts from testimony by Rear Admiral Bradley A. Fiske before the House Committee on Naval Affairs, from official printed report of committee.]

I think, of course, it is very well known we are behind other nations—for instance, the two great naval nations in Europe—in the matter of mines and air craft. I think that in case of an attack on our coasts by one of those powers our inadequacy would be very keenly felt. (P. 1007.)

* * * * * * *

As to scout ships, the policy of the General Board is to cut down what we think we really ought to have, because if we told Congress what we really think we ought to have they would say we are crazy. (P. 1017.)

* * * * * * *

I would say it would take about five years to get ready with our Navy to fight successfully and effectively against an effective navy. (P. 1023.) I am not thinking so much of the material of the ships as of the operations. What I have in mind all the time is what I would do if we were to have war to-morrow or next month. When I think of the number of things that we would have to do in order to get the Navy into really effective shape—by which I mean having plans, plans of preparation and plans of conduct of the war, and properly drilled mine layers and mine sweepers, and the aeronautical branch—when I think of all that has to be done in preparing general plans and detail plans of war, in getting the personnel enlisted and trained, ready to fight our battleships that are now in reserve and in ordinary, and figure it all out, I conclude that it will take at least five years. (P. 1024.) I doubt if in five years we could get the Navy up to a state of efficiency, for instance, such as that of one of the navies of Europe now. I doubt it very much. (P. 1024.)

* * * * * * *

We lack a general staff, which shall arrange the plans, that is fundamental; we have not enough personnel to man all the ships. We have not any mining equipment to speak of, or any aeronautical equipment or personnel. Besides the battleships we need small auxiliaries in the fleet, such as have been proposed by the General Board. (P. 1047.)

* * * * * * *

Mr. GRAY. Has it not been said, Admiral, that to make effective even the ships we have, we need more scout cruisers? I believe you testified to that this morning. I believe, even to make more effective the ships we already have, we need an increase in scout cruisers.

Admiral FISKE. To make the Navy more effective; yes.

Mr. GRAY. And we need more air craft, you say, to make effective the Navy we have now?

Admiral FISKE. Yes.

Mr. GRAY. And we need more submarines, you say, to make effective the ships we now have?

Admiral FISKE. I do not think I said submarines. I said mines.

Mr. GRAY. It also has been said here that we need submarines.

Admiral FISKE. Yes; I agree with that; but I think I spoke of mines.

Mr. GRAY. And we need more destroyers to make more effective the ships we now have. Is not that true?

Admiral FISKE. Yes.

Mr. GRAY. And, also, we require more officers, do we not, to make effective the ships that we now have?

Admiral FISKE. Yes.

Mr. GRAY. And we require more training for those men to make more effective the ships that we now have?

Admiral FISKE. Yes. (P. 1050.)

* * * * * * *

It would be necessary to supply submarines for only a few individual harbors. That is a small part of the problem. Most all of them should go with the fleet. But in the Canal Zone, which is the most vulnerable part of our entire possessions, anybody can go there and take it that wants to; I think we should have a few submarines. (P. 1053.)

NO DEFINITE POLICY.

[Extract from the Report of the General Board of the Navy, 1913.]

The absence of any definite naval policy on our part, except in the General Board, and the failure of the people, the Congress, and the executive government to recognize the necessity for such a policy has already placed us in a position of inferiority which may lead to war; and this inferiority is progressive and will continue to increase until the necessity for a definite policy is recognized and that policy put into operation.

—

[Extracts from the Report of the General Board of the Navy, Nov. 17, 1914.]

This shows that we are now deficient 10 battleships, built, building, and authorized, from that contemplated in the 1903 program. (P. 56.)

* * * * * * *

The General Board believes the policy it has consistently advocated for the production of an adequate Navy is to the best interests of the country, and that any Navy less than adequate is an expense to the Nation without being a protection. (P. 56.)

* * * * * * *

The General Board in its indorsement No. 449 of August 30, 1913, and accompanying memorandum brought to the attention of the department the dangerous situation of the country in the lack of air craft and air men in both the naval and military services. (P. 58.)

* * * * * * *

At the present time, more than a year later, the total number of air craft of any kind owned by the Navy consists of 12 aeroplanes, not more than two of which are of the same type, and all reported to have too little speed and carrying capacity for service work. (P. 59.)

* * * * * * *

In view of the advance that has been made in aeronautics during the past year and the demonstration now being made of the vital importance of a proper service to both land and sea warfare, our present situation can be described as nothing less than deplorable. As now developed air craft are the eyes of both armies and navies, and it is difficult to place any limit to their offensive possibilities. (P. 59.)

* * * * * * *

In our present condition of unpreparedness, in contact with any foe possessing a proper air service, our scouting would be blind. (P. 59.)

THE TORPEDO SITUATION.

[Extract from the report of Rear Admiral Joseph Strauss, Chief of the Bureau of Ordinance, United States Navy.]

The torpedo situation is developing very satisfactorily with the exception of modern torpedoes for battleships anterior to the *Nevada* and *Oklahoma*, for cruisers of the *Tennessee* class, and for the scouts. At present all these vessels are equipped with a short-range torpedo which may be considered obsolete for the battle fleet. (P. 8.)

NOTE.—As neither the *Nevada* nor *Oklahoma* is yet completed, this statement means that every United States battleship afloat is equipped with obsolete torpedoes.—A. P. G.

—

THE ALTANTIC SUBMARINE FLOTILLA.

[Extract from the evidence of Commander Yates Stirling, jr., Dec. 15, 1914.]

Representative ROBERTS. I am asking you that question because some newspapers state that there is only 1 submarine out of the 17 that will dive.

Commander STIRLING. I think I can explain where they got that impression. The commander in chief ordered a mobilization of the Atlantic submarine flotilla at Hampton Roads on the 1st of November of all available vessels. He left it to me to say what vessels I would bring down there. He did not consider the 5 at Colon. That reduced the submarine flotilla to 12. * * * So when we got down there the admiral wanted to know what we could do. I told him we had then only 1 submarine that I thought could efficiently take part in the maneuvers at sea off the coast. (P. 866.)

[From bulletins of Office of Naval Intelligence, United States Navy Department, July 1, 1914.]

VESSELS BUILT.

	Battleships, dreadnaught type.	Battleships.	Battle cruisers.	Armored cruisers.	Cruisers.	Destroyers.	Torpedo boats.	Submarines.	Coast-defense vessels.

THE ARMY.

[Statement by Congressman GARDNER to House Committee on Military Affairs, Jan. 4, 1915.]

SOLDIERS.

There are 29,405 regular United States soldiers available for a field army, according to Secretary of War Garrison. If all of them were ordered into trenches, they could man a single line about 14 miles long. There are 119,087 militiamen or national guardsmen in the United States, and there are just 16 men in the United States reserve. In other words, until a new army could be organized, drilled, and equipped we have just 148,508 men to summon to take the field. If every one of them answers the summons, they can man a single line of trenches about 65 miles long, just about two-thirds the circumference of Greater New York, by the way.

Our whole field army—militia, regulars, and all—would just about garrison Paris.

But can our militia all be counted on to stem the first onslaught of invasion? Has history shown us any such thing? Is it not a fact that before militia is to be relied upon it must go through an arduous training in a camp of instruction? Will even the best friend of the Militia or National Guard, whichever you call it, claim that it is to-day in a healthy state?

How can anyone make such a claim? The Chief of Staff tells us that in the last year, out of 120,000 militiamen, 23,000 failed to present themselves for the annual inspection, 31,000 absented themselves from the annual encampment, and 44,000 never appeared on the rifle range from one year's end to the other.

ARTILLERY.

The Russian Army in a single battle of the Japanese War had 1,204 field guns engaged. Japan had 922 guns extending over the same front. (Fortifications bill hearing, Dec. 9, 1913.)

We have in our possession only 634 completed modern field guns and howitzers altogether. (Letter from Secretary Garrison to Representative A. P. GARDNER, Dec. 23, 1914.)

That is to say, we own a little over half the guns which Russia had at the battle of Mukden. Yet any ordinary engagement of this European war makes the battle of Mukden look like a peace conference.

Gen. Wotherspoon, Chief of Staff of the United States Army, tells us in his recent report that European armies average more than 5 field guns for each 1,000 men. So our 634 guns would only equip a modest little army of 127,000. To be sure, we have appropriated for 226 more guns, but they are not ready.

In the testimony before the Fortifications Committee in 1913 it appeared that Russia has 6,000 field guns, France 4,800, and Germany about 5,000. It will take us quite a while to raise our modest 634 to those figures if the information given us by the War Department is correct. Last session Gen. Wood testified that the entire capacity of this country, working night and day, is 500 guns in a year.

AMMUNITION.

After all, what good would the guns be without ammunition? The Secretary of War expects us to have 580,000 rounds of artillery ammunition ready by July 1. I hope he is right. It is worth remembering that in a single battle of the Japanese war Russia shot away nearly half that amount. Gen. Wood tells us that 200 rounds of ammunition a day is a fair expenditure for a gun under battle conditions, so you see that our 634 guns can next July be provided with just about four days' ammunition apiece, if Secretary Garrison's hopes are fulfilled.

Last year the Ordnance Department estimated that the Government arsenals, running night and day, with three shifts, can turn out 1,600 rounds of artillery ammunition daily. In other words, eight field guns can shoot away ammunition just as fast as Uncle Sam can make it. Private manufacturers can not help the situation for three or four months after they get their orders, says Gen. Wood. Listen to this sentence from the general's evidence: "The best estimates indicate that at the end of the first six months not to exceed 350,000 rounds could be procured from all sources, including the Government plant."

Think of that! Three hundred and fifty thousand rounds to be made in half a year. Why, Russia shot away 250,000 rounds in the nine days' battle of Mukden alone.

WHAT THE CHIEF OF STAFF WROTE TO SECRETARY GARRISON.

Seven weeks ago Maj. Gen. Wotherspoon, Chief of Staff of the United States Army, wrote to the Secretary of War informing him that for the full equipment of an army of 800,000 men in case of war we are short 400,000,000 rounds of rifle ammunition and 11,000,000 rounds of artillery ammunition. Of course, you gentlemen with your ideas will laugh to scorn the idea that we might possibly need 800,000 men in case of war. That is because you will not listen to unpalatable evidence. That is because you shun a real inquiry. Mr. Chairman HAY, I asked you to summon Gen. Wotherspoon; I asked you to summon Gen. Wood; and you flatly refused both requests. Yet President Wilson intimates that this committee can be trusted to make an adequate investigation and an adequate report. How have you investigated? What have you done, I should like to know? Why, you summoned Gen. Crozier, who has been Chief of the Ordnance Department for 13 years, and you extracted from him the admission that his own work was most commendable. It is true that you put to him a few questions as to his recommendation for artillery and ammunition, but you didn't put the right questions. You did not drive home the questions which I would have driven home if I had not been muzzled. Why didn't you follow up the question of heavy field guns when you had Gen. Crozier on the stand? Why didn't you ask him to point out why Germany uses 11-inch guns to batter covered trenches if 3-inch guns to scatter shrapnel are all that is needed? You know, Mr. Chairman, that the biggest movable gun in the United States Army is the 6-inch howitzer, and we only have 32 of them completed. Yet the Germans have 16½-inch howitzers and 12⅔-inch howitzers and 8-inch mortars and the English have 9½-inch howitzers. What big guns the French may have I do not know.

LITTLE AMMUNITION.

[Extract from the report of Brig. Gen. William Crozier, Chief of Ordnance, United States Army, 1914.]

The amount of ammunition on hand for field guns is far short of that considered advisable, although appropriations for this purpose have been materially increased.

No permanent ammunition trains have been provided (p. 22).

WHAT SECRETARY GARRISON SAYS.

[Extracts from the report of Hon. Lindley M. Garrison, Secretary of War, 1914.]

Whatever the future may hold in the way of agreements between nations, followed by actual disarmament thereof, of international courts of arbitration, and other greatly to be desired measures to lessen or prevent conflict between nation and nation, we all know that at present these conditions are not existing. We can and will eagerly adapt ourselves to each beneficent development along these lines; but to merely enfeeble ourselves in the meantime would, in my view, be unthinkable folly. By neglecting and refusing to provide ourselves with the necessary means of self-protection and self-defense we could not hasten or in any way favorably influence the ultimate results we desire in these respects. (P. 6.)

* * * * * * *

In continental United States we had in the mobile army on June 30, 1914, 1,495 officers and 29,405 men.

We have a reserve—that is, men who have been trained in the Army and under the terms of their enlistment are subject to be called back to the colors in time of war—consisting of 16 men.

The Organized Militia of the various States totals 8,323 officers and 119,087 men. The enlisted men thereof are required, in order to obtain the financial aid which the Congress authorizes the Secretary of War to extend under certain conditions, to attend 24 drills a year and 5 days annually in the field. If all of the National Guard could be summoned in the event of war, and should all respond (an inconceivable result), and if they were all found fairly efficient in the first line—that is, the troops who would be expected to immediately take the field—we could summon a force in this country of Regulars and National Guard amounting to 9,818 officers and 148,492 men.

And this is absolutely all. The only other recourse would then be volunteers, and to equip, organize, train, and make them ready would take, at the smallest possible estimate, six months.

Anyone who takes the slightest trouble to investigate will find that in modern warfare a prepared enemy would progress so far on the way to success in six months, if his antagonist had to wait six months to meet him, that such unprepared antagonist might as well concede defeat without contest.

* * * * * * *

For the purpose of information the table which follows is presented, showing the area, population, and military resources on a peace and war footing of other nations in comparison with ours.

	Land forces of various countries.			
	Area (square miles).	Population.	Peace strength.	Total trained war strength.
Germany	208,830	64,903,423	620,000	4,000,000
France	207,054	38,961,945	560,000	3,000,000
Russia	8,647,657	160,095,200	1,200,000	4,500,000
Great Britain and colonies	11,467,294	396,294,752	254,500	[1] 800,000
Italy	110,550	32,475,253	275,000	1,200,000
Austria-Hungary	261,035	49,418,596	360,000	2,000,000
Japan	147,655	53,875,390	230,000	1,200,000
Turkey	1,186,874	35,764,876	420,000	1,200,000
Spain	194,783	19,503,008	115,000	300,000
Switzerland	15,976	3,741,971	140,000	275,000
Sweden	172,876	5,476,441	75,000	400,000
Belgium	11,373	7,074,910	42,000	180,000
United States (including Philippine Scouts)	3,026,789	98,781,324	97,760	[2] 225,170

[1] Excluding native army, 160,000.
[2] Including Organized Militia and Philippine Scouts.

* * * * * * *

MAJ. GEN. LEONARD WOOD'S WARNING.

Statement of facts by Maj. Gen. Leonard Wood, United States Army, when Chief of Staff. Submitted December 9, 1913; hearings on fortification bill, pages 13, 14, 15, and 16:

I am submitting, for the information of your committee, a statement which shows in detail the condition of the field artillery matériel of the United States Army and the available ammunition for these guns, and I trust that the members of this committee may find time to read this, for it shows that we have neither guns nor ammunition sufficient to give any general commanding an army in the field any assurance of success if attacked by an army of equal size which is supplied with its proper quota of field artillery.

The fire of modern field artillery is so deadly that troops can not advance over terrain swept by these guns without prohibitive losses. It is therefore necessary to neutralize the fire of hostile guns before our troops can advance, and the only way to neutralize the fire of this hostile field artillery is by field artillery guns, for troops armed with the small arms are as effectual against this fire until they arrive at about 2,000 yards from it as though they were armed with knives. This field artillery matériel and ammunition can not be quickly obtained. In fact, the Chief of Ordnance estimates that almost one year would be required to supply the field artillery guns needed with one field army of a little less than 70,000 men. No war within the past 45 years has lasted for one year, so that after war is declared it would probably be over before we could manufacture an appreciable number of guns; and the same applies to ammunition.

The Ordnance Department states that by running night and day with three shifts Frankford Arsenal could turn out about 1,600 rounds of ammunition per day, and that if private manufacturers were given orders to run under war conditions they could begin deliveries of ammunition in from three to four months, and after getting under way could turn out about 100,000 or 200,000 rounds per month for two or three months, and after a total time of six months the production would perhaps equal 250,000 rounds per month. The best estimates indicate that at the end of the first six months not to exceed 350,000 rounds could be procured from all sources, including the Government plant. After this six months there would be no particular difficulty in securing ammunition as rapidly as might be needed.

I will state to the committee that it is my belief that no modern war between first-class powers will last for one year, and unless private manufacturers are now encouraged to manufacture ammunition for our guns after war is declared they will not be in any condition to do so until after the war is finished, and the supply of ammunition during the war will be limited to what the arsenals can turn out. At present this is about 1,600 rounds per day, running three shifts, and this ammunition, under ordinary battle conditions, could be fired by eight guns in one day of battle. If guns are not supplied on the battle field with the ammunition which they can be reasonably expected to use, they are not efficient, and when a gun has exhausted the ammunition supplied it becomes as perfectly useless as junk; in fact, it is worse than junk, for it must be protected by other troops.

In the Russo-Japanese War the Russians expended during the war, exclusive of the action around Port Arthur, 954,000 rounds.

At Mukden in nine days they expended 250,000 rounds.

One battery of eight guns at Mukden fired 11,159 rounds, or 1,395 rounds per gun.

At Liaoyang eight Russian guns fired in three hours 2,500 rounds, or 312 per gun.

During August 30 and 31 the First and Third Siberians, with 16 batteries of 8 guns each, fired 108,000 rounds, or 844 rounds per gun.

At Schaho, in a four-days fight, the artillery of the First Infantry Division—48 guns—fired 602 rounds per gun.

At this same battle in 45 minutes, 20 minutes of which were not occupied by firing, 42 guns fired 8,000 rounds, or 190 rounds per gun in 25 minutes of actual firing.

The War Department believes, after extended study, that in case of war with a first-class power an army of 500,000 men will be needed to give this country any chance of success against invasion, and that this force will be needed at once. To make it efficient it must be given its proper quota of field artillery. To do this this artillery must be on hand, for it can not be supplied after war is started. A municipality might as well talk about buying its fire hose after the conflagration has started. A fire department without its proper equipment is worthless, irrespective of the number of men it has; and so would your armies, unless you provide in peace the material which will make them effective in war. (Pp. 13, 14, and 15.)

* * * * * * *

I invite the attention of the committee to the fact that to October 1, 1913, total appropriations have been made by your committee and the Military Committee for only 245,098 rounds of ammunition for our modern field guns. All of this ammunition will not be manufactured until June 30, 1914.

Of this ammunition for modern guns we have at present in this country—with troops, in depots, or under manufacture—186,508 rounds; and for the 2.95 mountain gun 15,106 rounds; a total of 201,614 rounds, and this is all we have.

At Mukden in 9 days the 1,204 Russian guns expended 250,000 rounds.

The present daily output of the ordnance factories is, for three shifts running night and day, not above 1,600 rounds. It is at present manufacturing about 600 rounds of assorted sizes per day with one shift (p. 16).

SHORTAGE OF MUNITIONS OF WAR FOR FIELD ARMY.

(Table prepared from figures given on page 12 of the report of Maj. Gen. W. W. Wotherspoon, Chief of Staff, United States Army, Nov. 15, 1914:)

	Munitions required as a reserve in anticipation of war.	Munitions on hand or in process of manufacture.
Rifles	642,541	698,374
Rifle cartridges	646,000,000	241,000,000
Field guns (exclusive of giant guns)	2,834	852
Field-gun ammunition, rounds	11,790,850	580,098

AS TO COAST DEFENSES.

[Extract from the report of Brig. Gen. E. M. Weaver, Chief of Coast Artillery, United States Army, 1914.]

From the foregoing it will be seen that the present authorized strength of the regular Coast Artillery Corps is short 564 officers and 10,988 enlisted men of the strength required to man our coast defenses under the adopted policy outlined above.

The defenses outside the continental United States are practically ready for their garrisons, and when these are provided there will remain for home gun defenses 176 officers and 7,543 enlisted men, which is about one-third of one relief.

In order to provide for our primary home defenses, to wit, coast defenses of Portland, Boston, Narragansett Bay, Long Island Sound, eastern New York, southern New York, Chesapeake Bay, Pensacola, San Francisco, and Puget Sound, there are required 662 officers and 16,251 enlisted men.

It will thus be seen that there are now provided about one-fourth of the officers and one-half of the enlisted men necessary for this purpose. Unless provision is made in the near future for additional Coast Artillery personnel, it will be necessary to reduce the garrisons to mere caretaker detachments at some of the defenses of lesser importance, including Portsmouth, Delaware, Charleston, Savannah, Key West, New Bedford, Potomac, Tampa, Columbia, Baltimore, Cape Fear, and Mobile (p. 15).

—

[Extract from the report of the Chief of Staff, United States Army, 1914.]

There is a serious deficiency, however, in ammunition for these coast defenses, the supply which the department has been attempting to maintain being on the basis of approximately an hour's full and active operation of the guns in the United States proper and a two hours' full and active operation of the guns in over-sea fortifications. According to the report of the Chief of Coast Artillery, the amount of ammunition now available and provided for by appropriations is equal to about 73 per cent of this requirement for the guns and 50 per cent for the mortars. * * * The deficiencies in the matter of fire control and searchlights are of the most serious character. As a matter of fact, proper fire control and searchlight installation is only maintained in a limited number of first-class defense areas, the remainder of the fire-control systems and searchlight equipment being deficient or improvised (p. 6).

—

CHESAPEAKE BAY UNFORTIFIED.

[Extract from the report of the National Coast Defense Board, Feb. 1, 1906.]

Commercially and strategically, Chesapeake Bay is to-day, as it always has been, of the very first importance. With the entrance, as it is now, unfortified, a hostile fleet, should it gain control of the sea, can establish, without coming under the fire of a single gun, a base on its shores, pass in and out at pleasure, have access to large quantities of valuable supplies of all kinds, and paralyze the great trunk railway lines crossing the head of the bay. (The situation is the same to-day as nine years ago, when the above was written. The entrance to Chesapeake Bay is still unfortified. A. P. G.)

ENEMY COULD LAND.

[Extract from the evidence of Rear Admiral Frank F. Fletcher, Dec. 9, 1914.]

Representative WITHERSPOON. How many unharbored places are there on the coast where they (the enemy) could land?

Admiral FLETCHER. In smooth water and fine weather, they could land almost any place, as we did from the open sea at Santiago. (P. 536, official printed hearings of House Committee on Naval Affairs.)

THE RANGE OF OUR COAST GUNS.

Correspondence between the Secretary of War and Congressman A. P. GARDNER relative to the comparative range of foreign naval guns and the guns of our seacoast defenses:

WASHINGTON, D. C., *December 14, 1914.*

The honorable the SECRETARY OF WAR.

MY DEAR MR. SECRETARY: Would you be kind enough to answer the following questions:

1. How many 14-inch guns are there in the coast defenses of the United States, and where are they situated?

2. Are there any guns of a larger number of inches in caliber, except the 16-inch gun destined for the Panama Canal?

3. Referring to page 7 of the current report of the Chief of Coast Artillery, how large is the caliber of the guns which "foreign warships of the latest design are carrying"?
4. How much do these foreign guns out range our 14-inch guns?
5. How much do they out range our 12-inch guns?

Very respectfully,

——— ———.

—

DECEMBER 15, 1914.

Hon. A. P. GARDNER,
House of Representatives.

MY DEAR MR. GARDNER: I am in receipt of your letter of even date and answer the inquiries therein as follows:

1. None.
2. No.
3. 15-inch, 45 calibers.
4. The guns just mentioned carry at their maximum elevation 21,000 yards. Our 14-inch guns if mounted so as to shoot at their maximum elevation would carry as far. On the present carriage they would carry 18,000 yards.
5. The foreign guns, just mentioned, as above stated, carry at their maximum elevation 21,000 yards. Our 12-inch guns on their standard carriage carry 13,000 yards. They could be mounted so as to carry a similar distance to the foreign guns just mentioned.

In regard to the question that you put to me orally at your visit yesterday afternoon I repeat the answer which I made to you. In view of the increased size and caliber of guns now on, or contemplated to be placed on, naval vessels and the caliber, mounting, and range of our coast defense guns and the question which has arisen as to their defensive strength against the offensive strength of naval ships with their increased armament I had ordered a board to study this question and report to me thereon.

Sincerely, yours,

LINDLEY M. GARRISON,
Secretary of War.

REPORT OF THE CHIEF OF STAFF.

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF STAFF,
Washington, November 15, 1914.

SIR: I have the honor to submit the following report for the period from April 22, 1914, to November 15, 1914:

STRENGTH OF THE ARMY.

According to the latest returns, the actual strength of the Army, exclusive of the Philippine Scouts, is 4,572 officers and 88,444 enlisted men. The authorized strength of the Army is 4,726 officers and 95,977 enlisted men. The Army is therefore 154 officers and 7,533 enlisted men below its authorized strength.

Of the total present enlisted strength of the Army, 22.50 per cent, including recruits and recruiting parties, belongs to the noncombatant and noneffective class, and is not with the colors; 19.45 per cent is in that branch whose special function is coast defense; and 58.05 per cent belongs to the mobile forces (Engineers, Cavalry, Field Artillery, and Infantry).

Of the actual strength of the Army from the latest returns, 1,067 officers and 19,899 enlisted men (including recruits and men engaged in recruiting) belong to the staff, technical, and noncombatant branches of the Army.

Seven hundred and forty-six officers and 17,201 enlisted men belong to the Coast Artillery and 2,738 officers and 51,344 enlisted men belong to the mobile army (Engineers, Cavalry, Field Artillery, and Infantry).

MOBILE ARMY.

The total strength of the field or mobile forces in our Army is therefore less than 52,000 enlisted men. If from this strength the noncombatants and noneffectives, belonging to the regimental, troop, battery, and company organizations, such as the noncommissioned staff, musicians, cooks, scouts, etc., which aggregate 5,376, are deducted, the actual fighting strength of the Army with the colors, and without deductions for officers and men sick, on furlough, detached service, etc., would be 2,738 officers and 45,968 enlisted men.

There are in the line of the United States Regular Army (including Coast Artillery), not including the two battalions of the Porto Rican Regiment, 65 regimental and 758 troop, battery, and company organizations. Under existing laws there belong to these organizations 322 regimental field officers and 2,358 company officers. Of these officers, according to latest returns, 93 field and 675 company officers are at present absent from their commands on detached service, on leave, or sick. This important branch of the Army is therefore at the present time 28.656 per cent short of the officers who are deemed necessary under existing laws for its instruction, training, and discipline. As the department draws mainly upon the units of the forces in the United States proper for officers for detached service, maintaining as far as possible the full complement of officers with the organizations on foreign service, the percentage of regimental and company officers absent from their organizations is far higher for those organizations in the United States than the above percentage would indicate.

DISTRIBUTION OF THE MOBILE ARMY.

The enlisted men of the mobile Army are distributed as follows:

In the United States proper	30,481
In our foreign possessions	20,863
Distributed as follows:	
In the Philippines	7,212
In the Hawaiian Islands	6,832
In the Panama Canal Zone	1,681
In China	690
In Alaska	431
In Vera Cruz	3,434
In Porto Rican Regiment	583

Of the enlisted men of the mobile Army in the United States, 18,954 are in the field in Texas and on the Mexican border, 1,665 are in the field in Colorado, 245 are temporarily in Montana, 300 are in Arkansas, and only 9,317 are at their home or permanent stations. It may be added that the department is under the necessity of dispatching in the near future at least one additional regiment of Infantry to Panama, and that this action will still further reduce by at least 1,200 the number of troops of the mobile Army remaining within our continental limits.

MATÉRIEL FOR THE MAINTENANCE OF THE MOBILE ARMY.

A fairly adequate supply of ammunition and other matériel to maintain the mobile army in the field for a period of six months is now on hand and available.

COAST ARTILLERY CORPS.

As to the Coast Artillery branch of the Army, the strength of that corps must necessarily depend on the number and character of the coast defenses which it is required to man. Its strength has no relation to the strength of the mobile Army other than that the strength of the latter must be adequate to protect the fortified positions from attack from the rear.

Under the present approved policy of the War Department the Coast Artillery defenses in our foreign possessions are to be manned entirely by organizations belonging to the regular service. The Coast Artillery defenses in the United States proper are to be manned at the rate of 50 per cent of the gun and mortar defenses by the Coast Artillery Corps of the Organized Militia.

The strength of the Coast Artillery of the Regular Army, from latest returns, is 746 officers and 17,201 enlisted men. The estimate of the Chief of Coast Artillery shows that 1,312 officers and 30,309 enlisted men of the Regular Army in addition to the 740 officers and 18,531 enlisted men of the Organized Militia required to man 50 per cent of the gun and mortar defenses in the United States are necessary to man the seacoast defenses now existing at home and in our foreign possessions. As the authorized strength of that corps of the Regular Army is 748 officers and 19,019 enlisted men, it is at present 2 officers and 1,818 enlisted men below its authorized strength and 566 officers and 13,108 enlisted men below the necessities as estimated by the Chief of Coast Artillery, in addition to the deficiencies in the Coast Artillery Corps of the Organized Militia. The total deficiencies in the Coast Artillery Corps of the Regular Army and the Organized Militia are, therefore, 856 officers and 24,489 enlisted men.

DISTRIBUTION OF THE COAST ARTILLERY.

The companies of the Coast Artillery Corps are distributed as follows:

	Companies.
On the Atlantic, Pacific, and Gulf coasts of the United States proper	140
In Texas (equipped and acting as Infantry)	5
In our foreign possessions	25
That is:	
In the Philippine Islands	11
In the Hawaiian Islands	8
In the Panama Canal Zone	6

The aggregate enlisted strength of the Coast Artillery Corps required to man the coast defenses in the United States is reported by the Chief of Coast Artillery to be 24,075; the actual number available is 14,633. The aggregate enlisted strength required to man the coast defenses in foreign possessions now completed, or to be completed in the near future, as reported by the Chief of Coast Artillery, is 6,234; the actual number now in those possessions is 2,568. It therefore appears that there is a deficiency of 9,442 enlisted men for the home coast defenses and 3,666 for those in our foreign possessions.

Naval armament in the last few years has rapidly developed, particularly in respect to the caliber of the guns, their ranges, and the rapidity with which fire from these guns can be delivered. At the present time the tendency is to place on the higher type of battleships guns as large as 15 inches in caliber. These guns, whilst carrying a projectile of less weight than those used with our direct-fire type of seacoast guns, have, owing to the greater length of the guns and the higher powder pressures used, a very distinct advantage in range, their range exceeding that of our 14-inch guns from 2,000 to 3,000 yards. Whilst this advantage in range is to a degree offset by the instability of the naval platforms and the less accurate methods of obtaining ranges from ships than from land defenses, there still appears to remain a distinct advantage in this respect, which, coupled with the number of these caliber guns now being carried on the stronger type of naval ships, makes it necessary to give careful consideration to the question whether there should not be a change, not only in the length, caliber, and powder pressures of our heavier type of guns, but whether there should not be a change in the emplacements so as to give overhead protection to the crews operating the guns. In other words, it is my opinion that careful consideration should be given, at least in the establishment of new defense districts, to the question of the caliber, length, and range of the seacoast guns, as well as to the question whether the turret system for the protection of the gun and its crew should not be adopted, in order to put the land defenses somewhat nearer on a parity with the naval guns which are liable to attack them. As a fleet of 8 battleships of the most modern type can throw against a single target 118 projectiles per minute, the danger that must arise from the possibility of fragments of these shells and the débris thrown up from their impact against the concrete parapets which protect the guns, to the crews as well as to the delicate and complicated machinery which operates the guns, would indicate that overhead protection against such fragments should be provided in order to insure the most effective operation of the coast armament.

MATÉRIEL FOR THE COAST ARTILLERY DEFENSES.

Matériel for the coast artillery defenses as at present established and under construction is fairly adequate in the matter of guns, mortars, and mine matériel. There is a serious deficiency, however, in ammunition for these defenses, the supply which the department has been attempting to maintain being on the basis of approximately an hour's full and active operation of the guns in the United States proper and a two hours' full and active operation of the guns in over-sea fortifications. According to the report of the Chief of Coast Artillery the amount of ammunition now available and provided for by appropriations is equal to about 73 per cent of this requirement for the guns and 50 per cent for the mortars. The amount of explosive necessary to load and operate the mines now provided at our various coast defenses for one charge is complete. The deficiencies in the matter of fire control and searchlights are of the most serious character. As a matter of fact, proper fire control and searchlight installation is only maintained in a limited number of first-class defense areas, the remainder of the fire-control systems and searchlight equipment being deficient or improvised.

ORGANIZED MILITIA.

According to the latest returns, the total reported strength of the Organized Militia is 8,323 officers and 119,087 enlisted men. Of this force, 855 officers and 5,026 enlisted men belong to the staff and non-

combatant branches, 450 officers and 7,150 enlisted men belong to the Coast Artillery, and 7,018 officers and 106,911 enlisted men to the mobile forces (Engineers, Cavalry, Field Artillery, and Infantry). Of this force there were present at the annual inspection 692 officers and 4,090 enlisted men of the staff corps, 439 officers and 5,989 enlisted men of the Coast Artillery, and 6,553 officers and 85,541 enlisted men of the mobile forces, a total absenteeism from inspection of 639 officers and 23,467 enlisted men. Reports as to the attendance at camps of instruction show that 568 officers and 3,744 enlisted men of the staff corps, 423 officers and 6,135 enlisted men of the Coast Artillery, and 5,904 officers and 77,353 enlisted men of the mobile forces attended these camps of instruction, showing a total absenteeism of 1,428 officers and 31,855 enlisted men from these camps.

As regards practice with the rifle, there were 111,140 officers and men in organizations armed with the rifle. The total number who fired the rifle during the range-practice season, 1913 (the last report available), was 66,974. The total number who fired the rifle during the range-practice season, 1913, and qualified as second-class men or better, was 42,599 officers and men.

From the above figures it will be seen that only 81.07 per cent of the total reported strength of officers and men of the Organized Militia attended the annual inspections; that only 73.87 per cent of officers and men attended the camps of instruction; that the number of men who had any practice with the rifle during the target season 1913 was 52.56 per cent; and that the number who qualified as second-class men or better was 33.43 per cent.

The requirements of the regulations are that units of the Organized Militia shall have at least 24 drills of one hour each per annum. Reports indicate that whilst in a majority of States these requirements were fully met as regards the organizations, yet in a majority of organizations there were a number of enlisted men who failed to attend 24 times for drill and instruction during the calendar year 1913. The total number so failing to attend during the year 1913 was 37,874 men out of a total of 119,087.

There is no indication of the number of practice marches held by the units of the Organized Militia during the year, and it is believed to be a safe conclusion that not a single unit at its maximum strength marched a distance of 10 miles fully equipped and armed.

The above figures, taken in conjunction with the fact that the number of companies, troops, batteries, etc., is 2,000, and that of this number, 1,120 organizations are below the prescribed minimum strength, would indicate to a degree the dependence to be placed upon this force.

As organized the militia is deficient in the following units to make it a properly balanced and efficient field force:

Cavalry, number of troops	54
Field Artillery, number of batteries	79
Engineers, number of companies	14
Ambulance companies	34
Field hospitals	12

The deficiency in its Coast Artillery branch is 290 officers and 11,381 enlisted men.

As to the matériel necessary to put this force into the field and maintain it there for a period of six months, there is a very decided deficiency in many important respects. For instance, there are but 550 horses available for the use in drill and instruction of the Cavalry, which aggregates 4,940 officers and enlisted men. The deficiency in horses for the Field Artillery is even greater than that of the Cavalry. There are no animals for the signal or sanitary troops. As regards wagon transportation, the militia as now organized is deficient 1,934 wagons. Should the militia be assembled into divisions and separate brigades, the deficit would be 5,836 wagons. There are no draft animals available. These deficiencies in matériel are very important, inasmuch as they must be supplied before the Organized Militia forces can be made available for field operations.

As regards Field Artillery matériel for the Organized Militia, should this force be called into service with its present number of batteries, the total amount of ammunition necessary therefor would be 1,300,000 rounds of 3-inch ammunition, based on an average of 5,000 rounds per gun, which is equivalent to the best standards of supply of this character of ammunition in foreign armies. To completely equip the proper number of batteries for the 12 militia divisions, including the auxiliary divisions, there would be required, in addition to matériel now in the hands of the Organized Militia, 316 field guns and 1,322,384 rounds of ammunition.

MILITARY ESTABLISHMENT.

If it is deemed that the condition and strength of our military establishment (including the Organized Militia) as above set forth is satisfactory and adequate to our needs at home and in our foreign possessions under modern conditions and existing circumstances, there appears to be no necessity for special action beyond maintaining that establishment at its present strength and in about its present condition. To make even this force effective, however, by proper training and instruction, a number of additional officers and noncommissioned officers of the Regular Army are urgently needed—first, in order that a full complement of these instructors may be kept with the units of the Regular Army; second, that we may have available an adequate corps of trained instructors for the militia.

In case, however, the strength and condition of that establishment as set forth is deemed inadequate and unsatisfactory, it is pertinent to make suggestions as to what should be done to correct this condition and provide a military establishment adequate to our needs and responsibilities. These suggestions, in my opinion, should be based upon study of conditions as they are in our country and in our foreign possessions, including home needs and the needs which might arise in our relations with other countries.

In looking over the strength of our garrisons in foreign possessions it becomes at once manifest that the garrisons we are maintaining there or propose to maintain there under the scheme of distribution of our Army as it exists at present are entirely inadequate to the needs of those possessions. That an effective defense against an enterprising enemy in the Philippines could be made with a deficiency of 33 per cent of the manning details of the coast defenses of Manila and Subig Bay and with a mobile force of a little over 7,000 American troops, supplemented by less than 6,000 Philippine Scouts, is manifestly impossible; that the great waterway of the Panama Canal can not be protected against the operations of a first-class military power by the present or proposed garrison we contemplate placing there without the power and ability to reenforce it rapidly by troops from the United States is equally manifest; that we can retain our valuable Territory of Alaska in its isolated position against an enemy with any military power by placing there a garrison of less than 500 men verges on the ridiculous unless we have ample forces at home to occupy that Territory in the very earliest stages of an impending conflict. As regards the Hawaiian Islands, all military persons will recognize that the proposed garrison in this possession is far below what it should be to meet a serious attack unless, in this case again, we have an adequate force on the Pacific coast ready to dispatch to the islands when trouble is impending. It must therefore be frankly admitted that the present garrisons of these outlying possessions are entirely inadequate for the purpose for which they have been sent there, and that without a material change in conditions at home we have no available resources from which to reenforce them, even should time be given to us to do so. As the Philippines are too distant from the United States to be reenforced when war is impending, it would seem necessary that the garrison of those islands should be at least a full manning detail for the Coast Artillery defenses and one complete division at full war strength plus the necessary administrative staff. As to our other outlying possessions, it may be said that the garrisons proposed for those possessions, with the exception of Alaska, may be considered adequate only under the contingency that we have available in the United States sufficient thoroughly trained troops in excess of our home needs to warrant us in heavily reenforcing the peace garrisons.

As to the necessities within the continental limits of the United States, whilst our isolation by water from the other great powers is an undoubted protection, that protection is limited by two main factors:

First. The power of our fleet to protect the country from invasion over those seas.

Second. Our ability to assemble rapidly at the points of debarkation selected by an enemy an adequate force to delay, if not prevent, his effecting a lodgment on our shores.

Whether or not our Navy is adequate for the purpose indicated, i. e., to protect our country from over seas, is a question beyond the scope of this report. That we can not, with our present strength, rapidly assemble a sufficient force, fully equipped for field operations, to meet such an expedition as might be dispatched against our shores is evident. The very fact that an enemy traversing the seas would have a wide choice of landing points, or points of attack, at once evidences the difficulties attending the assembly of organizations of sufficient strength to meet him at the point he may select. It therefore appears to be necessary that the general distribution of forces to meet such a situation would be on a very wide front if prompt opposition to a landing is to be effected.

Fortunately there is no apparent need for garrisons of any great strength on our northern frontier. This, however, is not true as regards our southern frontier, where for the greater part of the last three years we have been compelled gradually to increase the number of troops until at the present time over two-thirds of the mobile forces of our Army in the United States are concentrated.

Careful consideration of our needs would indicate the advisability and necessity for having at all times available at home and, in addition to the necessities in our foreign possessions, in the first line of our military establishment a mobile force of at least 500,000 thoroughly trained and thoroughly equipped fighting men, with adequate supplies for the operation of this force for a period of at least six months. This is a conclusion that seems to have been reached by all those who have given careful consideration to this question. It is also agreed that we should have, as a second line, a thoroughly equipped and trained force of Organized Militia of not less than 300,000 men, properly proportioned as to its staff and several arms, with stores and supplies necessary for its operation in the field for a like period. The smaller units of the standing Army and the corresponding units of the Organized Militia must manifestly be organized into the higher units of brigades and divisions and be susceptible of assembly for drill and field exercises, for without such organization and power of assembly the troops themselves, not to speak of the higher commanders, would be without that experience which is essential to effective operation in war.

As stated elsewhere in this report, the strength of the Coast Artillery Corps bears no relation to the strength of these mobile forces; that corps is charged with the manning and the operation of the seacoast defenses. The mobile army, on the other hand, must not only be prepared to meet the forces of the enemy after they have effected a lodgment on our coast, but must be prepared, at least in the initial stages of war, to guard all the fortified positions on our coasts from attack from the rear by landing parties from naval vessels and such transports as they may be able to convoy. While the strength of the Coast Artillery Corps therefore depends upon the number of fortified positions it has to operate, the strength of the mobile forces will depend upon the number of fortified positions it must defend from attack from the rear or turning point, plus the necessities which may arise to meet and oppose the landing of an expeditionary force in a region beyond the range of our seacoast guns.

In any scheme to create such a force of mobile troops, as is above contemplated, we can not do better than to follow the example of the master minds in military organization for national defense. The policies developed in this direction all include, amongst others, the primary plan of using the standing Army as a school for the training of men who, on graduation from that school, pass into the reserve and constitute the real national military strength. Experience has shown that from two to three years of active service in the standing Army is the lowest possible limit of time within which the average man can be converted into a disciplined, trained, and effective soldier. After passing through the school and gaining experience, the men under this plan are separated from the active Army and go into the reserve for periods varying from five to a greater number of years, being held at all times, whilst allowed during peace to pursue with the utmost freedom such civil occupations as they may select, under obligation to respond to a call to the colors in case of national need. This system is economical in the highest degree, as the officers and men receive pay only during their active service, and, on being called to the colors, the period spent in the reserves involving no expense in the way of emoluments.

In arriving at a conclusion as to what the size of the regular mobile army should be, in order that the country may eventually and within a reasonable time have a military establishment adequate to its needs, it is necessary to decide what the size of the Regular, or standing, Army should be in order to provide the 500,000 men believed to be necessary with the colors and in the reserves. Assuming the adoption of a short term of enlistment—say, three years—for the passage of the men thoroughly trained in the school of the Regular, or standing, Army into the reserve, and that men so trained should not be held in the first reserve for a longer period than five years, it would appear that the size of the Regular, or standing, Army to be used as a school for the training of reservists should be about 205,000 enlisted men. If from such an army, organized on a basis of three years' training, we discharge yearly that increment below the grade of sergeant which had completed its three years' training, we would have, with due allowance for deaths, etc., in the first year of its complete operation an army of 263,700 (205,000 plus 58,700 reserves); in the second year an army of 322,400 (205,000

plus 117,400 reserves); in the third year an army of 381,100 (205,000 plus 176,100 reserves); in the fourth year an army of 439,800 (205,000 plus 234,800 reserves); in the fifth year an army of 498,500 (205,000 plus 293,500 reserves). After this the Army would be maintained at the last figure, and in addition we would be accumulating trained men in the second reserve at the rate of about 55,000 each year.

The rule as to the accumulation of reserves for the operation of the Coast Artillery Corps does not seem to have the same force as when that principle is applied to the mobile army, inasmuch as it is necessary for the Coast Artillery at all times to man their defenses with practically the full complement, and that corps, as it is not charged with any greater requirements as to strength in war than in peace, does not require expansion in war. However, the principle applies to a degree, at least, to this corps in order that its ranks may at all times be readily filled with experienced men when war is imminent.

Whether our country could adopt the principle of creating a reserve without compensation to the reservists whilst not actively serving with the colors is doubtful, but it would seem that a small remuneration might be given for the retention of their services.

No reason is seen why the same principle as to reserves should not be applied to the Organized Militia, and the men trained in its units be bound for service for a period corresponding to that of the reservists for the Regular Army. It must, however, be admitted that unless there be a material change in the laws governing the Organized Militia which will bring about a greater reliance upon and an increased control by the General Government, that branch of our military establishment can not be regarded and depended upon as a reliable force. Such a modification in the law to meet this end might be brought about by placing the Organized Militia under pay by the General Government and, under a binding obligation, to serve at its call. This, it is thought, would produce a state of affairs where the Organized Militia will be much more thoroughly trained than it possibly can be under existing laws, and to that extent can be more surely depended upon. In any regulations or modifications of law looking to the better organization of the militia as a national force it naturally follows that the United States should have the power to create in the Organized Militia that parity of the several arms of the service and staff which is essential for effective operations in war. It should also have the power to detach from the Regular Army such numbers of officers and noncommissioned officers as it may find necessary to place on duty with the Organized Militia to aid and assist the officers of that branch of the national defense in a thorough training of the units.

The question of supplies and equipment necessary to make such forces as we may organize effective is of primary importance. No matter what size force we may have, it will be ineffective without proper and adequate supplies and equipment. It would therefore appear that we should establish depots in which should be deposited all those supplies necessary to the effective operation of our Army which can not be readily and rapidly procured in the first stages of war.

OUR SUPPLY OF MUNITIONS MOST NECESSARY IN WAR.

No attempt will be made to enter into particulars as to the character of supplies that it will be necessary to accumulate and store for the use of such forces as are contemplated in the above scheme; that is, a regular mobile army, including its reserves of 500,000 men, and a force of 300,000 mobile Organized Militia troops, including its reserves. One illustration will be sufficient, and that will be taken from the munitions most necessary in war, as rifles and field artillery. The proper proportion of rifles in a force of this character, including the Cavalry, which is armed with the rifle, would be 642,541. The minimum accumulated supply of rifle ammunition, based on 1,000 rounds per rifle, should be 646,000,000 rounds. The proper proportion of field and heavy guns of the mobile type, and exclusive of the gigantic engines of war of more recent introduction, drawn by tractors, no types of which have as yet been developed in this country, would be 2,834. The ammunition for this type of guns, based upon a supply of 5,000 rounds per light field gun, with a corresponding proportion for the heavier field guns, a conservative estimate, if we regard the examples of the great military nations, would be 11,790,850 rounds. It is sufficient to point out that at the present time we have on hand and being manufactured 698,374 United States rifles (model 1903) and 241,000,000 rounds of ammunition for these rifles, 852 field guns and 580,098 rounds of ammunition for these guns. The number of guns per thousand men used in the calculation as to the total number required in the above estimate as to force is five, that number being considerably below the average in European armies. It should also be remembered that large numbers of guns and large masses of ammunition are, in an active war, liable to capture and destruction, and that to start into field operations with the expectation that the proportions given will be maintained without large sources of manufacture would be fallacious. As the factories and works in this country which can produce munitions of war of the above character are exceedingly limited, it is evident that a full supply of this type of matériel must be stored and ready for use before war is undertaken.

DEPOTS.

As regards the depots in which supplies for the military establishment should be stored, their distribution should be in the immediate vicinity of the troops, both of the Regular Army and the Organized Militia, which are to be equipped from them. The distances in this great country between the present limited number of depots and the stations of the troops or the areas from which the troops will mainly be drawn are so great that an effective distribution from them to troops organized under the general scheme here contemplated would be ineffective in that it would consume a great amount of the limited time which modern warfare indicates would be at the disposal of a country subject to attack whose plans contemplate the mobilization of its forces only after war is immiment or has been declared.

OPERATIONS OF THE ARMY.

On the 22d of April, 1914, the naval forces occupied the city of Vera Cruz, Mexico. In accordance with the directions of the President, so much of the Fifth Brigade of the Second Division, with certain auxiliary troops, as could be accommodated on the transports at that time available were ordered dispatched from Galveston, Tex., to Vera Cruz. Brig. Gen. Frederick Funston, with 225 officers and 3,832 enlisted men and a limited amount of transportation, sailed with the major portion of his reenforced brigade from Galveston on the 24th of April and arrived at Vera Cruz on the 28th of April. At noon on the 30th of April, Gen. Funston took over the command of the city of Vera Cruz from the naval authorities, and with his force of 3,832 enlisted men of the Army and 3,333 enlisted men of the United States Marine Corps, ordered to report to him for duty, making a total enlisted force of 7,165 men, occupied the immediate suburbs of the city, and extended his lines to include El Tejar, about 9 miles distant, where the main source of fresh water supply for the city is located. A large proportion of the reenforced brigade was necessarily left in Galveston on April 24, due to the lack of water transportation facilities. Owing to changed conditions subsequent to the occupation of the city of Vera Cruz by our forces, the original strength of Gen. Funston's command which landed at Vera Cruz has not been augmented, and certain elements of the brigade which properly belong to it, such as parts of its Field Artillery, Cavalry, and transportation, have been retained ever since at Galveston. The latest reports indicate that the enlisted forces of his command have now shrunk to about 3,434 men of the Army and 2,500 men of the Marine Corps, an aggregate enlisted strength of 5,934, this shrinkage arising mainly, so far as the Army is concerned, from the discharge of time-expired men and sickness.

The health of the command during the time it has been in Vera Cruz has, owing to the unremitting attention given to sanitation, been remarkably good, the sick rate steadily decreasing until, as indicated by the last reports, it was between 1.35 and 1.93 per cent.

It is due to this command to call particular attention to its having been able to avoid friction with the foreign elements of the population and the armed forces which have at all times confronted it. The situation was a delicate one and called for the greatest tact on the part of both officers and men. No instances have been brought to the attention of the department of any serious friction between the troops and the inhabitants of Vera Cruz or with the armed bodies of Mexicans outside the city.

The 1,703 miles of Mexican border from Brownsville, Tex., to the vicinity of San Diego, Cal., was, on the 22d of April, kept under observation and patrolled to the extent possible by 359 officers and 8,260 enlisted men under the command of Brig. Gen. Tasker H. Bliss, who, as commanding general of the Southern Department, controls the border from the mouth of the Rio Grande to the Colorado River, and Maj. Gen. Arthur Murray, who, as commanding general of the Western Department, controls the border from the Colorado River to the Pacific coast.

When the news of the occupation of the city of Vera Cruz by United States forces reached the border a marked increase of the feeling of uneasiness and apprehension became manifest, both on the Mexican and on our side. Conditions there became such that it was deemed advisable to make a material increase of the forces at the disposal of the commanding general of the Southern Department, and to that end the Eighth Brigade from the Western Department, the Second Brigade from the Eastern Department, the Sixth Field Artillery from the Central Department, and five companies of the Coast Artillery Corps from the coast-defense district of the Gulf, aggregating 193 officers and 5,545 enlisted men, were ordered to report to the commanding general of the Southern Department for assignment to station, and were by him distributed along the border. This movement, together with the changes made in the Western Department, brought the strength of the Regular Army forces on the border and in Texas up to over 20,000 men. The duties performed by these troops have been of a very arduous and exacting character. Living for the most part under canvas or improvised shelter, they have had the task of patrolling and guarding the very long line, much of which is desert, all of it exceedingly hot. They have been called upon to prevent not only the incursion of hostile parties into our own territory, but to receive and disarm considerable numbers of Mexican troops driven into our territory by stress of war. A good part of the time has been spent by the troops in efforts to prevent the passage of munitions of war from entering into Mexican territory. Whilst it was impossible under conditions to accomplish fully the task of preventing the passage of these munitions across the border, great success has attended the efforts to stop the incursion of armed parties and to disarm Mexican troops driven into our territory. First and last, over 5,000 Mexicans driven into our territory were disarmed and held as prisoners until very recently, when they were released, and the enlisted men amongst them returned to their own country. The total approximate cost attending the care and maintenance of these prisoners was over $719,883. The skill and forbearance shown by the officers and men in this arduous frontier service warrants the highest commendation, particularly in view of the fact that in their operations 1 of our men has been killed and 9 wounded by bullets fired from the Mexican side of the border; in addition, a number—about 20—of our citizens have been killed and wounded in like manner. Conditions on the frontier continue to be such as to give little hope of relief coming in the near future to these troops, many of whom have been absent from their permanent stations, living in tents, for over two years.

Late in the month of April, 1914, a situation arose in the coal regions of Colorado which necessitated the dispatch of United States troops to that region. The Eleventh Cavalry, from Fort Oglethorpe, Ga., the second squadron of the Fifth Cavalry, from Fort Leavenworth, and seven troops of the Twelfth Cavalry, from the Central Department, were sent, and have been on duty there ever since. Good order has been preserved by the troops since they have been there, and no overt acts of a serious character have been committed in the regions under their control.

Early in the month of September conditions in Butte, Mont., were of such a character as to render it necessary for the governor to dispatch the militia of that State to the Butte region, and, incident to this state of affairs, a battalion of the Fourteenth Infantry was moved from Fort Wright, Wash., to Fort William Henry Harrison, Mont. Recently it was found necessary to transfer this battalion to Fort Missoula, where it is now temporarily stationed.

Early in November conditions in the coal regions of Arkansas developed to a state where it was deemed necessary to dispatch troops to that region in support of the United States courts. The first squadron of the Fifth Cavalry was ordered to proceed to Fort Smith, Ark., for duty. These troops are still on duty in the State of Arkansas.

Owing to the pressing necessity for troops for more important duties and with a view to their being better prepared for the purpose for which troops are maintained, early in the year orders were issued relieving the troops to a great extent from the guarding of the national parks, and leaving these parks under the control of the Interior Department. To this end, the troops dispatched to the Yosemite National Park, Cal., were withdrawn; the usual orders for the guards to proceed to the Sequoia and Grant Parks were not issued, and the second squadron of the First Cavalry, with its machine-gun platoon, was relieved from duty in the Yellowstone Park and ordered to join its regiment in California, a military guard consisting of a detachment of about 200 mounted men drawn generally from the Cavalry of the Army being left at the Yellowstone Park to perform the duties heretofore performed by the troops relieved.

Very respectfully,

W. W. WOTHERSPOON,
Major General, Chief of Staff.

The SECRETARY OF WAR.

Home Owning Among Workingmen.

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 20, 1915.

Mr. BUCHANAN of Illinois. Mr. Speaker, in the CONGRESSIONAL RECORD of September 22, 1914, pages 16962–16966, I endeavored to give some idea of the need of public aid in the matter of home owning among the workingmen of the cities of the United States. I would like now to present figures in proof of a like need of the use of Government funds, particularly the trust funds of the United States, such as the receipts of the postal savings banks, in the interest of home owning of all classes, farmers and workingmen alike. Bills have been introduced in this Congress not only by myself—H. R. 8472—but by other Members having for their object the relief of citizens struggling to obtain homes and farms in their own right. These bills slumber in the committee to which they were solemnly consigned. In my opinion, they will not be reported during this session. But there will be other Congresses, and it is to get the facts before the country and give the Members of the next Congress time to think these problems over that I wish to present here some of the facts and give in outline the remedies that have been applied in foreign countries. We are a Nation of tenants; as a people we live in rented homes or in mortgaged ones. Of the 20,255,555 homes in the United States 10,697,895, or considerably more than half, are rented outright; 2,931,965 are mortgaged; and only 5,984,284, or 29 per cent, are owned free from mortgage. These figures are for all homes, whether on farm or in city or village. In the cities, of course, the conditions are more acute than in the country, as a whole. In the 50 cities with a population of 100,000 or more, there are 4,424,326 homes, and 74 per cent of them are rented outright; that is to say, 3,196,941 of these homes are rented; 547,723, or 12.8 per cent, are mortgaged; and only 13 per cent are owned free of encumbrance. I will insert here a table showing the condition of home ownership in these 50 cities, for these are facts we need to keep before us, and the details for these 50 cities will interest many of these millions:

TABLE 1.—*Distribution of homes according to proprietorship and encumbrance in cities having, in 1910, 100,000 inhabitants or more.*

[From Thirteenth Census of the United States, 1910, vol. 1, Population, p. 1313.]

I will not go further into detail at this time, except to say that in Chicago, in the eighteenth ward, there are 4,905 homes, and only 105 of them are owned free of encumbrance. In New York City, in the eighth assembly district of the Borough of Manhattan, there are but 6 homes owned free of debt by the occupants, while 11,962 are rented. These are but a few samples of the

miserable conditions that sleep in the census reports while the dance goes on. The Bureau of Labor Statistics, in its Bulletin 158, on "Government aid to home owning and housing of working people in foreign countries," goes fully into the laws and the machinery through which foreign countries exercise their activities in the matter of loaning public money on long-time mortgages to workingmen for home-building purposes. This bulletin is for free distribution among our people, and by the time the next Congress convenes everyone will have an opportunity to convince himself of the practicability of a law such as I have proposed in H. R. 8472.

I will not, therefore, go into the detail of this phase of the subject, except to say that if Germany, as you will see from the bulletin referred to, page 20, can use $114,867,745 of its workingmen's old-age and sickness insurance fund to loan to workingmen on first mortgages to build homes, then we can take these postal savings bank funds, picked up from the poor of our cities, and reloan them to the workmen of our cities to enable them to have homes of their own. I tell you now that H. R. 8472, or some revision of it, will be introduced by some one in the next Congress, and by some one in the next and the next, until a real home-owning Nation is built up out of this foundation of the people's money. I have no doubt that in the next Congress my bill will again be referred to the committee and there remain unconsidered and unreported, and maybe the next man's bill will be, too; but in time some power, the power of public opinion and public poverty, will force consideration and favorable action upon legislation of this character. Cato voted alone in the Roman Senate for 40 years, and then secured a majority for his, at first, lonely measure. There will be a few men in this House from now on that will vote and talk until we shall no longer as a Government collect trust funds and institute reserve banks to loan money to banks to reloan to "big business" and the despoilers of men, but until the Government shall loan its funds direct to those who wish to borrow for the ownership and development of our farm lands and for the building and owning of our homes.

As I have said, the machinery used by foreign countries to loan State funds to workingmen in cities can be easily studied in and ascertained from Bulletin 158 of the Bureau of Labor Statistics; as to what is being done in the way of laws and legal machinery for loaning public money to farmers in foreign countries, I propose to submit a brief outline here. But, first, let us consider what are the facts as to farm mortgages and farm tenancy in this country.

There were 6,361,502 farms reported in the census of 1910; of these, 2,354,676 were operated by renters, 1,312,034 were operated by men who, while nominally owning them, were carrying mortgages on their farms, and 2,588,596 were operated by their owners free from encumbrance. There is hardly a State in the Union that does not show an increased percentage, not only of renters but of mortgaged farms, if we compare 1910 with 1890.

Even my own State of Illinois, with the best soil to be found on earth, has 104,379 rented farms out of a total of 251,872; and of 145,107 farms operated by nominal owners, 55,792, or 39.2 per cent, were mortgaged, whereas in 1890, 36.7 per cent were mortgaged.

Mortgages—credit may be a good thing; I believe it very often is, but let us make the burden of carrying it as light as possible. I insert here Table No. 2, to show how farm ownership is distributed by States:

TABLE 2.—*Number of farms operated by owners, tenants, and managers, and number and per cent of farms operated by owners that were mortgaged.*

[From Thirteenth Census of the United States, 1910: Abstract, p. 294, and vol. 5, Agriculture, pp. 129–132.]

[1] Includes those whose owners rented additional land. [2] Percentages based on total of farms free from mortgage and mortgaged. [3] Includes Indian Territory.

I wish to submit now what I believe to be a carefully prepared condensed digest of what other countries are doing for their farmers in the way of loans of money on long-time mortgages from State funds. Brief as many of these surveys are, enough is given to show in a general way the legal machinery used and the accomplishments under the various plans.

TENANCY AND MORTGAGE INDEBTEDNESS IN THE UNITED STATES—STATE LOANS TO FARMERS.

INTRODUCTION.

Certain facts are generally recognized and accepted regarding the nature and import of tenancy in the economics of agriculture. The situation arising in the discussion of this problem may, by superficial analogy, perhaps, be likened to that arising in tariff discussions. Examples may be found of an agricultural system efficient in productive results, but conducted under a tenant system of land tenure, while other systems equally successful are based on the ownership of property by the agriculturist. Of the former type England occurs as a pat example, while the second type finds its representative in Denmark, where ownership extends to over 80 per cent of the number of cultivated farms.

Whether or not a tenancy system of land tenure is an evil to a country is perhaps more to be determined by the temper and past experience of a people. Thus in England years of *landlordism*, fostered by a peculiar system of inheritance and entail and a very adaptable system of long-time leases, has habituated the farming population to the system, or rather it has created a stable class of tenant agriculturists. (There is on foot in England a movement to-day to make the tenant farmer an owner of his acres. In this movement the State is active and has been for years. For a concise statement of the facts see The Yearbook of Social Progress for 1913–14, London.) The large farms have facilitated the extensive use of machinery and at the same time an intensive system of agriculture has prevailed. The landlord, by reason of his large-scale farming and business methods, has been able to secure credit as has any other business man. The financing of the farm therefore being in his hands, the need of the tenant for liquid capital has not been urgent. Quite different have been the past associations and experiences of the farmer in the United States, so much so as to militate quite strongly against the belief that he will become satisfied in time with the status of tenant farmer. His past generations have felt the magic of property and independent ownership. The young farmer who does begin farming as a tenant—and the majority of tenant farmers are generally conceded to be those of the younger generation getting a start—looks upon his tenant status as a temporary condition out of which he hopes to elevate himself to the rank of independent proprietorship. Thus the natural development of agriculture in this country, as conditioned and influenced by the past experience and temper of our farmers, points toward the need of maintaining an agricultural system based on free ownership.

As the difficulty of obtaining capital to start on a farm grows, and as the available amount of land continues to decrease as population increases, there is danger that the young prospective farmer be not merely compelled to start farming as a tenant but remain in that condition, unless some means are found to facilitate the transition from that state to free ownership. Briefly, the escape for the young tenant farmer lies in providing capital for him through an efficient and just system of credit adapted to his peculiar needs.

TENANCY IN THE UNITED STATES.

For the United States as a whole the census of 1910 (5 Thirteenth Census, 97) reports that 62.1 per cent of all the farms in the United States were operated by their owners, less than 1 per cent by managers, and 37 per cent by tenants. Based not on mere numbers of farms but on total farm acreage and an improved acreage, the results show up as follows:

Per cent of farms in the United States operated by owners and tenants, respectively, in the United States in 1900 and 1910.

[Thirteenth Census, 1910, vol. 5, p. 98.]

	Number of farms.		All land in farms.		Improved land in farms.	
	1910	1900	1910	1900	1910	1900
Farms operated by owners and managers	63	64.7	74.2	76.7	67.3	69.8
Tenants	37	35.3	25.8	23.3	32.7	30.2

If these figures mean anything, they indicate that, looked at from three points of view, tenancy in the United States has increased steadily between 1900 and 1910. Tenant farmers constituted a larger proportion of the number of farms, the amount of all land in farms, and the amount of improved land in farms in 1910 than in 1900. This indeed marks the lengthening shadow of tenancy in the United States. In fact, the amount of tenancy has increased steadily between all the censuses from 1880 to 1910 for which figures are available.

Here is the result, showing the continuous increase of tenancy over a period of 30 years:

Number and per cent of farms of specified tenure in the United States, 1880–1910.

[Source: Thirteenth Census, 1910, vol. 5, p. 102.]

Years.	Number of farms operated by—		Per cent of farms operated by—	
	Owners and managers.	Tenants.	Owners and managers.	Tenants.
1880 [1]	2,984,306	1,024,601	74.5	25.5
1890 [1]	3,269,728	1,294,913	71.6	28.4
1900	3,712,408	2,024,964	64.7	35.3
1910	4,006,826	2,354,676	63.0	37.0

[1] Not including farms with areas of less than 3 acres reporting sale of less than $5 of produce during the year.

Thus, since 1880 farms operated by tenants have increased more rapidly than farms operated by owners. During these 30 years it is also shown (5 Thirteenth Census, 102) that the number of tenant farms increased 129.8 per cent, while farms operated by their owners and by managers increased only 34.3 per cent.

It should, however, be said, by way of extenuation, that this increase in tenancy has not been accompanied by a parallel increase in the concentration of land ownership (compare 5 Thirteenth Census, 102). On this point no figures were gathered by the census of 1910, but a casual examination of the farm schedules of the 1900 census showed in one instance that 1,934,346 tenant farms, representing 95 per cent of all tenant farms, were owned by 1,257,716 separate owners. Furthermore, the average size of farms has decreased between 1900 and 1910 from 146 acres to 138 acres. (5 Thirteenth Census, 37.)

Thus, to state the case concisely, tenancy in the United States has increased 129.8 per cent between 1880 and 1910, while population as a whole has increased 83.4 per cent for the same 30-year period. Much more alarming does the increase of tenancy become when this 129.8 per cent increase is compared with the 58.7 per cent which is the amount of increase for this 30-year period in the number of farms. (5 Thirteenth Census, 57.)

Conditions vary greatly as between different sections of the country. (5 Thirteenth Census, 105.) Thus the number of farms operated by tenants is proportionately larger in the Southern than in the Northern States (49.6 and 26.5 per cent, respectively), generally explained as due to the transition through which the colored laborer is going from slavery on a large plantation to the necessary status of tenant, because of his poverty and consequent lack of capital. Tenancy decreased between 1900 and 1910 in the New England States 9.4 to 8 per cent; in the Middle Atlantic States, 25.3 to 22.3 per cent; the Mountain States, 12.2 to 10.7; and in the Pacific States, 19.7 to 17.2 per cent; while it increased in all the other sections of the country, as follows: East North Central, 26.3 to 27 per cent; West North Central, 29.6 to 30.9 per cent; South Atlantic, 44.2 to 45.9 per cent; East South Central, 48.1 to 50.7 per cent; and West South Central, 49.1 to 52.8 per cent. The general average increase throughout the country between 1900 and 1910 was 16 per cent.

To repeat, it is conceded that the status of tenancy may be a stage in the progress toward ownership, and the existence of a certain amount of tenancy in a country may or may not be a menace if the means are at hand to facilitate this progress. (See Carver, Thomas N., Principles of Rural Economics, Boston, 1911, pp. 114, 377–379; Taylor, H. C., Agricultural Economics, New York, 1911, ch. 12, 13.) It is to insure this evolution that the legislation proposed by my bill (H. R. 8472) seeks to make certain to the purchaser of a home farm access to the needed money.

MORTGAGE INDEBTEDNESS IN THE UNITED STATES.

This leads to the second feature of the discussion—mortgage indebtedness. The amount of mortgage indebtedness is at once an index of economic success, as well as a menace to the agricultural prosperity of a country. Unfortunately the census data relating to mortgage indebtedness, particularly as regards its significance, are very defective. Some unpublished schedules of the census were made use of to bear out Mr. Coulter's statements before the committees of the House and Senate to investi-

gate rural credits. (Rural credits. Joint hearings before the subcommittees of the Committee on Banking and Currency of the Senate and of the House of Representatives charged with the investigation of rural credits. 63d Cong., 2d sess., Washington, 1914, pp. 154–160 et passim.)

There has been a relative increase in the number of farms mortgaged in the United States from 1890 to 1910. Thus about 34 per cent of all the farms in the United States were mortgaged in 1910, as compared with 28 per cent in 1890.

Number and per cent of farms in the United States mortgaged and free from mortgage, 1890 to 1910.

[Thirteenth Census, vol. 5, p. 163.]

Years.	Number.		Per cent.	
	Mortgaged.	Free from mortgage.	Mortgaged.	Free from mortgage.
1890	886,957	2,225,789	28.2	71.8
1900	1,127,749	2,510,654	31.1	68.9
1910	1,327,439	2,621,283	33.6	66.4

Taken by itself this development of mortgage indebtedness would mean that the farmer is adopting to a greater extent the credit methods of business, indicating, perhaps, greater business success on his part. It is therefore necessary to know what relation the average mortgage indebtedness of the country bears to the value offered as security for it. Thus when it is shown that the average mortgage indebtedness is only 27.3 per cent of the total value of the security, we are in a position to safely infer that this mortgage indebtedness is not a menace to our farming interests. This is further borne out by the fact that the ratio of mortgage indebtedness to the value of the farms mortgaged has declined from 35.5 per cent in 1890 to 27.3 per cent in 1910.

From the unpublished schedules of the Thirteenth Census it appears that "owners mortgaged" averaged about 145 acres to the farm, while those free from mortgage averaged about 135, the former thus having larger farms to the extent of 10 acres. In 1910 the average mortgage debt per farm was $1,715 as compared with $1,224 in 1900, which is an increase of 40.1 per cent for the 10-year period. Furthermore, the average value of land and buildings per farm increased for the same years 82.6 per cent, the mortgage burden thus indicating no lack of prosperity. (5 Thirteenth Census, 163.)

Mr. Coulter's statements before the joint committees of the House and Senate as to the relation of mortgage indebtedness to prosperity are in point:

> But what was more significant the "owners mortgaged" had more improved land per farm. The owners who were free from mortgage had 64 acres per farm for the whole country, while the owners with mortgages had nearly 82 acres per farm. There were 18 acres more per farm being cultivated by those farm families who had mortgages.
>
> It seemed that they were using that money to improve and develop the farms. I found that the average value of land per farm free from debt was $3,588, and for those which were mortgaged it was $4,913; in other words, it was $1,400 more per farm. The farmers with mortgages have more valuable farms.
>
> * * * * * * *
>
> For the whole United States the "owners free" have buildings on their farms with an average value of $1,093. The "owners mortgaged" have buildings with an average valuation of $1,284; that is to say, there is nearly $200 per farm more invested in buildings by the mortgaged farmers than the free farmers. But I raised the question, Do they cultivate better; do they farm better——
>
> * * * * * * *
>
> The average value per acre for all land in "owned farms free from mortgage" is $26.46, and for mortgaged farms it is $33.87. And, as I say, I raised the question, Does the farmer who has a mortgage farm better than the farmer who is free? Are they likely, after all, to turn out to be, generally speaking, more progressive and to be the farmers who have more business knowledge? And I found this fact: That the average value of implements and machinery per farm, the equipment of the farm for farms owned free from debt, was $194, and for farms mortgaged $271. There was over $75 per farm more of equipment for the mortgaged farmer.
>
> On the question of value per acre, the average value of implements and machinery per acre of improved land—assuming that all of the implements and machinery are used on the improved land, and bearing in mind that this is an average for two and one-quarter million owned farms free and over 1,000,000 owned farms mortgaged—the value of implements and machinery per acre of improved land for owners free was $3.01—of course that is getting down to details merely by division—and for owned farms mortgaged the value was $3.33. In other words, the farmer with a mortgage had 32 cents per acre more invested in implements and machinery than did the farmer free from mortgage, thus showing the more intensive cultivation.

MORTGAGED FARMS AND TENANCY.

As a further indication of the fact that the greater evil confronting our farming is the tenancy problem rather than the mortgage problem is indicated by the fact that the States of the United States where the greatest amount of tenancy prevails are those of relatively less mortgage indebtedness. This is shown by the table which follows, the sections of the country being arranged in the order of the per cent of tenancy:

Per cent of farms operated under tenancy system compared with per cent mortgaged, and the value of land and buildings per acre as at the Thirteenth Census, 1910.

[Thirteenth Census, 1910, vol. 5, pp. 65, 105, 160.]

Geographical divisions.	Per cent tenancy.	Per cent farms mortgaged.	Average value per acre of land and buildings.
United States	37.0	33.6	$39.60
West South Central	52.8	30.6	18.50
East South Central	50.7	22.7	21.32
South Atlantic	45.9	18.8	23.96
West North Central	30.9	46.1	49.92
East North Central	27.0	40.9	75.25
Middle Atlantic	22.3	38.3	56.56
Pacific	17.2	36.8	48.28
Mountain	10.7	20.8	22.16
New England	8.0	34.9	36.45
The South	49.6	23.5	20.75
The North	26.5	41.9	57.20
The West	14.0	28.6	34.24
East of the Mississippi	37.2	30.9	44.41
West of the Mississippi	36.8	38.0	36.17

The only note this table calls for is that the truth of the general statement is made the most evident by observing the percentages for the larger geographical groupings. Also note that the value of land and buildings is greater per acre in those sections of the country where the tenancy is lower. Mortgaged farms are owned farms, the implication being, therefore, that farmers who are owners are more successful than tenant farmers judging from the value of land and buildings owned by the former. These two resultants, a proportionately high average of mortgaged farms and value per acre, flow from the same general cause, agricultural prosperity, the measure of which it is not necessary to go into in this discussion.

INTEREST RATES.

Knowledge of three facts is necessary to judge the import or onerousness of a mortgage: (1) The equity of the mortgage (value of security on which it is based); (2) rate of interest charged; and (3) method of repayment. Omitting discussion of the third, which will be adverted to later, reference is made to the fact that as regards the first point, mortgage indebtedness in the United States, as elsewhere reported above, forms only a small percentage (27.3) of the value of the equity supporting it, indicating the general conservativeness and safety under which the business is conducted, as well as the prudence of the mortgagor. Thus, in general, mortgage indebtedness per farm has increased only 40.1 per cent while the average equity of mortgages per farm has increased 106 per cent. (5 Thirteenth Census, 163.) This may of course mean that money lenders are loaning less in proportion to value, not that farmers want or need less. This would be remedied by my bill.

Taking up now the matter of the rate of interest, there is little doubt that American farmers pay a much higher rate of interest than do European farmers. Investigations by the Department of Agriculture as reported in hearings before the House subcommittee of the Committee on Banking and Currency, December 3, 1913 (p. 9), showed on the basis of returns from 30 States that the average rate of interest was 7.66 per cent. These represented straight interest and did not include costs for abstracts. There were great variations in the rates of interest as between the States; thus in Pennsylvania the rate on mortgage loans was 5.3 per cent; Illinois, 5.5; Iowa and Wisconsin, 5.6; Indiana, 5.7; Ohio, 5.7; Massachusetts, 5.5. High rates of interest were found in the West. Thus in Montana the rate was 9.3 per cent; Wyoming, 9.2; Utah, 8.7; Arizona, 10; Texas, 8.5; Arkansas, 8.8; Oklahoma, 7.2; and Alabama, 8.8.

On the other hand, the discussions of the various State mortgage systems in other countries show that the farms in those countries rarely pay a rate of interest in excess of 6 per cent. About the only one of the States that showed a rate of 6 per cent on State mortgage loans was Tasmania, a new and undeveloped country. Instances in excess of this rate should be noted in the case of Egypt (9 per cent) and in the Philippines, where the rate is now established at 8 per cent. In continental European countries the maximum rate was 5 per cent. Furthermore, attention should be called to the fact that the charges for the negotiation of mortgages, fees, and so forth, are very much reduced in these countries, in some cases, indeed, such charges being entirely remitted.

STATE LOANS TO FARMERS.

INTRODUCTION.

It is indeed a lamentable fact that the United States is one of the few civilized countries in the world where the mortgage-loan business has not been organized on a scientific basis.

Speaking before the State governors' conference at Colorado Springs August 26, 1913, Senator FLETCHER, of Florida, president of the Southern Commercial Congress, and chairman of the United States and American Commission which traveled in Europe in 1913 to study the whole question of agricultural credit, said:

The worst feature of the farm mortgage in this country is in its individual character. An investor buying a farm mortgage must determine the sufficiency of the security offered; must attend to collections of principal and interest; must see that the taxes are paid and that the property is not allowed to depreciate in value.

The second, and perhaps the greatest, disadvantage is the limited time for which a farmer may borrow money on a mortgage and the fact that he is required to pay back in a lump sum the entire principal of the loan at the end of that short time or else secure a renewal.

The creation of a new system of long-term credit for the farmers of this country contemplates two purposes, namely, (1) the diminution of tenancy, and (2) the refunding of the present large mortgage indebtedness of the farmers of the country now held on onerous conditions of high interest rates and terms of repayment.

The proposition of having the Government assist in the furthering of any economic enterprise is not a new or untried one. The Federal Government in early days assisted railroad development by general grants of land; it has assisted manufacturing industry through a protective tariff; it lends its funds to banks at a low rate of interest. In foreign countries the field of the activity of State aid is wide and all pervasive. Particularly is this the case in the matter of State aid to farm loans. For one of the most striking features of the European agricultural-credit system is the intervention of the State either by grant of direct money subvention or through a system of rigorous control. This interference of the Government extends both to personal and real credit. It is, however, with the latter system alone that this memorandum is concerned.

In the American Economic Review of December, 1912 (p. 863), Prof. Kemmerer has very concisely delineated the methods of supplying agricultural credit as follows: (1) Establishment of Government agricultural banks; (2) organization of banks with private capital and Government guaranty; (3) encourage farmers to organize cooperative credit societies on the plan of Raiffeisen or Schulze-Delitzsch in Germany; (4) utilize present banking machinery, improving this where necessary. The first two plans are very nearly related and shade off one into the other. For there is little difference between the State actually supplying the fund and its guaranteeing an income on private funds, because in the latter case the control of the Government must be very close, amounting almost to actual operation.

Referring to the proposition to use the present banking system, it is to be noted that this system is based on short-term loans and rapid turnover of funds. It supplies personal credit of which the farmer may avail himself much as any other business man, provided he, the farmer, observes ordinary business methods in his operation, such as the keeping of proper accounts, records, and so forth. But the real problem to the farmer at the present time is how to obtain suitable long-time real credit; that is, mortgage loans bearing a low rate of interest, nonforeclosable and easy of redemption. To secure this facility of redemption there is needed a scheme of amortization of loans whereby the farmer may gradually pay off his principal and interest in equal annual installments instead of, as under the present system, being called upon to make a final lump-sum payment of the principal. It is but natural that private lenders on real estate should be unwilling to accept repayment on the installment plan unless the rate of interest be excessively high. A small investor of money would find his interest consumed in continual reinvesting of his funds. To conduct a proper system of amortization loans requires large capital and continuous years of operation. These two conditions seem to be fulfilled by the Government acting as a money lender. The Government is a large holder of funds, offers the greatest security, and can therefore lend in the money market at the lowest rates of interest.

To carry out a scheme of Government loans to farmers, whether the Government makes those directly to the individual farmer or through an intermediary association, the natural administrative unit for carrying out the project may be the individual State rather than the Federal Government. Speaking on that point, Mr. H. C. Price, dean of the Ohio State Agricultural College, says (Marketing and Farm Credits. Proceedings of the First National Conference on Marketing and Farm Credits. In Chicago, Apr. 8, 9, and 10, 1913. Published by cooperating farm papers, pp. 192–194):

There are three ways that land-mortgage associations in this country might be organized and operated to accomplish the same results as the German landschaften societies—that is, to make loans and issue mortgage bonds in exchange for the mortgages accepted on farm land. First, to form a cooperative association of landowners who desired to borrow capital on their farms, just as the German landschaften societies are organized. Although from a theoretical standpoint this is the ideal organization and for nearly a century and a half has been in successful operation in Germany, yet, for American conditions, unused as our farmers are to cooperative organization, to hope to bring about the successful organization of a land-mortgage association through cooperation I believe is entirely visionary.

The second method is to leave the organization of such institutions to private initiative, as our building and loan associations in the cities have been developed, or the land-mortgage banks of Germany are operated, which are associations doing business similar to the landschaften societies, but are stock companies instead of cooperative companies. There are several drawbacks to leaving the organization of such institution to private initiative. In the first place, there is not enough of prospective profit to induce private interests to undertake to develop anything like a general system. In some localities there would be successful private organizations, just as we now have, but there is no reason to believe that such organization would become anything like general. In the second place, an association organized by private interests will be operated in the interests of those who loan money rather than those who borrow, and farmers can not expect to get any great relief through such organizations. There is still another drawback to privately organized land-mortgage associations—the success of such institutions as a means of extending credit depends upon the confidence the investing public has in the bonds that they issue. It is reasonable to expect that in the beginning investor and borrower would hesitate to do business with such institutions, and any system that is left to develop by means of such organizations would make little progress.

The third way that land-mortgage associations might be organized and accomplish everything that has been accomplished by the German landschaften societies, and to my mind the only feasible plan for American conditions, is for the respective States to organize and operate land-mortgage associations. Such a plan would involve the establishing of a State land-mortgage bank as a State institution, for the purpose of furnishing an adequate system of credit for farm owners in the State through the sale of bonds secured by mortgages on farm real estate. The bank itself would not have the funds with which to make the loans, but in exchange for accepted mortgages would issue bonds of equal amount in denominations of $25, $50, $100, $250, $500, and $1,000, and bearing interest at 3, 3½, 4, and 4½ per cent; the denomination of the bond and the rate of interest they bore to be optional with the borrower. The borrower could either take these bonds and sell them himself or have them sold through his local bank or have the State bank sell them for him. The farmer borrowing in this way would pay on his loan the same rate of interest as the bonds issued in exchange for his mortgage bear, plus one-half of 1 per cent to pay the operating expenses of the State bank and to build up a reserve fund. The German landschaften allow only one-fourth of 1 per cent for this purpose, but we will put it at one-half of 1 per cent to be conservative.

In addition to this would be added the per cent or fraction of a per cent that is to apply to the amortization of the principal. For example, a farmer makes application for a loan of $1,000. His application is granted, and he is given in exchange for his mortgage ten $100 bonds bearing 4 per cent interest; these are sold at par, so that he realizes $1,000 in money. He pays 4 per cent, and one-half of 1 per cent to pay operating expenses of the bank, and he wants to pay enough additional with his interest to pay off his loan in 25 years, in which case it would be necessary for him to pay $33.52 semiannually, or the equivalent of 6.7 per cent semiannually.

A land-mortgage association organized as a State institution would at once give its bonds the standing of State or municipal bonds, and they would command as favorable rates of interest. They would also command the confidence of investors, as the bonds of privately or cooperatively organized associations could not possibly do. The objection may be raised that such a plan means that the State is going into the banking business, but such institutions would not carry on a commercial banking business; they would simply be the intermediary between borrowers and lender. They would be entirely self-supporting, and would simply mean that the State had taken over a fundamental public utility, namely, converting farm real estate securities into a more stable, uniform, secure, and negotiable form that would be of mutual advantage to both investor and borrower. It would be a matter of prime importance to the public welfare, because it would provide a means of developing our agriculture and increasing our agricultural production far beyond what is possible under our present conditions.

SUCCESS IN OTHER COUNTRIES.

It is this last idea, namely, that the State would be taking over "a fundamental utility" that has animated the establishment of State land-mortgage associations in European countries and the conduct of the mortgage-loan business by Government funds and by Government official by directly negotiating with the borrower in the colonies of the British Empire. The same is true as regards eight States in the United States and in the Philippines, which lend State funds directly to the farmers.

Among the leading States of Europe which have State land-mortgage institutions are practically all of the States of Germany, also Austria, Russia, Egypt, Hungary, Denmark, Norway, Sweden, Italy, France; and in South and Central America there are Argentina, Costa Rica, and Mexico. In addition, practically all these countries use State funds in various ways to aid the farmer, such as lending funds to cooperative societies and to loan associations engaged in supplying short-term credit to the farmers. This is particularly true in the German States,

England, Ireland, and Scotland. In Germany there are also agricultural improvement institutions which loan funds to farmers or associations of them for the purpose of making large improvements, draining of submerged areas, irrigating, deforesting, and so forth.

In all instances the effect of State activity has been to lower interest rates and to facilitate the burden of repayment by spreading it equally over a long term of years. Money losses through foreclosure have been none or practically negligible. Although the United States commission did not favor a system of State aid in the supplying of mortgage credit in this country, it was nevertheless forced to admit (Report Washington, 1914, p. 22; 63d Cong., 2d sess., S. Doc. No. 380, pts. 1 and 2) that "in every instance in Europe where Government capital has been granted to establish mortgage credit, the results have been favorable to the agricultural interests of that nation."

Particular attention should be called to the system in the British colonies of Australia, Canada—two Provinces, New Brunswick and Nova Scotia—New Zealand, and the Union of South Africa, because of the very simplicity of the systems in force. In these countries the law creates a governmental department which deals directly with the individual borrower and lends him money provided by the State through the issue of bonds, takes his mortgage security, and collects payments, all the business usually being done through the medium of the local post office, precisely as it is proposed to do in this bill. The situation can best be summed up in these words of Mr. Henry D. Lloyd:

> The world over one of the greatest obstacles in the way of the small farmer—and the large one—is the difficulty of getting capital. Often there is no money to be borrowed in the district where he lives, or if there is, it is in the hands of rich neighbors or banks, who know nothing but their bond and the pound of flesh. But in New Zealand the settler has only to go to the nearest post office to get into communication with a money lender, who charges no commission or brokerage, and no fees, except for actual expenses, never exacts usury, offers no cutthroat mortgages for signatures, will let him have any amount from as little as $125 to as much as $15,000, has never foreclosed (this was written in 1900), does not try to induce him to borrow more than he really needs; if he has no freehold, will lend on leasehold and good will and improvements, gives him 37½ years to pay the money back, and accepts it from him in small installments of principal with every payment of interest, so as to make it as little of a burden as can be; will allow him, if he happens to have $25 to spare, to pay it in at any time to reduce his indebtedness, and when it finds itself making a profit out of its business, instead of accumulating a fortune, gives him the benefit by reducing his rate. (Henry Demarest Lloyd: Newest England. Notes of a Democratic traveler in New Zealand, with some Australian comparisons, pp. 299–300.)

For further details as to the mortgage-credit system of certain leading countries where it has been most extensively developed, reference is made to the pages following:

UNITED STATES.

[Wisconsin State Board of Public Affairs. Report on Agricultural Settlement and Farm Ownership. Part 1, State Loans to Farmers, Madison, Wis., 1912.]

The States of the United States now lending money to farmers are eight in number, including Idaho, Indiana, Iowa, North Dakota, Oklahoma, Oregon, South Dakota, and Utah. Three other States have at some time or other loaned money to farmers on mortgage security, but have later on abandoned the system on account of political mismanagement, which wrecked them. These States were New York, New Jersey, and Wisconsin. Illinois loaned its school funds on farm mortgages so long as it had such funds to loan.

The fund from which these loans were made has in all cases consisted of the educational or school fund of the State, except in the case of Utah, where the land-grant funds derived from the sale of lands granted to the State by the United States in 1896 and from lands granted by Congress in 1855 for the support of the university and other public institutions have furnished the fund. Indiana was the first State to adopt the system, including the authorization thereof in its constitution of 1851. In Iowa and Oregon the system has been in force since 1857, in North Dakota since 1899, in Idaho since 1890, in Utah since 1895, in South Dakota since 1904, and in Oklahoma since 1907.

The terms on which the loans are made in different States differ a trifle, although all require a first-mortgage security. None of them appear to have adopted the system of paying off the principal in equal annual installments except North Dakota, where only interest is paid for the first five years, and the principal is thereafter to be reduced 10 per cent annually. In Indiana, Iowa, and Oklahoma the amount loaned may not exceed one-half the value of the land offered as security, while in Idaho, North Dakota, Oregon, and South Dakota it may not exceed one-third the value of the land; Utah loans up to two-thirds the assessed value of the improved land, exclusive of improvements. The interest rates vary from 5 to 7 per cent.

The amounts that have been loaned at the dates indicated are as follows:

Amounts of mortgage loans to farmers made by specified States in the United States.

States.	Date.	Amount loaned.	Amount outstanding.
Idaho	Sept. 1,1912	.....	$1,509,191.33
Iowa	June 30,1910	.....	4,595,731.19
North Dakota	June 1,1912	$1,680,012.00	.....
Oklahoma	Aug. 2,1912	4,079,225.00	.....
Oregon	Oct. 1,1910	5,078,144.95	.....
South Dakota	Sept. 30,1912	6,216,405.61	.....
Utah	Oct. 14,1912	.....	701,934.50

SUCCESS OF THE SYSTEM OF FARM LOANS IN THE UNITED STATES.

During the 22 years that the educational funds of Idaho have been loaned to farmers "very few foreclosures have been made, possibly not over six altogether," and "in no instance where foreclosure of mortgages have been made necessary is any loss reported," as reported by the State board of land commissioners. During the year 1911 the applications received were far in excess of the funds available to meet them. From January 1, 1911, to January 1, 1912, $1,008,600.33 in loans have been made. The rate of interest now charged is 7 per cent, which rate, however, is not large in Idaho, as private money lenders get from 8 to 10 per cent.

As regards the success of the system in Indiana, no figures are available. The only thing to indicate the success of the system is its continuance.

In Iowa loans have been made to farmers and holders of other real estate for about 25 years. Up to 1860 an unsuccessful experience with the system was reported, due to the fact that no adequate provision was made for the administration of its funds to secure accurate data regarding the value of the security on which loans were made. This deficiency in the law was amended and the system started on the way to success. The counties are now held responsible for all moneys from the school funds handled by them. The system has not worked badly on the whole, but such losses as have occurred are due to a lack of proper supervision over the security offered for the loan. Although the interest charged in Iowa is a trifle higher than that charged by a private lender for similar loans, nevertheless the State has been able to keep invested all its funds.

In North Dakota the success of the system may be indicated by the following letter written by Mr. W. E. Sellens, the officer in charge of the system in North Dakota. This letter was written August 1, 1912, and is as follows:

> There has been one mortgage foreclosure, and the land was sold afterwards on contract at a profit to the State. The State has never lost a cent by such investments, and this system has in all probability had some effect in reducing the rate of interest as charged by private money lenders. It is hard to determine as to this, however. There are no changes in the system contemplated.
>
> * * * The worst difficulty that we have to contend with is the handling and investing of these funds in an impartial manner. Last spring about $320,000 was loaned to the farmers, and our correspondence at that time indicated that we could have loaned perhaps $1,000,000 if it had been on hand, and it is rather difficult to place these loans in a way that those who are not successful in getting a loan will not feel aggrieved and think that others have been especially favored. Since that time I have adopted a system of placing the names of those who indicate a desire for a loan on a list and take care of them in the order in which they appear on the list, and I believe that this system will be successful and satisfactory.

Speaking on the Oklahoma system, before the First National Conference on Marketing and Farm Credits, at Chicago, April, 1913, Dr. Connell, connected with the agricultural college of that State, said:

> And throughout that entire State this money went into improvements at the willing direction of the farmer, and resulted in an equipment that was absolutely impossible and beyond the reach of those people who had settled upon those fertile lands had not this financial assistance come to them in this manner. That money is being repaid from day to day into the treasury and being loaned again upon this land and upon that, and so becomes a revolving fund for the improvement of farm life in that State.

Regarding Oregon, satisfactory details are not available on which to base an estimate of the success of the system. It is estimated, however, that the number of foreclosures up to July 18, 1912, does not exceed 500 since 1887—that is, 5 per cent of the 10,000 loans made by the State within that period. From 1900 (Jan. 1) up to September 30, 1910, the State sold 119 farms acquired by foreclosure. The aggregate obtained for these farms was $597,462.57, as compared with $480,393, the principal of the loans secured by the farms, and $709,533.80, the cost of the loans to the State, including interest to date. This shows that the State got back all of the principal plus $117,469.57 of the $229,140.80 interest and expense involved.

In South Dakota during the 20 years of the operation of State loans to farmers it has been necessary to foreclose in only one instance. In this case the county netted a profit on the loan.

The rate charged by the counties is 5 per cent and is slightly lower than rates for similar loans by private lenders. On date of September 30, 1912, the State commissioner of school and public lands had on file applications for loans amounting to nearly $1,000,000, which could not be filled because of a lack of funds.

Regarding the success of the system in Utah the board of land commissioners reported as follows:

During the 15 years in which the State has made loans of this character there have been only two cases of foreclosure, one on August 15, 1910, for $1,000, and one being conducted at the present (Oct. 14, 1912) for $2,000.

Foreclosure on August 15, 1910, netted the State $1,000 principal and accumulated interest at the rate of 6 per cent, so that no money was lost on the transaction.

While private loans range from 7 to 10 per cent in Utah, the State makes loans at the rate of 6 per cent.

By way of contrast to the success of the system of State loans in these States attention is called to the attempt to establish cooperative credit associations among farmers in Massachusetts by an act which was approved April 21, 1909. The purpose of this law is to free credit associations from the restricting condition of the general banking law of the State; nevertheless only 22 cooperative credit unions had been established under the act, and none of these had been organized among farmers.

PHILIPPINE ISLANDS.

[Source: Philippine Commission. Reports, 1908–1913.]

The Federal act of March 4, 1907, authorized the Philippine government to guarantee for 25 years a yearly income of 4 per cent upon capital invested in agricultural banks by private enterprise for making loans to farmers. As indicated, the bank was to be conducted by private capital and management, but owing to the hesitancy of capital in the islands to avail itself of this opportunity the Philippine government itself decided to carry out the plan. On June 18, 1908, therefore, the Philippine government, after getting the advice of the Attorney General of the United States as to the constitutionality of its proceeding to establish a bank under the Federal act of 1907, created an agricultural bank. A bank was therefore organized with a capital of ₱1,000,000 ($500,000) and began operations October 1, 1908.

The act provides that the bank shall be managed by a board of directors consisting of the secretary of finance and justice, the insular treasurer, and three resident citizens of the Philippine Islands or United States. The officers were paid out of the appropriation of treasury until the year 1911–12, when they were paid by the bank. There are 24 agencies throughout the Provinces.

The maximum loan to any individual is ₱25,000 ($12,500) and a minimum loan of ₱50 ($25). Loans are payable in 10 years or otherwise as the board of directors may declare. There is an interesting provision which provides that 50 per cent of the bank's capital is to be used for making loans not over ₱5,000 ($2,500). This is done in order to favor the small needy agriculturist.

In 1909 the act was so amended as to make loans apply for repair or maintenance, drainage and irrigation work, to aid in purchase of agricultural lands, clear lands, to pay labor employed in agricultural work, and to meet expenses in connection with raising and planting of crops.

Regarding the operations of the bank during the five years of its existence, it is interesting to note that the first loan was made to an American farmer. The minister of finance and justice in his report for 1907 and 1908 states that "it seems beyond question that this bank will prove an important factor in the restoration and promotion of agriculture in the Philippine Islands." (Report of the Philippine Commission, 1908, p. 12.) In his 1910 report, though discouraged as to the amount of business done by the bank because of the difficulty of defective titles, the minister of finance and justice nevertheless reports: "One of the good results already accomplished consists in the decrease of usury in the Provinces." Previous to the establishment of the bank farmers had been paying 10 to 40 per cent interest and, in addition, had been required to sell their products to the lender at the price fixed by the latter.

Up to October 1, 1911, loans were made by the bank at 10 per cent. By resolution of the board of directors the rate was made 8 per cent thereafter on loans guaranteed by property registered under the land registration act. "This will have a stimulating effect, both on the registration of titles and on applications for loans, thus removing the chief obstacle in the way of increased business for the bank, namely, the lack of sufficient title by intending borrowers." (Philippine Commission Report, 1911, p. 145.) That this prophecy has come true is borne out by the results of the operations of the bank in the years following the reduction of the interest rate.

Since its opening—October 1, 1908—the agricultural bank has made 390 loans to the close of the fiscal year 1913, amounting to ₱1,760,253 ($80,126.50), or an average of ₱4,513.46 ($2,256.73) per loan. The largest number of loans, or 155, ranged from ₱1,000 ($500) to ₱5,000 ($2,500), and the next largest number, or 122, were for amounts not in excess of ₱1,000 ($500).

There have been only five foreclosure proceedings instituted since the bank's organization. In all the foreclosures the security has been sufficient to protect against loss except in one case, where there is probably a loss of ₱150 ($75).

So great was the business of the bank during the fiscal year 1912–13 that the ₱1,000,000 ($500,000) of capital appropriated became exhausted; and to replenish its funds it was decided to make the bank a provincial depositary, with the right to invest in loans an amount equal to 20 per cent of the minimum reached by these deposits during the past six years. "This was the only practical solution of the difficulty encountered by reason of the lack of capital to meet the demands for loans." (Report Philippine Commission, 1913, p. 224.)

The following table will show certain operations of the bank since its opening for business October 1, 1908:

Table showing certain operations of the Philippine Agricultural Bank.

Years.	Number of applications for loans.	Number of loans granted.	Amount of loans granted.
October 1, 1908, to June 30, 1909	417	23	$27,725.00
July 1, 1909, to June 30, 1910	148	89	114,500.00
July 1, 1910, to June 30, 1911	123	61	115,225.00
July 1, 1911, to June 30, 1912	170	69	108,351.50
July 1, 1912, to June 30, 1913	.....	148	514,325.00
Total	.....	390	880,126.50

Of the above sum granted in loans there were, in 1913, outstanding $811,325, $68,801.50 having been repaid on principal loaned.

The increase in the business of the bank in 1912–13 was very remarkable. Loans to an amount of $514,325 were made, this amount being not only $403,673.50 in excess of the previous year, but also in excess of the total loans made during all the previous years by $148,523.50.

The latest report on the bank's operations states that "the borrowers, with very few exceptions, are prompt in paying interest." The amount overdue, however, in 1913 was $2,658.98, as compared with $2,849.38 the previous year.

The bank has been a profitable institution. The net profit at the close of the year, June 30, 1913, was 95,410.45 pesos ($47,705.22), showing an increase of 80.2 per cent over the preceding year. The total surplus of net profits of the bank during its years of operation is 211,313.68 pesos ($105,651.84).

NEW ZEALAND.

[Source: Official yearbook compiled in the registrar general's office, 1913.]

State loans to farmers have been made in New Zealand since 1894. Legislation for this purpose has since been amended and is now contained in the State advances act, 1913, which is a consolidation of all prior acts. This act authorizes the borrowing of money by the State for the purpose of lending to settlers, workers, and local authorities.

The system under the act is administered by the New Zealand State Advances Office. The office is in charge of a superintendent appointed by the governor. All acts of the superintendent and his office are subject to oversight of the New Zealand State Advances Board.

Money is advanced to settlers on first-mortgage security and improvements on lands held under various kinds of security indicated in the act. In general, it is required that the land shall be held in fee simple or on the basis of some lease created by various acts of the State. Loans may be granted to an amount of three-fifths of the value of freehold estates, provided, however, that in case of first-class agricultural land the loan may amount to two-thirds of the value; on leaseholds the loan may be up to three-fifths of the lessee's interest. For the purpose of determining the term for which the loan shall run the board classifies loans as 36½-year loans, 30-year loans, and 20-year loans. These loans are called first, second, and third class loans, respectively. A loan is considered as first class when the value of the land or the applicant's interest therein, exclusive of improvements, is not less than three-fourths of the amount of the loan; the security is second class if the value of the

land or the applicant's interest therein, exclusive of improvements, exceeds one-third, but does not rise to three-fourths of the amount of the loan; and it is third class if the value of the land or the applicant's interest therein is not in excess of one-third of the amount of the loan.

Loans may be paid in lump sum or in installments as the work progresses, if the loan is for building purposes.

No loan of less than $1,216.63 nor in excess of $9,732 may be granted. Applications for loans not in excess of $2,433.25 shall have preference to applications for loans for larger sums, thus showing the intention of the system to favor the small borrower.

Mortgages are repayable in semiannual installments of principal and interest combined. They may also be paid in lump sum at any one time. The rate of interest charged is 5 per cent, which is reducible to 4½ per cent if payment is made not later than 14 days after the date due and no arrears are outstanding.

TRANSACTIONS DURING THE YEAR 1912–13.

The report of the operations under the act during 1912–13 shows that 3,187 applications were made for loans, as compared with 5,355 in the previous fiscal year. The amount requested during this same year amounted to £1,164,225 ($5,665,700.96), only £854,300 ($4,157,450.95) of which was actually advanced.

Inasmuch as advances are made on both rural and urban and suburban property, distinction should be made as to the actual amount loaned in the agricultural regions. Since the creation of the fund there has been advanced in all on rural property approximately £4,873,592 ($23,717,334.47), which is approximately twice the amount loaned on urban and suburban property. The average amount of each advance on agricultural property has been £421 ($2,048.80).

The gross profits for the year ended March 31, 1913, were £85,502 ($416,094.48), and the cost of management £11,386, or 0.14 per cent on the capital employed. The net profits amounted to £73,864 ($359,459.16).

The borrower enjoys great facility in making his repayments. Thus, to illustrate: On a 36½-year loan at 5 per cent a borrower would pay in 72 semiannual installments £1 13s. 10d. (about $8). On a 30-year loan the borrower would pay £3 4s. 8d. ($15.98) on every £100 ($486.65) in 60 semiannual installments, while on a 20-year loan of £450 ($2,189.93) the weekly payment amounts to only 12s. 11d. per week, or less than 7½ per cent per annum, including repayment of principal on a 20-year loan. On the 30-year term it amounts to about 10s. 4d. ($2.51) per week, or less than 6 per cent, including repayment of principal. On the 36½-year term it amounts to about 9s. 10d. per week ($2.19), or 5½ per cent, including repayment of principal.

The mortgagor may also pay up the whole mortgage at any interest period on payment of the proper fee for the discharge of the mortgage. Also, on the due date of any installment, after at least one-tenth of the loan has been repaid, the mortgagor may be permitted to readjust his loan by treating the balance of principal then unpaid as a fresh loan to run from that date. But it is provided that no readjustment of loan is permitted unless the principal unpaid at the time amounts to at least £100 ($486.65). This privilege relieves the mortgagor of paying interest on the original amount of the loan.

To provide for a long and cheap method of making remittances borrowers are permitted to pay their installments through the local branch of the post-office department. Loans are also made through the post office.

SUCCESS OF THE SYSTEM.

The conditions in New Zealand which preceded the Government's determination to make advances to farmers were very similar to the economic conditions prevailing in the United States in the early nineties, namely, general economic depression, low prices, and high interest rates. Many farmers had been closed out and the remainder were hanging on with a load of debt about their necks. The effect of the Government's enterprise was instantaneous; the rate of interest fell at once to 5 per cent, and since then no farmer has had to borrow money on mortgage security at a higher rate.

Guy H. Scholefield in his book, New Zealand in Evolution (1909), summarizes the results of the activities of the advances-to-settlers office as follows:

* * * High rates of interest were gradually eliminated from agrarian economy. Farmers' sons clamored for land. Every year more estates were bought and handed over to them; more tracts of the brooding bush fell to the axes of the sturdy yeomanry who were willing to carve out new homes in the wilds. Back-blocks pioneering became a fashionable occupation for young men from the colleges, who passed straight out to the fringe of the bush to break in the land for themselves, willing and anxious to toil for a year in the fastnesses for the joy of a holiday amongst civilized men in the simmering Christmas of the Antipodes. (Pp. 188, 189.)

There is another interesting phase which has grown out of the system of Government advances to settlers in New Zealand. It was immediately charged at the time of its inception that the scheme was ultrasocialistic; but quite the contrary has been the result, as summed up in the words of Le Rossignol (Le Rossignol and Stewart: State Socialism in New Zealand, p. 302), who summarizes the results of the legislation as follows:

The land legislation of the Liberal Government was socialistic, in a sense, but its effects were anything but socialistic, for it converted land-hungry laborers into prosperous farmers, strong supporters of the freehold and the sanctity of private property.

AUSTRALIA.

In view of the somewhat fuller statement regarding State loans to farmers in New Zealand, it has been deemed sufficient to present the main facts concerning the situation in Australia in a very brief summary statement. All of the six States of Australia have established a system of loans to farmers from funds supplied by the State. These funds are raised by the issue of bonds, which have an extensive sale in the foreign markets, particularly in London. During the operation of the systems in force since 1894 there has been little or no loss to the State. Such losses as there have been have been temporary and have been covered by later operations. The dates of the original establishment and of the amending acts organizing the system are as follows:

(1) The western Australia agricultural bank act, 1894; 1906, 1907, 1909.

(2) The State advanaces act of South Australia, 1895, 1896, 1901.

(3) The State savings-bank amendment act of Victoria, 1896, 1900, 1901, 1903, 1910.

(4) The State advances on land act of Tasmania, 1898; new act, 1907.

(5) The advances to settlers act of New South Wales, 1899, 1902, 1906.

(6) The agricultural bank act of Queensland, 1901, 1904, 1905.

There are certain well-defined purposes for which loans may be made, differing very little as between the various States of the Commonwealth. Among the purposes for which loans may be made to the individual farmer are: First, improvements in the way of fencing, draining, building, and repair of structures; second, purchasing of new land; and, third, paying off existing mortgages.

Not merely farmers alone are permitted to borrow funds, but other producers, laborers, and so forth, are permitted to secure loans for the purchase of small holdings on which to build houses for themselves or carry on market gardening.

Practically all the States limit the amount that may be loaned to a single individual, varying from £25 ($121.66) to £5,000 ($24,332.50).

Queensland and New South Wales give preference to loans not over £2,000 ($9,733). All of the States require a first mortgage as a security, and permit the repayment of the principal by a series of equal annual installments distributed over a period of years, varying from 7 years to 36, as may be arranged between the borrowers and the Government. In West Australia, South Australia, Victoria, New South Wales, and Queensland the interest rate is 5 per cent, while in Tasmania it is 6 per cent. Generally speaking, only the interest is paid for the first five years, after which repayment of the principal commences.

Payments on the principal may be annual or semiannual, while opportunity is always given to the borrower to complete his payments at any time, usually after five years. This last provision is inserted in order that the borrower may take advantage of any reduction in the interest rate and thus refund his debt at a lower rate.

THE SUCCESS OF THE SYSTEM.

The success of the system is indicated by the large amounts of money that have been advanced by the Government for the development of the agricultural resources of the country. Up to January 1, 1912, there had been advanced by the six States of Australia $45,566,629 to farmers and home builders. Great as was the advantage to those who were able to take advantage of these loans, it should nevertheless be noted that these States had not been conducting their business without some degree of profit to themselves. Thus at the same date noted above, January 1, 1912, accumulated profits accruing to the system in the various States were $1,081,745. During the last three years the average annual profits have been something over $130,000. It should be remembered that before these profits are calculated administration expenses are deducted. The detailed results of the system in the six States of Australia are indicated in the tables which follow.

Amounts advanced to farmers in the six States of Australia, as of Jan. 1, 1910, 1911, and 1912.

[Commonwealth Yearbook, No. 6, 1901–1912, p. 417.]

States.	Amounts advanced.		
	1910	1911	1912
New South Wales	$6,632,324	$7,870,065	$9,484,249
Victoria	12,933,760	13,613,172	14,378,649
Queensland	1,147,487	1,493,743	2,094,556
South Australia	7,518,480	8,695,277	10,047,293
West Australia	6,117,590	7,495,583	9,471,104
Tasmania	44,708	71,100	90,692
Commonwealth	34,394,349	39,238,940	[1] 45,566,629

[1] As reported. The correct footing is $45,566,543—£17 difference.

States.	Balance due.		
	1910	1911	1912
New South Wales	$3,869,417	$4,516,530	$5,228,363
Victoria	6,367,450	6,358,846	6,539,768
Queensland	796,354	1,007,351	1,487,456
South Australia	3,456,753	3,989,644	4,704,300
West Australia	4,554,849	4,753,651	6,232,682
Tasmania	41,468	65,995	80,745
Commonwealth	19,086,291	20,692,017	24,273,314

Profits on Government advances to farmers in the six States of Australia as of Jan. 1, 1910, 1911, and 1912.

[Commonwealth Yearbook, No. 6, 1901–1912, p. 417.]

States.	Annual profits.			Accumulated profits.		
	1910	1911	1912	1910	1911	1912
New South Wales	$26,230	$39,905	$46,441	$39,122	$75,947	$123,361
Victoria	28,839	14,706	14,935	398,630	413,341	428,281
Queensland	9,606	12,400	16,147	29,213	41,613	57,761
South Australia	22,323	32,421	30,606	185,832	218,253	248,858
West Australia	33,204	32,863	39,224	151,241	184,104	223,333
Tasmania	[1] 477	234	394	[1] 477	[1] 243	151
Commonwealth	119,725	132,529	147,747	803,561	933,015	1,081,745

[1] Deficit.

The Government seems to have been very conservative in the management of its funds inasmuch as approximately only one-half of the applications for loans have been granted, showing that careful examination is made of the value of the security offered for a loan. Thousands of farmers in Australia have been assisted in building up their farms and equipping them, or even purchasing additional land, by the aid of these State funds.

In New South Wales since the commencement of the act—1899—11,279 have received loans from the Government fund; in Victoria since 1896, 7,459 have received such loans, while in Tasmania, since 1898, 155, and in Queensland since 1901, 1,417 have received loans. The total number of farmers who have been thus assisted in South Australia and West Australia is not reported, but the average number who have been assisted during the years 1908 to 1912 was 300 in South Australia and 2,722 for the same period in West Australia.

UNION OF SOUTH AFRICA.

The Union of South Africa was created as a Federal union of the British colonies of South Africa in 1909. Prior thereto each colony was independent, legislating as a separate State. In 1907 all the four States organized agricultural land banks on the plan of those in Australia whereby the Government raises funds by the issue of bonds and reloans them through an office or branch of the administration specially created therefor at a rate sufficiently in advance of its borrowing rate to pay expenses, usually 1 per cent over former rate.

So successful and popular were the individual State banks that it was deemed advisable to consolidate their efforts and give unity to the work so as to the more effectively develop the agricultural resources of the country. This was done in 1909 by the passage, June 22, of an act to take over the funds of the various State banks and to administer them through the Federal ministry of finance.

On October 1, 1912, by virtue of the above act and a proclamation by the governor general September 24, 1912, the Land and Agricultural Bank of South Africa was established. The main object of the bank is to assist the farming population by providing bona fide deserving applicants funds for their capital needs, repayable in installments over an extended period and at a low rate of interest.

Ordinary advances are made for a term of 30 years, although during the first 5 years the applicant pays only interest and during the last 25 years reduces his principal and interest gradually, being permitted at any time to pay as much as he sees fit, provided it is in multiples of £5 ($24.33). Annual payments for interest and principal are about 7 per cent of the total advance made.

In all cases there is required a first-mortgage security on landed property, but in cases where the property has been purchased from the Government and the balance of such purchase price has been arranged for by the drawing of a bond, bearing no interest, a second mortgage may serve as security for a loan.

The minimum amount which may be loaned any individual farmer is £50 ($243.32), while the maximum amount is £2,000 ($9,733), except where large agricultural works and improvements have been specially authorized by the Government, in which case advances are made up to £5,000 ($24,332). Advances are made up to 60 per cent of the value of the property offered as security, the valuation of which is determined by the Government board.

In addition to these ordinary loans, the Government grants advances upon land held under various kinds of tenure; for example, upon land held under a lease from the Crown, provided the unexpired period of such lease is 10 years or more. In this latter case advances are made up to 50 per cent of the value of the lessee's interest, as determined by the board. Also, a loan may be made upon Crown lands up to 50 per cent of the purchase price, which latter is only partly paid. These special advances may not exceed a term of five years.

Personal short-term loans are made, but not in excess of £1,000 ($4,866.50), on which loans 6 per cent interest is payable on the monthly balance remaining during the time which the farmer gradually draws upon his credit.

Advances may also be made to cooperative societies, the members of which become jointly and severally liable for the repayment of the whole advance.

As already stated, the capital of the bank consists of the funds of the three provincial banks in existence prior to the creation of the Federal bank, together with such amounts as are recovered by the Government from any advances previously made under special acts for the erection, construction, or repair of fences and dipping tanks, and such funds as may be specially voted by Parliament from time to time.

SUCCESS OF THE SYSTEM.

The board administering the act in the Union of South Africa has granted approximately a little over 50 per cent of the applications received for loans, indicating a fair degree of conservativeness in making loans. During the year and three months that the act has been in operation 2,923 farmers have been benefited by the receipt of loans amounting to $7,965,974. The largest proportion of these loans has been for the purchase of land, $2,670,502 of the above amount having been placed for that purpose.

The two tables which follow show in some detail the financial operations of the bank:

Advances paid out since the establishment of the bank, Oct. 1, 1912, to Dec. 31, 1913.

Years.	Advances.		Average amount.	Value of security.	Per cent loans form of value of security.	Repayments.
	Number.	Amount.				
1912 (3 months, October–December)	287	$519,036.86	$1,810.34	$1,292,158.20	40.2	$373,151.24
1913	2,636	7,446,036.99	2,842.04	16,636,960.97	44.8	2,547,223.51
Total	2,923	7,965,973.85	.....	17,929,119.17	.....	2,920,374.75

Purposes for which advances were paid out since the establishment of the bank, Oct. 1, 1912, to Dec. 31, 1913.

Years.	Amount advanced for—					Total.
	Improvements.	Purchase of stock.	Discharge of existing liabilities.	Purchase of land.	Other.	
1912 (3 months)	$97,933.45	$71,157.96	$239,149.54	$110,858.87	$837.04	$519,936.86
1913	1,052,477.95	609,942.78	3,222,197.25	2,559,642.74	1,776.27	7,446,036.99
Total	1,150,411.40	681,100.74	3,461,346.79	2,670,501.61	2,613.31	7,965,973.85

As shown by the above table, the bank appears to have been careful in placing its loans on adequate security; that is, amounting to approximately a little over 40 per cent of the value of said security.

Although cooperative societies are permitted to receive loans from the Government fund, no advances were made in 1912, while in 1913 loans to the amount of $267,657.50 were granted. To show how far short of the actual needs of the agriculturists of South Africa the funds have been it is interesting to note that applications from cooperative societies were in amounting to $939,234.50. Relative to cooperative societies, the board reports that its greatest difficulty consists in compelling the keeping of a uniform system of accounts and otherwise to maintain adherence on the part of the societies to the prescribed by-laws. Nevertheless the lending board continues to be strict in its rules, endeavoring scrupulously to maintain them.

Reports of the operations of the bank show that, unfortunately, there have been some arrears in the repayment of loans, these amounting to $7,533.82 at the close of the year 1913. As an offset to this somewhat discouraging feature of the bank's operation mention should be made of the fact that its business has not been without its profit. Thus during the first three months this profit amounted to $42,216.97, which, as required by the law, is placed to the credit of a reserve fund. In 1913 the profit amounted to, in round numbers, $147,910, and the total reserve fund at that date was, in round numbers, $575,918. In 1913 the total earnings were 5.6 per cent on the bank's capital, as compared with 5.9 per cent in 1912. Frankness requires that attention should be called to the report of the committee on public accounts (Union of South Africa, first report of select committee on public accounts, March, 1914, Cape Town, 1914, p. xii), March, 1914, wherein it is pointed out that, while the bank pays on its capital—borrowed fund from the State—3¾ per cent, the State, on the other hand, pays 4¼ per cent on the money which it has borrowed and advanced to the bank, thus making it impossible to determine the actual amount of profits which the bank is making. It can not be other than a mistaken financial policy on the part of the State to thus loan its funds to the bank at a lower rate than it itself is required to pay in the money markets of the world. In the words of the committee:

> In the opinion of your committee it is essential that, if the true position of the bank is to be known, the interest charged by the treasury to the bank should be governed by the actual cost to the Government of the sum so provided.

Except for this one mistaken policy on the part of the bank, it would seem that the institution as a whole has been a success. Its administration expenses amounted to 0.878 per cent of the amount invested in mortgages in 1912, while in 1913 it was 0.662 per cent, indicating a substantial reduction in that respect.

CANADA.

Two Provinces in Canada, Nova Scotia and New Brunswick, enacted laws in the spring of 1912 authorizing their governments to extend credit to farmers for the purchase and improvement of farm lands.

The law for Nova Scotia was passed May 3, 1912, entitled "An act for the encouragement of settlement on farm lands." The government extends its credit through private companies, which lend money on real estate. There are three methods by which the farmers may obtain credit from the government. By the first method the farmer must secure a guaranty for a part of a loan made to him by a private loan company. For example, the government may guarantee a private company lending $800 to a farmer offering security to the value of $1,000 against any loss on the principal to an amount of $500, say. Under the second plan the Province advances the actual cash to the borrower for his use. In this instance the loan in no case can exceed $2,500 to any one person. The third plan of supplying credit on the part of the State consists in the purchase of privately owned property and its resale to farmers.

New Brunswick passed an "Act to encourage the settlement of farm lands" April 20, 1912. Under this act there is created "a farm settlement board," which is given power to buy, improve, and sell land to settlers for farming. This farm settlement board is composed of three commissioners, who are appointed by the lieutenant governor in council, although one shall be the superintendent of immigration for the Province.

The terms on which the property is sold differ according to the value of the property. For example, if the price paid is to be less than $800, the settler is required to pay 25 per cent of the price in cash and the balance with interest as agreed upon between the settler and the board. This balance must be paid within 10 years, although an extension of two years is permitted, at the discretion of the board. If, on the other hand, the purchase price of the property exceeds $800, the settler is required to pay 35 per cent of the purchase price in cash, with the same privilege as to the payment of the balance as in the preceding instance. The price of the land sold to the settler must not exceed the price paid for it by the board. Thus the cost of maintenance and administration is borne by the board and not by the settler.

Besides this power to buy land the board is authorized to take agricultural land belonging to the Province, to divide it into farm lots, and to improve it for settlement purposes. These improvements may consist in clearing the land, not to exceed 10 acres in each 100 acres, and in erecting dwelling house and outbuilding. This land so improved is to be sold to settlers upon the same terms as land purchased from private owners.

The board retains all title to the land until the last payment is completed, and if the settler defaults in payment of interest the board may begin eviction proceedings at its own discretion upon one month's notice, and may resell the property to another settler.

Relative to the discussion of the subject of State loans to farmers in Canada, Mr. Arthur Hawkes, the special commissioner of immigration appointed by the Canadian minister of the interior, in November, 1911, has this to say regarding his suggestion that the Provinces work out plans for the settlement of special localities with the aid of public credit:

> The financing of settlement as a function of government now seems to be inevitable. It contains nothing revolutionary in principle. It would be difficult for those whose railway dividends are founded on government guaranties and subsidies to oppose the application to Canada of a principle that is operating in the United Kingdom, Australia, and New Zealand and is about to be applied in South Africa. It may be objected that it is unfair to afford to present-day pioneers facilities that were not available for heroic old-timers. The objection might be good if you refused to give a new district a railway because your grandfather had none when he started his farm. The governing factor in the use of public credit is the object to be achieved, and not the incidental advantage that may alight on an individual here or there. (P. 37 of Mr. Hawkes's report.)

EGYPT.

This information relative to the agricultural bank of Egypt is taken from a report on that subject to the Secretary of War and to the Philippine Commission by E. W. Kemmerer, who was instructed to make a study of the agricultural bank of Egypt and to prepare a report on it.

The agricultural bank of Egypt is owned and financed by private capital, but with a Government guaranty of principal and 3 per cent interest. The Government further assists in lowering the expenses by permitting the use of its taxgatherers as the collectors of the installments of the loans of the bank. In 1894 the first step was taken by the Government to provide agricultural credit for the peasant proprietors—the fellaheen—of Egypt by an advance of 27,000 bushels of seed. This amount was increased to nearly 44,000 bushels in 1895 and in 1896 to 46,000 bushels. The purchase money was made payable in equal installments during the last quarter of the year. It was not until June, 1898, however, that the national bank of Egypt was established. The conditions that led up to its establishment was the excessive rate of interest which the Egyptian peasants were forced to pay the money lenders. Mortgage indebt-

edness had become very heavy. The national bank met two needs: First, it permitted sums borrowed in the early part of the year to be paid in the fall after the sale of the cotton crop; second, it made loans of larger amounts for a period of years—usually five years—at 9 per cent interest. The continued success of these Government advances led to the establishment of the agricultural land bank June 1, 1902, having a capital of $12,357,000, of which $6,179,000 were paid up. To this bank all agricultural loans were transferred. The interest rate was fixed at 9 per cent and the concession to the bank was to continue for 50 years.

The following table is taken from the report mentioned above:

Years.	Number of loans.	Total amount.	Average amount.	Number of loans.	
				Under $98.86.	$98.86 and over.
1902	46,572	$5,972,133	$128	.....	.....
1903	78,911	10,854,042	138	13,156	65,755
1904	134,207	19,456,844	145	17,498	116,709
1905	185,530	28,499,717	154	21,829	163,701
1906	.....	34,766,521	.....	.....	.....

According to this report the table seems to justify the following conclusions: First, the development of the bank has been rapid, and it has been a boon to a surprisingly large number of Egyptian peasants. The outstanding loans have increased from December 31, 1902, to March 31, 1906, 482 per cent. Second, the number of loans from 1 Egyptian pound up to 20 pounds increased during the three years ending December 31, 1905, 66 per cent, while the larger loans over $98.86 increased 149 per cent. Third, the rather small average amount of the loans shows that the humbler peasant is being reached and benefited.

Although the success of the bank has not been such as to get the peasant proprietors out of debt yet, it has not been without its benefits to the peasants of Egypt. The peasant proprietors are now assured of reasonable rates of interest, for though 9 per cent may seem a high rate of interest, yet it is low compared to what the Egyptian peasant paid prior to the establishment of the bank. The Earl of Cromer, in his report of 1895, as quoted in the report under consideration, on the Egyptian bank, tells how the Egyptian peasant was treated by European money lenders:

> A small cultivator in Upper Egypt borrowed $49.43 from an European money lender. In order to obtain the money he was obliged to sign a bond for $74.14. He states that for three years he paid $24.71 at the end of each year. At the end of the third year he was asked to repay the capital sum of $74.14.

He goes on to tell how legal proceedings were instituted on refusal to pay the sum, but the debtor finally yielded with the result that he "paid no less than $168.06 in the shape of interest and legal expenses in return for a loan of $49.43 for a little more than three years." In addition, therefore, to lowering the rate of interest the bank has been instrumental in securing for the peasants of Egypt peaceful possession of their property, giving them an incentive for the exercise of thrift and probably encouring them to expend their money more wisely than heretofore.

To sum up, it will be possible to note the financial condition of the bank as shown in the latest available Government report for 1910 concerning its operation. (Great Britain parliamentary papers. Egypt, No. 1, 1911.) This report on its operations speaks favorably of its prospect, although the percentage of collections upon loans still in arrears has been growing considerably since 1904. The percentage of arrears to annuity uncollected in 1910 amounted to 18.9 per cent. This was due, the report explains, to an insufficiency of the cotton crop in certain regions. The report regards this as a temporary setback, and states that "the prospects for these Provinces are distinctly more promising." There seems on the whole, then, no desire to abolish the bank but to improve its methods in making and handling loans by restricting them in districts where there are large arrears and making closer examination of titles to land upon which loans are made and to inquire carefully into the purpose for which loans are made. In short, therefore, the evils lie in the economic condition of Egypt, crop failures, etc., rather than in the fundamental principle of the bank.

IRELAND.

A very comprehensive report on agricultural credit in Ireland was made by a departmental committee at the department of agriculture and technical instruction for Ireland in 1914 (Great Britain Parliamentary Papers, Cd. 7375). The information which follows has been obtained from that report. Long-term agricultural loans have been extended in the aid of Irish agriculture by the State since the early part of the nineteenth century. These State funds and free grants are at present made through four different departments—(1) the board of public works, (2) congested-districts board, (3) the estates commissioners, and (4) the department of agriculture and technical instruction.

The board of public works since 1831 has been authorized to make long-term loans for drainage purposes, which loans have been taken advantage of almost exclusively by the large landholders. Another class of loans made to individual owners have been advances for the purpose of carrying out permanent agricultural improvements, such as irrigation, subsoiling, clearing, erection and improvement of buildings, and so forth.

One of the most important results obtained through the use of this class of loans has consisted in making possible the erection of dwellings for agricultural laborers. Thus, by the aid of these loans since 1860 there have been made 1,011 advances (p. 292), amounting to a total of £407,814 ($2,376,798.60). The congested-districts board was authorized to make loans for the purchase of land by people in the congested districts in Ireland desiring to settle in the country.

The powers of the board authorize it to aid emigrants from congested districts to increase the size of their holdings and develop agriculture by improvement of live stock and methods of cultivation, both by direct and indirect means. The board is also empowered to aid and develop the small handicraft industry. Since its establishment in 1891 up to the year 1912 the board has made, for agricultural purposes, 1,384 loans, an average of about 69 per year during the 20 years. The total amount loaned was £26,464 ($128,787.06). A slight loss has been suffered to the amount of £58 ($282.26). This does not include its loan for dwelling-house purposes, of which it has made a considerable number since 1909. Thus, in 1911–12 it sanctioned 66 loans, to an amount of £2,720 ($13,236.88).

It should be noted that the functions of the board are entirely secondary as regards the extension of credit, its main work being to purchase, improve, and resell estates fitted up for the small holders.

The department of agriculture and technical instruction for Ireland is one of the governmental bodies more recently authorized to extend its credit in the aid of Irish agriculture. Since 1900 the department has been active in supplying loans to meet the capital requirements of the farmer in the way of equipping and stocking his holdings. The department has also aided the local agricultural credit societies by supplying them with working capital. During the period 1901–2 to 1912–13 the department has made 3,262 loans, involving £106,776 ($519,625.40). The committee reports that the repayment of the advances to the department has been, on the whole, very satisfactory.

The work of the estates commissioners in advancing credit to Irish farmers has been somewhat along the line of that done by the department of agriculture. This board has been active in supplying capital with which the farmer could equip and stock his holdings. The work of this board has been very effective in clinching the results which have followed from the creation of a peasant proprietary in Ireland, which was made possible by the land-purchase act in Ireland. To quote from the report:

> The great legislative measures of land purchase, under which the fee simple of the soil is steadily passing by means of State credit into the hands of a peasant proprietary, have laid the foundation upon which may be gradually built up a sound and prosperous rural economy, with the assistance of the various voluntary and State organizations at work in their respective spheres. The evidence received by us has been unanimous upon one point—the great improvement usually wrought in the condition and whole outlook upon life of those farmers who have obtained the complete ownership of their holdings, as compared with those who are still in the position of tenants.

The estates commissioners have expended for the benefit of new holders from November, 1903, to March, 1913, £247,029 ($1,202,166.63), which has been made in the shape of loans, while £320,460 ($1,559,518.59) additional consisted of free grants or subsidies. An attempt is being made to reduce the number of free grants, which have been found necessary in the case of evicted tenants who have been in a greater or less condition of poverty. There has been no difficulty in the matter of repayment of the land-purchase annuities administered by these commissioners, and in the words of the report "the regularity of the repayment of land-purchase annuities furnishes one of the strongest proofs of the credit worthiness of the Irish agricultural classes" (p. 328).

The table which follows gives a summary review of the operations of the four governmental bodies in Ireland engaged in

extending credits to Irish farmers. The total covers the operations for the year ending March 31, 1913:

Loans and free grants made by state departments in Ireland for various agricultural purposes in the year ended Mar. 31, 1913.

	Loans.	Advances repayable with annuity.	Free grants.	Total.
BOARD OF WORKS.				
Drainage, maintenance, etc.	$3,075.63			$3,075.63
Field works	14,039.85			14,039.85
Farm buildings	501,862.68			501,862.68
Laborers' cottages	15,339.21			15,339.21
	534,317.37			534,317.37
CONGESTED DISTRICTS BOARD. (Figures for year 1912.)				
Improvement of dwellings of tenant purchasers not exceeding $34.07 valuation (£7)	13,236.88			13,236.88
Erection and improvement of dwellings of tenants on estates purchased by board		$22,084.18	$14,643.30	36,727.48
Free grants through parish committees for erection and improvement of dwelling houses and out offices to landholders not exceeding £7 ($34.07) valuation			66,987.37	66,987.37
Purchase of live stock	16,628.83			16,628.83
	29,865.71	22,084.18	81,630.67	133,580.56
DEPARTMENT OF AGRICULTURE AND TECHNICAL INSTRUCTION.				
Purchase of bulls	25,719.45			25,719.45
Purchase of stallions	9,684.33			9,684.33
Fencing	13,382.88			13,382.88
Agricultural implements	8,623.44			8,623.44
Miscellaneous	1,294.49			1,294.49
	58,704.59			58,704.59
ESTATES COMMISSIONERS. (Expenditure for improvement of estates and untenanted land, reinstatement of evicted tenants, etc.)				
Building and repair of houses		128,334.47	45,384.98	173,719.45
Drainage, fencing, and amalgamation of holdings and parcels, etc.		55,001.18	19,840.72	74,841.90
Purchase of stock, seeds, implements, and manures			55,385.64	55,385.64
Miscellaneous		1,946.60	2,262.92	4,209.52
		185,282.25	122,874.26	308,156.51
Grand total	622,887.67	207,366.43	204,504.93	1,034,759.03

ARGENTINA.

[Int. Inst. of Agriculture, Bull. of the Bureau of Economic and Social Intelligence, Rome, 1911, 2d year, No. 8, August, 1911, pp. 184–186.]

Mortgage institutions in Argentina are of two classes, official and private.

There are three official institutions: The National Mortgage Bank, the Buenos Aires Province Bank (mortgage section), and the Mortgage Bank of the Capital.

We shall only deal with the working of the first of these, the most important for rural-land credit.

1. BANCO HIPOTECARIO NACIONAL.

The National Mortgage Bank was founded by the law of September 24, 1886, to facilitate loans on mortgage in the Republic by issue of notes of hand, repayable in installments. The law—No. 1804—of September 24, 1886, has been amended by the chamber of representatives as follows:

Article 34 of the reform provides that the bank commission, which had till then amounted to 1 per cent of the sum borrowed for the whole term, shall be only 1 per cent for a third part of the period, one-half per cent for the second third, and one-fourth per cent for the last. Article 56 introduces another reform by which the loans to one person may not be less than $1,000 gold or more $1,000,000 gold.

If the total of the loans made by the bank exceed $250,000,000 gold, new loans can only be granted to the amount of 40 per cent of the estimated value of the property.

The rate of interest on the notes of hand varies between 5 and 7 per cent; that on sinking fund from 1 to 4 per cent. The management of the bank proposes in future only to issue "ceduls hipotecaris argentins" at 6 per cent, repayable in installments in from 21 to 33 years.

Although the reform is not yet an accomplished fact, the bank is already rendering very important service, as may be seen by its balance sheet for 1910. We find there that official statistics show 7,125 applications for loans for an amount of $199,278,549 gold on real estate valued at $434,175,242 gold. We see further that it has granted $123,986,900 gold, but for various reasons only 4,409 loans have been registered for an amount of $98,804,700 gold, which, according to M. Smets, have been entirely acquired by the debtors, in consequence of the high quotations of the notes of hand, at a monthly average of between 98.93 per cent and 103.81 per cent, and an annual average of 100.54 per cent.

As a result of this special issue, which marks the highest level attained by the bank, its circulating capital amounted on December 31, 1910, to $287,617,026 gold, or very nearly the maximum of $300,000,000 gold.

Further examination of the tables show a large number of small loans, as many for amounts under $10,000 gold as for over that sum. It would thus appear that the bank is of enormous advantage to the Republic.

Again, of the 4,405 loans granted by this bank 2,876 were granted in the capital (for an amount of $52,237,700 gold), and only 1,533 for $46,567,000 gold in the rest of the Republic; 3,599 of the properties mortgaged are situated in towns, and 810 in the country.

AUSTRIA.

[International Institute of Agriculture. Bulletin of the Bureau of Economic and Social Intelligence, Rome, 1912. (No. 4, Apr.; No. 9, Sept., 1912.]

It was not until 1850, when the transfer of land became free in Austria, that the problem of mortgage credit came to the front. Mortgage indebtedness early became heavy. In 1858 the amount of land-mortgage credit amounted to 2,244,000,000 crowns ($231,152,000), and has shown a steady increase up to 1908, when it amounted to 13,808,000,000 crowns ($2,803,024,000).

By 1910 there were 15 provincial mortgage-credit institutions whose foundation capital had been supplied by the State. Practically all of these make their loans in the form of bonds and not in cash, the individual borrower realizing his cash by selling the bond. The amount of issue must not exceed the value of the property pledged, and upon the gradual redemption of the mortgage an equal amount of bonds must be retired.

The term of amortization is usually 30 to 60 years, the principal and interest being repaid in equal annual installments. The rate of interest on their bonds or notes issued has waivered in the last 15 years from 2 to 5 per cent.

Mortgage loans granted by the credit institutions and mortgage banks may be repaid at any time by the borrower without the payment of any premium, and the mortgage can not be foreclosed except for reasons specified.

The principal aim of these institutions is in assisting to convert existing mortgages at a high rate of interest into those bearing a low rate of interest, subject to redemption by partial payment, thus facilitating the payment of the debt by means of small annuities, continuing over a period of years. In considering the utility of these institutions one must bear these facts in mind rather than the volume of business done by them. The borrower is protected from the private capitalist and institutions which operate a mortgage-credit system for profit.

In 1908, 1909, and 1910 there was outstanding in mortgage loans by the 15 Austrian mortgage-credit institutions 1,208,000,000 crowns ($245,224,000), 1,266,400,000 crowns ($257,079,200), and 1,229,700,000 crowns ($249,629,100), respectively.

In 1910, 14 of these institutions supplied about 17 per cent of the mortgage credit in Austria.

FRANCE.

The Crédit Foncier de France was established December 10, 1852, for organizing and improving agricultural and land credit in France. In 1858 the permission to make loans on drainage operations was extended to the bank. By the act of January 11, 1860, the bank extended its operations into Algeria. At the opening of its operations the bank was granted a subsidy of 10,000,000 francs ($1,930,000).

The Government exercises control over the institution by the appointment of two governors and two deputy governors, and a board of directors, whose decisions are not valid without the approval of the governors. Every issue of bonds requires Government authorization. In lieu of this Government control over the bank it is given the special privilege of issuing bonds at fixed rates of interest on first mortgage. The amount of the loan in any case is limited to one-half the value of the improved property on farms, houses, and so forth; in the case of vineyards, woods, and so forth, it is limited to one-third the value thereof. It may not exact a commission on its mortgage loans of over six-tenths of 1 per cent. Borrowers make a repayment

of the principal on the amortization plan, such that the annual interest and the sinking fund amounts to 12.52 per cent for a loan of 10 years, while for a loan of 75 years the annual payment amounts to 4.66 per cent of the principal.

The operations of the bank are large and extensive. Its present capital of $38,600,000, divided into shares of $96.50, may ultimately be increased to $48,250,000. One-fourth the capital must be in French treasury bonds, one-fourth in the buildings and property of the society, or in loans to French colonies, or deposited as a guaranty in securities left with the Bank of France. Shares may not be issued below par.

The Crédit Foncier may take short-term mortgages, although its real business is the granting of long-time loans. Its present rate of interest on such loans is 4.3 per cent, while it loans at a rate of 4.1 per cent to public establishments and at a rate of 3.85 per cent to municipalities. The bank is enabled by law to exercise a summary and expeditious process of foreclosure in the event of the failure of a borrower to meet his obligations.

It is stated that (agricultural cooperation and rural credit in Europe. Information * * * secured by the American commission * * * and the United States commission, 1913, Washington, 1913, 63d Cong., 1st sess., Senate Doc. No. 214, pt. 1, p. 663)—

> The part played by Government intervention in our system (of farm loans) is exclusively that of encouragement. Its purpose is to assist the free development of organizations resulting from individual initiative. The State only intervenes to control and regulate the proceedings and to give the whole system that high guaranty of probity and disinterestedness which are the best patents of nobility of all democracies striving to promote social progress.

In France, as elsewhere, the moving cause compelling the State to act was a high rate of interest—8 per cent—which farmers were compelled to pay in discounting their notes.

To show how the bank aids the farmer a concrete case is in point. Thus a farmer may go to the Crédit Foncier and borrow 10,000 francs for 30 years, and pay 4½ per cent interest and 1½ per cent added to pay off the principal in equal annual installments.

Under the old system the farmers paid 5 per cent all their lives, and at their death the only way to satisfy their mortgage was to sell the estate over the heads of their families.

It is claimed by the president of the National Federation of Mutual Agricultural Cooperative Associations that—

> the Crédit Foncier compares favorably with the German land-mortgage banks. The rate of interest is no higher and the administration is as good if not better. (63d Cong., 1st sess., S. Doc. No. 214, p. 660.)

By a series of enactments commencing in 1894, with changes and additions in 1896, 1899, 1906, and a new law in 1910, the State placed funds at the disposal of the original banks for distribution to the local banks, for the purpose of making short-term agricultural loans.

The local banks pass upon the safety of loans for which applications are made and form the first security for all loans.

The original banks disbursed, in 1912, for the purpose mentioned 85,000,000 francs ($16,405,000), of which 60,000,000 francs ($11,580,000) was from State grant and 25,000,000 francs ($4,825,000) from their own assets.

In 1911 the 4,000 local banks having a subscribed capital exceeding 18,000,000 francs ($3,474,000) granted loans to farmers amounting to 82,000,000 francs ($15,826,000), in addition to the outstanding loans, which amounted to 52,000,000 francs ($10,036,000). During the year 72,000,000 francs ($13,896,000) of this sum was repaid, leaving the outstanding loans at the end of the year at 62,000,000 francs ($11,966,000).

On March 19, 1910, a law was enacted providing for a long-term credit to peasant farmers. The loan can not exceed 8,000 francs ($1,544), and the maximum period of repayment is fixed at 15 years, with interest at 2 per cent. The loan may be for the purpose of taking up a small farm, transforming a farm from one class to another, or reconstituting one after damage by flood.

Several kinds of security may be accepted—mortgage on the farm, life insurance, personal security, and so forth.

During the two years the law has been in operation long-term credits have been extended to the amount of 12,000,000 francs ($2,316,000).

In the words of the president of the Central Society for Real Estate Credit and Cheap Dwellings:

> The laws of April 12, 1906, on cheap dwellings; of April 10, 1908, on small holdings; of July 12, 1909, on the homestead; of March 19, 1910, on individual long-term credit for the benefit of small farmers, are all laws which indicate a notable progress in the improvement of the economic and social conditions of the rural population and are the fruit of our agricultural credit system.
>
> The diversity of these social laws clearly shows what has been done in France and that the French system of agricultural credit is a highly effective instrument of social conservation. Services which it renders the rural population of France have made our agricultural credit system a prime factor in national consolidation. It is securing day by day the economic emancipation and the moral and social redemption of the agricultural laborer. (63d Cong., 1st sess., S. Doc. No. 214, p. 663.)

GERMANY.

[Agricultural Credit and Cooperation in Germany, report of the British board of agriculture and fisheries by J. R. Cahill, London, 1913 (reprinted, Washington, D. C., 1913. 63d Cong., 1st sess. S. Doc. No. 17).]

Germany has a great variety of agencies through which the borrower may obtain long-term credit on mortgage security. There are the long-term credit associations of the larger landowners, the savings banks which rank as public corporations; there are the State mortgage institutions, the joint-stock mortgage banks, and various others too numerous to mention.

STATE MORTGAGE INSTITUTIONS.

Taking up now the mortgage-credit banks which have been established for a whole State or Province we note that there are 16 of these throughout the Empire. Their liabilities are guaranteed by the Government authorities of the State or Province in which they are located. They make loans on all forms of land, except that the mortgage institution for Hanover restricts its loans to those on rural property. The original purpose of many of these banks was to assist landowners, by loans on reducible mortgages, to redeem feudal burdens and servitudes, which at one time attached to their holdings. This special character has been lost, and practically all of them have developed into ordinary mortgage institutions.

The total outstanding loans of these State mortgage institutions, 1910, amounted to about $500,000,000, of which half was placed on mortgage security. Funds are obtained generally by the issue of bonds, which are recognized as trust securities, while working capital is provided by deposits, repayments by borrowers, accumulated funds and grants or loans from the State or other governmental authority. The bonds of these banks are redeemable at their discretion by a system of drawing. These banks make their loans in cash and not in the form of bonds as is the case with the land-credit associations of landowners (landschaften).

The special service of these State mortgage institutions is to afford loans to farmers of average and small means at moderate rates of interest, not subject to recall and repayable in equal annual installments, with the privilege of completing payments at any time on notice of three to six months. As low as $75 are lent by at least six of these banks, while the report which is authority for these statements noted above states that one bank grants loans as low as $10 approximately. The rates of interest range from 3½ to 4 per cent, to which must be added from one-half to 1 per cent for the repayment of principal and an additional one-fourth to one-half of 1 per cent for administration expenses.

In addition to making loans, the State exempts these banks from stamp taxes and court fees. They are further assisted by the corporation of local revenue authorities or other public officials.

In order to maintain an adequate knowledge of the business and credit of the borrowers these banks usually have their local agents. These local agents also tend to aid in bringing the credit facilities of the bank into each locality. The banks advertise their business in the daily papers, thus not hesitating to attract clients.

The value of the bonds in circulation issued by these mortgage banks amounted to approximately $215,000,000 in 1900 and to $440,000,000 in 1909, thus showing an increase of approximately 105 per cent. The total of the loans outstanding at the same date was $245,000,000 and $485,000,000, of which $135,000,000 and $240,000,000, respectively, were assigned to mortgage loans. (Report cited, p. 60.)

SUCCESS OF THESE BANKS.

[Report cited, p. 61.]

These State or semi-State banks have fulfilled their purposes with success. They were created in parts of middle and northwest Germany at a time when practically no suitable institutions existed for the grant of long-term credit to farmers. They have served in an especial manner the needs of medium and small landowners who predominate in their respective areas and afforded them the advantage of being able to obtain loans at moderate rates of interest, not subject to recall and repayable in small annual installments. The principle of compulsory reduction of debt by annual payments to sinking fund, which was not adopted by the mortgage credit associations till comparatively late in their history (about 1820–1840), was applied apparently universally by these institutions from the beginning; and unlike many credit associations of the older type, they did not frustrate, in fact, the reduction of mortgage charges by permitting borrowers to utilize accumulated sinking-fund payments toward removal of indebtedness and to charge forthwith their property to the old amount. The relative freedom from excessive indebtedness enjoyed by medium and small landowners in Brunswick, Hanover, and Cassel is attributed partly to this compulsory system of paying off mortgages by convenient installments. Its educational influence in this direction was not confined to actual borrowers from these institutions. They have shown also that mortgage credit in the most favorable terms may be afforded on sound business lines not only to large but also to small and medium landowners. By their business organization at once centralized and decentralized, they

secure not only the necessary supervision over their borrowers but also bring their benefits more easily within the reach of farmers in every district. Not aiming at profits beyond the payment of expenses—although, in fact, considerable sums are usually allocated to public purposes as the result of their operations—they grant loans more cheaply than the joint-stock mortgage banks. The majority of the latter do not find it profitable to lend at all upon small properties, and other institutions which possess the advantage of being accessible for small farmers without incurring expense, namely, the public savings banks, not only charge higher rates but may grant only loans subject to recall and only agree to gradual amortization for a limited portion of their loans. Certain drawbacks are associated with the management and the control of the banks now being considered by the State or public assemblies of districts or Provinces. Thus the necessity of obtaining the sanction of a representative assembly for changing the rate of interest payable on bonds or chargeable on loans, the strict adherence to formal rules (e. g., as regards lending over 50 or other percentage of the assessed value), for whose alteration similar authority is required, may often prove disadvantageous in practice.

OTHER STATE AIDED CREDIT INSTITUTIONS.

In addition to these State mortgage institutions the various provincial governments of the Empire, Prussia in particular, have established what are known as rent-charge banks in order to facilitate the paying off of certain feudal burdens attaching to the holding of land. Their present purpose is somewhat different from that of their original establishment. Their functions are to (1) issue bonds on certain conditions to members desiring to sell their property and converting it into small holdings; (2) to grant loans for land settlement, paying off preliminary charges or erecting buildings; (3) to settle with coheirs to properties coming under the home colonization acts by cash loans granted under certain conditions.

The rates of interest on their loans varied from 3½ to 4½ per cent.

The Prussian rent-charge banks are authorized to grant cash loans to pay off debts upon property which is to be subdivided for settlement and to set up the first necessary dwelling and farm building. Under a special act (1900) granting this authority the loans for this purpose were to be drawn from the accumulated reserve of the banks and not to exceed a total of about $2,500,000. In 1911 the maximum to be applied in this way was increased to $3,750,000, approximately.

These cash loans may be granted not only to prospective purchasers of small holdings but also to individuals or associations undertaking to establish small holdings. No maximum loan is fixed for individuals, its amount being dependent upon the security for its repayment. The rate of interest charged is 3½ per cent.

The total value of the bonds issued by the Prussian rent-charge bank since 1850 amounted to approximately $155,000,000 at the end of 1909. The total issue since 1891 upon the security of small holdings amounted to about $25,000,000. These banks in Prussia have rendered notable service in the eastern Provinces; also, to a large extent in Pomerania, to which Province about one-half of the loans issued since 1891 have fallen. Land settlement in Posen has been carried on by a special commission created in 1886 and amply endowed with State funds, it being reported that these State funds amounted to approximately $150,000,000.

SIGNIFICANCE OF THE RENT-CHARGE BANKS.

The importance of these banks for agricultural policy consists in the fact that they are the agencies by which the State, while leaving the actual settlement of land by small and medium holders to private enterprise and risk, yet gives them the advantage of its credit. By their instrumentality the persons of this class are enabled to enter into possession of land and to obtain loans for establishment expenses at rates which, inclusive of sinking-fund payments, amount to probably quite one-half per cent less than they would pay for credit elsewhere. Landowners desirous themselves of dividing their estates into small holdings or who hand over this task to others may also, under certain conditions, reap advantage from the fact that they receive an immediate and final settlement in State bonds.

INSURANCE INSTITUTIONS AND AGRICULTURAL CREDIT.

The insurance institutions created under the German imperial insurance act are permitted under certain conditions to lend a portion of their funds for agricultural purposes, and these loans are not made directly to individuals, but only to the municipalities or other public corporations. Loans are granted for the improvement of housing or for new buildings for the benefit of both rural and urban workingmen. In some cases there is a limit set to single loans. Thus the Weimar institution does not make a loan to a single borrower in excess of approximately $1,250; likewise Baden, as well as Wurzburg, Bavaria, does not lend over approximately $1,750. Mortgage loans are usually made up from 50 to 75 per cent of the value of the property offered as security by the borrower.

The usual rates of interest range from 3 to 3¾ per cent, with an additional payment of at least 1 per cent per annum to the sinking fund.

At the end of 1908 the total of the mortgage loans of all these insurance institutions—31—amounted to approximately $85,000,000 as compared with $65,000,000 at the end of 1905.

AGRICULTURAL COOPERATION AND STATE AID.

[Report cited, p. 33.]

For nearly a generation the systematic furtherance of rural cooperation has been a matter of settled policy in the various German Federal States, and public aid has been liberally granted for this purpose. Financial assistance has usually taken the form of small grants to cover the expenses of establishing credit societies, contributions to unions toward the cost of auditing, of propaganda, and of courses of instruction for persons holding office in rural societies, advances of capital at low rates to central banks, or endowments of capital or grants toward establishment expenses of such banks, or both. Occasionally it has taken the form of assisting central societies to secure advantageous terms at large banks. Direct financial assistance has also been given to rural productive or trading societies of various kinds. The cooperative movement has been substantially promoted by the district governors, agricultural inspectors, rural teachers, and other public officials, while one of the primary aims of the semiofficial chambers of agriculture in Prussia and of the similar bodies in other States is the spread of cooperation among farmers.

The most signal acts of the Prussian Government in this respect has been: In 1895 the establishment of the State Central Cooperative Bank, which has received up to date a total capital of £3,750,000; in the period 1896–1906 the construction and equipment of granaries, at a total cost of £250,000; and in 1902 a loan of about £80,000 to the Berlin Central Cattle-Selling Society at 3½ per cent interest, subject to an annual sinking-fund payment of 1 per cent. At the present time annual grants are made by nearly all the provincial governments, and the chambers of agriculture established in each Province usually work in close association with the cooperative unions, give to the latter the constant or temporary services of their officials free of charge, or make money grants, or do both.

In Bavaria the State has, among other things, made a loan of £200,000 at 3 per cent to the Central Loan Bank to serve as working capital, and arranged for this bank a credit at the Royal Bank of up to £50,000 at 1 per cent below the official rate of that bank—but not at less than 3 per cent. It has advanced to the Bavarian Agricultural Bank, a cooperative society with limited liability, £50,000 without interest and £200,000 at 3 per cent, besides providing £3,000 toward its establishment expenses; and advances and grants on a considerable scale have been accorded to granary undertakings, breeding societies, and vine-growers' societies. The cooperative granaries obtain support in an especial measure from the State. Since 1904 the Bavarian National Union has received annually £1,700 toward the cost of audit; and other grants are made for general cooperative purposes in Bavaria. It may be added that the insurance societies for live stock also receive considerable State assistance.

In Saxony, Baden, Hesse, Wurttemberg, and Alsace-Lorraine substantial public aid is also accorded. In each of these cases, except in that of Hesse, central credit or central trading organizations, or both, obtain financial support from the State.

HOLLAND.

[Agricultural cooperation and rural credit in Europe. Information secured by the American and United States Commission. Washington, 1913. 63d Cong., 1st sess., S. Doc. No. 214, p. 522.]

The local savings banks are the rural-credit associations in Holland. The State, however, assists agricultural credit by granting loans to the central banks and giving subventions to branch banks.

These sums are used in meeting the expenses of supervision, inspection, and operation, and at the close of the year the excess of such sums over the expenditures have at times been refunded to the banks.

In 1910 the State expended in the interest of rural credit 16,000 florins ($6,432), of which 6,500 florins ($2,613) went to central banks and 9,500 florins ($3,819) to local banks.

The interest charged for loans varies from 3.75 to 4.5 per cent.

HUNGARY.

[Agricultural cooperation and rural credit in Europe. Information secured by the American and United States Commission. Washington, 1913. 63d Cong., 1st sess., S. Doc. No. 214, pp. 129–152 passim.]

INTRODUCTION.

Following the crisis of 1856, owing to the restrictive policy of the Government toward the Hungarian savings banks and the difficulty of securing loans from charity trust funds, which had formerly advanced loans to landholders, a condition approximating a catastrophe threatened the agricultural interests of the country. For several years thereafter farmers were unable to make any considerable improvements tending to a more modern system made necessary by the emancipation of "cheap labor."

The opening of the mortgage-loan department of the national bank did but little to relieve the situation.

The establishment of some form of Hungarian agricultural credit became of vital importance. The organization of institutes, which to some extent satisfied the requirements of large landholders, opened the way for the development of the Hungarian system of agricultural credit.

Beside the State-endowed land-mortgage institute the system includes the National Small Holdings Land-Mortgage Institute (established in accordance with the provisions of the law of 1898, No. 23), the Central Hungarian Credit Cooperative Society, and the National Association of Hungarian Land-Mortgage Institutes.

None of these are State institutions, but the State supports them financially and exercises a supervisory control.

The number of private banks is limited and are found only in the larger towns. They make but few loans to agricultural

interests. Most credits of this class are granted by limited companies or cooperative societies and the mortgage institutes.

HUNGARIAN LAND-MORTGAGE INSTITUTE.

This was established to control the land mortgages of the larger estates and was the first of the altruistic credit institutes in Hungary to receive State favors. In 1863 the State contributed 500,000 florins ($203,000) toward its establishment, and since that time the State has further favored it by granting exemptions from taxes, stamp and other duties. This fund since its organization has granted 27,387 mortgage loans amounting to 876,296,560 crowns ($17,788,800) on real estate.

MORTGAGE INSTITUTE FOR SMALL HOLDINGS.

As the activities of the Land Mortgage Institute were confined to the large estates, and as the chancery trust funds, Catholic chapters, and savings banks were insufficient to meet the demands of the enormously increasing number of small landholders and their modern intensive system of agriculture, a pressing need of a credit fund for the small holders was becoming more and more imperative.

In 1879 the National Small Holdings and Land Mortgage Institute was authorized by the State, which contributed to its funds 500,000 florins ($203,000) and extended the same benefits as regards exemptions, and so forth, as had been granted the older institute. One of its original objects was the granting of small personal credits, but as experience showed this to be impractical and unsafe this feature of its activity has been abandoned.

The results anticipated from its activities have been fully realized. It has advanced 288,000,000 crowns ($58,463,000) on 66,264 loans on mortgage bonds, an average of 4,340 crowns ($881) for each transaction. Its minimum loan is 300 crowns ($60.90), and no loan is granted in excess of 40,000 crowns ($8,120) as long as an application for a smaller amount is on file.

The loans granted by joint-stock banks and savings banks are a very important item in the sum total of farm mortgages. In 1911 the claims of the institutes amounted to 660,000,000 crowns ($133,980,000), while those of the joint-stock and savings banks on mortgage loans for agricultural purposes amounted to 1,679,000,000 crowns ($340,837,000).

The country banks advance money to farmers on mortgage for a period of six months. In general, the period may be extended for a determined or indetermined period. While the rate of interest paid by these banks for savings deposits requires the exaction of a high rate on loans granted to farmers, the rate is still lower than that demanded by private capitalists.

When as the result of a crisis the banks recall their loans there is usually no difficulty in finding some larger bank willing to assist in carrying the loans, or even should such difficulty appear the State lends its aid, thus avoiding the dangers which short-term recall loans engender.

HUNGARIAN CENTRAL COOPERATIVE CREDIT SOCIETY.

After several attempts to form comprehensive cooperative societies under the patronage either of the leading classes in the country, or of that of a central cooperative society established with the purpose of aiding all associated country cooperative societies had failed, the Government in 1898 extended to such societies as conformed to certain requirements not only State favor, but established a central cooperative credit society which should supply, direct, and control such financial aid as was necessary for the local societies to properly perform their functions.

Under this act such societies may be formed by local government administrative authorities, by public corporations, or by the Hungarian Central Cooperative Credit Society, with their sphere of activities limited to certain defined districts. A member's liability is limited to five times the nominal value of his stock. Loans are granted to members only. All members must be shareholders. While not a State institution, the society is under strict supervision by the State, and the president of the central society is appointed by the Crown.

The State contributed to the fund of the central society 1,000,000 crowns ($203,000), and as a guaranty fund for the security of the society's debentures a further sum of 3,000,000 crowns ($609,000).

The societies are exempt from trade taxes and certain stamp and other duties, while the central society is further exempted from payment of postage dues.

The central society supplies the affiliated societies with capital for loans. The funds are derived from its capital, current deposits, and so forth, and by issuing 4 and 4½ per cent debentures based on bonds transferred to it by associated societies.

In the 14 years of operation the number of societies formed has been 2,412, and its activities extend to more than half of the parishes in the country. The central society has extended credit to affiliated local societies exceeding 100,000,000 crowns ($20,300,000).

FEDERATION OF NATIONAL LAND-MORTGAGE INSTITUTES.

Another medium of credit is found in the National Federation of Hungarian Land Mortgage Institutes, an institute founded by the State in conjunction with the two land-mortgage institutes and the Hungarian Central Cooperative Credit Society.

The functions of this federation include the parceling of landed property, settlements, acquirement of common pasturage, measures of land policy, as well as satisfying the need of credit in consummating these transactions and for the building of agricultural workers' dwellings.

The State contributed 8,000,000 crowns ($1,624,000) and the two land-mortgage institutes and the central cooperative society collectively contributed 7,000,000 crowns ($1,421,000) toward its foundation. In addition, they may place at the disposal of the institute securities having a value of 10,000,000 crowns ($2,030,000) as a guaranty of the debentures issued by the federation.

The peculiar workings of this chain of loan institutes are as follows:

The loans required by the purchasers of landed property sold in lots by the National Federation of Hungarian Land Mortgage Institutes are, in the first place, advanced by the local cooperative societies affiliated with the Hungarian Central Cooperative Credit Society. The local cooperative societies, in return for an entry in the land registry with priority of claim, cede the loans to some land-mortgage institute in return for an entry with deferred (second) claim to the national federation, and, finally, in return for a deferred (third) claim to the central cooperative credit society. The manipulation of these collective loans is carried out by the last-named institute.

The institute purchases estates for sale in small lots, leases church land holdings and subleases them to small farmers, assumes control and management of entailed estates, loans money to parishes for acquiring common pasturage, and grants loans for the purpose of building agricultural laborers' dwellings. For the two last-named purposes in 1912 it granted loans amounting to 3,800,000 crowns ($771,400) and 712,000 crowns ($144,536), respectively.

The above account by no means covers all the activities of the State in lending its financial aid to agriculture. Thus mention may be made of its subsidies granted to raise funds for short-term personal credit to farmers, its aid to farm laborers and others to buy their own homes, and many other like activities too numerous to mention.

ITALY.

In Italy (Report of the Agricultural Credit Commission of the Province of Saskatchewan, 1913, Regina, 1913, p. 78) the State has been obliged to make provision for rural credit in Liguria, the Marches, Umbria, Latium, south Italy, and the islands. It has passed a series of agricultural-credit laws, notably that of July 7, 1901, authorizing the savings bank of the Bank of Naples to engage in rural credit business in the southern Provinces of Italy and in Sardinia, and that of March 29, 1906, creating a special rural credit section of the Bank of Sicily. Other laws (Dec. 21, 1902; Mar. 31, 1904; June 25, 1906) dealt with the same problem in other sections.

In Sardinia and the Basilicata the interest payable on long-term mortgages may not exceed 4 per cent, and advances to be used in the erection of cottages and improved farm buildings must be granted at 2½ per cent. The State undertakes to pay the difference between this and the normal rate.

The amounts which special laws place at the disposal of farmers in Italy, either through the State or savings banks and credit institutions, are:

		Lire.
Central Provinces and Sardinia		29,000,000
Sicily		16,000,000
Southern Provinces and Sicily (provincial agricultural credit banks)		14,000,000
Sardinia (Ademprivile banks)		6,350,000
Basilicata		2,600,000
Calabria		2,000,000
Latium		1,700,000
Umbria and the Marches		1,100,000
Liguria		500,000
Total	($14,137,250)	73,250,000

AGRARIAN CREDIT INSTITUTE OF LATIUM.

[Statement by Mr. G. Venti, director.]

[Agricultural cooperation and rural credit in Europe. Information secured by the American and United States Commission, Washington, 1913. (63d Cong., 1st sess., S. Doc. No. 214, p. 28.)]

The Agrarian Credit Institute of Latium was founded under the provisions of a special law 10 years ago, which endowed the institute with a capital of 1,000,000 lire ($193,000). This sum has not been given by the Italian Government, but the Government invited the Bank of Italy and the savings banks of Milan and Rome to provide the capital. The Bank of Italy contributed 500,000 lire ($96,500), the

Savings Bank of Milan 300,000 lire ($57,900), and that of Rome the remaining 200,000 lire ($38,600).

Under its charter the Bank of Italy can not donate money, so the Agrarian Credit Institute of Latium must pay the bank on its annual profits a percentage proportionate to the capital provided. The rest of the profits belong to the agrarian institute for the formation of a reserve fund, which, in about 10 years, has reached the amount of 109,000 lire ($21,037).

The Agrarian Credit Institute of Latium may only transact business in the Province of Rome, and it supplies credit to agriculturists through the agency of various cooperative organizations and associations. Much of its activity has been devoted to promoting the organization of such bodies, through which it carries on its work. Still another main branch of its work has been that of educating the rural population to an understanding of the use of credit, as when you get out to these small townships and villages of one, two, and three thousand inhabitants you find very little understanding of financial or business methods.

The small rural banks and cooperative associations send their bills to the Agrarian Credit Institute of Latium, and the institute discounts them by charging 1 per cent more on the rate of discount. The intermediate association may also charge an additional 1 per cent, so that the total charge for the loan may not exceed 2 per cent over the rate of the Bank of Italy.

The Agrarian Credit Institute of Latium has been of great service to the Province of Rome, as it supplies a large proportion of the money required for agriculture. The loans made have to be repaid within one year, but three years are allowed if the money is required for machinery or live stock. The agrarian institute can also lend money directly to the farmers, especially when the latter reside in a district where there is no cooperative association.

Various precautions may be taken to insure the safety of loans. For instance, a farmer comes to the office and states that he has prepared his land for sowing and requires money in proportion to the produce the cultivated land will yield. The office sends an expert to investigate and find out whether the investment is likely to prove safe for the farmer, and in the event of a favorable report the loan is made. When harvest time comes a representative of the institute inspects the crop, and when the produce is sold the farmer pays the bill to the institute. Sometimes the farmers ask for loans after harvesting, and in such cases the loans are secured by the produce of the land.

RUSSIA.

[Agricultural cooperation and rural credit in Europe. Information secured by the American and United States Commission, Washington, 1913. (63d Cong., 1st sess., S. Doc. No. 214, pp. 237–259, passim.)]

State aid to rural credit in Russia takes on three different forms: First, aid and subsidy to agricultural cooperative associations; second, capitalizing of land-mortgage banks, one for the peasantry, another for the nobility; and, third, loans to those agricultural associations offering grain as security.

Loans and subsidies to cooperative agricultural societies were definitely organized by the act of 1904, whereby there was established in the State bank a general administration of small credits. On January 1, 1907, the total amount of capital borrowed from the State by these credit associations was 4,729,480 francs ($912,789.64).

In addition to advancing foundation capital and granting subsidies from time to time to associations already organized, the State also makes loans to them for definite periods to facilitate their current transactions. According to the report of January 1, 1907, 990 credit associations had borrowed under this head 7,591,640 francs ($1,465,186.52), and 841 loan and savings banks had borrowed under the same head 1,095,220 francs ($200,425.26). All of these loans are personal or short-term loans as distinguished from land-mortgage loans.

The Peasants' Land Mortgage Bank is a Government institution authorized to purchase land, divide and sell it directly to peasants, and to loan them money, holding the borrower, under its new policy, individually liable. During its existence it has purchased and resold approximately 53,000,000 acres of land. Its credit system is most liberal.

The period of payment generally extends over a period of 55½ years. The rate of interest charged, including amortization, cost of administration, and repayment of loan, amounts to only 4½ per cent. The State bears any amount over this rate. The Government loans money to the peasant, the funds for this purpose being secured by the issue of 5 or 6 per cent bonds. This bank had outstanding in January, 1912, bonds to the amount of 1,223,588,015 rubles ($530,044,827.73). (The Russian Yearbook for 1913. London (n. d.), p. 550.)

The Nobility Land Mortgage Bank performs the same functions for the nobility as the Peasants' Bank performs for its clients. Both banks received the same foundation capital from the Crown. In January, 1912, there was outstanding on its various issues of mortgage bonds 774,540,100 rubles ($398,888,151.50).

In addition to these governmental activities the Government, through the Imperial Bank, grants loans through the associations, taking grain as security, thus preventing speculation in grain at the season when the producer is in urgent need of funds and is willing to sell his holding at almost any price.

FINLAND.

[Source: Int. Inst. of Agr. Bull. of the Bureau of Economic and Social Intelligence, 3d year, No. 10, October, 1912, p. 176, 177.]

Two funds administered by the State treasury, "The Charity Asylum fund" (Fattig og arbetshusfonden) and "The Military Hospital fund" (Krigmanshusfonden), provide the amounts for the long-term loans on mortgage of rural real estate. The conditions on which loans are granted out of these funds are determined by the decrees of the Imperial Senate of Finland of May 24, 1884, and November 19, 1889. Out of the "Charity Asylum fund" loans are granted of a minimum of 1,500 marks ($289.50) and a maximum of 10,000 marks ($1,930) at 4 per cent interest. Besides interest the borrower must pay large installments of the principal beginning with the sixth year, so that the debt may be completely extinguished in 15 years. According to data supplied by the treasury only 400,000 marks ($77,200) have been invested in such loans. Out of the "Military Hospital fund" loans of from 2,000 marks ($386) to 40,000 marks ($7,720) are granted. The rate of interest is fixed at 4½ per cent and sinking fund at 1½ per cent. In this way the loans are repaid in 32 years. The loans out of this fund amount to 8,300,000 marks ($1,601,900) (January 1, 1912).

Scandinavian countries.

The intervention of the State and the agriculture of the Scandinavian countries has been well recognized since as early as the seventeenth century. The State has assisted agriculture in these countries by means of loans and direct subsidies.

DENMARK.

Denmark has perhaps the largest proportion of owners to tenants in agriculture of any country, approximately 80 per cent of its farmers owning their own properties.

STATE MORTGAGE BANK.

[International Institute of Agriculture Bulletin of the Bureau of Economic and Social Intelligence. Rome, 1911, 2d year, No. 4, April 30, 1911.]

There is in existence a loan-credit branch to the State bank of Denmark which loans money to owners of real estate and large occupiers. Cooperative land-credit associations of borrowers of the German Landschaften type have been in existence in Denmark since 1850, although they were proposed and discussed as early as 1839. They went through a more or less haphazard development until it was declared that they should be created only by special laws, the first of which was the act of May 28, 1880, at which time two credit associations were created for peasant proprietors. During the subsequent period of their history down to 1906 their chief difficulty seems to have been in marketing their bonds, on the basis of which the members made their loans to each other. To give their bonds stability the State determined to guarantee and supervise their issue, and for carrying out that purpose created a mortgage division in the State bank by the act of April 6, 1906. The State granted the mortgage bank a foundation capital of 20,000,000 crowns ($5,360,000) in State bonds at 3½ per cent. The bank may issue its bonds to an amount equal to eight times this initial capital. With the loans it thus raises the bank buys bonds of three types of land-credit institutions—first, the mutual cooperative credit association; second, the bonds of the title bank, a special institution created for the conversions of the titles; and, third, obligations guaranteed by the State, authorized by the law, granting State loans to peasant proprietors discussed below.

In 1906 the bank borrowed 20,000,000 crowns ($5,360,000) additional to its capital supplied by the State to the same amount. This loan was negotiated in 3½ per cent bonds, while a later loan of the same amount in 1908 called for 4 per cent interest. (Int. Inst. of Agriculture. Bulletin of economic and social intelligence. Rome, 1913, 4th year, No. 1, January, 1913, p. 100.)

With this capital it bought land-credit association bonds to an amount of 33,840,200 crowns ($9,678,297.20). In August, 1912, the bank negotiated a further loan of 15,000,000 crowns ($2,895,000), which will enable it to keep up the price of Danish farmland bonds.

STATE AID TO SMALL HOLDERS.

The special facilities which have existed in Denmark for the peasant proprietors since March 24, 1899, are of much greater interest and of greater importance for the agricultural development of Denmark. By this act of March 24, 1899, there is furnished to rural laborers of small means funds with which to purchase their few acres. Certain conditions necessary for the safe loaning of the funds are laid down by the State. An applicant must be between 25 and 50 years of age and show himself to be a responsible individual. The amount of ground he is permitted to purchase with the State money ranges from 1.1 hectares (2.72 acres) to 4.41 hectares (10.89 acres), and the purchase price of his holding may not exceed 4,000 crowns ($1,072), upon which value the State grants him a loan of nine-tenths thereof.

Under this act 2,000,000 crowns ($736,000) were appropriated each year for five consecutive years. This act was revised April 22, 1904, and the value of the purchasable property under it was raised to 5,000 crowns ($1,340), and the annual amount

appropriated by the treasury was increased to 3,000,000 crowns ($804,000). This law likewise was to continue in force for five years. When the law came up for revision again in 1909 the value of the property purchasable was again increased, this time to 8,000 crowns ($1,624), while the treasury made available annually 4,000,000 crowns ($1,072,000). In other respects the law has remained unchanged. The latest revision took place June, 1914, at which time the law was reenacted for only three years instead of five, and the total available was 5,000,000 crowns ($1,340,000). The borrower is required to pay interest at the rate of 3 per cent per annum, and payments of principal and interest may be made by a system of equal annual installments.

The law has been remarkably successful. The total number of peasant proprietors who, by the assistance of the State fund, became owners of their properties from 1900 to 1911, the latest report available, was 5,777. The State had loaned in all approximately 35,400,000 crowns ($6,907,200). That the State has been successful in permitting the younger farmers to establish themselves as owners is shown by the fact that 3,895 (71.6 per cent) of the 5,441 borrowers, concerning whom information is available, were between the ages of 25 and 40, and 1,274 (or 23.4 per cent) were from 40 to 50 years of age. Over four-fifths (82.2 per cent) of the purchasers of peasant properties were married.

The average size of holding purchase was 3.16 hectares (7.81 acres), under the law of 1899, but since 1904 there has been a gradual increase in the size of the farm purchased. Thus under the act of 1909 the purchase size was 4.22 hectares (10.42 acres). An inquiry made by the board administering the State fund shows that the quality of the soil of the farm purchased has greatly increased from year to year.

An inquiry by the administering officer also shows that the farmers on these estates have been successful and compare favorably with those occupying other farms.

The State feels that it has been well compensated for any loss which it may have suffered, and very few farms have been taken over by foreclosure proceedings, although the total losses amount to 10,000 crowns ($2,680), which is, of course, a mere bagatelle.

NORWAY.

STATE MORTGAGE BANK.

A mortgage bank with a capital endowment from the State was established in Norway under the law of June 28, 1887, with later amendments (1892), and a somewhat extended revision in 1907. There had been one in existence, however, since 1851. The headquarters of the bank are at Christiania, with branches at various places, as designated by the Crown. The capital endowment of the State is unrecallable until the dissolution of the bank. This capital amounted to 27,000,000 crowns ($7,236,000) in 1912. One-fourth of the capital may be in Norwegian Government bonds payable in 30 to 80 years. The bank pays interest of 4 per cent upon this capital from the State after paying interest on its own money and its administration expenses. All net profits go to a reserve fund.

The amount of the loan on any piece of property is limited to three-fifths of its value. The security in every case shall be a first mortgage up to 60 per cent of the value of the property mortgaged, the only claims taking precedence being State treasury dues, claims of the Bank of Norway, and public endowed funds. The term for any loan shall not exceed 40 years. Loans are repaid semiannually by a system of amortization. They may be recalled in case the security is diminished or because of default in payment of interest upon six weeks' notice. A borrower may increase his installment payments by giving three months' notice.

The administration of the bank is in the hands of three directors, two selected by Parliament and one by the Crown.

A report on the operations of the bank covering the period 1910–1912 (Statistisk Aarbok for Kongeriket Norge, 1913, p. 124) shows that it was in possession of assets amounting to 212,739,275.98 crowns ($56,914,095.26), of which 191,986,143.03 crowns ($51,450,486.33) was the balance of loans outstanding on December 31, 1912.

On its capital the administration expenses for the years 1910, 1911, and 1912 were, respectively, 184,445 crowns ($49,432.26), 185,207 crowns ($49,635.48), and 192,890 crowns ($51,694.52), or 0.785 per cent, 0.699 per cent, and 0.714 per cent, for each of the years mentioned.

SMALL HOLDINGS BANK.

In addition to the mortgage banks in Norway there was created by act of June 9, 1903, a bank making a specialty of loaning money on small holdings and for building purposes. The duty of the bank is to make loans to those of moderate means on the guaranty of a town or commune. The purpose of such loans is to be for the improvement of certain small holdings and for the purchase of large estates to be cut up into small holdings. The interest on such loans is not to exceed 3½ per cent—the law also loans at 4 per cent money for building purposes. The State guarantees any loan and furnishes the capital in amount determined by Parliament. The total amount of the bank's outstanding loans may not exceed six times the amount of its capital. The outstanding securities or bonds of the bank shall run for a term of not less than 30 years nor over 80. They are to be withdrawn gradually by a system of public lots.

Loans to borrowers are made to individuals in cash, repayable in semiannual installments, with no payments for the first five years; but payments must be completed in 42 years thereafter. The bank is given summary powers to proceed in case of default of payment on six weeks' notice. All interest on installments not met at date due is collectible at 5 per cent interest. Following are the principal conditions for a loan: First, citizenship; second, moderate means—that is, being in possession of property of 1,500 crowns ($402) or less; third, taxable property of at least 50 are (1.24 acres), improved or arable and not over 200 are (4.94 acres); fourth, loan not in excess of 3,000 crowns ($804), of which not over 2,000 crowns may be on the ground value.

The security for each loan is twofold: First, as indicated above, the guaranty of the commune wherein the land is situated; and, second, the requirement of a first mortgage on the property on which the loan is made. The amount of the loan is up to nine-tenths of the value of the land and improvements or nine-tenths of the purchase value of any property purchased by the borrower.

The supervision of the loan is in the hands of the local committee of inspection and is guaranteed by the commune. After being passed upon by the commune the loan is paid by the bank to the local communal treasury, which in turn passes it over to the borrower.

The actual management of the bank is in the hands of the directors of the Norwegian mortgage bank described above. In each locality there is sent a supervising committee of three to seven members to inform the directors of the bank as to the value of all property offered as security.

The bank has been very successful in its operation. (Sociale Meddelelser, Christiania, 1914, No. 1, p. 8.) Since the time it was established—October 1, 1903—up to June 30, 1913, it has advanced in all approximately 32,000,000 crowns ($8,576,000), of which approximately 2,000,000 crowns ($536,000) have been repaid. At the above date there was outstanding 29,954,983 crowns ($8,027,935.44); by means of this fund 22,600 loans have been placed, making possible the purchase of 13,140 small holdings and 9,460 homes by their owners. The fund has, in fact, not been sufficient to meet the applications for loans.

The bank has been very successful in reaching the small native farmer, one-third of its loans having been made in amounts of 1,000 crowns ($268) or less, while a trifle over one-half have been above that amount, but not over 2,000 crowns ($536).

SWEDEN.

[Sweden; its people and its industry. Historical and statistical handbook, published by order of the Government. Edited by Gustav Lundbarg, first actuary at the Royal Swedish Central Bureau of Statistics. Stockholm, 1904, pp. 598–603 et passim.]

Mortgage credit for farmers and landowners in Sweden is in the control of the State and rests upon State subvention, granted in bonds whose value is so stable as to put them on the par with Swedish State bonds. The mortgage-loan business as early as 1668 was put into the hands of the Bank of Sweden, but, owing to the fact that this line of business was entirely incompatible with an ordinary banking business, tying resources up for too long a time, it was deemed advisable to establish special mortgage-credit associations, the first of which was established in 1836. These were at first independent, private associations organized to secure loans on the amortization system of repayment for their members on the security of a first mortgage of the landed property of their members.

And here a very natural consequence of competition in the mortgage-loan business arose, namely, rivalry in the share market, with its mischievous consequences. This led to the establishment of the General Mortgage Bank of Sweden in 1861. The purpose of its organization was to create a central institution to negotiate all loans to secure funds for the mortgage societies. For this purpose a loan of 6,000,000 crowns ($1,608,000) was made over by the Bank of Sweden on the security of mortgage in landed property. The bank was also given a monopoly of issuing bonds on the basis of the mortgage securities held by it from the local societies, while the State further handed over to it 8,000,000 crowns ($2,144,000) in Government bonds. In 1890, or about 31 years later, this amount was increased to 30,000,000 crowns ($8,040,000).

The bank administration is distinctly in the hands of the Government, being administered by a board of five members, whose president is chosen by the Government and the vice president by the public-debt commission, while the other three members are chosen by the interested local mortgage societies. All the regulations of the bank must receive Government approval, and no changes can be made without the consent of Parliament. Even the local mortgage societies are controlled by the Government through a system of State sanctioned by-laws. The rules regarding proportion of loan to security—one-half—are strictly maintained and appraisements are most carefully conducted.

Thus it is to be noted that the bank does not deal directly with the individual borrower, quite contrary to the system in Australia, New Zealand, and South Africa, and in a few of the States of the United States. All the bank's business is conducted through the medium of the local associations, which in turn treat with the farmer. In fact, the members of the local associations are the borrowers themselves.

Loans of three types are made, depending on the conditions on which they are granted. First, there is the 4 per cent loan, with one-half of 1 per cent additional as repayment on principal by a system of equal annual installments. Second, there is the 4 per cent additional for amortization. For these two classes of loans the security must be twice the value of the loan, and borrowers may give notice to repay loan after 10 years. Third, there is the 4 per cent loan not paid by a system of equal annual installments, in which case it may amount to only one-third the value of the land offered in security.

The members of the mortgage society are jointly responsible for the bonds of the society in proportion to the amount of their unpaid debt to the society. In the same way the societies are responsible to the General Mortgage Bank.

The use of credit for his capital requirements is a familiar practice to the Swedish farmer. For the country as a whole mortgage indebtedness amounted to 37.1 per cent of the assessed value of all real estate; in 1890 it was 44.8 per cent; in 1900 it was 47.8 per cent, while in 1910 it was 55 per cent, and in 1912 57.7 per cent. These figures, of course, include both urban and rural parts of the country, and in the term "real property" are included buildings as well as land merely.

There has been a large increase in the number of members of the mortgage societies. Thus in 1870 there were 38,316 members, while in 1910 there were 72,300 (Statistisk Arsbok for Sverige, forsta argangen, 1914, Stockholm, 1914, p. 122), an increase of 88.7 per cent. This is a more rapid increase than population, which only increased 32.5 per cent during the same period (1870–1910).

From 1870 to 1910 the amount loaned by the General Mortgage Bank for farm loans increased from 181,885,810 crowns ($48,745,397) to 364,007,800 crowns ($97,554,090), or 101 per cent, while taking up to the year 1912 this increase was 102.2 per cent, 367,736,650 crowns ($98,553,422) having been loaned that year.

No data are given as to the average amount of each loan, but it may be inferred that this has increased somewhat, as the relative increase in the number of members (borrowers) in the local societies increased from 1870 to 1910 only 88.7 per cent, while the amount loaned in 1910 as compared with 1870 increased 101 per cent.

In addition to thus taking over into its own hands the monopoly control of the mortgage business and supplying its capital, the State in Sweden has gone further and made loans and subventions to aid strictly agricultural improvements, drainage of lakes and low ground, cultivation of drained land. For this purpose there have been established two agricultural improvement funds administered by the treasury department. One fund is limited to loaning a million crowns ($268,000) a year. The other fund depends on an annual appropriation by Parliament. State grants are also made to agricultural societies on prescribed terms. Thus in 1900 the State aided such societies to an amount of 340,116 crowns ($91,151.09), while in the same year certain counties granted 182,935 crowns ($52,319.42).

Mention should also be made of the fact that beginning in 1904 the State created a fund for persons of small means who wished to borrow money to buy their own small holdings in country districts. This was a laudable attempt to colonize in the country the surplus labor in the cities and to make possible an extension of the agricultural resources of the country. For the purpose 10,000,000 crowns ($2,680,000) was made available for five years, to 1909. During 1909 to 1912, 5,000,000 crowns ($1,340,000) was appropriated annually for this same purpose, and in 1913 this was increased to 7,500,000 crowns ($2,010,000). These funds are placed out through intermediary companies. The interest charged may not exceed 3.6 per cent, and the maximum value of the property purchased may vary from 7,000 crowns ($1,876) up to 8,000 crowns ($2,144). Interest and principal are payable in equal annual installments.

Considerable beneficial work has been accomplished by this fund. From 1905 to 1911 there were disbursed nearly $5,000,000, making possible the purchase of holdings by 6,220 borrowers. (Great Britain report of the departmental committee on the equipment of small holdings, London, 1913 (Cd. 6708), p. 44.) This is considerable, inasmuch as the number engaged in agriculture in Sweden is about 2,500,000.

The State has still another fund of 2,000,000 crowns ($536,000) set aside to make loans to associations to purchase and subdivide land for small holdings.

The Shafroth-Palmer Woman Suffrage Resolution.

EXTENSION OF REMARKS
OF
HON. CARL HAYDEN,
OF ARIZONA,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 12, 1915,

On joint resolution (H. J. Res. 1) proposing an amendment to the Constitution of the United States extending the right of suffrage to women.

Mr. HAYDEN. Mr. Speaker, almost every gentleman who has spoken in opposition to this resolution has, first or last, announced himself as a stanch advocate of State rights. This defense of the rights of the States has not been confined to the Democratic side of the House, but many able speeches have been made by Republican Members, who insist that we should not take away the right possessed by each State from the foundation of the Government to determine, each for itself, the qualifications of the electorate. The words of the fathers have been quoted at length to show that it was the intention of those who founded this Government that the question of suffrage was to be left for settlement to the States and to the States alone.

In view of the vigor and earnestness with which gentlemen have announced their adherence to the doctrine of State rights, I have wondered if the cause of woman suffrage might not be materially advanced by the acceptance of House joint resolution No. 245, by Mr. PALMER, of Pennsylvania, as a compromise. I sincerely regret that the parliamentary situation prevents a test of the opinion of the House by a vote on this resolution as a substitute for the pending Mondell resolution. The Palmer resolution was introduced on April 6, 1914, and is identical with Senate joint resolution 128, introduced by Senator SHAFROTH, of Colorado, on March 20, 1914. The text of the Shafroth-Palmer resolution is as follows:

Joint resolution proposing an amendment to the Constitution of the United States.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution of the United States, which, when ratified by the legislatures of three-fourths of the several States, shall be valid to all intents and purposes as a part of the Constitution, namely:

"ARTICLE —.

"SECTION 1. Whenever any number of legal voters of any State, to a number exceeding 8 per cent of the number of legal voters voting at the last preceding general election held in such State, shall petition for the submission to the legal voters of said State of the question whether women shall have equal rights with men in respect to voting at all elections to be held in such State, such question shall be so submitted; and if, upon such submission, a majority of the legal voters of the State voting on the question shall vote in favor of granting to women such equal rights, the same shall thereupon be deemed established, anything in the constitution or laws of such State to the contrary notwithstanding."

The Shafroth resolution was favorably reported to the Senate by Senator OWEN, of Oklahoma, on April 30, 1914, and is now on the calendar of that body. The Senate report is as follows:

"Mr. OWEN, from the Committee on Woman Suffrage, submitted the following report:

"The Committee on Woman Suffrage, to whom was referred the joint resolution 128, for an amendment to the Federal Constitution providing that 'whenever any number of legal voters of any State, to a number exceeding 8 per cent of the number of legal voters at the last preceding general election held in such State, shall petition for the submission to the legal voters of said State of the question whether women shall have equal rights with men in respect to voting at all elections to be held in such State, such question shall be so submitted; and if, upon such submission, a majority of the legal voters of the State

voting on the question shall vote in favor of granting to women such equal rights, the same shall thereupon be deemed established, anything in the constitution or laws of such State to the contrary notwithstanding,' report the resolution and recommend that it be adopted.

"The spirit of the constitutions of the several States is that the question of woman suffrage shall be decided by the voters in such States; but in a very large majority of the States this spirit is made inoperative because of the restricted machinery provided for giving it expression, and the voters of the State are prevented from exercising this their constitutional right by cumbersome and ineffectual legislative machinery. The barriers which must be overcome before the people may express their will amount in many instances to a prohibition against them of such expression. In many States two successive legislatures must be passed, in some instances by a majority vote, in some by two-thirds, and in others by three-fourths, before the voters may express themselves upon the proposition. In some instances after the legislative barrier has been passed, a majority of all the people voting at an election must vote upon the proposition. In some instances two-thirds of all the votes cast are necessary to its adoption; in others, three-fifths of all voting. And in one State after passage through the legislature by a three-fourths vote in each house such an amendment must be accepted by three-fourths of all the people voting in the whole State and two-thirds of all voting in each and every individual county. Indeed, if nine-tenths of all the people in all the counties except one voted for such an amendment and in one county one-half of 1 per cent less than two-thirds of the voters in such county voted for such an amendment, then it would fail to become law.

"Such a provision is repugnant not perhaps to the spirit of this State constitution, but to the spirit of the Federal Constitution itself.

"This amendment would insure uniformity of law. It is in no way restrictive of the rights of the people in the various States; it is not adverse to the doctrine of State rights. There is no right inherent in a legislature. The members of the legislatures are the representatives of the people themselves, and by no stretch of the imagination could an added privilege to the people of the States be regarded as an invasion of the rights of the legislatures. This amendment does not direct the only way the people shall decide this question, it simply provides an additional means.

"In one State of the Union, and only one, the legislature may decide the question of suffrage without submission to the voters of the State. There the right would not be taken from the legislature; it might decide, but in addition to that, if the legislature fails or refuses so to do, the people may, at their pleasure, decide it for themselves. This amendment is in accordance with the broadest ideals of democracy.

"In effect the passage of the suffrage amendment by the Nation's Congress would give the cause a tremendous advance from coast to coast. Without further delay the legislatures in every State in the Union would give dignified and simultaneous consideration to suffrage, and at the same time create an overwhelming cumulative impetus to the movement, increasing suffrage activity inestimably. Federal sanction would dignify this great movement so vital to one-half of the entire citizenship of the United States.

"The ratification of this amendment would mean that at least 36 States would have already experienced effective suffrage activity, and the effect would be the same as if the legislature of every State in the Union had already passed a State suffrage amendment. The hard, laborious, and ofttimes impossible task of getting by the State legislatures would be accomplished and the battle two-thirds won.

"The State-rights doctrine is the great objection that is raised to Federal issues that come before Congress. It is recognized as a valid objection by Members of Congress, and many Members from the North feel that they owe to Members from the South the courtesy of refraining from interference in matters vital to the South. Moreover, the question of State rights, when carefully analyzed with relation to the suffrage question, is really the great race problem, and this problem is no longer confined to the South, but is one seriously in the minds of Senators and Representatives from Western States, having to deal intimately and immediately with the race question growing out of immigration or attempted immigration to our shores by the Asiatic. This resolution is in no way embarrassing to those statesmen and citizens who have to face this problem, but it leaves the State free to act as a State upon this question at such time as the people themselves decide they are ready. Under this resolution the voters of the States will be able to decide this question when and how they want to without asking their Representatives for permission.

"This amendment will either directly or indirectly be the means of bringing a great number of new States into the suffrage ranks and will so increase suffrage activity that its effect can not be overestimated.

"For these reasons we recommend that the Senate joint resolution be adopted."

In order to ascertain the methods of amending the various State constitutions, I have requested the Legislative Reference Division of the Library of Congress to prepare the following table, which I shall print as a part of my remarks:

Amendment of State constitutions.

States.	Legislature.	Legislative vote.	Restrictions.	Election.	Popular vote.	Initiative.
Alabama	1	Three-fifths		G. S.	E.	
Arizona	1	Majority		G. S.	A.	[1]
Arkansas	1	....do	[2]	S. R.	E.	[3]
California	1	Two-thirds		L.	A.	[3]
Colorado	1	....do	[4]	S. R.	A.	[3]
Connecticut	2	First proposal, majority of lower house alone; second proposal, two-thirds of each house.		S.	A.	
Delaware	2	Two-thirds		G.	[5]	
Florida	1	Three-fifths	[6]	G.	A.	
Georgia	1	Two-thirds		G.	A.	
Idaho	1	....do		G.	A.	
Illinois	1	....do	[7]	S. R.	E.	
Indiana	2	Majority	[8]	L.	E.	
Iowa	2	....do		L.	A.	
Kansas	1	Two-thirds	[9]	S. R.	A.	
Kentucky	1	Three-fifths	[9]	G.	A.	
Louisiana	1	Two-thirds		S. R.	A.	
Maine	1	....do		T. M.	A.	
Maryland	1	Three-fifths		G.	A.	
Massachusetts	2	Majority of upper house, two-thirds of lower.		L.	A.	
Michigan	1	Two-thirds		G.	A.	[10]
Minnesota	1	Majority		G.	E.	
Mississippi	1	Two-thirds		G.	[11] E.	
Missouri	1	Majority		G.	A.	[12]
Montana	1	Two-thirds	[2]	G.	A.	
Nebraska	1	Three-fifths		G.	E.	[13]
Nevada	2	Majority		L.	A.	
New Hampshire	[14]				[15]	
New Jersey	2	Majority	[16]	S.	A.	
New Mexico	1	Majority. For certain amendments, including elective franchise, three-fourths.		Z.	[17] A.	
New York	2	Majority		L.	A.	
North Carolina	1	Three-fifths		G.	A.	
North Dakota	2	Majority		L.	A.	[18]
Ohio	1	Three-fifths		L.	A.	[19]
Oklahoma	1	Majority		G.	E.	[1]
Oregon	1	....do		G.	A.	[3]
Pennsylvania	2	....do	[16]	L.	A.	
Rhode Island	2	....do		T. M.	[20]	
South Carolina	1	Two-thirds		S. R.	[11]	
South Dakota	1	Majority		G.	A.	
Tennessee	2	First proposal, majority; second, two-thirds.	[21]	L.	R.	
Texas	1	Two-thirds	[22]	L.	A.	
Utah	1	....do		G.	A.	
Vermont	2	Senate: First proposal, two-thirds; second, majority. House: Majority.	[23]	S. R.	A.	
Virginia	2	Majority		L.	A.	
Washington	1	Two-thirds		G.	A.	
West Virginia	1	....do		G.	A.	
Wisconsin	2	Majority		L.	A.	
Wyoming	1	Two-thirds		G.	E.	

[1] 15 per cent.
[2] Only 3 amendments at 1 election.
[3] 8 per cent.
[4] Not more than 6 articles amended at a time.
[5] None; action of legislature is final.
[6] At regular sessions only.
[7] Only 1 article amended at a session. Same article not oftener than once in 4 years.
[8] No amendment may be proposed while another is pending.
[9] Only at regular sessions. Only 2 amendments at 1 election. Same amendment not oftener than once in 5 years.
[10] 10 per cent.
[11] Legislature can afterwards reject.
[12] 8 per cent in two-thirds of congressional districts.
[13] 15 per cent in State and 5 per cent in two-fifths of counties.
[14] Constitutional convention only can propose amendments.
[15] Two-thirds of vote on measure.
[16] No amendments oftener than once in 5 years.
[17] For certain amendments, including elective franchise, three-fourths of electors voting in State, two-thirds of those voting in each county.
[18] 25 per cent in one-half counties.
[19] 10 per cent in State and 5 per cent in one-half counties.
[20] Three-fifths of vote on measure.
[21] No amendments oftener than once in 6 years.
[22] Only at regular sessions.
[23] No amendments oftener than once in 10 years.

EXPLANATION OF THE TABLE.

Column 1. Legislature: Shows whether the vote of one legislature or of two successive legislatures is necessary to the proposal of an amendment.

Column 2. Legislative vote: Shows the vote in the legislature necessary to the proposal of an amendment. The indicated proportion is a proportion of the "members elected" to each house, except in the following States: Connecticut—First proposal, "Majority of the house of representatives"; second proposal, "Two-thirds of each house." Idaho—"Two-thirds of all the members of each of the two houses." Maine—"Two-thirds of both houses." Massachusetts—"Majority of the senators and two-thirds of the members of the house of representatives present and voting" on the amendment. Minnesota—"Majority of both houses of the legislature." Mississippi—"Two-thirds of each house"; "a two-thirds vote of each house, respectively." North Carolina—"Three-fourths of each house." Vermont—First proposal, senate, "A vote of two-thirds of its members." Wyoming—"Two-thirds of all the members of each of the two houses."

Column 3. Restrictions: Shows the restrictions imposed in certain States upon the proposal of amendments.

Column 4. Election: Shows the election at which the voters act upon an amendment which has been proposed.

Column 5. Popular vote: Shows the popular vote required to adopt an amendment.

Column 6. Initiative: Shows the percentage of the voters of the State which must act in order to propose an amendment by initiative.

EXPLANATION OF SIGNS.

A. Majority of the persons voting on the amendment.
E. Majority of the persons voting at the election.
G. Next general election.
G. S. Next general election unless legislature orders a special election.
L. Time to be fixed by the legislature.
R. Majority of the persons voting for representatives.
S. Special election.
S. R. Next election for senators and representatives.
T. M. Next annual town meeting.
Z. Next regular election after adjournment of legislature, or a special election not less than six months after adjournment.

To illustrate the difficulty of amending State constitutions in order to obtain woman suffrage, this table shows—

First. That in 15 States affirmative action at two successive sessions of the legislature is necessary in order that a proposed amendment may be submitted to a vote of the qualified electors. In New Hampshire amendments may be submitted only by a constitutional convention.

Second. That in 20 States a two-thirds vote of each house of the legislature is required in order to submit amendments. A three-fifths vote is necessary in 6 States. The constitution of Massachusetts provides that a majority of the upper house and two-thirds of the lower house may submit amendments. Vermont requires a two-thirds vote of the State senate on the first proposal. New Mexico makes it practically impossible to submit an equal-suffrage amendment by requiring a three-fourths vote of each house.

Third. That 11 States have restrictions either as to the number of amendments that may be submitted at an election or the frequency with which the people may vote to change the State constitution. In Illinois and Indiana proposed changes must be considered one at a time. The people of Kentucky may vote on two amendments at the same election, but not oftener than once in five years. The constitutions of New Jersey and Pennsylvania may be altered only once in 5 years, Tennessee once in 6 years, and Vermont once in 10 years.

Fourth. That in nine States a majority of the votes cast at the election are required in order to amend the constitution. This means that the ballots of all those who fail to vote are counted against the proposed change. The vote on amendments is usually small, so that this condition is practically equivalent to the two-thirds vote which is required in New Hampshire. The constitution of New Mexico approaches the limit of conservatism. In that State an amendment affecting the elective franchise must receive a three-fourths vote in the State and a majority of two-thirds in each county.

Constitutional amendments may be proposed by initiative petitions in 11 States, the required percentages being 8 per cent in five States, 10 per cent in two States, and 15 per cent in three States. I understand that the 25 per cent requirement in North Dakota makes the initiative method of amending the constitution of that State practically inoperative.

The merits of the plan proposed in the Shafroth-Palmer resolution deserve careful consideration by Congress. The Senate has already voted on a resolution identical in language with the Mondell resolution which we are now considering. In that body the proposed amendment failed, as it will in this House, for lack of a two-thirds majority. While I sincerely hope that the day is not far distant when this particular amendment may be submitted to the States, yet I must in all frankness say that the prospects for early action are not encouraging. Under the circumstances, therefore, I feel justified in bringing to the attention of the House this well-conceived compromise, which ought to quiet the fears of the advocates of State rights, while at the same time it makes easy the way for an extension of woman suffrage by the will of the majority in a larger part of the United States.

I realize that it has been found to be a difficult task to make an appeal to the entire body of qualified electors in a State in order to receive their approval of votes for women. It is much easier to discuss the question of suffrage with the representatives of the people who have been elected as members of the State legislature. But those of us who believe in the rule of the people do not seek to avoid the effort necessary to consult the great body of voters who are, and of a right ought to be, the final arbiters of a question of this kind.

Civil Service Applied to Fourth-Class Post Offices.

EXTENSION OF REMARKS

OF

HON. SAMUEL J. TRIBBLE,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 19, 1915.

Mr. TRIBBLE. Mr. Speaker, owing to numerous contests over fourth-class post offices in my district and considerable misunderstanding of the civil-service rules applied to this class of post offices I am extending my remarks in the RECORD, that I may publish a letter of the Second Assistant Postmaster General construing the civil-service regulations applied to fourth-class post offices. Many of my friends seeking these post offices do not understand why the Member of Congress does not have them appointed without regard to rules governing the selection by examination.

Mr. White, of Canon, sent me a petition of patrons, and the petition recited, in part, that these petitioners were proud of the fact that they were represented in Congress by a man they could petition, and one who would have regard for their wishes. The office at Canon being a fourth-class office, and knowing that these good citizens petitioning me believed I could name their postmaster, I wrote the Postmaster General. My letter and his reply I now insert in the RECORD.

JUNE 22, 1914.

Hon. A. S. BURLESON,
Postmaster General, Washington, D. C.

DEAR MR. BURLESON: Two of my correspondents sent me circular letters, which they informed me were sent out by the Civil Service Commission.

One of these constituents sent me a petition signed by numerous patrons of the office. He makes the following statement accompanying same:

"These petitioners are my friends and your supporters, and said when signing they were glad they had a Representative in Congress they could appeal to and would consider such signatures."

The letter sent out by the Civil Service Commission is construed to mean by this constituent that out of the first three on the eligible list the Member of Congress can make selection of his choice. I am not able to see any other construction to be placed upon this letter. It is true this is not the construction placed by the Post Office Department, but the man desiring the appointment can not be convinced that the construction placed by the Post Office Department is followed, but is an excuse on the part of the Congressman for not securing the appointment of the applicant should he appear one of the first three on the eligible list.

I have been in the Post Office Department recently requesting the appointment of one party who was not the first on the eligible list, but who was third, and the Post Office Department refused to make the appointment recommended by me, stating that reasons must be shown why the first and second eligibles were not selected.

In other words, I consider the circular letter sent out by the Civil Service Commission misleading. The Post Office Department tells me there is a more recent order than the one sent out by the Civil Service Commission, justifying the Post Office Department in taking the position it does.

It seems to me there is a conflict between the Civil Service Commission and the Post Office Department. It is embarrassing to me and to other Members of Congress. I am writing to protest against the commision sending out circular letter of November 17, 1913, unless the Post Office Department will appoint the nominee of the Member of Congress from the eligibles.

Please let me hear from you.

Yours, very truly,

S. J. TRIBBLE.

POST OFFICE DEPARTMENT,
FIRST ASSISTANT POSTMASTER GENERAL,
Washington, July 3, 1914.

Hon. S. J. TRIBBLE,
House of Representatives.

MY DEAR MR. TRIBBLE: In reply to your letter of the 22d ultimo I beg to advise that the plan which the Postmaster General has adopted for the selection of fourth-class postmasters from eligible lists furnished by the Civil Service Commission is as follows:

It is desired that the persons with the highest rating be chosen, unless good and valid reasons are submitted to the department showing that this would not be in the best interest of the service. If reasons are submitted sufficient to make the selection of the first eligible inadvisable, then it is my desire that the person with the next highest rating be chosen, unless good and valid reasons are submitted to show

the inadvisability of his appointment. In such case the third eligible may be selected.

In no case should the second or third eligible be chosen unless the appointment of one of the highest standing eligibles has been shown to be inadvisable from the standpoint of the greatest efficiency in the Postal Service.

In accordance with your request the inclosures which accompanied your letter are herewith returned.

Sincerely, yours,

DANIEL C. ROPER,
First Assistant Postmaster General.

Mr. Speaker, the language used in this decision naturally causes many contests to be filed protesting against the first eligible, making charges as set out in the Roper letter. You will note the statement of the Post Office Department that the first on the list shall be selected unless cause be shown why such selection should not be made. This responsibility of showing cause rests upon the patrons. No reasonable man would expect the Representative in Congress to assail with personal charges the applicants making best mark and second-best mark throughout his district. What does he personally know susceptible of proof against true and tried citizens that he would be justified in making wholesale charges against the many applicants? The great majority of post offices in my district are fourth-class offices. All offices paying less than $1,000 are fourth class, and the selection is made by civil-service examination except a few very small offices selected by an inspector. The first, second, and third class offices pay over $1,000. Nominations for postmasters at first, second, and third class offices are made by the Representative in Congress, and his selection is usually appointed during the Democratic administration, but the situation is very different in the selection of postmasters for fourth-class offices.

My inability to have all my friends and constituents who apply appointed to positions grieves me inexpressibly. If I have made mistakes at first, second, and third class offices, then I must bear the full responsibility of such mistake, but when my friends censure me for the application of civil-service rules to fourth-class offices the censure is unjust.

One office has a disappointed applicant who was my supporter, but he failed to make sufficient rating on examination to obtain an eligible standing. He knew he could not be appointed, but I have been informed that he immediately became disgusted with my record in Congress and proceeded to show his disapproval of same by voting against me for Congress at the next election and cast his vote for a person very objectionable to the southern people as an officeholder. It does not seem just to hold me responsible for the fact that he failed on examination and an applicant who did not support me made the highest mark and received the appointment.

Another office presented an applicant who supported me, but on account of residence eligibility I advised against making the application in writing and contested the eligibility of this applicant in the Post Office Department. This was known to patrons as well as by applicant. The applicant insisted on standing examination, made the highest rating, and was appointed. Many patrons familiar with my attitude immediately found objections to my record in Congress and expressed their disapproval by striking my name from the party ticket. They objected to the new postmaster, but refused to file any kind of objections. Another office presents a few voters who threaten me with political destruction because an active supporter made the highest rating and a nonsupporter made the second on the list, and it is expected of me that I express a desire to have the nonsupporter second on the list appointed. Yet those criticizing me know that there are four other offices in the same county where the first on the list was appointed postmaster.

One postmaster seeking reappointment assails me bitterly because he must give up the office. The facts are that he has been a postmaster of the Republican administration 16 years. Over his own signature he says he voted against the Democratic national ticket in 1912 and also votes against the State Democratic ticket. Furthermore, he says he intends to continue to do so. Still he thinks the President, against whom he voted, and the Democratic Party, for which he claims no allegiance, should maintain him, a Republican administration postmaster, in office in the South. To the party and President he tried to defeat he appeals to give him reappointment and has alienated many of my friends in his community because he expected me to see that he was reappointed as a personal and political friend.

A prominent citizen and friend at another office wrote me, strongly urging the appointment of the applicant finally selected. In a few days thereafter the Republican appointee applied for reappointment. The prominent citizen then wrote me, strongly urging the reappointment of the Republican administration postmaster. This postmaster refused openly to vote the Democratic national ticket, contributed to the Republican campaign funds, and secured his appointment by very objectionable methods to the southern citizen. I refused my friend's request. He then applied for the office himself and receiving no encouragement he proceeded to withdraw and indorse the fourth applicant. When the appointment was made and I nominated his first selection, he wrote me that he would help to bring about my defeat on account of the "dirty deal" given the patrons of that office by my selection, and he has exerted himself to make good his threats.

A prominent applicant at a certain office proposed to the other applicant to retire from the contest if the other applicant would pay him monthly a specified amount of the salary. He was to do no work for the Government at the post office, and yet was willing to receive a portion of the Government salary. His proposition was rejected. Furthermore, this prominent applicant was not appointed. He writes letters to prospective candidates seeking opposition to me and asserts that the record in Congress of the Representative from the eighth Georgia is so very bad that an immediate change is demanded by the people, and that a man of high integrity should be elected.

Mr. Speaker, the civil-service regulations applied to post offices in making selection are new and untried by the people. The regulations are sometimes not understood, and I thought it wise and proper to publish the letter of the Post Office Department with these comments, that this information in this public way may reach those interested, and that errors prevalent in the minds of some citizens may be corrected.

River and Harbor Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. WILLIAM P. BORLAND,
OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 19, 1915.

Mr. BORLAND. Mr. Speaker, I desire to submit some recent statements showing the progress of navigation on the Missouri River between Kansas City and the mouth of the river.

The matter referred to is as follows:

KANSAS CITY MISSOURI RIVER NAVIGATION CO.,
Kansas City, Mo., January 5, 1915.

Hon. WILLIAM P. BORLAND, M. C.,
Washington, D. C.

DEAR SIR: For your information, beg to advise that we have handled this season a total of 14,000 tons of merchandise on the Missouri River, the entire movement amounting to 5,300,000 ton-miles. This shows an increase of 40 per cent over the 1913 season.

The 1914 fleet consisted of the steel-hull steamers *Advance* (stern-wheel towboat), 600 horsepower; *A. M. Scott* (twin-screw towboat), 600 horsepower; *Chester* (twin-screw packet), 700 horsepower; and the following all-steel, cargo-box barges:

	Tons.
Endeavor, 231 feet long, 41 feet wide, 7 feet deep	1,400
Alpha, 200 feet long, 36 feet wide, 8 feet deep	1,000
Beta, 200 feet long, 36 feet wide, 8 feet deep	1,000
Gamma, 156 feet long, 30 feet wide, 8 feet deep	600
Delta, 156 feet long, 30 feet wide, 8 feet deep	600
Epsilon, 156 feet long, 30 feet wide, 8 feet deep	600
Handy, 100 feet long, 21 feet wide, 6 feet deep	200
Open steel barge Delaware, 135 feet long, 30 feet wide, 8 feet deep	400
Total barge capacity	5,800
Plus freight capacity packet Chester	350
Total freight-carrying capacity of fleet	6,150

This capacity is predicated upon a draft of 6 feet, and is subject to reduction during lower stages of the river.

Our experience has taught us the necessity for using "lighters" during the low-water season. These are decked steel barges (without cargo house) of relatively small size, one of which can accompany each tow without the expenditure of much power, to be used for lightering cargo from the larger barges to enable the tow to pass over any shallow crossing which may develop. Transfer of freight to the lighters can be performed while the tow is under way and before reaching any shallow crossing that may be reported. Without this arrangement, you will understand, the loaded draft of our barges is limited to a few inches less than the depth of water over the one or two shallowest crossings—and there are usually only one or two troublesome crossings to contend with on each trip during low-water season.

During good stages of water these lighters or flats will accompany tows to carry structural steel, reinforcing iron, lumber, logs, sacked wheat, and such freight as does not require careful protection from the elements. They will also be equipped with oil tanks below decks to carry fuel oil for the towboats, giving each power boat a greater steaming radius of fuel and enabling us to bunker all fuel at the cheapest supply market. We have requested bids on, and expect to put in service early this season, four of these lighters, each with a carrying capacity of 200 tons, thereby increasing the total capacity of our fleet to 6,950 tons. This additional equipment will also enable us to handle structural steel and iron, logs, lumber, and other low-grade commodities which can not now be handled profitably in our cargo-box barges.

The matter of an additional towboat is being considered, and, while I can not of course say definitely at this time, I am of the opinion one will be authorized by the board.

Our towboat *Advance* was equipped with new machinery and boilers last spring, and owing to delay on the part of the engine and boiler builders we were unable to have the boat ready for service before

August 1. Most of the season's freight was therefore carried by the packet *Chester* and barges towed by only the *A. M. Scott*.

Our tonnage was also affected by business depression following the outbreak of the war in Europe. Early in the season and until the war began we handled 3,800 tons of export flour; after that, not a pound. The movement of dry goods dropped to practically nothing for a time, the merchants waiting for the cotton market to hit bottom before placing their orders; and all other lines were more or less affected. Somewhat offsetting this loss of regular tonnage, we had been gradually widening the scope of our service, increasing the number of customers and lines of commodities so that we are now serving a great many more industries with a greater diversity of freight, and thus demonstrating the feasibility and economy of river transportation to more and more shippers.

The record of actual miles traveled by the different boats during 1913 and 1914 is as follows:

	1913	1914
Towboat Advance	5,712	4,803
Towboat A. M. Scott	5,750	10,000
Packet Chester	7,344	7,344
Total miles	18,806	22,147

You will note that with the towboat *Advance* in service only a part of the 1914 season an increase of 3,341 traveled miles is shown.

Comparing the 1914 with the 1913 season, the following percentages of progress may be of interest:

	Per cent.
Tonnage increase	40
Ton-mile increase	37
Horsepower increase (towboat)	33
Boat-mile increase	17
Fuel enconomy increase	13

In the spring of 1914 we filed joint tariffs with the Atlas Transportation Co., operating a monthly towboat and barge service between New Orleans and St. Louis; this enabled us to move some freight all-river from New Orleans to Kansas City at 80 per cent of the rail rate. In fact, some coffee moved all-water from Brazil to Kansas City. This movement will naturally grow as the Mississippi River service is improved and sailings made more frequent.

We are now endeavoring to establish through water rates in combination with Panama Canal lines and the Mississippi River between Kansas City and Pacific coast points to give our people the advantage of Panama Canal rates on canned goods and west coast commodities.

The improvement work which the Government has done on the Missouri River is very satisfactory and has been of great benefit to navigation. Within a few days, as soon as it is received, I will forward you a letter from one of our oldest and most experienced pilots, giving you his views of the benefits resulting from the work already accomplished by the engineers.

Our annual audit will be completed to-morrow and I will then mail you the annual statement. Roughly, we have on hand $334,000 cash; $8,600 bills receivable; a few hundred other accounts receivable; $500,000 in boats, barges, terminals, shipyards, and other equipment; material and supplies, $25,000; accrued interest on deferred stock payments, about $50,000, and various smaller book accounts.

Stock subscription collections to December 31 amounted to $995,749.06.

If you desire information on any points not here covered, please wire and it will be furnished promptly.

Very truly, yours,

A. W. MACKIE,
Assistant to the President.

P. S.—You probably realize that we suffer more or less channel trouble in the low-water season, due to the fact that the United States Government improvement work must of necessity be carried on during the navigation season and while we are operating through the stretches of river under improvement. For instance, we lost a great deal of time this fall at Isbell on this account. Three wing dikes were constructed on the north bank of the river, across the channel we had been running, to throw the water to the south, or rock, shore. As these dikes were extended out into the river, the longest being 1,500 feet, our boats were forced farther and farther toward the south shore, around the end of the dikes, which finally forced us into about 3 feet of water. This caused no end of trouble until such time as the channel "made" along the south shore—that is, until such time as sufficient sand and drift was precipitated behind the dikes to build up dams high enough to force a large volume of water in the desired direction. Of such things, of course, we do not complain, as the temporary interference with navigation can not be avoided; but I cite this for your information, as showing at least one reason why it is difficult to operate profitably during low-water season on a river which is undergoing improvement.

Our loss this season is apparently less than that of last season, but we who are in the work are more than ever convinced of eventual success of the enterprise, and feel encouraged over the general development. Our equipment is in prime condition; we are very proud of our two towboats—if there are any better on the inland waters, we have not been able to find them—and we hope and expect to "get over the hill" on a season of normal conditions.

A. W. M.

EFFECT UPON THE COMMERCE OF THE TRANS-MISSISSIPPI TERRITORY OF THE THROUGH ALL-WATER SERVICE FROM COAST TO COAST VIA THE PANAMA CANAL.

Letter from Mr. R. D. Sangster, transportation commissioner, the Commercial Club of Kansas City, to Mr. W. D. Wells, jr., traffic manager W. S. Dickey Clay Manufacturing Co., Kansas City, Mo., relative to the effect upon the commerce of the trans-Mississippi territory of the through all-water service from coast to coast via the Panama Canal. Filed by Hon. WILLIAM P. BORLAND at hearing on the subject of the improvement of the Missouri River before the Committee on Rivers and Harbors, House of Representatives, December 14, 1914.

THE COMMERCIAL CLUB OF KANSAS CITY,
Kansas City, Mo., December 4, 1914.

Mr. W. D. WELLS, Jr.,
Traffic Manager W. S. Dickey Clay Manufacturing Co.,
Kansas City, Mo.

DEAR SIR: Referring to your telephone call of last evening respecting exchange of telegrams between your Mr. Walter S. Dickey and Mr. W. P. Trickett, traffic director of the Minneapolis Civil and Commerce Association, relating to the impending national rivers and harbors congress in Washington, to which I understand Mr. Dickey will be a delegate from Kansas City, together with other gentlemen, to secure further recognition in the way of national aid from Congress for Missouri River improvement:

It seems perfectly clear, in view of recent threatened transcontinental freight-rate disturbances, due to the opening of the Panama Canal, that the question of inland waterway improvement in this country must become an issue of transcending import at once to the trans-Mississippi section and indeed the Nation.

Through water service from coast to coast via the canal has been a reality less than 90 days, but the sworn evidence before the Interstate Commerce Commission in its fourth-section cases, Nos. 203, 305, etc., wherein the transcontinental railroads are seeking further relief from the provisions of the commission's fourth-section order No. 124 in the Spokane rate cases, is conclusive that exceedingly great impetus has recently been given to water transportation and that the commerce of this country is bound to largely drift to the seaboard and Gulf coast territory, to the detriment and distress of inland communities.

So far as the trans-Mississippi section is concerned, while we have been in the enjoyment of rates via rail to the Pacific coast substantially as favorable as the Atlantic seaboard, we are now confronted with the possibility of a material handicap against us in freight rates in favor of coast-to-coast traffic tributary to ocean service, even should the Interstate Commerce Commission conclude that rates to so-called intermountain territory from the Missouri River and east may not be affected by the adjustments which the rail carriers are permitted to make in competition with the water carriers for the reason that they do not propose to exactly meet the port-to-port rates by rail.

The rail carriers propose to establish lower rates from New York to San Francisco than they have been operating, but will not exactly meet the rates via the steamship routes. The rates by rail as proposed are as much as 200 and 300 per cent of the rates now being quoted by the water carriers. For example, the rate on soap, carload, from Missouri River to New York, inclusive, by rail to Pacific coast, Columbia River, and Puget Sound, port cities, is 80 cents per 100 pounds, whereas the steamship lines are quoting a rate of 40 cents, or were doing so quite recently.

This product is manufactured quite extensively on the Atlantic seaboard, and manifestly the interior manufacturer must absorb the difference in freight rates of 100 per cent in order to lay his goods down on the Pacific coast in competition with Atlantic seaboard manufacturers. The carriers by rail will not be permitted by the Interstate Commerce Commission to, under any circumstances, participate in traffic that does not produce out-of-pocket costs and something besides.

The zone of sea influence does not stop at the Atlantic seaboard, but extends inland as far west as Chicago, to which point the rate to-day on canned salmon, for instance, is 60 cents per 100 pounds, based upon the combination of rates from the Pacific coast by water to New York, thence by rail. This rate is 10 cents less than the rate to Missouri River.

The trans-Mississippi section must suffer from these inequalities in freight-rate adjustments. An alternative, however, presents itself forcefully in the opportunity in existing circumstances for the National Government to vitalize the commerce-carrying capacity of our inland-waterway system with which this great region is blessed, and, by so doing, follow the precedent it has so well established in the construction of the Panama Canal.

There can no longer be any doubt about the situation to which we refer and the effect upon the commerce of the trans-Mississippi territory of the through all-water service from coast to coast via the Panama Canal.

During the calendar year 1913, the year immediately prior to the opening of the canal, the total water tonnage of those commodities covered by the transcontinental railroads' recent application to the Interstate Commerce Commission for further relief from its Spokane case opinion was 421,359 tons. The total rail tonnage from territory north of the Ohio and Potomac Rivers and east of Pittsburgh, of the same commodities, was 537,609 tons. The tonnage referred to represents those articles most susceptible in trade to the freight rate and cover about one-half the total tonnage. They have been designated in the proceedings before the Interstate Commerce Commission as Schedule C commodities.

The ships already in service prior to the opening of the canal had a carrying capacity of 1,239,200 tons, and it is quite apparent that without the addition of a single ship the vessels in service prior to last September could more than take care of the entire tonnage of these commodities from that territory east of Pittsburgh and have additional carrying room for 267,476 tons. As an illustration of the effect of the canal's opening, the tonnage moved via that route for the month of September, 1914, was 78,000 tons, thus forecasting an annual tonnage upon the basis of that month alone of 936,000 tons. It is a matter of record that for the years 1912 and 1913, respectively, a little less than one-twelfth of the total tonnage via the Panama route moved in the month of September each year.

To illustrate the effect the opening of the canal has had upon rates via all-water routes, the sea rate, for example, upon iron and steel, carloads, from coast to coast was formerly 60 cents on a large number of such items, and 50 to 55 cents on those remaining. Since the opening of the canal the sea rate has been reduced to 30 cents. The sea service was confined to sailings from New York, but since the opening of the canal sailings have been announced from Philadelphia and from Boston and regular dates of sailings established. The local rate from Pittsburgh to New York on iron and steel articles is 16 cents, making, when added to the 30-cent water rate, a through rate of 46 cents from Pittsburgh to San Francisco. The railroads have been operating a through rate of 80 cents from Pittsburgh to San Francisco, but they propose a rate of 55 cents in competition with the sea route, or 9 cents higher than the rail and ocean combination via New York.

This is a fair example of the effect of the Panama Canal, and it shows that the interior manufacturers in trans-Mississippi territory will find it difficult, if not impossible, to compete with manufacturers on and adjacent to the seaboard and Gulf coast, and it seems inevitable that inland manufacturers will be unable to profitably reach the Pacific coast from their present inland locations. The alternative will be either to abandon the Pacific coast markets or move their plants to the seaboard or Gulf coast.

Therefore it seems proper to say that the intermittent and inconstant policy of Congress toward inland waterway improvement must give way to a broad, comprehensive plan of development to meet the problem which the Panama Canal has introduced in order to maintain an

equilibrium of natural, commercial, and industrial development of the country at large.

The undersigned, together with representatives of Minneapolis, St. Paul, and other Missouri River territory cities, has followed very closely the recent proceedings before the Interstate Commerce Commission and has pointed out the disaster and destruction which would follow the literal application of the commission's order in the Spokane cases upon the products and commerce of this section and that has been fully submitted to the commission.

But this territory is blessed with natural arteries of transportation which our representatives at the impending National Rivers and Harbors Congress in Washington may well urge, with greater insistance than ever before, that the National Government enter upon the work of perfecting the commerce-carrying functions of.

Yours, very truly,

R. D. SANGSTER,
Transportation Commissioner.

Personal.] THE COMMERCIAL CLUB OF KANSAS CITY,
Kansas City, Mo., December 4, 1914.

Mr. O. V. WILSON,
Care of Ryley-Wilson Grocery Co., City.

DEAR SIR: In connection with your trip as a delegate to the National Rivers and Harbors Congress in Washington, D. C., next week, I invite your attention to the inclosed copy of communication.

Yours, very truly,

R. D. SANGSTER,
Transportation Commissioner.

The following account of a shipment of coffee from Brazil to Kansas City by water appears in the Kansas City Star of October 7, 1914:

Just 59 days after leaving Brazil a shipment of coffee consigned to the Ennis-Hanly-Blackburn Coffee Co. reached the municipal wharf in a barge of the boat line company. In that time it never touched land. At the New Orleans wharf it was transferred to a Mississippi River barge and thence to one of the boat line's barges at St. Louis. A saving of freight rates of 20 per cent over the water and rail route was effected. The recent extension of marine insurance to Mississippi River cargoes has opened up the new route for South American imports.

The "Pork Barrel."

EXTENSION OF REMARKS
OF
HON. JOHN H. SMALL,
OF NORTH CAROLINA,
IN THE HOUSE OF REPRESENTATIVES,

Friday, January 15, 1915.

Mr. SMALL. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing a speech of the gentleman from Pennsylvania [Mr. MOORE], delivered at the National Rivers and Harbors Congress, December 9, 1914.

The SPEAKER. The gentleman from North Carolina asks unanimous consent to extend his remarks in the RECORD by printing a speech by the gentleman from Pennsylvania [Mr. MOORE] upon the subject of rivers and harbors. Is there objection?

There was no objection.

The address is as follows:

THE PORK BARREL.

[An address by J. HAMPTON MOORE, M. C., of Pennsylvania, president Atlantic Deeper Waterways Association.]

Mr. President, ladies, and gentlemen: The topic assigned to me was not of my own choice. It was selected for me. It would have pleased me much if our distinguished president of the National Rivers and Harbors Congress, the Senator from Louisiana, had taken this topic to himself. He is a Member of the Senate of the United States, while I am only a Member of the House; and they know much more about "pork" in the Senate than we do in the House. [Laughter.] There is another reason why I should like to have had the Senator respond to this subject. He comes from a farming community down on a plantation in Louisiana, while I come from a great city, Philadelphia, which we regard as the second port of the United States [applause], and the "pork barrel" is distinctly an agricultural product. [Laughter.] We have no use for it in urban life; it belongs to the farm. How the Senator would define the term I do not know; neither can I tell how the magazine writers acquired their knowledge of it. They are perched up yonder in the eighteenth stories of their skyscrapers in New York, most of them; and as their hands are not calloused from toil upon the dredge or from work along the canal, it is difficult to determine where they get their sensational information about rivers and harbors.

I hold no brief for them, nor for the lexicographers of the railroads, who also seem to be intensely familiar with the "pork barrel" when it suits their purposes. In this I do not refer to the "big men" of the railroads, only to those little brains who think they are doing something big for the railroads when they oppose waterways. [Applause.]

DEFINITION OF THE "PORK BARREL."

I can give a commonplace definition of the term, however, what the boy on the street understands it to mean, and it is this: A "pork barrel" is not what you get for your own river and harbor, but what the other fellow gets for his. [Laughter and applause.] You never hear of "pork barrel" when things are coming your way; you always hear of it, and only hear of it, when things are going the other fellow's way. Even at that, if there is evil in it, I would not want to defend it.

There are many men of many minds in this country of 100,000,000 people, and they are represented in the Senate and in the House of Representatives at Washington. If you who come in from various States of the Union think you will find here one homogeneous mass of public opinion, you are very greatly mistaken, because in the Senate there are 96 ways of thinking upon a public question and in the House there are more than 400. It takes a pretty clever leader to get us together upon one line of thought, and therefore we may not all agree upon all the matters affecting our transportation affairs, nor upon the size or effect of our appropriations.

REFORM AND REFORMERS.

And besides, what we have here in Washington in the way of Representatives, there are many other men of many minds in this country who have their influence upon Congress and Congressmen, and some of them have turned reformers. It is odd how some of us can swing around from our known and natural methods of life to become reformers. Only this morning I was discussing this anomaly with a delegate from Virginia, who gave me a new thought on reformers. He said "the two greatest reformers in the world are poverty and old age." [Laughter and applause.] It seems easy for men to reform when they have got enough for themselves, or when some other fellow begins to get something. There are reformers who have a purpose in preaching reform. Some of them have noble aspirations, but others may be "Greeks bearing gifts." We have observed all of these varieties in the waterways movement.

[At this point Mr. MOORE made some humorous references to James J. Hill, Andrew Carnegie, and THEODORE E. BURTON, of Ohio, and their interest in peace, war, and waterways. He continued:]

These reformers are entitled to our consideration. But even they do not complete the picture. There are others who believe in "principle," to the extent that they would not even accept public office. [Laughter.] In one of the leading addresses this morning, that of the distinguished Secretary of State, it was said that the people generally stuck to principles and that they would not be bothered with the details of projects. The reference, of course, was to the motto, "A policy and not a project." That is an excellent idea, Mr. President, but we need not deceive ourselves; few men come here to talk "policy" who do not have in mind a project for which they intend to stand. It is like coming to talk "principles" and then asking for an office. We all believe in the "policy," but most of us likewise believe in our "projects."

I am one who believes in a "project." If there be any of you who do not believe in a "project," it would be interesting to have you rise and tell whether I am mistaken in my judgment of human nature. How many of you are not interested in some project in your own vicinity that you would like to see advanced? I pause that you may think it over. I see no one rise.

APPROPRIATIONS SHOULD NOT BE SECTIONAL.

Call it "pork barrel" if you please, I shall stand by the Delaware River and its improvement as long as I am honored by the people of Pennsylvania as one of their Representatives in Congress. [Applause.] That great river works for the whole country, and properly improved is capable of greater work. Call the great Atlantic coastal project "pork barrel," but I will stand for it so long as the people of the Atlantic coast insist by convention and resolution that it is needful to commerce and the progress and safety of the country. [Applause.] That project means big business and the saving of life and property. Call your great Mississippi River 9-foot channel project "pork barrel," Mr. President, and you would be seemingly untrue to the people of Louisiana, to the people of the Mississippi Valley whom you represent. Call the Columbia River and the Snake River "pork barrel," then the gentlemen who sit here as representatives of the commercial forces at that corner of the United States would be answerable to the people back home. Mr. President, we are expected to look after our projects, not in a sectional spirit, but for the welfare of the entire country.

The "policy" defined here, and for which we are presumed to unite, is the securing for the approved projects of all the States of an annual appropriation bill of not less than $50,000,000. This convention, as I understand it, is for the purpose of helping that each may have a square deal and equal rights in the apportionment of appropriations for the improvement of our respective sections of the country. [Applause.] We should not be dejected because, perchance, some Member of Congress invites criticism striving to obtain recognition for his own locality, nor because some editor whose magazine is enjoying second-class postage at the expense of the people of the United States discovers in the cry of "pork barrel" a convenient medium for increasing his circulation. Nor should these great public works be made the sport of statesmen brought to the bar of repentance by "poverty or old age," or those disciples of reform who, seeing all evil in others, live on in the hope that their sanctified countenances may some day adorn the pages of the "pork-barrel" magazines. [Applause.]

A TRANSFORMATION ON THE TRINITY.

We have said there are "many men of many minds" in the Congress. Among them are the discoverers of the "pork barrel." In the last session of Congress they made much of the Trinity River in Texas. I ought not to say much about it, because I have criticized the Trinity project myself when comparing it with other and more important streams; but in 1909 the distinguished Representative from Ohio, Mr. BURTON, a member of my own political party, who made an enviable reputation as chairman of the Rivers and Harbors Committee, said that the Trinity River in Texas was good enough for him. He was then preaching the doctrine of peace. He said there were great commercial possibilities ahead of the Trinity, and that it ought to be improved to the extent of hundreds of thousands of dollars, which he authorized to go into a bill. [Applause.] At the last session, only a few months ago, when the coastal States—and all others, in fact, except one or two of the inland States that have no rivers—were waiting with bated breath to know their fate, the same distinguished Representative—now become a Senator, though the change of title does not of necessity imply a real reform [laughter]—thumped and pounded the Trinity River and other items in the rivers and harbors bill until all the projects, regardless of their importance, went down with the measure.

Like our friend, Mr. Carnegie, who easily evoluted from a maker of war materials to an apostle of peace, Mr. BURTON departed from his advocacy of the Trinity River improvement to become its bitter opponent upon the floor of the Senate. [Laughter and applause.] I like the Senator for his many excellent qualities of statesmanship, and it may be that he is right about some of the individual projects which he picked out of the last rivers and harbors bill. But the Senator is human, like the rest of us, and some of his earlier contributions to the literature of waterways may have put a few of us to a disadvantage in attempting to follow his footsteps. I trust the distinguished and able Senator from Ohio is doing some good. I am not sure he is, but, just between us waterway men and women, I would venture to say that if anyone were looking forward to presidential honors, a clever campaign manager would think it fine capital if the dear, good people of the Middle West could be made to believe that you "pork-barrel" devils in Oregon, Louisiana, Maryland, and Florida, in your efforts to obtain competitive transportation to the country's markets, were actually looting the honest farmers who are suffering because they can not now get sufficient prices for their products—— [Applause drowned the close of the sentence.]

ARMY APPROPRIATIONS COMPARED.

Let us say something about this "pork-barrel" business in the aggregate. I am not pleading for an unjust cause, nor for an unworthy stream. Much of my waterways information and much of my instruction comes from those who defeated the rivers and harbors bill in the last session of Congress. I have taken the trouble to have the figures collated with regard to certain other branches of the Government of the United States for the last 40 years—actually, 39 years—but we will call it 40 years. Let us see what they are. Since 1875 we have appropriated—and these gentlemen who are arguing for peace on sea and land, and who object to the opening of our coastal canals, voted for these measures as they came along—we appropriated for the Army of the United States, in these 40 years, approximately $2,000,000,000; they voted for it and there was no "pork barrel" in it nor scandal attached to it; and you and they should remember that while the Army is a protective arm of the Government service it is not a productive arm of the Government service. Somebody must work to maintain the Army of the United States; it is not the Army itself that raises revenue and gets the money to maintain the Army. The Army is our creature, and while we are glad to support it, we must work elsewhere than in the Army to raise money for the cost of war. [Applause.] But in 40 years we have raised this approximately $2,000,000,000 to support the Army of the United States, which, though small it is, we are proud to call our own. [Applause.]

NAVY DEPARTMENT AND PENSIONS.

During this same period of 40 years, due very largely to the lesson we learned in the Spanish-American War, we have appropriated for the support of the Navy of the United States more than $2,000,000,000; and proud as we are of it as a protective arm of the Government, the Navy is not a productive arm; it does not delve in mines; it does not work in the mills or on the farms. It is supported by those who work in the mines, by those who work in the mills, and by those who work on the farms; yet we dedicated more than $2,000,000,000 of our money to the maintenance of the Navy of the United States in the last 40 years. There was no "pork barrel" attached to that. [Applause.]

I hesitate to make another comparison, yet I think I will. We are a grateful Nation, the most grateful of all the nations upon the face of the globe, for during the last 40 years, the period of which I am now speaking, we have appropriated from the men who worked in the mines, and the men who worked in the mills, and the men who plowed the seas, and the men who worked on the farms—we have taken from them and given to the old soldiers of this country who sustained the Union in 1861–1864 more than $4,500,000,000. [Applause.] We have sustained them. We have kept the old soldiers. We have been faithful to them, as they were to us. We have stood by them, and we have paid our debt to this enormous extent, equal to the entire amount that we have appropriated to both the Army and Navy of the United States during the last 40 years. There was no "pork barrel" there. [Applause.]

WHERE THE REVENUE COMES FROM.

Now, where did we get this money? We got it out of business. We got it out of labor. We got it out of commerce. We got it out of that intercourse between men which we call trade; and with this intercourse, with this intercommunication between the active spirits of the laboring and the industrial and the manufacturing and the commercial world we have maintained these old soldiers and we have kept this Army and Navy going. We have looked out for every other branch of the Government service to the tune of a billion dollars every session of Congress. One-third of all the revenue of the Government used in order to meet these enormous bills comes in at the ports along the coast of this country. It comes in through these harbors which the Government is supposed to maintain. We collect it at the customhouses. Another one-third comes from the internal revenue laid upon the labor and commerce of the people. We are taxing them very heavily now in every direction. We are not taxing the Army and Navy and the pensioners; we are taxing labor, commerce, and trade, and the burden is borne largely by those who deal in that intangible commodity known as transportation.

SQUARE DEAL FOR WATERWAYS.

If it were not for what we do for transportation, most of us would still be living in the old thatched log houses, digging our own potatoes and cooking our own meals. It is transportation that has brought together you men from Maine to California, from the Lakes to the Gulf; it is transportation that has given you the facilities of life and happiness of which the world did not dream a hundred years ago. [Applause.] Do you give the railroads credit for all of this? They are entitled to much of the credit, but not to all, although, in a practical sense, they do most of it. Relatively up to a year or two ago they carried eight or nine hundred million tons of the commerce of the country, and the boats on the rivers and on the lakes carried 100,000,000 tons. But as to the cost of it—and this is why we ask a square deal for waterways—you can carry a cargo of clay from over yonder in France, 3,000 miles away, and land it at the port of New York by boat cheaper than you can deliver it from New York to the city of Trenton, N. J., 58 miles away, by rail. The farmer has had to pay, according to figures furnished by the Director of the Census a couple of years ago, 1.6 cents more to carry a bushel of wheat 9 miles from his farm to the railroad than it could be carried 3,000 miles from New York to Liverpool. And what has this burden bearer of the country, this waterway carrier, this commerce maker of the country, this labor dispenser of the country, supporting all these other great arms of the Government, protective and otherwise, what has it received from the Government of the United States in the last 40 years for the improvement of rivers and harbors? Six hundred and ninety-three million dollars all told. Compare that with what

went to the Army and the Navy, compare it with what went to the dear old soldiers of this country. Yet this great burden bearer, the greatest burden bearer of them all, except the railroad, received the least at the hands of the Government and must stand the greatest amount of abuse. It is an outrage which the waterways men of this country ought to resent. [Applause.]

Ladies and gentlemen, the president tells me I have talked five minutes overtime. I have not started, but I am going to quit in the five minutes he gives me. I shall respect the Chair. [Cries of "Go on!" "Go on!"]

NO "NEW PROJECTS"—ECONOMY.

Well, then, let me talk a minute about something that is very dear to many of us. We are told that the coming rivers and harbors bill is not to carry any new projects. That was the scheme upon which the filibuster succeeded in the last session of Congress—no new projects—economy! Economy on useful works, while we have been spending more money on other things this Congress than we ever did in other years in the history of this Nation!

Who is it that says we shall not spend money to open up the streams of this country? Is it the President? If it is, he should be frank and let the country know, but I do not want to believe it is the President. Is it the Secretary of State, who spoke to us this morning? He is an advocate of peace, and I do not blame him for that; but does he want us to be unprepared upon our rivers and harbors to do business, or to meet an enemy in the event of war? If he is opposed to such improvement, which I would not like to believe, he should speak out, for we ought to know where he stands on that question. Is it the chairman of the Rivers and Harbors Committee, or the members of the committee? I should not want to think so. The truth is the people of this country want us to do business for the country, and they would not excuse us if we were bottled up along the coast in event of war. So those who oppose these improvements ought to speak in order that the people here can take the word home and let their communities know just what our Representatives stand for in Washington.

IMPORTANCE OF ATLANTIC COASTAL WATERWAYS.

We have asked for the opening of certain coast canals. It is important that we should connect up the God-given waterways of the Atlantic coast. It is not a new suggestion. The demand has been before Congress since the days of Washington and Monroe. We have been put off until our patience is sorely tried. Why? Some wise old men of both parties have told us we had no right to ask for such improvements when we had the great bosom of the Atlantic Ocean to come and go on. Why, gentlemen, you have come to this convention in the midst of one of the frequent storms that rage along our coast.

If you look at the newspapers to-day, you will find reports of wreckage and devastation that has gone unchecked. There has been loss of life and property. It is but one of many similar visitations. In 10 years we have lost more than 2,200 lives on the Atlantic coast, because we must take the risk of the open sea. What we have asked for in particular is a cut of 13 miles from Delaware Bay to Chesapeake Bay. That would reduce an outside sailing of 325 miles, and give the Nation much-needed communication between the navy yards and repair stations and the base of supplies for our naval vessels in the event of need. I refer to the Chesapeake and Delaware Canal, that neglected old waterway which, back in the days of the Civil War, when the railroads were incompetent, carried troops to Washington at Lincoln's call—the troops that saved the Capital. [Applause.] I mean that old canal which, if it remains inadequate and under private ownership as it is, would, in the event of a foreign invasion, find Washington in relatively the same position it was in during the War of 1812, when the British were in possession of the Capital and the President was obliged to seek a haven across the Potomac.

WATERWAYS FOR NATIONAL DEFENSE.

I do not know whether you who come from the mountains back yonder, where the streams are not burdened with commerce, fully understand this question. I do not believe you would feel secure even in your remoteness from the scene of activity if an attack were made upon the coast. In such a case you would be called upon, and as loyal Americans you would promptly respond to the call, to defend the honor of the flag, but you would be ashamed to find that such canals as the Chesapeake and Delaware, capable of the greatest possible service, were unfitted for the passage of the smallest Government craft to carry men or supplies. In a matter so vital should we wait until another country has sent its battleships to bottle up our ports? We need the inside passages now for business purposes; that's the essence of our agitation, but once we have them for business purposes we are always prepared for what may happen. What would Germany do without the Kiel Canal, its key to the ocean and the Baltic Sea? Oh, we could take a chapter from the history of those European countries now so unhappily engaged in war. They have not neglected their waterways as we have. It has cost them money to build their waterways and inland passages, but it seems to have been worth the price. It will cost us less to improve our waterways now than to wait until war obliges us to improve them. Even now the naval vessels of the Government are unable to navigate such streams as the Hudson River. One of them went aground at Albany only a few weeks ago because of the uncompleted works there; nor could they pass through the old Chesapeake and Delaware Canal even in times of peace; we have tried it to our dismay. If, then, in times of peace these costly craft of the Nation must take a dangerous outside route and be driven ashore, as they sometimes are, endangering the lives of the men and risking the property of the Government, is it not time we should insist that some of the enormous sums of money that go into other branches of the Government service shall be appropriated to the Government needs for the defense of the country? [Applause.]

I wish I could go on. [Cries of "Go on!"] I wanted to discuss the waste and loss incurred by the filibuster, but the Chairman says my time is up. [Applause.]

Income Tax.

EXTENSION OF REMARKS
OF
HON. CORDELL HULL,
OF TENNESSEE,
IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 20, 1915.

Mr. HULL. Mr. Speaker, I noticed in the CONGRESSIONAL RECORD of January 19 what purports to be an "Extension of remarks of Hon. WILLIAM E. HUMPHREY" on the income tax.

I pass by with absolute unconcern and indifference the cheap, coarse, and abusive language which the gentleman from Washington [Mr. HUMPHREY] has written as an introduction to three or four newspaper clippings which he thus inserts in the CONGRESSIONAL RECORD. If the gentleman from Washington imagines that he is either injuring the "authors" of the law or helping himself by the use of coarse epithets that would not be very creditable to a vulgar or ignorant person, he is welcome to continue this practice; but no one will expect Members of the House to take notice in kind of all such ranting as he may thus indulge in.

With regard to the new income-tax law, it may be said in all truth that the enactment and launching of this law has not created one-fourth the controversy and criticism that has been experienced by other income-tax laws in the more than 50 States and countries where they are in operation, during the first stages of their introduction and operation. There was more confusion and complaint in connection with the introduction of the Spanish War revenue tax in 1898 than has attended the introduction of the income-tax law. Any one of our State general-property tax systems when first introduced and while new to the people was even more difficult to understand and afforded even more complaint than the present income-tax law has produced.

If any person will take the time to read and examine the various income-tax laws now in existence throughout the world and some of the decisions construing and applying them, it will be seen that almost every paragraph and sentence contained in our income-tax law has a settled and well-defined meaning. It is readily agreed that no law is perfect in its provisions, or could be made satisfactory to every person, even if perfect. It must be admitted, however, by any fair-minded person who will familiarize himself with this class of legislation that most of the "vagaries" alleged against the present law come from persons who merely desire to discredit the law in order to avoid paying their fair share of taxes, or from those who have not given it sufficient attention to understand it. One of the greatest tax authorities in the United States, Dr. E. R. A. Seligman, closed a recent article on our income-tax law with the following language:

Taking it all in all, the law must be pronounced an intelligent and well-considered effort. It will need amendment in detail to make it completely equitable in principle and fairly smooth in operation. But

when we compare it with our preceding ventures in this field we may be proud of what has been accomplished. Indeed, the law may be declared to be in many respects superior to any other existing income-tax law.

I am entirely content to place the judgment of the best and most unbiased tax authorities of the country against the superficial or prejudiced utterances of the gentleman from Washington [Mr. HUMPHREY] or any other enemy of just, fair, and honest taxation. The attempted criticisms of the law contained in the newspaper clippings above referred to are neither sound nor accurate. Practically every income-tax law that has ever been enacted makes the family the unit of taxation for manifest reasons. This is just as fair to the woman as it is to the man.

It is not surprising that some hidebound protectionists would oppose an income tax or any other honest tax designed to compel the wealth of the country to do what it has never done—bear its fair share of taxes. Neither is it surprising that the large owners of our wealth would, through any subservient newspaper or other available source, seek to prejudice any law of this character, either by superficial criticism or by grossly misleading statements. Every reasonable person who is willing to be at all fair must concede that the income tax is more just and equitable than any other tax law thus far devised, and that laws imposing such tax are in successful operation everywhere. It will also be agreed that from one to two years are necessary in which to place in satisfactory operation any new income-tax law and get it adjusted to our intricate and complicated business conditions and to enable it to reach its normal revenue yield. I assume that the gentleman from Washington is undertaking to speak for the Republican Party in the House and to raise an issue having for its object the repeal of any and all income-tax legislation in this country. Not only the Democrats but the people generally will welcome this issue.

Army Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. FRANK T. O'HAIR.

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 22, 1915,

On the bill (H. R. 20347) making appropriation for the support of the Army for the fiscal year ending June 30, 1916.

Mr. O'HAIR. Mr. Speaker, upon one thing we will all agree, and that is efficiency must be maintained in our military organization. The question upon which we disagree is as to the size and magnitude of our armed land forces. Recent events in the European war show that in all probability any war we might have would be with a combination of nations. It would not be of much profit, therefore, to maintain an armed force capable of coping with one nation, so that if we are going to really arm ourselves as though we were going to have war tomorrow we must prepare to meet a number of nations in combination. We ought, therefore, to maintain at least 2,000,000 of thoroughly trained, armed, and prepared men, and since it costs about $1,000,000 to keep 1,000 men prepared for war for one year the expense of maintaining an adequate force to meet all possible danger from outside would be about $2,000,000,000 per year. Of course that is absurd, but it is no more ridiculous than to stop anywhere else along the line of preparedness to meet an invasion.

I maintain that our battleships will take care of foreigners and the standing Army should be used for maintaining domestic tranquillity. We have the best Army for its size there is on earth, and it is big enough to police our peaceful Nation. Every man I ever defended who was charged with the crime of murder was armed and prepared for a fight at the time of his trouble. Nations are only an organization of men and subject to the same rules and regulations. We are to-day prepared for every emergency for which our Army can legitimately be used. As long as a statesman and patriot like President Wilson sits in the White House we will have little use for any armament, either naval or military.

Mr. Speaker, there is a subject in the minds of our people of very great interest and importance. The members of the committee and others of this House have ably and exhaustively discussed the features in this bill, and to that other subject I desire to address a few remarks.

In the interest of education, in the interest of history, and for the cause of justice let us examine into a matter of world-wide interest, a matter which should be the pride of all Americans, the subject of the greatest geographical discovery since the discovery of America—the subject of the discovery of the North Pole.

The nations of the world have spent millions of dollars and sacrificed many scores of lives in an international race to reach the North Pole. It is a matter of general public opinion that the honor of first reaching the spot known as the boreal center belongs to the American Nation, but the fact has never been officially established by the National Government that an American was really the first to discover the North Pole. A careful and thorough study of facts and data presented by the different explorers seems to prove that such honor does belong to an American citizen, in substantiation of which statement I shall quote a few facts from various authorities on the subject.

I wish first to present a brief outline of a statement made by the man who claims to have been the first to reach the North Pole, to whom, if his statements are true—and the consensus of scientific opinion seems to prove that such truth has been well established—belongs the honor of being the discoverer of the North Pole.

Dr. Frederick A. Cook says:

In the specially equipped schooner yacht *John R. Bradley* we left Gloucester, Mass., on July 3, 1907. In the end of August we arrived at Annoatok, North Greenland, at a point 700 miles from the North Pole. There, aided by John R. Bradley, I finally organized an expedition to reach by sledge the Boreal Center. Supplies were landed and a permanent camp was erected at Annoatok. Rudolph Franke remained as my sole civilized companion. During the long Arctic night that followed sledges were built, the equipment was perfected, men and dogs were trained for the later sledge journey over the Polar Sea.

At sunrise of 1908 (February 19) my expedition started for the pole, aiming to force a new route over and among the lands discovered by Capt. Otto Sverdrup.

On March 20 the last of the supporting parties returned. I had selected as my companions for the last dash two young Eskimos, Ah-we-lah and E-tuk-i-shook. We were then approximately 60 miles north of Cape Svartevoeg in an air line 460 miles from the pole. To this point no one has ever denied my progress northward. The only point of my journey to the pole, therefore, which remains to be proven is the last 460 miles.

It is further conceded by everybody that when we were later carried adrift westward on the return that we traveled southward to Jones Sound and from there back to Annoatok and south to Upernavik. The total conceded distance therefore covered by my expedition, including the detours, was approximately 3,000 miles. Even if we exclude the 460 miles under dispute, my journey over the pack ice multiplies by three the longest journey over pack ice on record before or since. For the longest other journey claimed over pack ice is that of Engineer Peary, and since he seems to have traveled practically in an air line from Cape Columbia to the pole his greatest distance is 840 miles; therefore if my detractors concede that I am able to cover three times the record distance on pack ice, then they also prove without further argument the efficiency of my expedition. All discussion, therefore, on the complex problem of food and equipment is met by this doubly verified journey of 3,000 miles.

Now, as to that last 460 miles which our opponents have chosen to challenge. At the very outset they keep us in idleness on the lifeless waste of the polar ice, without explaining our movements. Less than a hundred miles to the south were game lands. To the north was the reachable glory of polar attainment. It is known that we did not go south at this time. It is not reasonable to suppose that one would sit on the ice for two months to deceive himself and the world. The only rational conclusion is that we did go north, for to do so was to satisfy an ambition nursed for 20 years.

In going northward as we reached the eighty-third parallel, we crossed a great gap dividing the land-adhering pack from the more active circumpolar drift. As we neared the eighty-fifth we discovered land westward. Between the eighty-seventh and eighty-eighth we crossed what seemed like ice-covered land. We reached the pole on April 21, 1908, and noted for the first time in history the physical conditions about the top of the globe. I have given along this line an abundance of scientific data by which subsequent explorers can affirm or deny my work.

In the brief cable dispatch published in the New York Herald September 2, 1909, is given the most general scientific data. Within a few days thereafter there was turned over to the New York Herald the complete original narrative as written while in the Arctic, from original observations, before civilization was reached. This was published under the title, "The Conquest of the Pole," in instalments, from September 15 to October 7, 1909.

The final and complete record of the important results of my polar expedition is published under the title, "My Attainment of the Pole," and upon the data thus published history must judge my polar effort.

Through all ages explorers have been rated not by disconnected field notes, not by a mathematical test of calculation for position, but by the careful reexamination of all the data as presented in the final publications. When to this is added the verifying and corroborative evidence of subsequent explorers, the pioneer's effort is substantiated for all time.

As pointed out by Edwin Swift Balch in his book, The North Pole and Bradley Land, my first reports were published and placed on record at a time when it was impossible for me to know of the work of any subsequent explorer. For this reason it is well to get a clear grasp of the physical conditions about the North Pole as first published.

Engineer Peary left the last civilized port for the pole about three months after I had reached the North Pole. His work was therefore about a year later than mine. His first report was sent by wireless about a week after my report had been published; and as noticed at once by all other Arctic explorers, Peary's report confirmed mine in every important scientific detail. My account of the physical conditions about the pole did not fit any previous theory. Peary's report in substance was a parallel of mine. Peary denied my success and said that he was the only one who had reached the pole. If he therefore unconsciously proves my case he is a witness of double value. The existence of the lands which I have reported are proven by Peary's description

of land-divided ice farther east and by other similar parallel data, and thus my position is absolutely established to and beyond the eighty-eighth parallel. This leaves only about 100 miles of the disputed 460 miles to verify. Over this last 100 miles and about the pole I have reported an absence of land and life; a sea of highly colored moving ice, composed of large, smooth ice fields. Here and elsewhere I have reported winds, thermometric records, tidal action on the ice pack, physical conditions of the sea ice. These and all the minutest detail, down to the psychology of the men with me, are confirmed by parallel statements of Peary in his official narrative.

Rear Admiral W. S. Schley was one of the first to note that Peary's report was in reality a scientific duplicate of mine, and that by his parallel material my position was verified and proven. In the end of 1909, when it was popular to belittle and ridicule my work, Schley said his judgment was made upon his knowledge of Arctic conditions; that he had gone over both accounts carefully and that it would take more than an academic lever to change his mind. Again, a year later, Admiral Schley placed himself on record by the following letter:

1826 I STREET,
Washington, D. C., January 7, 1911.

DEAR DR. COOK: I thank you very much for your kind letter, and I assure you that I have never varied in the belief that you and Civil Engineer Peary reached the pole. After reading the published accounts daily and critically of both claimants, I was forced to the conclusion from their striking similarity that each of you was the eyewitness of the other's success.

Without collusion it would have been impossible to have written accounts so similar, and yet in view of the ungracious controversy that has occurred since, that view—collusion—would be impossible to imagine.

While I have never believed that either of you got to within a pin point of the pole, I have steadfastly held that both got as near the goal as was possible to ascertain, considering the imperfections of the instruments used and the personal errors of individuals under circumstances so adverse to absolute accuracy.

Again, I have been broad enough in my views to believe that there was room enough at the pole for two, and never narrow enough to believe that only one man got there.

I believe that both are entitled to the honor of the achievement.

Very truly, yours,

W. S. SCHLEY.

This letter was sent out by the Associated Press on January 11, 1911. When one of Peary's experts read it in the papers he telephoned Admiral Schley and asked if he had written it. Admiral Schley answered, "Yes; what is the matter with it? Isn't it a good letter?"

Fifty other Arctic explorers and scientific experts have either in private letters or published statements expressed a similar opinion.

By a careful search through the published official records, Mr. E. C. Rost has plotted this parallel scientific data on a pictorial map. This map has been verified by S. J. Entrikin, second in command of the Peary expedition of 1894; Ralph L. Shainwald, explorer; Maurice Connell, of the Greely expedition; L. C. Bement, explorer; Capt. Edward A. Haven, master mariner and member of the Ziegler expedition; Dr. Middleton Smith, observer and naturalist of the Point Barrow expedition, and others.

This, with the detailed records as published in my narrative from original documents and photographs, I offer as proof to substantiate my claim as being the first to reach the North Pole.

And as further proof, let us note that my opponents do not argue on the merits of polar exploration but by a series of side issues, such as the distorted news reports on the Mount McKinley ascent, the yellow-journal "confessions," the false reports of the Danish verdict, and other press explosions. I am ready to go before a committee acting for the United States Government to present the scientific results of my polar effort, and also to meet one and all of the insinuations aimed to undermine the sincerity of my work.

FREDERICK A. COOK.

As Dr. Cook says, the only points in rebuttal of his claims, as above stated, are:

First. His disappearance at an early stage of the controversy.

Second. The Copenhagen verdict as given out by the press.

Third. The so-called "confession" as published in the now defunct Hampton's Magazine.

Fourth. His opponent's version of the Mount McKinley ascent.

I shall reply to these charges in the order presented:

First. At the time of his alleged "disappearance" Dr. Cook had not recuperated from his strenuous experience in the North nor from the physical strain occasioned by the arduous duties thrust upon him immediately after his arrival in civilization. He therefore, with his family, went away for a year's rest. When he was prepared to fight for his vindication he returned to this country about four years ago. As Dr. Cook expresses it, he came back at that time and "is still coming back."

Second. The Copenhagen verdict, rendered in December, 1909, was never truthfully presented to the public. The Danes, after due investigation, presented Dr. Cook with a gold medal and conferred upon him the degree of doctor of physics for the discovery of the North Pole. The Danes never said that Dr. Cook did not reach the North Pole. In verification of that statement is the fact that Salmonsen's Encyclopædia, published in Copenhagen, Denmark, in 1911, two years after the famous Copenhagen verdict was rendered, makes the unqualified statement that Dr. Cook arrived at the North Pole April 21, 1908.

Third. The much-heralded so-called "confession," which ran through four numbers of the now defunct Hampton's Magazine, was no confession of Cook's, but was purely a fabrication of Hampton's Magazine, as is clearly proven by the following sworn statement:

WASHINGTON, D. C., *July 1, 1914.*

To whom it may concern:

While employed as editorial stenographer by Hampton's Magazine it fell to my lot to take the story entitled "The Discovery of the North Pole" which ran in Hampton's in 1910. This story was published over the name of Robert E. Peary, was dictated to me by a woman (Mrs. Elsa Barker), and of it Mr. Peary wrote not one word. I still hold in my possession my stenographer's notebooks containing my original shorthand notes of this story.

Later in the year a member of this same enterprising, unscrupulous editorial staff manufactured and dictated to me a faked "statement" for the press, to which I was commanded to sign the name "Frederick A. Cook" by typewriter, but of which Dr. Cook had absolutely no knowledge until it appeared in the public press.

This faked "statement" (commonly called "the Cook confession") appeared simultaneously with the issue of Hampton's Magazine for January, 1911, which contained the first installment of what was known as "Dr. Cook's Own Story," in which, after Dr. Cook had O. K.'d the galley proofs, I helped to insert certain insanity and "confession" clauses.

The above is a voluntary statement made by me in the interests of justice, without the knowledge of Dr. Frederick A. Cook.

LILIAN E. KIEL.

CITY OF WASHINGTON, *District of Columbia, ss:*

Subscribed and sworn to before me this 1st day of July, 1914.

[SEAL.] EUSTACE C. OWEN,
Notary Public, District of Columbia.

4. THE MOUNT MCKINLEY CLIMB.

The opponents of Dr. Cook, falling back on the principle of the old proverb, "Falsus in uno, falsus in omnibus," tried to discredit Dr. Cook's discovery of the North Pole by attempting to disprove his ascent of Mount McKinley. The details of the various ascents of Mount McKinley are fully set forth in a masterly book by Edwin Swift Balch, the noted mountain climber and geographic historian, entitled "Mount McKinley and Mountain Climbers' Proofs"; and the same ascents have been critically analyzed in a brochure by E. C. Rost, which is indorsed by the leading explorers and mountain climbers. Dr. W. H. Axtell, of Bellingham, Wash., a man who has himself "mushed" over the mountain regions of the Northwest, writes of this analysis:

I have read the booklet (on Mount McKinley) with a great amount of interest and profit. It is, I think, one of the best articles of refutation of Dr. Cook's detractors I have read.

W. H. AXTELL.

I quote from this brochure: "Mount McKinley; Its Bearing on the Polar Controversy":

MOUNT MCKINLEY, ITS BEARING ON THE POLAR CONTROVERSY.

"During the last decade six attempts have been made to reach North America's highest peak—the summit of Mount McKinley. Of these the second, third, and sixth were successful.

"In 1903 Dr. Frederick A. Cook, with three companions, Ralph Shainwald, Robert Dunn, and Fred Printz, made his first and unsuccessful attempt.

"Three years later, in 1906, Dr. Cook organized and led a party of 10, including Belmore Browne and Herschel C. Parker, to the base of the mountain, but one after another of the party dropped out until only Dr. Cook and his packer, Edward Barrill, were left. These two men, with courage undaunted by apparently insurmountable obstacles, continued the trip, and finally succeeded, on September 16, 1906, in attaining the 'top of the Continent.' The weather was favorable, the temperature —16° F., the air at the top clear, and Dr. Cook secured a splendid photograph of the summit, with his companion, Barrill, holding the American flag on the highest point of the North American Continent, an altitude of 20,390 feet. Of this photograph more later.

"In 1910 the Lloyd expedition, comprising a party of three men, ascended the southern peak of the mountain, and not content with this achievement, immediately thereafter carried a flagstaff to a height of 20,000 feet on the northern peak, and planted it there so firmly that it was still plainly visible in 1913.

"The same year (1910) Belmore Browne and the pseudo Prof. Parker made a trip to Alaska for the nominal purpose of climbing Mount McKinley, but turned back at a height of 10,300 feet. In 1912 they made another attempt, which they claimed was almost successful.

"The latest expedition, that of Dr. Hudson Stuck, archdeacon of the Yukon, attained the summit on June 7, 1913, having followed a route which, when near the top, gradually merged with that which Dr. Cook and Barrill traversed seven years previously. Dr. Stuck's first narrative was published in Scribner's Magazine of November, 1913.

"The ascent of Mount McKinley, while an admittedly difficult feat, was inevitable sooner or later by some intrepid explorer. In 1906 and 1907 Dr. Frederick A. Cook was universally accepted as the first man to set foot on the 'top of the Continent,' as was shown by the following announcement, copied from page 714 of the National Geographic Magazine for December, 1906:

"December 15, annual banquet. The New Willard. The guests of the evening will include * * * Commander Robert E. Peary and Mrs. Peary; Mr. Morris K. Jesup, of New York, president of the Peary Arctic Club, and Mrs. Jesup; * * * Dr. Frederick A. Cook, who has been the first to ascend Mount McKinley."

The January, 1907, number of the National Geographic Magazine, giving a detailed account of the above-mentioned dinner,

contains the following remarks by Alexander Graham Bell, contributing editor of the National Geographic Magazine and member of the board of managers of the National Geographic Society:

I have been asked to say a few words about a man who must be known, by name at least, to all of us—Dr. Frederick A. Cook, president of the Explorers' Club, New York.

We have with us and are glad to welcome Commander Peary, of the Arctic regions, but in Dr. Cook we have one of the few Americans, if not the only American, who has explored both extremes of the world—the Arctic and the Antarctic regions. And now he has been to the top of the American continent, and therefore to the top of the world; and to-night I hope Dr. Frederick Cook will tell us something about Mount McKinley.

Doubtless to-day Dr. Frederick A. Cook would hold undisputed title of the first conqueror of this monarch of North American peaks had it not seemed desirable to his opponents in the polar controversy to cast a shadow of doubt on his mountaineering feat, in the hope to thereby discredit his discovery of the North Pole. To this end methods were employed which will not bear the searchlight of honest investigation.

A campaign of dishonor was inaugurated, the initial step in which was the perjured affidavit made by Edward Barrill, for which he was promised $25,000, and was paid $1,500 at the time the affidavit was made. For three years Barrill had proudly boasted to friends and strangers alike of how he and Dr. Cook had climbed Mount McKinley. But he was a man of moderate means, with a family, and needed money. However, he refused moderately large amounts; and it was not until the proffered bribe was increased to $25,000 that he finally consented to make the false affidavit. This valuable (?) document in the hands of the pro-Peary interests served as a newspaper sensation for a time, and no doubt had weight with that portion of the public which allows the press bureaus to think for it; but reasoning persons argued that an affidavit purchased from a self-confessed liar was worth but little, pro or con. Other steps must be taken. Other steps were taken.

Mr. Peary's press agent offered $3,000 and Lawyer J. M. Ashton, of Tacoma, Wash., a like amount toward financing an expedition to climb Mount McKinley in 1910. To this offer "Prof." H. C. Parker and Belmore Browne, both "quitters" from Dr. Cook's 1906 expedition, responded. J. A. MacDonald, who was in the foothills of Mount McKinley when Dr. Cook's party landed at the headwaters of the Yentna River, writes of this same "professor" as follows:

Dr. Parker should be the last one to say anything about mountain climbing or anything where it takes a man and pluck to accomplish results—good results—as he showed himself to be the rankest kind of a tenderfoot while in the foothills of Mount McKinley, and was the laughing stock of the country. Mount McKinley and the country around there was too rough for him. He got "cold feet" and started back for the States before he had even seen much of the country around there.

This choice combination went to Alaska and engaged in mining and hunting for a time in the foothills of Mount McKinley. When the season was well advanced they started up the northeast side of the mountain, but were turned back by rotten ice; after this futile attempt they ascended to a height of 10,300 feet on the south side and returned with a number of photographs and sketches, some of which were afterwards published by Belmore Browne in magazine articles and later in his book, The Conquest of Mount McKinley.

In Parker's account of the 1910 expedition, he claimed that—

The northeast ridge, the one used by Dr. Cook—north of Ruth Glacier—was absolutely insurmountable.

But in 1912 Messrs. Browne and Parker made yet another attempt to scale the mountain—again financed by the Peary interests—and this time "Prof." Parker found reason for a change of thought regarding the route to the top, for of this trip he said:

The northeast ridge is the only feasible ridge, and whoever goes up will follow in my footsteps.

Parker was advised to take this route by Engineer R. C. Bates, United States revenue inspector of mines, who in 1911, with a party of two, explored the mountain and selected the northeast ridge as the only feasible route to the top. He ascended to 11,000 feet and told the exploit to the Parker party, who took the same route and with an able guide ascended nearly to the summit. Of this trip the Associated Press said that its principal result was to show that the northeast ridge was climbable. In 1913 Hudson Stuck ascended by the Muldrow glacier and the northeast ridge.

Dr. Cook's judgment in his selection of the northeast ridge as his route to the top was thus vindicated by three different parties, among them the men who started out to discredit him.

* * * * * * *

In addition to various magazine articles by different explorers, three books have been published describing the ascent of Mount McKinley—one, "To the Top of the Continent," by Dr. Frederick A. Cook, relating the history of his first attempt and his later success; another by Belmore Browne, "The Conquest of Mount McKinley," which gives a brief outline of his trip with Dr. Cook in 1906, an account of his expedition with "Prof." Parker in 1910; also the story of his near ascent in 1912. The third and latest book is "The Ascent of Denali (Mount McKinley)," by Hudson Stuck, D. D., archdeacon of the Yukon.

The interest in Mr. Browne's book centers in Chapter X, which he calls "The End of the Polar Controversy," and Chapter XXVI, in which he relates the story of his last vain struggle to reach the actual summit.

In Chapter XXVI Mr. Browne describes in detail the ascent to an altitude of 19,300 feet, at which point they encountered a severe blizzard. Although they persevered for a time and managed to proceed a short distance higher, the blinding storm rendered it impossible for them to distinguish objects or even read the dials of their barometers, and they were eventually forced to turn back without reaching the summit. Mr. Browne says, on page 346: "* * * We had not stood on the top."

Belmore Browne asserts that Dr. Cook's photograph of the summit of Mount McKinley is not a photograph of the summit, but was taken in the foothills, 20 miles from McKinley's highest peak. He also asserts that his own picture of what he calls the "Fake Peak" was taken at the same spot as was Dr. Cook's photograph, and therefore he considers it a "conviction" of Dr. Cook.

In chapter 10, opposite page 122, Mr. Browne publishes a picture, underneath which appears the following legend:

"The author photographing the Fake Peak. Tucker standing where Barrill stood. This view including the author is used for a special reason. As short a time ago as March, 1913, a geographer accused the author of painting—by hand—the views of this peak, with which we convicted Dr. Cook! (Photo by H. C. Parker.)"

Mr. Browne does not take his readers into his confidence sufficiently to mention the name of the "geographer" who made the above accusation, because the name would stand for an authority beyond dispute. Even a 12-year-old boy, who has spent his holidays roaming about with a kodak, can see at a glance that the picture with which Mr. Browne claims he "convicted Dr. Cook(!)" is not a photograph per se, but a drawing made over a photograph. This picture certainly bears conviction of fraud—but not of Dr. Cook. On this point Mr. Browne is caught in his own trap and "convicted" by his own work. He is a clever artist, indeed, but not so clever that he can disguise a combination photograph-drawing-painting successfully enough to deceive even an amateur photographer, to say nothing of an expert professional. As a matter of fact, one need be neither amateur nor professional—just plain layman—to discern the glaring differences between Mr. Belmore Browne's composite picture of the so-called "Fake Peak" and Dr. Cook's bona fide photograph of the summit. Since Mr. Browne admits that "We had not stood on the top," and since he further admits that he was unable to see anything of the mountain higher than a point of 1,000 feet altitude below the summit, he is not in a position to say what the summit looks like or whether or not Dr. Cook's photograph is a true picture of the highest point.

Personally, in my work as a magazine writer and special correspondent for various publications, I have had much experience in photographic work at high altitudes; my work in this line has been highly approved by the heads of several departments of our Government, and some of it has been accepted for use in official publications; therefore I am competent to make the unqualified statement that Dr. Cook presents a photograph from nature, while Belmore Browne's picture is obviously faked.

Although Mr. Browne prints under his picture which he calls the "Fake Peak" the words, "Photo by H. C. Parker," his memory apparently slipped a cog at this point, for, on page 121, he writes:

* * * While we stood there, lost in thought of the dramatic side of our discovery, Prof. Parker (not Tucker) walked to the top of the rock at the point where Barrill had posed when Dr. Cook exposed the negative. His figure completed the picture.

The above is only one more proof of Mr. Browne's inaccurate and careless statements.

In his story of his 1912 expedition, on pages 340 and 341, Mr. Browne says:

Report has it that the Lloyd Mount McKinley party had reached this peak or one of its northern shoulders, and there raised a pole above a pile of rocks. * * * On the last days, close to the southern summit every rock and snow slope of that approach had come into the field of our powerful binoculars. We not only saw no sign of a flagpole, but it is our concerted opinion that the northern peak is more inaccessible than its higher southern sister.

A year later Archdeacon Stuck wrote in Scribner's Magazine for November, 1913:

All at once Walter cried out, "I see the flagstaff!" eagerly pointing to the rocky peak nearest the summit. * * * Whipping out the field glasses, one by one we all looked and all saw it distinctly standing out against the sky. Through the glasses it rose sturdy and strong, one side covered with crusted snow; and we were greatly rejoiced that we could carry down confirmation of the matter.

While Archdeacon Stuck in November, 1913, thus directly contradicted the statement of Belmore Browne, at the same time, in word and illustration, he corroborated Dr. Cook's account of his ascent to the summit, published six years earlier. This corroboration was doubly striking because it was unconscious and unintentional. Note the similarity in the following parallel columns:

On page 218 of "To the Top of the Continent" Dr. Cook says:

"As we dragged ourselves out of this icy ditch of terrors (in the northeast ridge) we were able to see that we had passed the barriers to the ascent. The slopes above were easy, safe, and connected, but the bigness of the mountain was more and more apparent as we rose above the clouds. The task enlarged with the ascent. * * * Soon after noon we swung from the Arete easterly to the glacier. The snow was hard and the slope such that but little step cutting was now necessary. Along the glacier to the gathering basin near the summit the prospective route rose in easy slants to our goal."

On page 225 Dr. Cook says:

"During the frequent breathing spells we examined the upper reaches of the mountain. We had seen the summit from various sides, but we were not prepared for the surprise of the great spread of surface. From below the apex appears like a single peak with gradual slopes. From the northern foothills we had previously discovered two distinct peaks. But now, from the upper slopes, we saw that there were several miniature ranges running up to two main peaks, about 2 miles apart. To the west a ridge with a saddle, to the east a similar ridge, with one main peak to the southeast. This peak was the highest point, and to it we aimed to take our weary spirits."

Of the final climb to the top Dr. Cook wrote on pages 230 and 231:

"The last few hundred feet of the ascent so reduced our physical powers that we dropped onto the snow, completely exhausted, gasping for breath. We puffed and puffed, and after a while the sickening thump under the left fifth rib became less noticeable. Breath came and went easier, and then the call of the top was again uppermost. * * * Just below the summit we dropped over an icy shelf on the verge of collapse. After a few moments we gathered breath and courage, and then for the last stage the life line tightened with a nervous pull. We edged up along a steep, snowy ridge and over the heaven-scraped granite to the top. At last, the soul-stirring task was crowned with victory; the top of the continent was under our feet."

On page 544 of Scribner's Magazine for November, 1913, Archdeacon Stuck says:

"With the exception of this ridge (the northeast ridge) Denali (Mount McKinley) is not a mountain that presents any special difficulties of a technical kind. Its difficulties lie in its remoteness, its size, the great distances of snow and ice its climbing must include the passage of. * * * But the northeast ridge in its present condition adds all of sensation and danger that any man could desire."

Note Archdeacon Stuck's narrative, page 548:

"At last the crest of the ridge was reached and we stood well above the two peaks which rise at the ends of the horseshoe. We had been aware for some time that we were above the north peak, for its apex had been like an index as we rose, and we had paused and noted the spot where we seemed level with it. But still there stretched ahead of us, and perhaps 100 feet above us, another small ridge with a pair of haycock summits. This is the real top of Denali (Mount McKinley). From below it merges indistinguishably, even on a clear day, with the crest of the horseshoe ridge, with which it is parallel, but it is not a part of it, but a culminating ridge beyond it."

Archdeacon Stuck's experience is given on pages 548 and 549 of Scribner's:

"The writer's shortness of breath became more and more distressing as he rose. * * * Yet a few moments' rest recovered him as completely as ever, to struggle on another 20 or 30 paces and to sink, gasping, on the snow again. * * * The last man on the rope, in his enthusiasm and excitement somewhat overpassing his narrow wind margin, had almost to be hauled up the few final feet and lost consciousness for a moment as he fell upon the floor of the little basin that occupies the summit."

The only deduction to be made from these two narratives is a confirmation of Dr. Cook's story, unwittingly, by Archdeacon Stuck.

The fact that Archdeacon Stuck failed to bring back with him the brass tube left by Dr. Cook proves nothing. In common with other glacial peaks, the summit of Mount McKinley is at times windswept, "heaven-scraped granite"; at other times covered with a great depth of snow. When Archdeacon Stuck made the ascent in June, seven years after Dr. Cook's conquest of the mountain in September, the summit was covered with snow. This alone, irrespective of the other natural changes which are constantly taking place in a glacial summit, would account for Archdeacon Stuck's failure to find Dr. Cook's records, even if he had looked for them, which apparently he did not do.

Although Stuck's first story of his ascent is fairly entertaining, some of his statements were rather sharply criticized by other writers and travelers. Under date of December 30, 1913, the noted geographical historian, Edwin Swift Balch, in an open letter to the New York Sun, said:

[From the New York Sun, Dec. 31, 1913.]

To the Editor of the Sun.

SIR: In the November Scribner's Magazine, page 552, Archdeacon Stuck makes the following statement:

"The English geographers prefer K2, the surveyor's designation of the second highest peak of the Himalayas, which the Duke of the Abruzzi climbed in 1909, the highest point ever reached by man."

This will undoubtedly be news to all mountain climbers and geographers, and especially to the Duke of the Abruzzi himself, to whom the archdeacon should cable at once the glad tidings.

EDWIN SWIFT BALCH.

To this Archdeacon Stuck replied:

[From the New York Sun, Jan. 3, 1914.]

To the Editor of the Sun.

SIR: I have waited more than two months for Mr. Edwin Swift Balch's letter, and am glad that he has at length discovered my mistake. I discovered it myself weeks before the article was published in Scribner's Magazine, but not in time to get the correction made. The annoying thing about it is that K2 and the Duke of the Abruzzi were a mere flourish of embellishment to show how much I knew about mountain climbing—dragged in by the scruff of their necks, so to speak. * * *

HUDSON STUCK,
Archdeacon of the Yukon.

So much for the magazine article.

In February, 1914, Archdeacon Stuck published his book, The Ascent of Denali (Mount McKinley), Charles Scribner's Sons, New York, in which he makes copious and elaborate additions to, as well as important omissions from, his original narrative, with apparently but one object in mind—to discredit Dr. Cook.

Why this sudden change of attitude? What influence—financial or otherwise—was brought to bear on the reverend gentleman to induce him to make such pathetically strenuous, though futile, efforts to discredit the straightforward, truthful account of one brother explorer, Dr. Cook, and bolster up the tottering structure of flimsy statements erected by another, Belmore Browne? I will not attempt to answer this inquiry, though the inference is plain. It must also be remembered that this pious missionary, in his ambition to prove himself the first to stand on the top of the continent, fails to credit Lloyd with his ascent.

The dedication of the book to Sir Martin Conway seems a little presumptuous on the part of the author, as there is small community of achievement between one of the world's greatest travelers, climbers, and explorers and the itinerant Alaskan preacher who was literally dragged to the culmination of his highest climb by his sturdy companions.

Stuck's carelessness in detail is plainly shown in his attempted Scriptural quotations. Although a "D. D." and an archdeacon, presumably familiar with his Bible, neither of the two quotations from the Psalms, on page 110, nor the one on page 115, nor the one from Matthew on page 13, preface, is correct. (See Psalm 148, verse 8; Psalm 65, verse 6; Psalm 50, verse 1; and Matthew 12, verse 34.)

On page 13, preface, Dr. Stuck says he is "no professed explorer or climber or 'scientist,' but a missionary, and of these matters an amateur only." If inaccurate in the quotation of the most familiar lines of the textbook of his chosen profession, what dependence can we place on his observations and conclusions in a field where he is admittedly a novice, but nevertheless considers himself competent to criticize and condemn an experienced explorer?

As already noted, Archdeacon Stuck in his magazine article directly contradicted Belmore Browne's statement relative to the flagstaff planted on the North Peak by the Lloyd party. In his book he attempts to reconcile this discrepancy by saying, on page 172:

It—the flagstaff—is, indeed, only just visible with the naked eye from certain points on the upper glacier and quite invisible at any lower or more distant point.

And again, on page 173:

It would never be seen with the naked eye save by those who were intently searching for it.

This friendly effort to put Messrs. Browne and Parker right on the subject fails of its purpose, however, for Mr. Browne says in his book, on pages 340 and 341, as previously quoted:

Every rock and snow slope of that approach had come into the field of our powerful binoculars. We * * * saw no sign of a flagpole—

And so forth.

Mr. Browne was certainly "intently searching for it," and not with "the naked eye." Try again, Brother Stuck.

Stuck reports that he was unable to find Parker's thermometer, which was left "in a crevice on the highest rock of the main ridge" (see p. 349 of "The Conquest of Mount McKinley," as quoted by Stuck), "in a crack on the west side of the last bowlder of the northeast ridge." Stuck accounts for

his failure to find this thermometer by saying, on page 120, when referring to his own record, which was left much lower than Parker's thermometer:

There would, however, have been little use in leaving it amid the bowlders where we hunted unsuccessfully for Prof. Parker's instrument.

Also, on page 119 he says:

Above we had not found any distinctive place in which a record could be deposited with the assurance that it would be found by anyone seeking it.

Is it not inconsistent to lay great stress on the fact that Dr. Cook's record, left in a brass tube a few feet below the summit, has not been found?

It is on pages 161 to 166, inclusive, however, that Archdeacon Stuck makes his most direct attack on Dr. Cook's veracity. If veracity is to be questioned, however, it is not that of Dr. Cook in his narrative, but that of Stuck in his criticism. It is irritating to the point of exasperation to find a man whose profession lends weight to his unsupported word guilty of such inaccuracies, and worse, in his attempt to deny the achievement of a fellow traveler. On page 165 Stuck says:

Dr. Cook talks about "the heaven-scraped granite of the top" and "the dazzling whiteness of the frosted granite blocks," and prints a photograph of the top showing granite slabs. There is no rock of any kind on the south (the higher) peak above 19,000 feet. The last 1,500 feet of the mountain is all permanent snow and ice.

On page 233 of "To the top of the Continent," Dr. Cook mentions as most impressive—

the curious low, dark sky, the dazzling brightness (not "whiteness") of the frosted granite blocks—

And so forth, and his photograph of the summit certainly shows rock.

Archdeacon Stuck's statement that "there is no rock of any kind above 19,000 feet" is especially interesting, for opposite page 102 of his book he shows a picture of "Denali's Wife from the summit of Denali," in which bare, "heaven-scraped" granite is plainly shown but a short distance from the summit of Denali (Mount McKinley).

Apparently a misstatement on the part of some one, but not Dr. Cook.

Again, Stuck says of Dr. Cook (p. 165):

In his account of the view from the summit he speaks of "the iceblink caused by the extensive glacial sheets north of the St. Elias group," which would surely be out of the range of any possible vision, but does not mention at all the master sight that bursts upon the eye when the summit is actually gained—the great mass of "Denali's Wife," or Mount Foraker, filling all the middle distance.

First. Dr. Cook does not, "in his account of the view from the summit," speak of the iceblink, and so forth. On page 229 of his book he writes:

* * * We started for the culminating peak (2,000 feet above). The sun soon rose far above the green lowland beyond Mount Hayes and moved toward the iceblink, caused by the extensive glacial sheets north of the St. Elias group.

(It is certainly difficult for Archdeacon Stuck to correctly quote anything.)

Second. In his description of the summit Dr. Cook says:

Fifty thousand square miles of our arctic wonderland was spread out under our enlarged horizon, but we could see it only in sections. Various trains of morning clouds screened the lowlands and entwined the lesser peaks.

On page 104 Stuck writes regarding the view from the summit:

Only once, perhaps, in any lifetime is such vision granted. Not often in the summertime does Denali completely unveil himself and dismiss the clouds from all the earth beneath.

And again on pages 107–108:

In all human probability I would never climb that mountain again, yet if I climbed it a score more times I would never be likely to repeat such vision. Commonly, only for a few hours at a time, never for more than a few days at a time, save in the dead of winter, when climbing is out of the question, does Denali completely unveil himself and dismiss the clouds from all the earth beneath him. * * * As the needle turns to the magnet, so the clouds find an irresistible attraction in this great mountain mass.

Does not a thoughtful person find in the above a logical reason for Dr. Cook's failure to report the "master sight" of Denali's Wife (Mount Foraker)?

But, as previously stated, Archdeacon Stuck's strongest criticism of Dr. Cook's picture of the summit is the fact that his photograph shows rock, and that he mentions "heaven-scraped granite" in his description, while Stuck claims there is no rock of any kind on the highest peak within 1,500 feet of the summit. Yet on page 102 of Stuck's book is a fine photogravure picture, taken from the summit by Stuck himself, which plainly shows "granite slabs."

Archdeacon Stuck attempts to discredit Dr. Cook's ascent of the mountain by claiming that Cook's picture of the summit shows rock where he—Stuck—claims none exists. How, then, does Stuck explain the "granite slabs" in his own picture of the summit?

And this is the man—himself not an American—who makes an impassioned appeal in his book for the removal of the name of an honored, martyred President of the United States from the highest mountain on the North American Continent, situated on United States territory, and the placing thereon of the name "Denali," which this itinerant circuit rider claims is the Indian name. As a matter of fact, the name "Denali" is unknown among the Alaskan Indians, except by one small tribe. Other tribes had other designations for it, but in 1896 the mountain was seen by W. A. Dickey and by him named Mount McKinley. Let the name of McKinley stand.

In Belmore Browne's book the picture called by him "The Fake Peak" is his "star" picture, and is considered by him his strongest argument against Dr. Cook. Note the errors in comparison made by Mr. Browne:

On page 122 of his book Belmore Browne states that he found much more snow than did Cook. Granting that, how does Mr. Browne explain the fact that in his own picture there is no snow at all over that part of the peak which in Dr. Cook's photograph shows a clear outline against the sky?

With a greater depth of snow, why are the rocks in Mr. Browne's picture as clear-cut as on a sunny summer day?

How does Mr. Browne explain the sharply cut dark outline between the snow and rock of his picture?

How does Mr. Browne explain the three sharp peaks on a level with the man's feet in his picture?

How does Mr. Browne explain the fact that the man in the foreground of his picture is apparently standing in the snow halfway to his knees, and yet no footprints are visible? How could a man walk to the place where he is shown in the picture without leaving footprints in the snow? In Dr. Cook's photograph the footprints are seen all along the line of the "hogback."

Mr. Browne claims that he photographed his picture from exactly the same point as did Cook; yet Browne is looking at the peak or summit in a direction almost at right angles to the line of the hogback, while Cook looks at the peak in a direction parallel with and along the line of the hogback; not across it.

On page 117 of his book Mr. Browne claims that Dr. Cook's camera was pointing upward. How does Mr. Browne explain the fact that Cook's photograph shows more below the line of footprints on the hogback than it does above that line—that is, a greater depth than elevation? In Dr. Cook's picture one looks down a greater distance than up; also one looks down into every footprint along the hogback. Thus the camera was not pointing upward, as Browne claims.

On page 346 of his book Mr. Browne says, "We had not stood on the top."

On page 342 he states that during the last 1,000 feet of their upward climb, owing to the raging blizzard which they encountered, they were unable to read the dials of their barometers or distinguish objects. Even the forms of their companions were but indistinct blurs.

With these statements in mind, on what authority does Mr. Browne assert that Dr. Cook's close-range, detailed photograph of the summit is not a view of the summit? Since Mr. Browne himself admits that he did not stand on the top and was unable to see anything within 1,000 feet of the top, how does he know what the top looks like?

Many other points of difference are easily detected, all of which expose Mr. Browne's weak, childish attempt to palm off his composite picture as a photograph from nature, while Dr. Cook's picture is unmistakably a photograph from nature.

Thus Belmore Brown and Archdeacon Hudson Stuck are both convicted, each on his principal picture by which he sought to convict an innocent man.

But what bearing has Mount McKinley on the so-called polar controversy?

Why does Belmore Browne entitle a chapter in his book "The end of the polar controversy"?

Because thousands of people assert that their only reason for disbelieving Dr. Cook's claim of polar discovery is the doubt that has been cast on his ascent of Mount McKinley; and if his veracity concerning his climb of Mount McKinley could be established beyond question they would unhesitatingly accept his claim to the discovery of the North Pole.

Until Dr. Cook's return from the North in 1909 his truthfulness, honor, scientific ability, and attainments were unquestioned; indeed, Robert E. Peary is quoted as publicly saying:

If anybody can discover the North Pole, Dr. Cook is that man.

Cook's fortitude and ability while with Peary on his northern trip when he discovered that Greenland was an island so gained

the respect and admiration of Peary that he made the above statement while on a lecture tour of the Southwest and at various other times. (See New York Herald, Sept. 9, 1909, p. 4.)

Not only verbally did Mr. Peary speak in the highest terms of Dr. Cook, but in his book, "Northward Over the Great Ice," he makes personal mention of Dr. Cook—who was official surgeon and ethnologist of the expedition—eighty-five times. On page 423, which is especially referred to in the index, he pays Dr. Cook the following tribute:

To Dr. Cook's care may be attributed the almost complete exemption of the party from even the mildest indispositions, and personally I owe much to his professional skill and unruffled patience and coolness in an emergency. In addition to his work in his especial ethnological field, in which he has obtained a large amount of most valuable material concerning a practically unstudied tribe, he was always helpful and an indefatigable worker.

Pages 114 to 121, inclusive, of the above-mentioned volume are devoted to Dr. Cook's report of special work among the Eskimos, and on page 438, among the recorded "results of the expedition," Mr. Peary includes the following:

The first complete and accurate information of the peculiar and isolated tribe of Arctic Highlanders by Dr. Cook.

Nor was Mr. Peary alone in his high opinion of Dr. Cook. Raoul Oliview, a member of the executive committee of the Belgian Antarctic Expedition of 1897, in an interview with a representative of the New York Times on September 18, 1909, expressed the opinion that Belgian scientists generally had full confidence in Dr. Cook, who won the esteem and admiration of the Belgian committee and the Belgian Antarctic Expedition, of which he was a member, by his quiet and unassuming demeanor, his integrity, and his determination.

Prior to Dr. Cook's return from the north in 1909 it was universally conceded that he was the first man to attain the summit of Mount McKinley. When his defeated rival in the race for the North Pole made his nefarious attempt to discredit Dr. Cook's Mount McKinley ascent, many were convinced that if Cook's climb of Mount McKinley could be proven beyond question, no further cause would exist to doubt his polar attainment. The crucial problem of Cook's detractors, therefore, was to effectually discredit his Mount McKinley ascent, a problem which they proceeded to meet by the most cruel, cowardly, and dastardly methods imaginable. The weapons, however, with which Dr. Cook's enemies attacked him have proved boomerangs that have only served to demolish their own claims; and since none of them, or any other, has produced one iota of proof that Dr. Cook did not reach the summit of Mount McKinley, but, on the contrary, other explorers have unwittingly and unwillingly corroborated his successful ascent, is it not time for the people of this country and for the Representatives of the people in the Congress of the United States to give due credit and recognition to Dr. Frederick A. Cook, who was actually the first man to conquer Mount McKinley's formidable height, and who, by every logical deduction of practical reasoning and by every scientific fact is proven to have been the first man to reach the North Pole?"

PHOTO BROMIDE ENLARGING CO.,
329 PLYMOUTH COURT,
Chicago, April 11, 1914.

Mr. E. C. ROST, *Chicago, Ill.*

DEAR SIR: After a careful examination of the picture opposite page 122 of Belmore Browne's book, Conquest of Mount McKinley, under which appears the following—

"The author photographing the Fake Peak. Tucker standing where Barrill stood. This view including the author is used for a special reason. As short a time ago as March, 1913, a geographer accused the author of painting (by hand) the views of this peak with which we convicted Dr. Cook"—

and also after a careful examination of the 8 by 10 enlargements made from said picture, I am absolutely convinced beyond doubt that the picture is a retouched reproduction, not made from nature.

Very truly, yours, J. A. BURGESS.

STATE OF ILLINOIS, *County of Cook, ss:*

J. A. Burgess, being first duly sworn, deposes and says that he has been a commercial photographer by profession for 15 years last past and can detect a photograph made from nature from one not made from nature; that the contents of the above letter signed by him are true.

J. A. BURGESS.

Subscribed and sworn to before me this 14th day of April, A. D. 1914.
[SEAL.] FRANK M. FAIRFIELD,
Notary Public.

To whomsoever this may concern:

Refer to Belmore Browne's book, "The Conquest of Mount McKinley," published by G. P. Putnam's Sons, New York and London, 1913. In Chapter X, headed "The End of the Polar Controversy," facing page 122, are two pictures, the upper one of which has the following title:

"The Author Photographing the Fake Peak. Tucker standing where Barrill stood. This view, including the author, is used for a special reason. As short a time ago as March, 1913, a geographer accused the author of painting (by hand) the views of this peak, with which he convicted Dr. Cook. Photo by H. C. Parker."

I will stake my professional reputation as an artist and a photographer on the statement that the picture referred to above, facing page 122 of Belmore Browne's book, is faked. It is a drawing made over a photograph.

In a letter written by H. C. Corbin, Adjutant General of the United States Army, to Maj. Gen. E. S. Otis, commanding Department Pacific, Manila, P. I., Gen. Corbin says:

"MAY 3, 1899.

"* * * The bearer comes to the Philippines for the purpose of making photographic views of all objects of interest, and will furnish this office with copies of all pictures made. We have already a very interesting collection of photographs of places of interest in camps, etc., in Cuba and Porto Rico. Those made by Mr. Rost excel those of any other artist. * * *

"Very truly, yours,

"(Signed) H. C. CORBIN,
"Adjutant General."

Another from the office of the Chief of Staff, Washington, D. C., says:

"Mr. E. C. ROST:

"I have sent to the Isthmian Canal Commission a commendatory letter, recommending you for the position of photographer * * *."

Still another from the Department of the Interior, United States Geological Survey, dated October 31, 1904:

"Mr. E. C. ROST:

"* * * I consider that you have been very successful in overcoming the enormous difficulties involved in making photographs in the tropics * * *.

"Yours, truly,

"GEORGE F. BECKER,
"Geologist in Charge."

A fourth from the National Museum, Smithsonian Institution, Washington, D. C.:

"Mr. E. C. ROST:

"* * * You should be able to obtain results of much scientific value. Of this I feel certain from the many pictures of your making which I have seen. * * *"

"Very respectfully, yours,

"RICHARD RATHBUN,
"Assistant Secretary in Charge, National Museum."

I also quote from the Annual Report of the Department of Public Instruction, State of New York, chapter on American Museum of Natural History, New York City, for 1901:

"The only way to secure the illustrations which our teachers required for lectures was for me to send one of our photographers, Mr. Ernest C. Rost, entirely around and across that continent (South America) * * *.

"ALBERT S. BICKMORE, A. M., Ph. D.,
"Department of Public Instruction,
"American Museum of Natural History, New York City."

Leslie's Weekly for March 31, 1900, contains an article signed "Ernest C. Rost," profusely illustrated with photographs of my personal making, and headed:

"An artist's strange experiences. The first visit that Guam had ever received from a photographer. The difficulties that Leslie's Weekly's photographer had to meet and overcome in getting photographs."

On the foregoing recommendations, and many others which I can furnish, I again make the statement that the picture referred to above is a drawing made over a photograph.

The above statement is not made merely for effect or bluff. I am willing to go into any court of proper jurisdiction and stand cross-examination on the subject.

This is a voluntary statement, made by me in the interests of truth and justice, without consultation with or the knowledge of Dr. Frederick A. Cook.

[NOTARY'S SEAL.] E. C. ROST.

By the most comprehensive method of examination the geographic historians have rendered a verdict for future generations.

So far as I can ascertain there does not exist a scientfic paper, authoritative book, or official report in the English or any other language which denies Dr. Cook's success in attaining the pole on scientific grounds. From a historic standpoint all that he claims for his polar attainment is thoroughly vindicated by many publications. Among these I refer to "The North Pole and Bradley Land," by Edwin Swift Balch.

In this connection it should be recalled that the work of our American Admiral Wilkes in the Antarctic came under the unfair criticism of rival interests, as has Dr. Cook's journey to the North Pole. For more than 50 years the name of Wilkes was taken from the map. Balch analyzed this injustice, fought the battle for Admiral Wilkes during 15 years against critics, including the Encyclopædia Britannica, and at last the Australian expedition rediscovered Wilkes Land, and Balch won against Sir Clements Markham and others in his vindication of Wilkes's discovery. He has worked out the study of the polar controversy in a similar manner.

If the data and description of the physical conditions at the North Pole furnished by Mr. Peary establish the fact that he reached the North Pole—and Congress decided that they do—then I insist that every fair-minded person must admit that since Dr. Cook gave those same data and those same descriptions to the world before Mr. Peary returned from the north—this well-known historical record establishes beyond question the fact that Dr. Cook also reached the North Pole, and therefore was the first man to "discover" the North Pole.

If Admiral Peary attained the pole, then it can not be denied but that he is the great discoverer of that point of the surface of the earth which has been unattainable since the creation of Father Adam unless some other man preceded him. Millions of American citizens believe and always will believe that Dr. Frederick A. Cook was the first man who ever stood at the

apex of the world and there unfurled the American flag. It therefore seems inconceivable to all fair-minded men and women that the admiral and his frantic supporters should not be intensely zealous in their efforts to procure an official investigation of Dr. Cook's remarkable exploration. If Dr. Cook is unable to prove to the American Congress that he attained the pole, then Peary would stand supreme as the most courageous and successful explorer since the landing of Christopher Columbus, and the cloud upon the title to his achievement would be forever removed.

If Dr. Cook did attain the pole, then I say that a generous and chivalrous nature would congratulate him and glory in the priority of his achievement.

The foundation rock and the fundamental principle of American greatness rests upon our adherence to and our belief in fair play and a square deal. Nothing else will reach the marrow of real men.

All of the power, prestige, cunning, slander, and technical devices of any man or set of men can not prevent this investigation. Until the claims of Dr. Cook are determined Peary will be called a hypocrite and Cook a fraud. These men are both great Americans, and they are great explorers. In the name of decency, in the name of honor, in the name of all that is glorious, let us settle this question with the light that is before us. Let us be worthy of the proud heritage of our fathers and an honor to posterity.

Woman Suffrage.

EXTENSION OF REMARKS

OF

HON. RICHARD WAYNE PARKER,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 12, 1915,

On the joint resolution (H. J. Res. 1) proposing an amendment to the Constitution of the United States extending the right of suffrage to women.

Mr. PARKER of New Jersey, under the leave of the House granted to extend his remarks, submits the following:

Mr. Speaker, I must oppose this resolution. I am a Representative from the State of New Jersey.

I was elected to support the Constitution of the United States and the reserved rights of the States which were guaranteed by that Constitution.

I was not elected to offer to other States the power to alter the very foundations of the government of my State nor to claim for any State any such power over other States.

It is not my duty to try to amend the Constitution except where amendment is necessary, and no such amendment is necessary when the States have full power over the subject.

It will not tend to good politics to inject such a question as this into our elections for years to come.

Nor do I think it fair to women who love and bless their homes and are fully occupied with home duties to put new political duties upon them and to force them into politics.

It is the foundation of the United States Constitution that every State reserves supreme control over its own affairs and over its own government. The electorate lies at the very foundation of that government, and to interfere with suffrage is to interfere with the State's fundamental management of its own affairs, which the Constitution solemnly agreed to guard.

The question of suffrage was wholly controlled by the State. Electors are chosen as the States shall please. Senators were formerly chosen by the legislature, and are now chosen, like Members of Congress, not by such voters as the United States shall ordain but by the voters that are by State law qualified to vote for the most numerous branch of the legislature.

It may fairly be said that it was not intended that this fundamental right of the States should ever be interfered with by any amendment of the Constitution. The State's control over suffrage is much more fundamental and essential to the independence of the State than the right of each State to equal representation in the Senate, which is guarded by a provision that it shall not be changed without the consent of every State.

As a matter of mere law, we can not, of course, deny that amendment may be made even in such a fundamental matter. Just after emancipation it seemed necessary to pass the fifteenth amendment. This was in a special situation existing at the close of the Civil War. But it is not necessary to make this amendment, because every State can adopt woman suffrage if it pleases, and by the United States Constitution amendments are to be proposed only when it appears necessary to amend the Constitution and not merely when it appears advisable.

As a believer in local self-government by the various States, I do not think that I was sent here as a Representative from New Jersey in order to give up any of her fundamental State rights or to take away any of the fundamental rights of another State. This Congress was elected on no such issue, and we have no moral right to surrender the rights of our respective States by submitting them to the votes of other States, except in a case of supreme necessity.

It is perhaps not advisable to argue the merits of woman suffrage. The question belongs to the legislature of my State rather than to Congress. It can be said, however, that woman suffrage involves tremendous changes. Are we to force women to go into matters outside of the home? Is there not enough to be done there and enough subjects to be discussed and settled in the family circle without introducing politics? Does home mean peace even with divergent views or must all such views be put into action? Will this be peace or a sword? Are husband and wife to be ordered to act separately in what concerns them both? If one or the other rules, is it for the good of the community that the ruler should control two votes instead of one? Will the unreasoning vote be sometimes doubled in this way and will the debate of a reasoning family often end in canceling its vote? Shall the voter be eligible to office? Shall the mother be asked to leave her home to fulfill public duties? Shall women fill executive positions and control great affairs of peace and war, in which they have had no experience? Shall the fascinations of sex introduce new influences into legislatures and interfere with the hard sense, practical consideration, and the give and take of hard knocks that seem essential to good law making? Do we wish our women to submit to these amenities of debate; do we wish to hear from them what chivalry forbids us to call in question?

These are questions which we need not answer here.

Why should we wish woman to be like man? It is her unlikeness to man that is her charm.

> Let her make herself her own
> To give or keep, to live and learn and be
> All that not harms distinctive womanhood.
> For woman is not undevelopt man,
> But diverse: could we make her as the man
> Sweet love were slain; his dearest bond is this:
> Not like to like, but like in difference.
> * * * * * * *
> Self-reverent each, and reverencing each,
> Distinct in individualities.
> * * * * * * *
> May these things be!

It is no answer to say that the influence of woman on politics will be beneficial. Her influence is now felt through all the Nation. Good women supervise schools, churches, libraries, hospitals, Red Cross, and everything that is good. Their influence is felt in politics, and is strong there. But they are not forced to be there.

This proposition forces all women to be in politics, including the large number—perhaps the majority—who do not wish to be in politics or in business or anywhere but in the home, where the good woman rules with absolute sway and where the cares of business and public life and bitterness and conflicts can never enter. It is there that man is hers and she is all her own, and reigns the queen of her own realm.

To quote some of the closing lines of the poet laureate's poem on this whole subject:

> I loved the woman; he that doth not lives
> A drowning life besotted in sweet self,
> Or pines in sad experience worse than death,
> Or keeps his winged affections clipt with crime;
> Yet was there one thro' whom I loved her, one
> Not learned, save in gracious household ways,
> Not perfect, nay, but full of tender wants,
> No angel, but a dearer being, all dipt
> In angel instincts, breathing paradise,
> Interpreter between the gods and men,
> Who looked all native to her place, and yet
> On tiptoe seem'd to touch upon a sphere
> Too gross to tread, and all male minds perforce
> Sway'd to her from their orbits, as they moved,
> And girdled her with music.

If this question were proper for us to handle, I would express my views fully. But it belongs properly to each State, and we are not called on to answer whether any benefits that might come by woman suffrage would be sufficient to make us favor such a change. We should certainly not attempt to interfere with the independence of our States by the passage of this resolution.

Safety First.

EXTENSION OF REMARKS
OF
HON. AUGUSTUS P. GARDNER,
OF MASSACHUSETTS,
IN THE HOUSE OF REPRESENTATIVES,
Friday, January 15, 1915.

Mr. GARDNER. Mr. Speaker, in accordance with the permission granted me by the House on January 15, I print the following two articles which I have recently published in the newspapers:

Chapter I. What is the matter with the Navy?
Chapter II. What ails the Army?

I. WHAT IS THE MATTER WITH THE NAVY?
ALWAYS SOME OTHER DAY.

"The rule is jam to-morrow and jam yesterday, but never jam to-day," said the white queen in "Through the Looking Glass."

The white queen did not happen to be talking of the American Navy, but she might just as well have been doing so.

Listen to the debates in Congress and you will be convinced that the pages of history furnish an impregnable defense for this country. If John Paul Jones could change a peaceful merchantman into the *Bonhomme Richard* and defeat the British man-of-war *Serapis*, why can not the like be done again? What man has done, man can do—such is the burden of the song of the gentlemen who believe that American genius and American freemen need no preparation for war. Is anyone such a dastard as to deny that our gallant Naval Militia admirals can on any pleasant afternoon forsake their counting houses for the quarterdeck and smash the British superdreadnaughts to smithereens with a fleet of converted Long Island Sound steamers? Perish the thought.

But if you are so skeptical as to be dubious lest the school history book and the Chautauqua lecture may not be adequate to repel the attacks of the effete monarchies of Europe and Asia, then peruse the hearings for the last 10 years before the congressional Committee on Naval Affairs and you may be comforted. A more complete docket of experiments about to be made and contracts shortly to be entered into and reports to be ordered in the near future and boards soon to be appointed can not be found outside the records of the circumlocution office about which Dickens wrote.

The American air man, Wright, was the first in the wide world to build an aeroplane which would actually fly, and ever since that time we have been experimenting and inspecting and reporting and contracting and considering—in fact, we have been doing everything except *building* aeroplanes. On July 1, 1914, France owned 1,400 aeroplanes, while Uncle Sam owned 23, most of them out of date. However, we recently ordered from abroad an up-to-date French aeroplane with two Salmson motors and an up-to-date German aeroplane with two Mercedes motors. We were in hopes that at last we were in a fair way to establish a little brood of air craft; but just then the European war broke out. Wicked foreigners commandeered our purchases; so here we are again just where we started.

We have as many as 12 submarines on the whole Atlantic coast, not counting those at Colon in the Canal Zone. To be sure, no one has accused the outfit of being any too new fangled; but, then, pray remember that we are still arguing about the best type with which to experiment. Meanwhile the modest proportion of 11 out of those aforementioned 12 divers were not in diving trim when Commander Stirling reported his fleet last November in obedience to the mobilization order.

Instead of the fleet of fast scout cruisers which the General Board of the Navy has told us that we need for our safety we have built just three, and they never were of much account, even when they were new. For about 10 years we have been considering and contemplating types for scouts; but before long it is confidently expected that a satisfactory conclusion will be reached.

Admiral Strauss in his annual report tells us that every American battleship in commission to-day is equipped with obsolete torpedoes, but that orders have been given and plants are being enlarged, and that in two years relief will be in sight.

DAWDLE, DAWDLE, DAWDLE.

So it goes dawdle, dawdle, dawdle all along the line from voter to President. The fact is that the whole Navy has got into a rut. It needs a good hard jolt to get it out of the rut, and then it needs to be trimmed up and enlarged until it is a strong weapon fit for the defense of a strong nation.

Now, do not blame it all on poor old Secretary Daniels. It is only partly his fault, even if he did deprive the seadogs of their grog and enter the sailormen in the lowest grade of the kindergarten.

Of course, Daniels with his super-peace ideas ought not to be Secretary of the Navy any more than a liquor dealer ought to be chairman of a temperance rally, but that is a small matter.

Neither is the blame to be imputed to the Navy bureau chiefs. There has not been one of them for years who at heart would not have been glad to speak right out in meeting and tell the country the whole truth as to our needs. But the country has hitherto been in no listening mood, and it would have been a bold bureau chief, indeed, who cared to face the molten lava from the tongues of the "little Navy" men. Let an officer speak up and he was damned up and down as a seeker for increased rank and power. Let a civilian speak up and he was muckraked from stem to stern as a minion of some armor-plate concern. Let an association or a league speak up and its membership was grilled to find out whether any one of them had a share of steel stock or copper stock or any other kind of stock in the family unto the third or fourth generation. Neither is the blame to be visited on Congress. If any one of us talked about national defencelessness, some one else talked about jackasses in solon's garbs.

There is just one party who ought to bear the blame, and that is the great American Republic, whose exact mirror we Congressmen are. Six months ago, if I cared to empty a room, all I need do was to discuss our national defenselessness. To-day, if I am anxious to fill a hall, I have but to say that our Army and Navy will be my topic. Six months ago I should have been a mighty poor politician if I had preached about our lack of national defense. To-day I should be a mighty poor politician if I were to drop the subject.

If I were a real hero, I should promise to keep up this crusade as long as the Lord might grant me grace. Not being a real hero, I content myself with a promise to keep on shouting so long as the press will grant me space.

A COMMISSION TO INQUIRE AND RECOMMEND.

One disease from which both our Army and Navy are suffering is mortmain, especially mortmain of ideas. Mortmain is an old English law term, which signified the "rule of a dead and gone hand." We ought to have this case of mortmain treated by an impartial commission of inquiry with some new blood and no arteriosclerosis of the intellect among the commissioners. What we need is a definite plan for the future. What sort of a plan for the national defense can we get out of four different full committees and four different subcommittees of the House and Senate? Yet it was those committees to which we were referred when a commission of inquiry into our defenselessness was refused us by the administration. Moreover, it does not do to forget that those committees, so far as the experienced members are concerned, are practically invited to inspect the results of their own handiwork.

Let us see how the inspection is faring. Just how far have they gone with this investigation? Both the House Committee on Military Affairs and the House Committee on Naval Affairs have now closed their hearings. Both committees confined themselves almost entirely to the examination of the graybeards of the service and to the particular graybeards whom the committees selected, at that. My requests for the summons of Admiral Wainwright, Admiral Winslow, Admiral Brownson, Gen. Wood, and Gen. Wotherspoon were absolutely and preemptorily refused.

A commission of inquiry, such as I advocated, would summon not only bureau chiefs in all their panoply but the hard-worked juniors and the experienced enlisted men as well. A commission of inquiry would allow the complainant to produce witnesses, a privilege which has been denied me by the committees to which I have referred.

SHORTAGE OF MEN PUT SHIPS OUT OF COMMISSION.

Assistant Secretary Roosevelt and Admiral Badger have testified that we are now 18,000 men short of the number required to man the serviceable part of our present fleet. This estimate takes no account of the crews requisite for vessels now building. The General Board of the Navy maintains that in case of war we should need from 30,000 to 50,000 additional trained men-of-warsmen, and there is no source of supply except about 8,000 naval militiamen.

On the other hand, Admiral Blue has testified that we are only 4,565 men short in case of war and that there is little doubt that this demand would be met by ex-service men now in civil life.

To this Admiral Fiske replies that it would take five years to get our Navy up to a state of efficiency necessary to fight a first-class enemy.

Let us see what all this juggling and counterjuggling of figures means. Does it mean that these admirals differ as to the number of men needed to man any particular vessel? Not a bit of it. It means that they differ as to how many vessels we need and how many vessels we have which are worth manning. The next time, gentle reader, that you hear about our fleet of 33 battleships ask how many of those battleships are in "cold storage" to-day with fragmentary crews or no crews at all. You will find that no less than 12 of them are launched on their way to that bourne whence no traveler returns. Naval authorities euphoniously term the three stages of a warship's road to oblivion as "in reserve," "in ordinary," and "out of commission." To be sure, those same naval authorities gravely inform us that our "cold-storage" fleet can be got ready for battle in from 3 to 12 months, but they are put to it to explain exactly what the resuscitated veterans would be good for when ready for battle. By the way, for fear that these 12 battleships should feel lonely, there are nearly 80 more of our fighting craft "out of commission" or "in ordinary" or "in reserve" to keep them company.

ONLY EIGHT FIGHTING FIRST-CLASS BATTLESHIPS COME NEXT MARCH.

Perhaps you are saying to yourselves, "Even if 12 battleships out of 33 are out of the game, that still leaves a mighty tidy fleet." But how about the other 21 battleships, which constitute our fighting force? Are they 100 percenters? Not by a long shot. Ten of them belong to the so-called first line and 11 of them belong to the so-called second line. Of the first liners, 2 ships, to wit, the *Michigan* and the *South Carolina*, are to be relegated to the second line on March 3, 1915. The honest fact is that on March 4, 1915, we shall have just 8 first-class battleships in full commission. Now, where is the common sense in prating about our 33 battleships?

If anyone tells you that our second line of battleships is a formidable part of our defense, just pin him down and find out how he makes that fact out. I have heard a Navy official testify that the second line would be of service if our first line was destroyed and the other fellow's first line was destroyed as well. So would a police force of octogenarians be of service if policemen were not called upon to handle any criminals under 80 years old. In private most naval officers regard our second liners as an admirable force wherewith to soothe the nerves of the timid in case of war. Perchance for that purpose they might be as useful as the venerable culverins hastily installed at sundry places on the Atlantic Coast at the outbreak of the Spanish War. It would be cheaper, however, for Uncle Sam, when he puts his war paint on, to conduct a daily clinic for the free administration of anesthetics.

Yet the General Board of the Navy says that we need 48 battleships under 20 years old for our defense. For our defense against what nation? For our defense against any nation except England, so we are told.

Ask any member of that General Board which he would rather have:

1. A fleet of 48 battleships ranging in age uniformly from 20 years old down to brand new; or

2. A fleet of 24 battleships, all of them less than 6 years old.

What the American people want, in my opinion, is a Navy up to date, even if it is necessary to enlarge the scrap heap to an extent which would make the bureau chiefs' hair curl if you could find any bureau chiefs with the requisite quantity of thatch for curling purposes.

THE CRUX OF THE PROBLEM.

Permit this ignoramus to make a suggestion:

First. Appoint an independent commission of level-headed men, and see to it that not too many of them are imbued with the idea that they know it all about the national defense.

Next, require that commission to summon the best naval experts we have and find out—

First. What war vessels do we need to make us safe against any nation on earth?

Second. How many of those vessels is it safe to put in "reserve"; that is to say, with skeleton crews?

Now, if it is decided that we are aiming too high in taking leave to ask for a Navy capable of swapping shots with John Bull, why then we can cut down the estimates accordingly; but, for heaven's sake, let us know the truth.

The problem as to the number of ships which we can safely keep in "reserve" depends very largely on two factors:

First. How long does it take to make a landlubber into a man-of-war's man?

Second. How many former men-of-war's men, adequately trained, can be depended on to return to the Navy in time of war?

On those two questions I should as lief have the opinion of a few intelligent junior officers and enlisted men as the opinion of all the naval experts who ever poured over an encyclopedia.

On the answers to the question as to the number and types of war vessels needed and on the answer to the question as to the proportion which can safely be kept in "reserve" with fragmentary crews, depends the preparation of any intelligent plan for the future. On the answers to those questions depends the number of officers and enlisted men which we ought to authorize. Do not forget that our Naval Academy can not be enlarged in a day without serious deterioration, and that the standard of the American man-of-war's man ought not to be lowered by the incorporation in our Naval Establishment of vast drafts of hastily trained recruits. On the answers to those questions depends our building program, and I hope that no one is so ignorant as to fail to realize that a very long time is required for warship construction. So the inquiry can not begin too soon.

MINOR DEFICIENCIES.

The shortage of ammunition to which Secretary Daniels testified before the Committee on Naval Affairs, the shortage of mines which was admitted by Admiral Fiske, the antiquity of the battleship torpedoes which Admiral Strauss pointed out, even the pitiable air-craft situation which Capt. Bristol revealed; all these facts are startling enough, but a determined General Staff of the Navy with plenty of funds could remedy them in a year or two. Not so the deficiencies in the ranks of our fighting vessels nor the deficiencies in the personnel which is to man them.

Dreadnaughts and crews can not be improvised when the war cloud appears above the horizon. Admiral Fiske states that it would take five years to get our Navy in a condition to fight an efficient foreign enemy. This opinion is not indorsed, perhaps, by the Secretary of the Navy, but it is most distinctly in line with what Navy men say when they express their private opinions of the privatest kind.

II. WHAT AILS THE ARMY?

There is still truth in the old, old story that it is the man behind the gun who counts. But for heaven's sake, how far behind the gun do you want the man to be? Must he be so far behind the gun that he has not even a bowing acquaintance with it until war breaks out? Yet that is where we stand to-day. Our Regular Army is an admirable handful. Our reserve army is a farce. A good deal over one-third of our militia absolutely struck their guns off their visiting lists during the whole of last year.

THE MEN.

We have only 30,000 Regulars available for a field army and 120,000 militiamen besides, so says the report of the Secretary of War. In other words, if every mother's son of them answers the call, we shall have 150,000 men to defend us while a new army is being made. That means that we could cover a battle front of 30 miles on the old Civil War reckoning of 5,000 men to a mile. Thirty miles is a long, long way from the distances which modern battle fronts cover.

How about it? Will all our militiamen turn up if they are summoned, and what will they do when the howitzer begins to howl? It is the correct thing for really patriotic orators to say that by nightfall every militiaman will be on hand, bubbling with heroism.

The fact is that this fiction of a trained citizenry rushing head over heels to arms in time of war is purely the creature of a deft imagination adroitly interpreted by a clever tongue. The strength of the trained-citizenry argument does not lie in its own soundness, but in the fact that most of us are politically estopped from saying what we really think about the militia, or National Guard, as it is called. Owing to the blessed circumstance that my congressional district is amazingly one-sided, I shall make bold to say what I really think. I believe that most men are actuated by the very best and most unselfish motives when they undertake the thankless duties of militia service. I believe that militiamen are keenly conscious of the fact that many persons scoff at them as "tin soldiers." At all events, I know that when I was a militiaman I was sensitively alive to the good-natured superciliousness with which my friends regarded what to them appeared to be my harmless vanity. I believe, moreover, that as the duties are made more arduous and more serious the militia steadily improves, although it becomes harder and harder to fill its ranks. On the other hand, I do not believe that over two-thirds of our militia would materialize in war time, and I do not think that dependence could be placed upon them until months of severe training and a weeding-out process had hardened them into military shape.

I can not forget that no less than 16 States of the Union fell short by greater or less amounts of furnishing their quotas of troops during the Spanish War. I can not forget that after the first burst of enthusiasm was over cities and towns offered bounties in order to fill their quotas of troops in the Civil War.

I can not forget that the National Government later on gave a large sum of money to each veteran who would reenlist, nor that both the North and the South were eventually obliged to resort to the hateful necessity of compelling men to join the army against their wills. All those things are none the less facts because they are unpopular facts and because it is the fashion to blink at them.

Neither can I shut my eyes to the report of the Chief of Staff on the record of the militia for the year ending June 30, 1914. Out of 120,000 militiamen, all told, 23,000 failed to present themselves for the annual inspection, 31,000 absented themselves from the annual encampment, and 44,000 never appeared on the rifle range from one year's end to the other.

WHEN THE CAPITOL WAS BURNED.

The President says that we have always found means to defend ourselves against attack, but the President is quite mistaken. "We shall take leave to be strong upon the seas in the future as in the past," says he in his annual message to Congress. That was the very same position which President Madison took at the time of the War of 1812. "We shall take leave," quoth Madison, and take leave he certainly did, bag and baggage, militia, statesmen, clerks, lobbyists, julep mixers, and all. Down into Virginia he went, leaving the Capitol and the White House to be burned by the victorious British.

Poor Dolly Madison! She saw it all, and she wrote her sister Anna these bitter lines:

Alas, I can descry only groups of military wandering in all directions, as if there was a lack of arms or of spirit to fight for their own firesides.

But there was no lack of spirit in those militiamen from Maryland and Pennsylvania and Virginia. Far from it. They had spirit enough and arms enough to defend their own firesides, but they did not know how to do it, because they had not been molded into an army. They were but a mob of citizenry under arms. The sad part of it all was that they had had two years in which to prepare, for these events did not occur until the summer of 1814. But the administration of that day had fostered the belief that the country had been misinformed and that the Government had not been negligent of the national defense. Hence it was that these poor militiamen were not ready when the day of trial came. A maddened Nation roared for a sacrifice and a sacrifice was vouchsafed unto them. Armstrong, the Secretary of War, was made the scapegoat, just as Alger was made the scapegoat for our unreadiness to fight Spain, and just as Garrison would be made the scapegoat to-morrow if we were to attempt unsuccessfully to put a large force of men into the field.

But the removal of Armstrong did not erase an exceedingly distressing passage from this Nation's history. That disastrous story harasses us to-day as it harassed our fathers before us. It will fulfill a useful purpose, perhaps, if it serves us as a bitter warning against being unprepared. On the coast of beautiful County Down, in Ireland, stands the picturesque town of Rosstrevor. For all its picturesqueness, I shall never visit that town and I shall never see the granite shaft which dominates its market place. That graceful monument was erected to the memory of Gen. Robert Ross, who burnt the Capitol at Washington, and its cost was defrayed by the officers of the Chesapeake force. I do not care to see it.

So much for our Regulars and our militia. There remains to be considered our reserve army of former enlisted men. We can dismiss it with a word, for President Wilson says that we are not to depend on a large reserve army. Perhaps it is just as well not to depend on it entirely, for at present it consists of but 16 men.

THE GUNS.

Come to think of it, I have got quite a distance away from the gun in following the man who ought to be behind it. If by the word "gun" a rifle is meant, then we have plenty to give to all comers; that is, at the outset of any war. If, however, when we say "gun" we mean cannon, then the first difficulty facing the man would be to find the gun to get behind.

Nine weeks ago, Maj. Gen. W. W. Wotherspoon, Chief of Staff and virtually head of the United States Army, made his annual report to the Secretary of War. If Gen. Wotherspoon had never done anything in life except write page 12 of his report, he would deserve the thanks of the Nation for that superb act of courage alone. I know of nothing of the sort which approaches it except the courage of Admiral Fiske when last month he testified to the condition of our Navy. Perhaps I ought to include in the same category the fearlessness of Capt. HOBSON, who for years has stood the gibes of his colleagues and faced the ridicule of the press while he thundered in the ears of an unattentive public the sad story of the dwarfing of our Navy's normal growth.

But to return to page 12 of Gen. Wotherspoon's report. He tells us that before a war breaks out we must accumulate rifles, cartridges, field artillery, and field-artillery ammunition. He tells us how much we ought to have and how much is actually on hand or in sight. Here is the table:

Chief of Staff's report, Nov. 15, 1914 (p. 12).

	Munitions required as a reserve in anticipation of war.	Munitions on hand or in process of manufacture.
Rifles	642,541	698,374
Rifle cartridges	645,000,000	241,000,000
Field guns (exclusive of giant guns)	2,834	852
Field gun ammunition, rounds	11,790,850	580,098

So you see that we are short 400,000,000 rifle cartridges, 11,000,000 rounds of artillery ammunition, and 2,000 field guns, if Gen. Wotherspoon's judgment is sound.

Of course, I am not an expert in these matters, but 580,000 rounds of field artillery ammunition seems rather inadequate as a reserve in the light of Gen. Wood's testimony that Russia shot away 250,000 rounds against the Japanese in the Battle of Mukden alone; yet 580,098 rounds is all we have on hand. I am told that Lieut. Hunsaker's report, lately sent over from France to the War Department, tells of a French cannon firing 500 shots in a day. Of course, that must be an extreme case. But cut the figure in half and you will find that 1,000 such guns would shoot away in two days all the artillery ammunition which we have now plus all which we shall manufacture up to July 1. By the way, Russia had 1,204 guns engaged at Mukden and Japan had 922 guns extending over the same front, so 1,000 guns is not an imaginative figure. I do not know whether Gen. Wotherspoon's estimate of 2,834 field guns is excessive or not. The testimony before the fortifications committee in 1913 showed that Russia at that time had 6,000 field guns, while Germany had 5,000 field guns.

The horrid significance of the whole business lies in the fact that it takes so long to make these munitions of war, even with unlimited appropriations. The good Lord knows that we never shall have unlimited appropriations for public undertakings in defense of our Nation so long as we need unlimited appropriations for public buildings in defense of our seats in Congress.

SLOW WORK MAKING GUNS AND AMMUNITION.

Last year and this year the Committee on Military Affairs took up the question of the length of time required to make munitions of war. The following facts stand out impressively: Working three shifts night and day, all the factories in this country, Government and private as well, can turn out in the first six months after war is declared but 400,000 rounds of artillery ammunition, or only 150,000 more rounds than Russia shot away in a single battle. They can make about 1,600 rounds per day, or enough to keep 8 guns going under an ordinary battle condition of 200 shots per day. In one year all Government and private factories put together can turn out 500 field guns, or one-quarter of our shortage, as Gen. Wotherspoon estimates it.

FRIEND HAY'S TABLES.

My friend HAY, chairman of the Committee on Military Affairs, publishes a table of our requirements in the way of munitions of war which differs vastly from Gen. Wotherspoon's table. Three times I have publicly asked Chairman HAY to summon Gen. Wotherspoon and put him through his paces for his temerity in ignorantly setting up his opinions against a Congressman's. The first time, the good chairman pointed out that the general had gone on the retired list a few days ago; the second time, he invited my attention to the fact that the hearings before his committee were closed; and the third time, he told me that it was no use summoning Gen. Wotherspoon, because he knew all about his ideas already.

Incidentally my efforts to secure the summons of Maj. Gen. Leonard Wood have been equally unsuccessful. Yet, Gen. Wood is not on the retired list. He preceded Gen. Wotherspoon as Chief of Staff, and he now commands the Department of the East.

As to Chairman HAY'S tables, I note, for instance, that he estimates 200,000,000 cartridges as a sufficient equipment for a field army of 460,000 men. That estimate is just one-third of the estimate made by the General Staff of the Army for that identical number of men. It is true that 200,000,000 cartridges will equip the machine guns and will fill the men's belts and will suffice for the combat train and the first ammunition train, but 400,000,000 additional cartridges are needed for the advance basis and the general bases. At least, the General Staff says so. However, Gen. Crozier, the star witness for the defense,

coincides with Chairman HAY on this point. It is fair to admit that the general was frank enough to admit that Army men do not agree with him.

WHY NOT A FEW TITANIC GUNS FOR US?

But where are all the giant guns which we progressive Americans ought to have? How are we off for these wonderful implements of warfare with which other nations have been arming themselves? We still are shaking hands with ourselves over our biggest gun, the 6-inch howitzer, and doubting those newspaper stories about the big field guns in Europe.

Tradition hath it that after the Battle of Crecy a board of French generals was called together to report on the new-fangled weapons called cannon which England had used in the fight. After profound cogitation, the generals decided that no dependence whatever could be placed in gunpowder and that cannon could be useful only under exceptional circumstances never likely to occur again. By a unanimous vote, so the story runs, they reported to their ruler that the trusty manganel and the stout catapult would triumph in the future as in the past. If anyone wishes to know the moral of this tale, let him inquire of our ordnance experts. It may be that we have no need of guns with greater diameters than 6 inches. Still Germany's 16½-inch howitzers and Austria's 12½-inch guns seem to be fairly serviceable in battering to bits anything from an impregnable fortress or a venerable cathedral down to a covered trench. Sir John French—foolishly, perhaps—seems to place some reliance in his 9½-inch thunderers. We smile at their puerile performances and continue to estimate and plan and report and consider and congratulate ourselves that we have the tidiest little 3-inch field guns which can be made, even if we are a little bit slow in rushing into the making of big ordnance. Let those foreigners waste their money on perfecting submarines and aeroplanes, Zeppelins and howitzers. We propose to keep our money in our pockets. That is the way to talk if you want to catch the votes. Let us waitfully watch and then proceed to reap the benefits of the foreigner's experiments without costing us a cent. All of which is vastly crafty, no doubt, provided no foreigner starts to experiment on us.

THE DOWNY DOVE.

Oh, well, what's the odds, since the apostles of pudginess tell us that they are going to put an end to wars by the brotherhood of man. In the sweet bye and bye, perhaps, when we have abandoned the Monroe doctrine and when the Californian intermarries with the Chinaman and the Mississippian intermarries with the negro. Until that day is at hand, do not forget the parable of the foolish virgins, who had no oil in their lamps when the fateful moment came.

Red River Improvement.

EXTENSION OF REMARKS

OF

HON. WILLIAM S. GOODWIN,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 16, 1915,

On the bill (H. R. 20189) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. GOODWIN of Arkansas. Mr. Speaker, I had intended to offer an amendment to provide funds for the further improvement of Red River, Arkansas and Louisiana, had not the present amendment been submitted by my colleagues from the State of Louisiana, who have considerable more mileage along this stream in their districts than I have in mine. I had intended, however, to ask this House to make the sum $380,000 instead of the sum named in this amendment pending.

The stream has been included in the provisions for rivers and harbors made by Congress since 1828. Red River was originally navigable to within the vicinity of Shreveport, La., near which place it was filled with what was known as the "Great Raft," completely filling the bed of the river for a distance of more than 90 miles. The Government first undertook the removal of this raft in 1828, and the work was prosecuted intermittently until the outbreak of the Civil War. At times as much as 15 years would elapse between appropriations. Much of the raft removed was permitted to reaccumulate, requiring much extra work and expense. According to the reports of the engineers, there has been endless duplication of work on account of small amounts that have been available from time to time. During the early period of work on this stream it was being extensively used by the Federal Government for the transportation of the Indians from the southeastern States to the Indian Territory selected for them in the West.

The Great Raft was finally broken up, removed, or new channels made, until the upper and lower stretches were united and continuous navigation made possible from the mouth of the Wichita River, of Texas, to the Gulf of Mexico.

In 1891 Capt. Willard, of the Engineer Corps, made a report on that part of the stream embraced in this item we have under consideration, from Fulton, Ark., to the mouth, and recommended that the improvement of the stream be undertaken by the Government along certain lines. In the rivers and harbors appropriation act of 1892 Congress adopted the plan as outlined in Capt. Willard's reports in the following language:

Improving Red River, Ark. and La., from Fulton, Ark., to Atchafalaya River: Continuing improvement according to plan of Capt. J. H. Willard, Corps of Engineers, United States Army—

And so forth.

The next rivers and harbors act, in 1894, contained the identical language, and this plan of Capt. Willard is the present project under which the Government is operating—when it operates.

In order that we may see just what the difference is between the present, or Willard, plan and the proposed, or Bixby, plan, I submit herewith the two in parallel columns:

FOR THE IMPROVEMENT OF RED RIVER.

PRESENT, OR WILLARD, PLAN.	PROPOSED, OR BIXBY, PLAN.
1. The systematic clearing of the banks for some distance back far beyond the limits of this district.	The continuation of improvement along the lines of the existing project.
2. An efficient snag-boat service for general work, patrolling the river, preventing jams, removing logs and snags from the channel and banks, and dredging towheads and obstinate shoals.	(See first paragraph.)
3. Extending the survey to embrace the whole valley.	The protection of the river banks so fast and so far as the landed interests shall build satisfactory levees.
4. The construction of a system of substantial levees to restrain the greatest flood, either alone or in partnership with riparian States.	The completion of the system of levees in cooperation with riparian States and local levee boards.
5. Closing gradually every outlet through which the main streams are depleted at various stages above low water.	(See first paragraph.)
6. Fixing caving banks to confine the main stream to the selected channel.	Revetment of banks to prevent cut-offs and protect important bends.
7. To exercise a watchful care from first to last to prevent injury to the regimen of the streams by cut-offs or outlets and to keep the building of bridges within reasonable bounds.	(See paragraph above.)
(No estimate of cost for completion can be given. See Report of Engineers, 1914, vol. 2, p. 867.)	The bank and bed improvement up to a total estimated cost of $6,020,000 for first construction work and of $165,000 for annual maintenance, provided local interests shall provide for the construction and cost of proper levees—estimated at $4,548,000—acceptable to the Engineer Department; the work of bank protection to accompany closely that of the corresponding levee construction in such way as to prevent undermining of levees when once properly built; these estimates being based upon a first appropriation by the United States of $270,000 for revetment and dredging plants, and $110,000 for the first year's clearing, dredging, diking, and revetting work within the banks and bed, and from $165,000 to $600,000 yearly thereafter in proportion as the State or other local levee work progresses, with a view to completion in 12 years.
(Estimated annual cost maintenance, expended principally for snagging operations in bed, $100,000.)	

Thus you will see that under the present project we are practically accomplishing nothing, and it is a well-known fact in our section that steamboats are and have been tied up on the river because the snags and obstructions prevent navigation except at great hazards. The cost of the present project is indefinite and indeterminable and only attempted in part, and in no wise accomplishes the object for which the improvement was undertaken.

The proposed project differs from the present in two essential details, namely, first, a definite time and cost limit, and, second, the cooperation of the riparian States and levee boards to the extent of about $4,548,000.

The development of the system of levees considered of primary importance by all authorities for the proper improvement of

this stream is taking place at a far more rapid rate than anyone has dared even dream was possible, and, as I have said, more than $1,175,000 has been expended within my State alone in the first construction of levees, to say nothing of what has been expended for rebuilding, repairing, and strengthening those already constructed, nor of other considerable sums spent in paying interest on bond issues and other outstanding obligations for the maintenance of these levees. The expenditures of State and local levee boards in Louisiana and in my State immediately north of the stretch of river under consideration has been enormous. Doubtless the expenditures within the State of Louisiana has been several million dollars, and the sum total expended by levee boards and districts along the river from Fulton to its mouth since the survey upon which Gen. Bixby based his recommendations will probably exceed already the sum it was estimated would be required of them.

The circumstances and difficulties under which the local boards and districts are compelled to carry on this work of levee building can not be appreciated by those who do not make a special study of levee building on streams of this character. The people do not wish the Government to construct the levees for the protection of their lands. They are willing and anxious and are rapidly constructing the levees at their own cost. The engineers admit that no permanent improvement of the stream for navigation can be accomplished until the system of levees is constructed. The riparian States and districts are constructing the levees. What they want is that the Government cooperate with them in the location of the levees and undertake to keep the river from undermining them when they are properly constructed as located. They are willing to abide by the judgment and decision of the War Department as to the place, size, and character of levees; but when the levees are thus constructed at their expense they wish and have a right to expect the Government to keep the river away from the levees by preventing caving banks, cut-offs, and the like, and by taking other proper care of the channel and bed of the stream.

Mr. Speaker, the present project contemplated doing all these things, and the recommendations of Gen. Bixby merely makes more specific how the most essential details are to be carried out, substituting a general, comprehensive, systematic plan for cooperating with our people, who are anxious and willing to meet the Government more than halfway.

River and Harbor Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. GEORGE WHITE,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 19, 1915,

On the bill (H. R. 20189) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. WHITE. Mr. Speaker, I am not unmindful that we are approaching the hour of midnight, after 11 hours' continuous discussion of the pending rivers and harbors bill; and inasmuch as a point of order has been reserved on my amendment, I will speak briefly with reference to the conditions out of which have grown the demand for governmental aid relative to flood control.

The verbiage of the amendment follows the recommendations of the Secretary of War as reported in House Document No. 914. The recommendations of the Secretary followed the disastrous floods of 1913. I am sure the membership of the House recalls the great loss of life and property resulting from those floods in the spring of 1913.

The subject of flood protection and flood prevention is one of great national import, and I feel that it is our duty to take some step toward ameliorating conditions in the most afflicted districts in the various parts of the United States without delay.

Speaking to the point of order raised by the gentleman from Illinois and the gentleman from Texas against the amendment, I submit that the interests of navigation and the direct connection of flood with governmental work on the river puts the amendment well within the jurisdiction of the Committee on Rivers and Harbors, and therefore, Mr. Speaker, the point of order should be overruled. The people of the Ohio Valley and its tributaries are asking—yes, demanding—that that most efficient arm of the Government service, the Army Engineers, give their attention to the study of the conditions with a view of bringing about economical and efficient cooperation on the part of local interests. From Pittsburgh down the Ohio River the municipalities and communities have contributed their funds and time in an effort to work out some practical plans for relief from the almost annual losses by reason of floods. The citizens of Pittsburgh have contributed some $80,000 and have employed competent engineers to make surveys and recommendations as to plans for flood protection. Will Congress refuse to allow an authorization for the Federal Government to lend its aid in unifying and guiding the different reports that have already been made?

If this amendment be adopted, the Government will do for the citizens of my district and the citizens affected by the flood conditions in the Ohio Valley and its tributaries the same thing that the Government has repeatedly done in appropriating millions of dollars for flood prevention for citizens who live along the lower Mississippi. The people of my district are asking the question, and I am representing them on the floor of this House, as to why it is that the Committee on Rivers and Harbors has jurisdiction over flood prevention and control with reference to the banks of the Mississippi River, into which the Ohio River flows, and at the same time claims to have no jurisdiction over the banks and territory adjacent to the Ohio River and its tributaries. Year after year Congress makes appropriation for levees on the Mississippi River. It is true that the language of the bill does not mention flood control, but the gentleman from Mississippi [Mr. HUMPHREYS], a member of the Committee on Rivers and Harbors, in his speech with reference to the levee appropriation, made practically no mention of navigation and dwelt entirely on the protection from flood afforded by the levees. In fact, the chart he presented to the House showed plainly the vast area so affected.

I was glad of the opportunity of supporting the appropriation for the lower Mississippi, but I believe the Members from the districts surrounding the Ohio and its tributaries are also justified in asking the Members from districts afforded relief by the levees to reciprocate by supporting this amendment, carrying, as it does, a few thousand dollars for a preliminary survey.

The gentleman from Mississippi called the attention of the House to a significant statement printed in large letters at the bottom of a chart in these words: "The process in which the country above is relieved is the process by which the country below is ruined." I call the attention of the gentleman to the fact that the country above, which is the country affected by my amendment, is not relieved and is suffering almost annually from flood conditions.

It is possible that no practical plans can be worked out by the Army engineers, but we feel that Congress should at least authorize them to study and collect additional data in the way of rainfall statistics, gauging of streams, and special maps of drainage areas that must be obtained before specific plans can even be considered. The Secretary of War states that some of the data can be obtained from the local offices of the United States Weather Bureau, the United States Geological Survey, and of the citizens, counties, and States, and so forth, in the areas involved, under the system which has existed in the past, but that a large part of it can best be obtained by field parties organized in each of the engineer districts of the area under consideration—Pittsburgh, Wheeling, first Cincinnati, second Cincinnati, and Louisville. The cost involved in collecting these data and preparing plans will be relatively small in comparison with the benefit hoped to be derived, and this same method can readily be applied, if necessary, to the drainage area of all rivers throughout the country which are subject to disastrous floods. I believe I am warranted in stating that there is no subject approaching in importance to the people of the flooded districts as this question of flood control, and I appeal to my colleagues to-night to approve the amendment.

Mr. Speaker, to sustain the point of order raised against the amendment will result in practically demonstrating to our people that Congress is not interested in solving the problems that are involved in the navigable streams mentioned in the amendment.

There is a general belief that the fixed type of dam increases materially the frequency of floods. I am not advised as to the merit of the contention, but is not Congress charged with the responsibility of answering the question, and should not the Rivers and Harbors Committee have jurisdiction over the authorization of a survey looking to definite settlement of the question? I trust, Mr. Speaker, that you will overrule the point of order and give the membership of the House an opportunity to express an opinion upon the merits of the question involved in my amendment. [Applause.]

Speech of David Clark on Child Labor.

EXTENSION OF REMARKS

OF

HON. EDWIN Y. WEBB,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 23, 1915.

Mr. WEBB. Mr. Speaker, I desire to insert in the RECORD the speech of Mr. David Clark, editor of the Southern Textile Bulletin, published at Charlotte, N. C., before the National Child Labor Conference, recently held in the city of Washington.

The speech is as follows:

A DEMAND FOR A SQUARE DEAL.

I come before you to-day to make a plea for a square deal for the cotton manufacturers of the South.

I do not come at the instance of the cotton manufacturers, in fact, up to the time of accepting your invitation no one of them knew that I contemplated addressing you, and even now only four or five of them are aware I am here.

I am editor and sole owner of the Southern Textile Bulletin, a journal that covers the textile industry of the South, and goes not only to the cotton-mill officials but to the superintendents, overseers, and other practical men in the mills.

Prior to entering journalism I was for eight years in the cotton-manufacturing business, beginning as an operative, and at one time or another filled practically every position in the cotton mill. For a considerable portion of the time I lived with mill people, ate with them, and I therefore know how they work and how they live.

The cotton manufacturers have no financial interest in my publication, either directly or indirectly, and I have never hesitated to take issue with them upon any matter where I consider them to be in the wrong.

I stand very close to the men in the mills, including the operatives, and I have my hand on the pulse of the industry. I know what they are thinking and what they are saying, and I am endeavoring through my journal to aid them not only in their practical but in their moral development and to put into their minds thoughts and ideas that will do much toward causing them to live clean and moral lives. Probably my greatest field of endeavor has been to promote good feeling and square dealing between the mill officials and the operatives, and I do not believe that any other industry in this country can to-day boast of as much good feeling, confidence, and cooperation between these two classes as exists in the textile industry of the South.

I have explained to you at length the position which I occupy and the work in which I am engaged in order that you may know that I have more than a theoretical knowledge of my subject, and I now wish to tell you where I stand upon the subject of child labor. I wish you to remember that I speak from practical knowledge and contact with the subject.

I have never advocated child labor and I have never believed that any child of less than 12 years of age should be allowed to work.

I do not believe that a girl under 14 years of age should be allowed to work, but I have never seen any evidence that a boy above 12 years of age was injured by cotton-mill work, except in so far as it prevented him from attending school, and wherever and whenever it is possible for a boy under 14 years of age to attend school, I believe that it should be illegal to employ him in a mill during the school term.

I do not believe that any woman under 18 years of age should be employed on night work, and in taking this position I take issue with many of our manufacturers.

This is, briefly, my position upon the so-called child-labor question; but at the same time I wish to say that I can show you strong, healthy men, many of them filling high positions in the mills, whose appearance will compare favorably with any of the gentlemen before me, who began work as cotton-mill doffer boys at 8 or 9 years of age, when there were no age restrictions.

I can show you strong, healthy women in the cotton-mill villages, mothers of large, healthy families, who began work as spinners at the early age of 8 or 9 years.

On the other hand, in spite of all the pictures that your organization has printed and all the statements that have been made, I have failed to note where you have shown one man or one woman whose health has been wrecked by early work.

There is a misunderstanding on the part of the public relative to the work that is being performed in the cotton mills by young boys and girls.

I have seen your statements about the "child at the loom," but it is an impossibility for a child to reach from the front of the loom to the place where the broken threads must be tied. Your representatives have seen small children playing around the looms operated by their parents or assisting those parents, but it was a misrepresentation to picture those children as running looms.

The young girls in the mills are employed almost exclusively at the spinning frames where it is their duty to watch the threads that break and "piece up" or replace them. When there are no broken threads they sit on the boxes at the ends of the frames and make occasional trips down the alleys. Their work is not continuous, and requires very little physical energy. It can not be compared to the endless, unceasing strain upon a girl at a sewing machine in one of your New York sweat shops.

When the bobbins on the spinning frames become full the young boys remove them from the spindles and put on empty bobbins. This is called doffing, and the boys are called doffers. Between doffs—that is, while the bobbins are filling up—the boys are at leisure and lay usually outside but near the mill door so that they can be called when needed.

Those of us who have had experience with doffer boys, with their infinite capacity for using their surplus energy for all manner of mischief, can hardly recognize them as the weaklings as painted by the members of your organization. If any of you have doubts upon this subject and wish to spend a lively and interesting two weeks, I will secure for you a position in charge of the doffer boys in a southern cotton mill, and if you retain your mental faculties at the end of that time you will paint a different picture of the doffer boy from that you have been accustomed to see. They are full-blooded American boys with health and energy and an infinite capacity for doing the things that they should not do, and, boy for boy, I believe that they can lick any other class of boys in this country.

The trouble with your organization is that your representatives do not present the true facts. They take exceptional cases and give them to the world as average and usual conditions. You tell about the millman violating the laws of his State, but your organization often violates a higher law than that of man, which says, "Thou shalt not bear false witness against thy neighbor."

I do not mean to give offense, but I am here to tell facts, and I do not believe that the donors and patrons of this organization intended that their money should be used to misrepresent conditions.

Speak of child labor in southern mills to the average man or woman, and immediately a mental picture arises of a girl of 4 or 5 years of age, ragged and exhausted with a heavy burden, and standing over her a brutal man with a whip. It is the picture that has been created in the minds of the public largely by the efforts of the National Child Labor Committee, and in creating that impression you have borne false witness against your neighbor.

I hold in my hand the editorial page of the latest number of the Good Housekeeping magazine. It contains an editorial intimating that children of 5 and 6 years of age are employed in the mills of North Carolina. On this page is a picture of a monument on which is written the word "Profit," and at the base of the monument lies the ragged figure of a child of not over 5 years of age.

Why did they illustrate this picture with a girl of 5? Why did they not put there the figure of a girl of 13 or 14 or 15 years?

I charge that it was done purposely to create in the minds of the public the idea that the North Carolina cotton manufacturers are employing children of that age, whereas the minimum age limit is 13 years, and only in rare cases and in violation of the law are children of fewer years being employed.

The picture was a violation of fact, and the man who produced it told an untruth as much as if he had used words.

I could cite many similar cases where a half truth has been told and the wrong impression created, and I can say honestly that I have never seen a statement issued by the National Child Labor Committee relative to the southern cotton mills that did not exaggerate conditions or contain half truths.

When your investigators come South they seem to be looking for the unusual, exceptional cases, and to have no idea of giving a square deal to the cotton manufacturers.

A mother, especially one who is working on the spoolers, where there is considerable space, often prefers to take her little

child in the mill and let it play around her rather than leave it with neighbors.

Where a family lives a considerable distance from the mill it is the custom to send the dinner pail to the mill by the young children and they usually reach the mill before stopping time. Such children are seen and, either through ignorance or intentionally, are represented as being employed.

There are, I am sorry to say, mills that violate the age-limit law, but the Southern States are essentially law abiding, and sooner or later every mill will be forced to comply with the legal requirements. The changes in such laws have been rapid in late years and it naturally requires time for mills, especially those that fought against the changes, to adjust themselves to the new conditions, but it will be done.

I do not think your organization has been granted any commission to enforce the laws of North Carolina, and, coming from States whose violations of laws, including those of child labor, are far in excess of those of my State, I say that you should clean up your own back yards before you attend to ours.

I do not wish to paint the condition of the southern cotton-mill operative as ideal. They work and they work hard, and their surroundings and lives are not all that could be desired.

However distasteful the idea of manual labor may be to those who live by their wits, we have not yet reached the state where most men do not have to earn their living by the sweat of their brows.

Many of you have read Thomas R. Dawley's book, The Child that Toiled Not. The cotton manufacturers of North Carolina purchased a considerable number of those books and distributed them, but I condemned them for their action.

Dawley's book contains a great deal of truth, but he selected the exceptional and unusual cases and it is not a true picture of the section which it is supposed to cover. Dawley painted the picture as some mill men wanted to see it, just as your representatives paint their pictures as they believe you want to see them.

It is a fact, however, that a majority of the people who have gone from the mountains or the small farms to the mills have immeasurably benefited their conditions, and it is also a fact that the child on the farm does harder and more injurious work and has less opportunity for enjoyment than the children in the mill.

I have never heard of your organization advocating age restrictions for the child on the farm, and it is openly charged that you are afraid of the political influence of the farmer.

Volume 4 of the 1910 United States census on occupation statistics gave the following for North Carolina as regards boys between 10 and 13 years of age:

Total engaged in gainful occupations	53,457
Engaged in agriculture	47,884
Hired out for farm and dairy work	7,560
In the cotton mills as bobbin boys, doffers, carriers, and spinners mainly	2,304

The figures for girls of these ages in North Carolina are even more striking:

Total engaged in gainful occupations	30,822
Engaged in agriculture	26,196
Hired out for farm and dairy-farm work	3,648
In the cotton mills as spinners, winders, spoolers, weavers, and knitting-mill operatives	2,319

These figures show that out of 84,279 children employed in gainful occupations only 4,623, or 1 out of 16, were employed in cotton mills.

If it is your Christian duty to strike the shackles from child labor, why devote all of your time to 1 and allow the other 15 to continue their labors?

Before closing I wish to say a few words relative to your proposed national child-labor law. The child-labor question is not a national one, and there being different conditions in different States, I believe that it is a question that should be regulated by the States.

The whisky question is a national one, because whisky can be carried or shipped from one State into another and there be used to debauch its citizens.

The fact that a boy of 13 works in North Carolina can in no way injure the citizens of New York or Massachusetts, and, plainly speaking, it is none of their business.

Because the citizens of North Carolina will not do your bidding you now seek to force your views upon them through the National Congress. North Carolina has always shown a regard for the welfare of her citizens, no matter how humble, and has been a leader in the enactment of laws for their moral uplift.

We have driven from our State the barroom with its insidious influence, the gambling halls and the dens of vice, and the observance of the Sabbath is rigidly enforced.

Most of you come from cities where the barrooms and the gambling dens hold full sway, where the dens of vice are filled to overflowing, and where theaters and places of amusement run full blast on Sunday.

Until you bring the moral stamina of your own States on a plane with North Carolina you can hardly claim the right to dictate the laws by which we shall be governed.

In conclusion, I wish to say that the cotton manufacturers of the South are entitled to a square deal, and I demand that your representatives cease misrepresenting conditions.

If you feel that the enforcement of our laws is your business and your duty, I wish to make to you a practical suggestion. When you find a case of employment of children under the legal age publish the name of the mill and that of the child and its parents. Such an act will cause the violation to cease, and is far better than telling the world that you know of such a case and intimating that it is usual.

I have not intended that this address should give offense, because I believe that most of those who are supporting or conducting your organization are Christian men and women, actuated by an honest desire to help humanity.

I have stated plainly the facts as I see them, and I thank you for your attention.

Federal Reserve Board.

EXTENSION OF REMARKS

OF

HON. CARTER GLASS,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 20, 1915.

Mr. GLASS. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD I include the following letter which I had occasion to write to Henry B. Joy in connection with the same matter referred to by the gentleman from Minnesota [Mr. LINDBERGH]:

HOUSE OF REPRESENTATIVES,
Washington, January 12, 1915.

Mr. HENRY B. JOY, *Detroit, Mich.*

DEAR SIR: I am to-day in receipt of your letter of January 7 addressed to Mr. F. A. Delano, vice governor of the Federal Reserve Board, at Washington, D. C., in which you call attention to an article said to have been printed in the Chicago Tribune, giving an alleged interview with me and with other Congressmen, which alleged interview you moderately characterize as "a lot of pure, unadulterated slush to stir up prejudice and trouble," and in connection with which you suggest that politicians of my type indulge in that sort of talk "because it pays."

It seems not to have occurred to you to inquire whether or not I gave an interview to the Chicago Tribune or made any comment, for publication or otherwise, upon the Lindbergh resolutions or upon matters appearing in the Chicago papers in reference to the conduct of the regional reserve bank of that district. You do not appear to have sufficiently appreciated the dignity of your own position as director of the Chicago Federal reserve bank, or the responsibility of my position as chairman of the Banking and Currency Committee of the House of Representatives, to have taken the precaution to be sure that you knew what you were talking about before making haste to engage in a wanton aspersion of public men.

Speaking for myself, I gave no interview to the Chicago Tribune, nor to any other newspaper, and have made no comment, for publication or otherwise, upon statements appearing in the public press concerning the administration of the Chicago regional bank. There is absolutely no excuse for any newspaper or person to undertake to represent my views upon the episodes to which your defamatory letter has reference.

I know nothing about the facts involved in the alleged maladministration of the Chicago regional reserve bank. I have not yet read the Lindbergh resolutions, but entertain a rather general prejudice against a sweeping investigation of a banking and currency system which has not been two months in operation. Nevertheless, the incident brings me firmly to the conclusion that if the other directors of the Chicago regional reserve bank are men of your temperament and your disregard of the ordinary amenities of public life, the sooner there is an investigation of the bank and a summary dismissal of its administrators the better it would be for the system. I shall unhesitatingly say to members of the Federal Reserve Board and to the Congress that, in my judgment, your letter to Mr. Delano clearly demonstrates your unfitness for the position which you occupy, and that your longer incumbency of it would be a distinct reproach and peril to the Federal reserve system; that is, if you are of sufficient consequence to impress your views upon the other members of the Chicago directorate.

Yours, very truly, CARTER GLASS.

Mr. Speaker, realizing that some significance might attach to anything that the chairman of the Banking and Currency Committee of the House of Representatives would say about the official action of the Federal Reserve Board or the operations of the Federal reserve banks, I have scrupulously refrained from making any comment upon newspaper reports affecting the management of Federal reserve banks or concerning any of the rulings of the Federal Reserve Board. In

my view, any criticism that I might desire to make in this respect should be made in a dignified way upon the floor of the House after a careful ascertainment of facts. So far am I from thinking that political influences should relate themselves to the management of the Federal Reserve System and such an utter distaste have I for bothering with patronage, that I have consistently declined importunate applications from my own and other States for letters of recommendation to the Federal Reserve Board and to regional banks. In view of these facts I resent the coarse imprecations of this Mr. Joy, who seems to have an itch for the very sort of notoriety that he pretends to disdain and deplore. The Federal Reserve System should no more be made the victim of official snobbery than of political demagogy; and while I agree with Mr. Joy that sensational newspaper criticism is calculated to harm the new banking system, it likewise is obvious that a sensational bank director can do the system infinitely more damage. Therefore, I venture to hope that not many of the regional reserve banks made the mistake of selecting men of Mr. Joy's type as their directors. I am rather astonished that the Chicago bank should have evinced such a lack of discrimination.

Immigration Bill.

EXTENSION OF REMARKS

OF

HON. JOHN L. BURNETT,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 15, 1915,

On the bill (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States.

Mr. BURNETT. Mr. Speaker, I desire briefly to answer some of the erroneous statements made by Congressmen and others in regard to the illiteracy test embraced in this bill.

The Washington papers a few days ago quoted Miss Jane Addams as saying in an interview with President Wilson a few days ago that the illiteracy test would keep out the aged parents of admissible aliens already here.

Nothing is further from the truth. The bill on this point reads as follows:

Provided, That any admissible alien or any alien heretofore or hereafter legally admitted, or any citizen of the United States, may bring in or send for his father or grandfather over 55 years of age, his wife, his mother, his grandmother, or his unmarried or widowed daughter, if otherwise admissible, whether such relative can read or not; and such relative shall be permitted to enter.

A Senator, speaking on this subject a few days ago, quotes from an address of President Wilson, which he says was sent out by the Democratic national committee as an assurance that this restrictive legislation would not be adopted. If that statement refers to a circular on the front page of which is President Wilson's picture, and which contains an address of President Wilson before a delegation of editors of newspapers published in foreign languages before his election, I state that I have seen the circular, and it bears no evidence that it was sent out by authority of any committee whatever. But the distinguished Senator stops short of quoting the entire address of our President. He must inadvertently have left out the following portion of the address:

I am speaking to you as also Americans with myself, and just as much American as myself, and if we all take the American point of view, namely, that we want American life kept to its standards, and that only the standards of American life shall be standards of restriction, then we are all upon a common ground, not of those who criticize immigration, but those who declare themselves Americans. I am not saying that I am wise enough out of hand to frame the legislation that will meet this idea. I am only saying that it is the ideal, and that is what we ought to hold ourselves to. * * * Of course, if the immigrants are allowed to come in uninstructed hosts and to stop at the ports where they enter and there to compete in an oversupplied labor market, there is going to be unhappiness; there is going to be deterioration; there is going to be everything that will be detrimental to the immigrant.

That, Mr. Speaker, is the crux of that address.

The illiteracy test will exclude the very ones who do not keep American life to its standards.

The assertion has been made recently that President Wilson gave preelection promises to veto any illiteracy test bill for restricting immigration in case of his election. No man who knows our President believes that he or any other man big enough to be President made any such statement. This was no party question, and no man big enough to be President would make any such promise or in any way pledge himself until he had seen the bill and given it thorough consideration.

Mr. Hilles, the secretary of the Republican national committee, sent out a statement before the last presidential election that Mr. Taft, if reelected, would veto the bill, and no one doubts that this statement helped to bring to Mr. Taft the most overwhelming defeat ever suffered by any nominee of a great party.

President Wilson, in his recent Indianapolis speech, did say:

There is not a single act of this present great Congress which has not been carried out in obedience to the public opinion of America, and the public opinion of America is not going to permit any body of men to go backward with regard to these great matters.

Applying that test to this bill, I will say that there is not a single act that has been passed by the present Congress that more fully represents public opinion than this one.

It has been agitated ever since 1896, and the great heart of the people has as the years have come and gone more and more cried out for its passage.

In 1897 Mr. Cleveland vetoed it, but for the whole of the fiscal year ending June 30, 1897, the entire immigration to this country was only 230,832, which was about 1,000 less than those that came from southern Italy alone during the last fiscal year.

True, Mr. Taft vetoed a similar bill two years ago, but he did so, as all believe, because he fell overnight into the hands of evil influences.

A recent issue of the Boston Transcript has the following timely editorial on the subject:

THE IMMIGRATION BILL.

Following the precedent set by his predecessor, President Wilson is to give a hearing on the immigration bill, which is now in his hands. But, unfortunately, such a hearing will not give any real indication of the national sentiment on the bill in question. The opposition to the measure is naturally admirably organized, well supplied with money, and marshaled by able attorneys. Those who favor the bill are the great body of the American people, scattered broadcast over the country, unknown and unorganized, but whose opinions are represented in the large votes which both Houses of Congress have repeatedly passed in favor of the principles embodied in the present bill. Those who doubt the existence of a widespread demand for some further restrictive or selective immigration legislation need only observe the persistently large majorities which during the past 18 years have been piled up in Congress in favor of the reading test. Congressmen may usually be relied upon to vote in accordance with the wishes of their constituents.

We have no doubt that nine-tenths, if not all, of those who will appear at the White House on Friday of this week in opposition to the immigration bill and who will center their opposition on the reading test are in reality opposed to any and all further restriction. The issue is clearly drawn between those who believe that our present immigration laws are inadequate and those who for one reason or another wish things to continue as they are, or would even lower the bars still further. The opponents of the reading test would be just as violent opponents of a numerical limitation of immigrants, or of consular certificates, or of any other plan to reduce, or even to select, our alien arrivals. The sooner this fact is recognized the better for the country.

It is singular that so many people miss the whole point of this reading test. The argument most frequently advanced against it is that it would not exclude the educated rascal; that it is no test of character. No advocate of this test ever claimed that it would exclude all rascals and criminals. That is not what it is intended to do. We have already done what we can by law to keep out alien criminals. That our law is unsatisfactory on that point is no argument against the addition of a mild reading test, which is to be an addition to, not a substitute for, existing provisions. When practically our only means of detecting rascals is by asking them whether they are rascals, it is obvious that we are in a very sorry plight indeed. Yet that is about all that we have so far been able to do. If those who spend so much time in attacking the reading test because it will not exclude educated rascals would devise some means for keeping out those same rascals they would be doing their country a really effective, constructive service. It is just as logical to object to typhoid inoculation on the ground that it will not prevent diphtheria as it is to object to the reading test because it will not exclude educated criminals. Typhoid inoculation was never intended to prevent diphtheria. Neither was the reading test ever intended to be used as a test of character. Supporters of the reading test do not claim that ability to read necessarily makes a man a desirable citizen, or that illiteracy necessarily means that he will be a bad citizen or an inefficient laborer. Supporters of the reading test do not claim that ability to read is a test of character. It is the interests which are fighting the immigration bill which persist in bringing forward that argument, and thereby mislead many of our most intelligent citizens.

No test can be devised which will shut out every undesirable alien and admit every desirable one. It is not without significance that all the experts who have made a sufficient study of the immigration problem to write books upon this subject in recent years have, with a single exception, become strongly convinced of the necessity of restriction, and have favored the reading test, viz, Messrs. Mayo-Smith, Commons, Jenks, Hall, Warne, Fairchild, and Ross. The one author who reached a different conclusion is Dr. Hourwich, and he has been severely criticized by other economists as to his figures and his methods of argument. Although only two members of the United States Immigration Commission were strongly in favor of the reading test at the start of their investigation, eight out of nine finally favored the test as the best single method of restriction.

The present immigration bill embodies a number of excellent provisions which would make the mental and physical examination of our arriving aliens more effective and would exclude a larger number of those whose coming here will inevitably tend to lower the mental and physical standards of our people. These provisions have been indorsed by medical bodies all over the country, and by our own Massachusetts Medical Society at its annual meeting last June. All these most necessary and most rational amendments to our immigration law will be lost if the President vetoes the present bill and Congress fails to pass

it over the veto. The reading test in the form in which it appears in the bill is a mild measure, which, in the opinion of experts, would never seriously reduce immigration, but which would operate as a selective test in raising the general standard of intelligence of our alien arrivals.

The increase of inmates of insane and charitable institutions in States where the new immigration has been so great has become positively alarming.

So much is this the case that the governor of New York recently sent a message to the House Immigration Committee urging the Federal Government to take some action looking to assuming a part of the burden of expense which that State was forced to bear.

Some have argued that this increase of insane patients was due to the older immigrants, but that contention is utterly refuted by the New York State Board of Alienists in their report for the year ending September 30, 1911.

On page 22 that report says:

"For the first few years after the commencement of that remarkable migration of the races of southern and eastern Europe to this country (to which Austria-Hungary, Italy, and Russia have contributed nearly 500,000 persons a year) it is noted that the increase of patients of those nationalities in the State hospitals was gradual. By 1905, however, it was possible to predict that when the effects of the 'new immigration' commenced to be felt the 'old immigration' (of Germans, Irish, and Scandinavians) would be outdone in the numbers of insane added to the foreign-born population of our State hospitals. To-day that prediction is fulfilled, and during the year more than 55 per cent of the aliens deported by the United States Immigration Service were natives of those three countries."

The New York Times of March 28, 1912, says:

INSANE ALIENS.

"The Times is informed by Secretary McGarr, of the State commission in lunacy, that of the 31,432 insane patients under treatment in the 14 State hospitals on February 10 last, 13,163, or 41.9 per cent, were aliens. Foreign-born patients have increased since the Federal census of December 31, 1903, by 1,552, or 13.4 per cent. In the two State hospitals for the criminal insane there were 1,230 patients on February 10, of whom nearly 44.4 per cent were of alien birth; the Federal census of 1910 showed a percentage of aliens to total population in this State of 29.9 per cent.

"The prevalence of insanity among immigrants is evidently much greater than among the native born. Of the 5,700 patients admitted to the civil hospitals for the year ending September 30, 1911, 2,737, or 48 per cent, were aliens, and 1,481, or 26 per cent, were of alien parentage, while only 1,224, less than 26 per cent, were of native stock. Of the whole number, the nativity of but 218, which is 3.8 per cent, was not ascertainable. Insanity among the foreign peoples of this city occurs in a still larger percentage of cases. Of the first admissions to the hospitals, 2,006 out of 3,221 residents of the city were of foreign birth; that is, 64.1 per cent, although the foreign-born population is but 40.4 per cent of the whole."

This report also states that many foreign countries encourage the emigration of their insane and diseased people to this country, in order to rid themselves of their care and expense.

The following extracts from the New York State Hospitals Bulletin of April, 1912, show an appalling condition. On pages 5 and 6 it is said:

"In February, 1912, there were 31,432 patients in the 14 State hospitals, 41.9 per cent of whom were of foreign birth. Careful studies have shown that the frequency of insanity in our foreign population is 2.19 times greater than those of native birth."

On page 13 the following is stated:

"The relatively large contribution of Italy to the population of the hospitals for the criminal insane is worthy of comment. Although the Italians constitute but 5 per cent of the foreign-born insane population of the civil hospitals, they number 23.1 per cent of the foreign born of the hospitals for the criminal insane. This nationality also contributes largely to the prison population of the State. The report of the State superintendent of prisons for the year ending September 30, 1910, shows that the Italians constitute 36.6 per cent of the foreign-born prison population of the State.

"Relatively, the Germans and Irish contribute a much smaller percentage of insane with criminal tendencies."

* * * * * *

On page 36 it is said:

"13. The larger part of the immigrants who are admitted to a State hospital within five years after landing come from Austria-Hungary, Italy, and Russia.

"14. The foreign-born first admissions show a higher rate of illiteracy than the native born.

"15. The largest percentages of foreign-born illiterates are found among the Austrians, Russians, and Italians."

On page 46 it is said:

"At $262 per patient the total annual cost to the State of the hospital care of the foreign-born patients now in the civil hospitals is $3,448,706. So long as the yearly addition of immigrants to the hospitals continues to increase this annual burden will continue to grow.

"At the rate of $2,882 per patient the admission of 2,737 new foreign-born patients to the State hospitals in 1911 will involve a total expense to the State before these patients are finally discharged of $7,888,034."

The New York Herald of April 13, 1912, speaking of conditions in that State, said:

"Recently the Herald published statistics showing that more than 60 per cent of the occupants of charitable institutions and insane asylums in New York were foreign born and likely entered here under the lax system of the immigration authorities.

"For the most part the immigrants come from the unhealthy parts of southern Europe and carry contagious diseases. Many are weak-minded, a condition difficult to detect, especially in children, and they are sent here by their relatives abroad because they can receive better care in American institutions. A majority of the immigrants get no farther than this city, and prominent medical authorities here have often declared that the foreigners are responsible for much of the disease in the tenement quarters."

The crime record of the new immigration is also becoming appalling.

A few years ago Police Commissioner Bingham, of New York, aroused by the wave of crimes against women and children, said to the Associated Press:

There is another very important thing about this crime business. I don't want to say anything that would be indiscreet, but unquestionably the hordes of immigrants that are coming here have a good deal to do with crimes against women and children.

You will notice that these particular crimes are done by fellows who can't talk the English language. It is this wave of immigration that brings to New York the hundreds of thousands of criminals who don't know what liberty means, and don't care; don't know our customs, can not speak the English language, and are in general the scum of Europe.

From the State of New Jersey comes the following letter of Frederick A. Pope, prosecutor of pleas of Somerset County, N. J., addressed to President Taft on February 8, 1913:

My duties as prosecuting attorney of Somerset County, N. J., have given me an excellent opportunity to check up in one important particular the investigations and conclusions of the Immigration Commission with reference to the illiteracy test. During the last two years I have kept a careful record of the last 114 criminal cases that I have prosecuted against aliens, with the following interesting results:

	Illiterate.	Literate.
Homicide	3	.....
Atrocious assault and battery	34	6
Simple assault and battery	9	2
Larceny	14	2
Sexual crime	7	1
Perjury	2	1
Excise	11	5
Marriage	3	1
Frauds	2	4
Miscellaneous	6	1
Total	91	23

The following conclusions are deducible from the above:

(1) Of the 114 crimes committed by aliens 54 were acts of personal violence; and of these 54, 46 were committed by illiterates, while only 8 were chargeable to those able to read and write.

(2) Of the 46 committed by illiterates, 3 were homicides, 34 were atrocious assaults (by maiming and wounding with a deadly weapon), and only 9 were simple assaults, showing conclusively that the illiterate alien 37 times out of 46 makes use of a deadly weapon in order to avenge his wrongs, fancied or real.

(3) Out of 16 cases of larceny (stealing of all kinds), 14 defendants were illiterate.

(4) Out of 8 sexual crimes, 7 were committed by illiterates, 3 of these being carnal abuse of infants under 10 years of age.

(5) Out of 3 perjury cases, 2 were against illiterates; that is, of those brought to justice.

(6) Out of 16 cases for violation of excise laws, 11 were illiterates, showing an utter disregard for laws.

(7) Of the 4 crimes against the institution of marriage, 3 were illiterates.

(8) Only in cases of fraud did the literate exceed the illiterate.

I am, Mr. President, sincerely, yours,

FREDERICK A. POPE,
Prosecutor of Pleas, Somerset County, N. J.

I have heard the old worn-out argument of the alien pushing the American laborer up. This is fine theory, but is a fallacy in practice. Listen to what John Mitchell, ex-president of the American Mine Workers, said when asked as to whether the new immigrants pushed up those who were here:

No; not at all. If it was, then I would say that there ought to be about 15,000 John Mitchells who were ex-presidents of the United Mine Workers of America, and who are now prominently before the people of the United States. Probably of the thousands of men who, like myself, were pushed up, I was the one who rose where the rest fell. * * * But I do know hundreds of men, Mr. Secretary—I have seen them in my life and talked with them, because I have been interested in these problems—I have found hundreds of men who were not quite so sensitive as I was, but whose hardships had hardened them so that they forgot their desire to rise in the world, and, as a result of unemployment, had got into a state of mind and into a condition where they did not want work.

* * * Sometimes like a dream these men look back to the pinnacle on which they once were, when they were wage earners, but they have been driven down and have become of the type that has been described. They are tramps, bums, and finally hoboes—men who no longer want work because they have got away from it, just as we find men in other classes of society who go down, down, down, until the better part of their manhood is submerged and they can not rise again. So, instead of these immigrants pushing men up to better planes of society, they push them out. Of course, I know—I have read the books that have been written about one class being supplanted by another in whole communities. I suppose you are familiar with the Slav invasion of the anthracite coal fields; how the English, Irish, and Scotch employees were there first, and then came along the Slavs, and slowly but surely drove them from place to place, and drove them up the valley. Mr. Powderly knows more about it than I do—how the English-speaking men made their last stand right up at Mr. Powderly's home, and now they are going from there. True, some of them have entered the railway service; we have lots of them who are railroad men now, and others have become policemen—strong, big, fine men. But there are hundreds of them, you will find, wandering up and down in America.

This, Mr. Speaker, is from a man who has worked with his hands and touches shoulder with the man who toils, and it is a sad picture of what is called pushing men up.

Mr. Speaker, the most terrific war that ever spread its besom of destruction over the world is now raging in Europe. When it ends the nations of the Old World will by every means possible keep the able-bodied and the literate within their borders to rehabilitate their ruined and devastated countries. The weaker ones and the illiterate will be urged to seek their homes in the Eldorado of the Western Hemisphere. It has been prophesied by those who have studied the question that 2,000,000 a year of those who are undesirable in their fatherlands will be pushed off to our shores. Gentlemen, if you defeat this bill, or the President by his veto shall assume the responsibility for its defeat, you will before many months have the anathemas of those begging for bread heaped upon your heads. Why, even before this European war we have the testimony of an official of our Government that some of the European nations were deliberately making us the dumping ground for the most undesirable of their people.

A few years ago Marcus Braun, of New York, an immigrant inspector, was detailed by our Government to make investigation of immigrant conditions in Europe. In his report to the Secretary of Commerce and Labor he says:

It was at this time that I learned of that famous clause contained in the agreement referred to between the Hungarian Government and the Cunard Line, by the terms of which said Government guarantees to the Cunard Steamship Co. for their line, "Fiume to New York," 30,000 third-class (steerage) passengers per year, or a penalty of 100 crowns for every emigrant lacking said number.

I could not possibly believe this to be true, and all my efforts to obtain some definite information in this respect proved futile. I finally decided to take the bull by the horns, as it were, and called on the above-named Mr. Selley, who, in his capacity as councilor, is not only the head of the police department of the Kingdom of Hungary, but has also had charge of the emigration and the laws governing same; he was the sponsor of the new Hungarian emigration law, and made all the arrangements for its execution. Mr. Selley was exceedingly proud of his achievement, and, directing my attention to what he termed the signal success of said law, wished to know my opinion about it. I replied that from my standpoint, as a United States emigrant official, I thought this law to be a very good one, provided it would be executed, but I suggested that in my opinion a serious mistake had been made by guaranteeing a specified number of emigrants to the Cunard Steamship Co., to which Mr. Selley replied as follows—I am quoting his language literally: "Why, we can very readily guarantee 30,000 a year, since we had 106,000 emigrants last year."

I told Mr. Selley that I believed that particular provision of the agreement to be wrong in the extreme, and that it might meet with serious objection in the United States. This remark was met by Mr. Selley with the intimation that the matter was an entirely Hungarian affair, and none of our business.

The Mr. Selley that he refers to he says in his report was the royal Hungarian councilor to the Ministry of the Interior.

Further on in the report he says:

To sum up the situation, as illustrated, appertaining to the question of Hungarian emigration to the United States, I desire to direct attention to the fact that there is a small proportion of the Hungarian people called the "Agrarians," who make sincere efforts to restrict emigration, who, however, are in a very deplorable minority. (The majority do advocate emigration and exert themselves in every particular and any way and manner possible to promote, induce, and assist emigration. The objects and reasons for this constant agitation are obvious and manifold, but they are all concentrated in one particular proposition, and that is the obtaining and earning of all the money they possibly can in the United States, and then either send or bring it back to Hungary, buy land therewith, or apply it in some other way for the benefit of the country of their nativity.)

The trend of the prevailing opinion in this respect is very comprehensively illustrated in a most enthusiastic exposé of Mr. Sigmund Kornfeld, the director of the "Hungarian credit bank," which appeared in the public press recently, and also in speeches and lectures which he made and gave, and in the course of which he proved logically the wonderful advantages of Hungarian emigration to the United States, citing, among other things, that through his bank alone 139,000,000 crowns had come into the country from the United States during last year, and that in certain counties the value of land had increased to unheard-of proportions. He advocates absolutely emigration en masse to the United States, advising those who heed him to do what those of their countrymen have been and are doing who had been in America and are still there, saying literally, "Let all go who can, earn all the money they can, learn the practical ways of the American laborer, and come home with both the money and experience thus gained."

In regard to the Italian immigration, Mr. Braun says in his report:

The Italian Government, however, goes even further in directing and regulating its emigration in a manner detrimental to the United States than does Hungary. Every steamer which leaves an Italian port for the United States has a so-called "royal commissioner" aboard, who instructs and coaches his protégés during all of the two weeks' trip across, devoting an appreciable portion of that time to warning his Italian fellow passengers against becoming American citizens.

This apprehension and fear that the United States might restrict immigration is universal all over Italy, it being claimed that such restrictions would cause an inevitable famine, some going even so far as to claim that a rebellion in their own country might be the natural consequence.

Italy, being overpopulated, and, what is more, having a large pauper population, considers the United States its best safety valve for the discharge of its superfluous people, and at the same time a convenient source of income which the Government derives from such unrestricted emigration. The Italian Government is too clever to charge any emigrant tax, as does Hungary, but it derives its income therefrom just the same. It is characteristic that an Italian subject can depart to any place on the globe, excepting the United States, without requiring a passport; just as soon, however, as an Italian subject is to leave for the United States he must in every case secure a Government passport, for which 8 lire is charged. The more than successful and flourishing condition of the steamship agencies in Switzerland, close to the Italian border, is largely due to this Italian Government tax for passports. The prospective Italian emigrant can readily and without the requirement of a passport cross over to Switzerland, whence he is then shipped to his port of embarkation without any further requirements.

That the Italians are justified in every respect in fearing a restriction of immigration on the part of the United States is evident from the information I received in interviews with Italian bankers, steamship agents, etc., to the effect that the amount annually received in Italy from the United States averages $1 a day for every Italian who comes to this country for temporary labor.

Italian emigration, too, is continually instigated and induced by certain classes of people residing in the United States, such as publishers of Italian newspapers, bankers, padrones, etc.

On page 27 of the report he says:

Geographically speaking, the immigrants coming from the north of Europe, if not afflicted with any disease, are the best we get; those from eastern and southern Europe are very rarely desirable, even though they may not be afflicted with any disease or moral defect, for, as is evident from the facts enumerated in this report, they only come here for a temporary stay, procuring labor at any price, expending in the United States only what is absolutely necessary to maintain life and sending the balance to their native country, whither they return after a time.

These can hardly be styled immigrants at all, and in Europe would be termed so-called "Sachsengaenger," a characterization which originated in Saxony some centuries ago, and survives to this day, from the fact that at the time of gathering crops in Saxony a goodly proportion of the population of Poland and Bohemia journeys over to said country, gathers in the crops, and then, with the money earned, returns to its native countries. Furthermore, these immigrants are mostly contract laborers, as appears more clearly from the statements made to me verbally by official and semiofficial persons, as well as from publications of semiofficial government organs, as hereinbefore specified.

The immigration from the Turkish dominions, both European and Asiatic, is nothing short of a menace to this country; from there we positively get the worst kind of people in the world. Either by nature or by centuries of oppression, the Armenian and Syrian has become a habitual and almost hysterical liar and intrigant, and if he comes to the United States he does so with the distinct and premeditated purpose to earn dollars, obtain American citizenship, return to his native country, and involve our Government in constant conflicts with Turkey. He uses his American citizenship to surround himself with all its benefits and the protection it guarantees and to defy the laws of the country where he intends to spend the balance of his days. The same thing can be said of a great many Hebrews who, ostensibly for reasons of piety, desire to spend the balance of their lives in Jerusalem, but who first come to the United States to obtain certificates of citizenship and the protection incident thereto. This is likewise true of the Greek who, with the American citizenship thus obtained, carries on business in the Turkish Empire, frequently in violation of the laws of that country.

If these were but isolated cases, the question of desirable or undesirable immigration would, to a certain extent, be idle. There are people of all lands, and even citizens of the United States, who go to other countries temporarily for purposes of business and to earn money in various capacities. This is legitimate, and no one can take exception thereto; but it is an entirely different matter with the great horde of immigrants who have flooded this country during the last decade. They come here not because of our free institutions or because they here have the opportunity to advance themselves both materially and intellectually, but because the American dollar has a much greater purchasing value in their native countries, to which they always remain loyal. They make no effort to learn our language nor our customs and views. They do not think of ever becoming citizens or to contribute in the least to further the development of this country, and if, perchance, some do take the oath of citizenship it is only because it facilitates their purposes here and protects them abroad in legal or illegal occupations.

When they think that they have gathered a sufficient amount of dollars they return to Italy, Hungary, Galicia, southern part of Austria, Syria, or Greece, as the case may be, and those who have procured American citizenship forget and disregard its obligations the very moment they leave our hospitable shores. During their temporary stay in this country they live in a manner unbecoming and unworthy of America. Their whole effort, energy, and mind are concentrated upon the one thing—to earn all the money they can and return "home." During their stay here they are all instrumental in reducing the price of labor, for to them a dollar is a fortune, while to the American laborer it frequently represents an insignificant amount.

On page 34 he says:

The conditions I have here depicted will, perhaps, be better and more earnestly appreciated if I state that, based upon these foreign efforts, it has become a favorite expression abroad, especially in Austria, Hungary, and Italy, to speak of "Our colonies in America."

Having arrived at the above conclusions, it is but just and proper that I should differentiate between good and bad immigration, in so far as the countries are concerned whence we get most immigrants, and I respectfully submit that the very best material reaching the United States comes from Germany, Great Britain, Norway, Sweden, Denmark, Holland, and Switzerland; in fact, from all western and northern countries of Europe.

It is deplorable that we do not get more of this class of immigration, and I found the reason to lie in the fact that we are getting too much of an inferior immigration, with whom the German, Swede, etc., can not very well compete. My contention in this particular was fully borne out by an interview which I had with Herr von Pillis, a gentleman semiofficially connected with the German Government, whose business it is to induce the Germans from other countries, such as Russia, Hungary, and others, to settle in Germany, provided they have money enough to buy land. He remarked to me as follows:

"We view with great satisfaction the fact that few Germans emigrate to the United States, which is not due so much to the excellent conditions existing here as to the fact that by your present immigration labor has been mercilessly cheapened in America."

In concluding his report he says (p. 49):

I believe I have shown conclusively, in my said various reports of this year, as well as in my report of August, 1904, that several European governments, and more particularly the Governments of Italy and Austria-Hungary, are encouraging the temporary exodus to this country of those of their people whom they can not support, and that they

employ every possible means to keep these aliens grouped together in this country, and under their influence, for the purposes of avoiding their assimilation with our customs and institutions, and I have likewise shown in these reports that considerable propaganda is carried on in the United States to assist these Governments in their attempts. There is, in the first place, the foreign priest and the minister, who preaches to the foreign-born residents of this country that their greatest sin would be to forswear allegiance to the country of their nativity, and become American citizens, and therefore I believe it will be rather difficult in the future to distribute, to any appreciable extent, immigrants into the rural districts of the South and the West, unless it could be done with the cooperation of European governments.

Seventy-five per cent of the aliens who worked for three or four years in the industrial centers of our Eastern States return to their native land with an average saving of about $1,000, having spent not one penny more in this country than was absolutely necessary to keep life together according to their own frugal customs and habits. Every one of such returning aliens is, in a measure, an agent in inducing about 10 others to do likewise. I repeat most emphatically that this sort of emigration is not only viewed with friendly eyes by some European Governments, but is positively fostered and helped along. On this sort of traffic Governments collect taxes and corrupt officials make money. The Chinese exclusion acts were passed for just such reasons, and some way should be found to stop this kind of immigration.

Mr. Speaker, is it any wonder that 2,000,000 American workingmen are crying out to us against such conditions? Is it any wonder that 5,000,000 farmers, North and South, are beseeching you to check it?

Is it any wonder that 500,000 members of patriotic organizations, who love our flag and our country, are begging you to deliver them and their children from this living death?

The Immigration Commission, after four years of ceaseless toil and study, said the illiteracy test is the most feasible and practicable way of saving our country and our institutions.

Choose ye this day whether you are on the side of the Ship Trust, the Steel Trust, the Brewers' Trust, or on the side of your own flesh and blood.

It is utterly impossible to correct these evils on the other side or to prevent the occurrence of such outrages. The illiterates are the ones thus played upon, and when we check them we check such infamies.

Will we do it?

Labor asks us to do it! Patriotism asks us to do it! Americans ask us to do it!

The ghost of a veto is held up before us. Are we truckling sycophants or are we men?

The legislative is as much a department of the Government as the executive. Shall we stifle our consciences and betray our constituents because we fear an Executive veto?

Not if we are worthy to represent the brave people whose commissions we hold.

Coast Guard.

EXTENSION OF REMARKS
OF
HON. WARREN WORTH BAILEY,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 20, 1915.

Mr. BAILEY. Mr. Speaker, I wonder how many gentlemen on this floor would support the pending measure if the money to meet its provisions were coming directly out of the pockets of the people instead of indirectly? Proposals of this sort meet with little, if any, popular opposition, because few people realize the burden they impose. Taxes are collected so stealthily, as a rule, through tariffs or through internal levies on whisky and tobacco that those who pay them know nothing of it. The goose is plucked without causing it to utter a single squawk. Nine men in ten seem to think that money grows on trees, as far as Uncle Sam is concerned, and that he has only to shake the branches to fill his lap with a golden shower.

This bill is widening the pension area. It is creating a new body to be supported in whole or in part out of the Public Treasury. There is no question about the bravery, the self-sacrifice, the hard service of the men affected. But they are not alone in taking risk. The men in mill and mine out in my district also take risks. They also brave death almost from day to day and every day in the year. The casualties in the steel mills, in the mines, and in the railroad service must equal if they do not exceed those in the Life-Saving Service. Yet who is proposing to put the steel workers, the miners, or the railway trainmen on the pension rolls of the United States?

I do not forget, I can not forget, that every dollar we appropriate here must come out of the sweat of men in mill, in mine, on farm, and in workshop. It must come from farmers and ditch diggers, from clerks and scrubwomen, from blacksmiths and track hands, from quarrymen and carpenters, from those who do the humble services which make society possible. I do not forget the services of the Coast Guard; I do not forget their daring; I do not forget the risks they freely take; nor, Mr. Speaker, can I forget that if we set them up as a privileged class, quartering them as pensioners upon all the rest, the burden must rest upon your constituents and mine, whose backs are bowed already under a heavy load of taxes, none the less grievous because these taxes are collected by stealth.

Rivers and Harbors.

EXTENSION OF REMARKS
OF
HON. WARREN WORTH BAILEY,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 19, 1915,

On the bill (H. R. 20189) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. BAILEY. Mr. Speaker, opportunity was not offered me in the general debate for making some observations which this measure has suggested, so I seize upon this chance to say that in my judgment a great, if not the greater, part of the huge sums we are spending on our waterways is almost clear waste. The waterway has ceased to be what it once was. It can no longer compete with the railway. We have been told during the consideration of the bill that New York has spent or is preparing to spend $150,000,000 on the Erie Canal—apparently as an insurance policy against railway extortion. But would it not be an infinitely cheaper and a more reasonable proposition to take over the railways themselves? What use has a dog for two tails? Why should the people maintain two systems of transportation when one would serve the purpose if rightly managed?

I do not know the figures, but can it be doubted that within the last 40 years enough money has been spent on the inland waterways of the country to build and equip railway systems which would better serve all the territory affected than the rivers can ever do? Yet year after year we go on pouring the people's money into these "improvements" under the pretext that thus we are safeguarding the commercial and industrial interests of the country. What we are doing is to pursue a crooked way to a dubious end. There is no clear evidence that the game has been or is worth the candle.

I do not pretend to be familiar with the particular items in this great bill. It is obvious, however, that the committee is obsessed with the notion that it has been amazingly conservative in framing it. It has excluded all new projects, but it is dealing most liberally with a myriad of old projects which call for nearly $35,000,000 of the taxes wrung from the people in a time of stress and strain, when the most rigid economy should prevail. Of course, I understand very well that the expenditure of all these millions in favored localities will "put money in circulation"; but the same plea can be made for bank robbers, highwaymen, and train looters. The footpad who relieves you of your purse at the point of a pistol does not bury his ill-gotten gain in a back yard. He spends it for food and clothes and shelter. He puts money into circulation. Perhaps the fact that it is your money and not his is unimportant; yet you will be the poorer.

And so, Mr. Speaker, the country will be the poorer and not the richer for the money put in circulation through many of the schemes embodied in this measure; but I hope members of this great committee will not think that I question their good faith or their good intentions. They are merely mistaken in judgment, according to my estimate. I may be wrong. My ideas of economy may be confused. It is barely possible that the insurance rate we are paying for protection of this sort against railway extortion is moderate; yet the premiums in the aggregate are appalling and the results but meager. The question, therefore, irresistibly suggests itself whether we might not better spend the people's money—if we insist on taking it from them by taxation—in the building or in the taking over of those modern highways which run where they are needed and which invariably describe the shortest and best routes between given points.

Radium-Bearing Ores.

EXTENSION OF REMARKS
OF
HON. THOMAS J. WALSH,
OF MONTANA,

IN THE SENATE OF THE UNITED STATES,

Friday, April 10, and Monday, April 13, 1914.

The Senate had under consideration the bill (S. 4405) to provide for and encourage the prospecting, mining, and treatment of radium-bearing ores in lands belonging to the United States, for the purpose of securing an adequate supply of radium for Government and other hospitals in the United States, and for other purposes.

Mr. WALSH. Mr. President, I was adverting to the comments upon the bill which have been read from the desk. The bill met with the most determined opposition in the committee—opposition to the measure as a whole, to the principle of the bill—notably from the Senator from Colorado [Mr. SHAFROTH] and the Senator from New Mexico [Mr. FALL]. If, however, any man shall undertake to assert that either of those Senators was actuated by any except the very highest motives, or that he was moved by any consideration except a desire to promote the public good as he saw it, I shall not hesitate to denounce him here and anywhere as a calumniator and a vilifier. So, Mr. President, with reference to the members of the committee upon whose initiative were offered the amendments reported by the committee: One and all they labored to perfect the bill, and labored conscientiously, in the light of their intimate acquaintance with the business of mining, with a sincere purpose to promote the ends had in view by the men who are responsible for the introduction of the bill.

Mr. President, to seek now to excite against them a suspicion in the public mind as to the rectitude of their purposes appears to me to deserve the reproofs which have been heard in this Chamber this morning. Such wanton malevolence directed against Members of this body may call for more attention than mere animadversion. It by no means follows that because a man does not entertain the same views as those held by the president of the National Conservation Association in relation to questions affecting the disposition of the public lands, at least in matters of detail, he is necessarily either a thief or a villain. It ought to be recognized that there is an opportunity for an honest difference of opinion with reference to these matters. Some of us here from the West, in a spirit of accommodation, are disposed to surrender something of our own views in order to meet those which, in their extreme expression, are represented by the president of the National Conservation Association. We, too, it appears, are to be the victims of malignant vilification, misrepresentation, and abuse.

It may suit some purpose thus to reward the men who have tried to compose the differences which have made the word "conservation" signify the locking up of the natural resources, but I am very sure it is not a purpose in which the public are particularly interested. The committee welcomes any criticism of the bill, but it resents the imputation that any delay in reporting this measure, or that in any amendments that have been offered to it, they have been prompted by any desire or any willingness upon the part of any Member to do anything that might seem to sacrifice the public interest upon any consideration or in behalf of any individual or association.

Mr. President, it will be understood that at the present time lands containing radium-bearing ores are open to location and appropriation under the general mineral act. Any person making a discovery of ores of this character is entitled to locate a claim 1,500 feet in length and 600 feet in width, and by the performance of $100 worth of work each year he is entitled to continue in the occupancy of that piece of ground, extracting the ores from it. After he has done $500 worth of work upon the property he may apply to purchase the ground, and pursuing the procedure required by the statute obtain a patent for it upon the payment of $5 an acre.

Senate bill 4405 contemplates that anyone may locate lands of this character under the provisions of the existing law, but it requires the appropriator to sell the ores extracted by him from the claim to the Government at a price to be fixed by the Secretary of the Interior, or rather to be determined by the Secretary of the Interior—the going market price. Then it is provided that the ore thus secured by the Government and such other ores as it may purchase shall be reduced in works constructed by it, and the radium they contain extracted, the purpose being to supply the Government hospitals of this country, 23 in number, with so much radium as is necessary for their use, the remainder to be disposed of in such way as Congress may subsequently direct or as the Secretary of the Interior may determine.

Mr. President, I wish to say something to the Senate concerning the question addressed to me at the opening of this discussion, as to the value of this metallic substance for the cure of cancer. As you have heard this morning in one of the documents read, there are about 75,000 deaths annually from cancer in this country, and there are usually about 300,000 cases pending; that is to say, there are about 300,000 people continually afflicted with cancer in this country and about 75,000 deaths annually ensue. The mortality from cancer is only a little less than that from tuberculosis, and the best reports attainable indicate that the cases are increasing continually in number; that is to say, the proportion is increasing.

If we should gather our information upon the curative value of this agency from newspaper and magazine comments, it is possible that varying opinions would exist concerning its virtue. Indeed, quite a number of newspaper articles, editorial comments, and excerpts from magazine contributions, more or less skeptical or derogatory, were read into the record at the hearing. But, Mr. President, I prefer to go to the very source for the information I shall lay before you in relation to this particular subject. There are two men in the United States who have had more experience in the handling of radium as a curative agency in cases of cancer than all the other men in the United States put together, and perhaps as much experience in the handling of radium for that purpose as any physician or surgeon in the world. They are men of the very highest standing in their profession. They have testified here, and so you have the information at first hand. One of them is Dr. Howard Kelly, of Baltimore, and the other is Dr. Robert Abbe, the senior surgeon of St. Luke's Hospital in the city of New York. Dr. Kelly has been operating with about 1 gram of radium, Dr. Abbe with about 350 milligrams. There is no such quantity of radium in the hands of any other operator in the United States, and the information that the public generally has concerning the curative value of this mystical substance comes from the experience of these two physicians and surgeons.

They were called before the committee to testify concerning radium and its uses, and they gave their views as to its value rather by reference to the operations which they have conducted than by any statement of the deductions which they have made from them. I am going to trespass upon your patience long enough to read from the record briefly some things that they said concerning the matter. Dr. Kelly told us as follows:

> I spoke to Dr. Halstead the other day, and said, "Dr. Halstead, this radium is offering us a definite hope in curing a certain number of cancer cases, and if we have a chance to experiment further there is no telling what we can do with it." He said, "Wouldn't it be splendid if you could take all that class of cases out of the hands of the surgeon?" Surgery is mutilating, particularly to the face. You have a little cancer in the corner of the eye; I have seen two cases within 24 hours. Another gentleman had had his eye taken out. He said, "Doctor, I have had nine operations." One treatment of radium cured that man. You have a man that has a nose as big as a baby's fist. What can the surgeon do? You have to cut off all the face of the man. It may be his ear; you have to cut off his ear. You will soon have nothing of him left.
>
> Mr. HAMLIN. If I understand it, the poison from the cancer—I am not sure that I used the proper terms.
>
> Dr. KELLY. The cells; the individual organisms.
>
> Mr. HAMLIN. They will extend through parts of the face, and you might cut off a portion of the face and still not get it all out?
>
> Dr. KELLY. That is just the trouble with surgery. If the cancer is discovered in the very earliest stages, it may be cured by surgery, and this radium propaganda will be doing wonders for the country at large if it will lead people to look attentively at every little disfigurement of the body which they do not understand. It is doing a great amount of good, and we are getting cases earlier. If it is discovered in the very early stages, surgery can handle it easily, but only through an operation, which is mutilating, with attendant pain, anesthesia, delay, and occasional recurrences. In the more advanced cases recurrence is the rule. You can not get at the roots. These little microscopic cells remain in the tissues, invisible, and will carry on the growth exactly as if you had not operated or touched it at all.
>
> Mr. HOWELL. Is there any difficulty in diagnosing an incipient case of cancer?
>
> Dr. KELLY. As a rule there is no difficulty at all. It is usually so easy to perform an operation and examine it microscopically and see if there is any doubt in those early cases. And it is not a dangerous operation in those early cases. Or, if we have radium, we apply radium, and the radium relieves it without disfigurement.
>
> In the older cases surgery is helpless because of the deep invasion and diffusion of the growth; but radium will attack cancer and halt most of those cases without blemish, without sacrificing the tissues. It melts the tissues back into the normal form. As Dr. Abbe has a happy way of expressing it, it drives the anarchistic cells back into the ranks of the normal cells and makes them do their part.
>
> Radium also goes further than surgery, because surgery only treats that which is visible, and the surgeon is under the constant impulse and desire to save the face of the patient. He does not want to mutilate the patient, and so he thinks that taking out just so much will do. He fails, and there is a recurrence. But the radium, like the blessed light from heaven above, bathes the part, throws its gamma rays, which are its active rays, into the part, acting on all the myriad micro-

scopic cells, not only the manifest, gross surgical lesions, but all those little cells through the surrounding tissues, and it acts like millions of microscopic knives to destroy them, or like a lash to drive them back. In other words, radium will not only do what surgery does, but it goes beyond and takes a class of cases which are utterly beyond surgery.

I want to present in evidence just one picture [exhibiting a portrait]. This is a work that radium does that no surgeon would dare attack. You would have to cut the man's brains out and take off three-fourths of his face to save that man's life. That is one of the worst and most rapidly growing forms of cancer that is known.

Mr. AUSTIN. How old was this cancer?

Dr. KELLY. "Uncle John," I think, had had that about six or eight months. He came from Missouri.

Mr. HAMLIN. And that was cured?

Dr. KELLY. We gave 50 hours' treatment with radium, and 48 hours afterwards here is the result [exhibiting another picture]. To us it was just as miraculous as if we had just put our hands over the part and said, "Be well."

I refer to another case which he tells us of briefly in this language:

Mr. AUSTIN. Are there many cases among children?

Dr. KELLY. Yes.

Mr. McCUMBER. Will the Senator tell us how the radium is applied in those cases, so that we may better understand the process?

Mr. WALSH. It will be understood that the metal itself is exceedingly rare. A gram is, according to my recollection, about one-thirtieth of an ounce, and that is sold to-day at $120,000. It is handled by being incased first in a small glass tube. It is put into the tube, which, being heated in a flame, is sealed at the top so that the precious content is hermetically inclosed. It is so precious that it is not safe to carry it in a glass tube, even though it could be utilized in such; so the glass tube is inserted within another tube of silver or platinum, the top of which is screwed on. That tube, then, is either embedded in the affected part or simply laid upon it.

Now, you will understand that the gamma rays, and, indeed, all three of the rays—the alpha, beta, and gamma rays—given off by this peculiar substance are very similar to the rays generally spoken of as X-rays. They penetrate solids so that the rays escaping from the radium on the interior penetrate the glass of the inner tube and pass through the silver or platinum of the outer tube. It continually throws off small particles called electrons. These give off the rays which penetrate through the solids and thus attack the diseased parts.

Another reason for inclosing it in the metallic case is that it would burn if brought into close juxtaposition with the flesh in the glass tube alone.

Mr. MARTINE of New Jersey. If the Senator will yield just a moment, I think a statement I rose to make would be very interesting here at this point.

Mr. WALSH. I yield to the Senator.

Mr. MARTINE of New Jersey. During the late illness of Robert Bremner, a Representative in Congress from New Jersey, who was a victim of cancer, he was taken to the Dr. Kelly hospital, in Baltimore. I visited him there two or three times during his illness and obtained an idea of the effectiveness or capacity of the radium rays. I visited "Smiling Bob," as they called him, as he lay in his bed. I asked him if he had found any relief from radium. He thought he had. He said, "I have three or four of these little tubes embedded in my flesh." He said his neck then became very stiff, and he applied to the doctor for something to give him relief for his neck. He said they took one of these tubes and bound it on the outside, as the Senator from Montana says, near the ear, and the pain from it was so intense as to make his ear tingle and burn. As he described it he said, "Have you ever been out in the cold and had your ear well frost-bitten and then come into a warm room? If so, you can get some idea of the uncomfortable sensation. The rays produced such a burning in my ear that I applied to the doctor for relief, and they bound up my ear." He had a belief that it was curing him, but as we know he collapsed under it.

Mr. WALSH. I wish to say in this connection, simply in addition to what has been said by the Senator from New Jersey, that in cases such as that of Representative Bremner, which are hopeless from the start, radium providentially does much toward alleviating the suffering which the patient would otherwise endure, even though he is not cured by it.

Mr. McCUMBER. If I understand the facts aright, the cancer growth is not a germ, but the development of cells.

Mr. WALSH. That is the best information which, as I understand, the profession has to-day. They do not attribute it to a germ, but say that it is an abnormal growth of cells; that the cells do not arrange themselves in the orderly manner they should in the body.

Mr. McCUMBER. And these rays are supposed to destroy those abnormal cells?

Mr. WALSH. I speak with some diffidence about that, because my understanding is that the exact effect is not even understood by the profession itself. I inquired definitely about that, because, as has been suggested here, the ulcer in a case of cancer under ordinary treatment—that is, a superficial cancer—yields rapidly. For instance, "Uncle John," referred to in the testimony read, was two days under treatment. Pictures were shown us, exhibiting startling results. The rapidity with which the sore disappears is remarkable. The suggestion was made that, with respect to perhaps a good many of the cells that have not degenerated, the effect of the radium is possibly to make them take their ordinary place, so that those cells which might be said to be anarchistic become regular law-abiding cells instead.

I continue——

Mr. SHAFROTH. At what page?

Mr. WALSH. At pages 4 and 5 of the House hearing:

Dr. KELLY. Yes; cases are not uncommon among children. The forms vary. There are many forms of cancer. Among children we have sarcoma, which is cancer of the connective tissues of the body. It is a very dangerous form of cancer, and one that I shall speak of later as particularly amenable to the kind of treatment we are going to speak of to-day. Only a few weeks ago I had a child come to me with the eye popped out until it looked as if it had an enormous elephant eye. In fact, the eye had been removed, but the cancer had come back, and the growth had spread until it was a cancer of the tissue of the brain. We applied the radium, and in several weeks the child was perfectly well. I received a telegram on the 25th of December from the father saying: "This is the happiest Christmas I have ever spent." I can show you the pictures of this case later if you desire to see them.

The CHAIRMAN. Will you permit me, Doctor, to ask you a question there? Is that disease curable now by any known means except radium?

Dr. KELLY. I will assert here, in the presence of some of the best authorities in the world, that such a case has never been cured since the world began—a case of this particular kind, a recurrent myoma. If I could get all those cancers of that kind to treat, one person at least could be kept busy treating those cases in this country.

Now, I will read you from what Dr. Abbe says. You will bear in mind, Mr. President and Senators, that these two men stand at the very top of their profession in this country and have been engaged in the use of radium in the treatment of cancer for, now, a period of 10 years.

Mr. WEST. May I ask a question right there? Have they gone so far as to say whether the cancers return or not? That is the great trouble in the local treatment of cancer.

Mr. WALSH. Undoubtedly. They advert to that in the course of the portion of the testimony I intend to read. They state how long since their patients have been treated and what the difference has been.

Mr. THOMAS. I should like to inquire of the Senator if Dr. Kelly made any statement before the committee as to the percentage of the cases which he treated which had been cured and the number of cases where radium did not effect a cure?

Mr. WALSH. I have not in mind that he did. My impression is that there is some testimony on that subject. I have heard Dr. Kelly say, however, outside of the record, that he would think that of the cases which ordinarily come, advanced as they usually are, not recognized as cancer until they had developed to an advanced stage, perhaps 25 per cent would be amenable to treatment.

Mr. THOMAS. That is, it would save one out of every four?

Mr. WALSH. One out of ever four.

Mr. VARDAMAN. I suggest to the Senator from Montana he also stated, I understand, that if taken at the proper time a very much larger percentage of the cases would be cured.

Mr. WALSH. Yes. He said, further, that the agitation to which the effort represented by this bill has given rise will undoubtedly result in bringing many more people to recognize the danger of small blemishes upon the skin and will prompt those affected to come for treatment, either surgical or by radium, very much earlier now than heretofore, and that for that reason the number of cases which can be successfully treated will be found to be continually increasing.

Mr. SMOOT. I should like to ask the Senator if it is not also a fact, testified to by many doctors, that many cases which could be cured by radium treatment could be also cured by the X-ray treatment?

Mr. WALSH. Yes; I have the testimony here showing the difference between the two. I will be very glad to read it to the Senator now. I read from page 27 of the record, as follows:

We talk about the value of X-ray and radium. They are not the same. They are allied to each other.

Mr. THOMAS. This is Dr. Kelly?

Mr. WALSH. This is Dr. Abbe. Let me remark, Mr. President, that by means of the X-ray, developed by electrical processes, it is known we are able to photograph through solids; that is to say, the X-ray is able to penetrate the solid and make a photograph of the object beyond. In exactly the same way the radium rays will penetrate a solid. The photographic plate is very sensitive to these rays also; and a photograph may be made of the object beyond the solid. Indeed, Mr. President, that is the way ores are tested to determine whether or not they con-

tain radium. If a sensitized plate gives evidence of being affected upon bringing the ore into contact with it, we have evidence that it contains radium.

Mr. McCUMBER. Merely for information, let me make an inquiry. If I understand correctly, the X-ray will not pass through metal, while the radium will; in other words, there are some solids, like flesh and, to a certain extent, bone, and so forth, that the X-ray will pass through, but it does not pass through metal. Is not that correct?

Mr. WALSH. I think that is correct. I continue:

We may get them in line after awhile, but they are not the same. Many of the early users of X-ray have died. The rays have caused cancer on the skin, starting in at the hand and working up to the body with fatal end. This is true of some of our noblest workers. If you should meet a score of the finest of the older X-ray workers, you would see six or eight men with one hand or one finger or both hands gone, because they have had parts amputated to save their lives. The X-ray may cause cancer on the skin by years of irritation, but those beginnings of cancerous growth radium will cure just as easily as it cures on the face.

Here [exhibiting] is a photograph of a man who had X-ray cancers all over his hands. He had lost one finger, which had been amputated for cancer. It went up into his arm and his shoulder, and he has since died. Although the disease had fatally invaded his system, he desired to test radium on 30 small X-ray cancers on his hand. Every one disappeared in four weeks after one little tube of radium had been laid on it for 30 minutes, and as they dropped off left his skin healthy and smooth. Other splendid men are now using it in the early stages and saving their lives.

I continue now reading from Dr. Abbe's testimony. He preserved plaster casts of some of the cases treated by him, concerning which he testified as follows:

Dr. ABBE. I was asked to bring some demonstrations here which it would take a few minutes to exhibit, if the committee care to see them. Ten years ago when I started to use radium—in order not to deceive myself, in seeing what changes took place—I made plaster models which I colored and kept, and as patients got better and better I took a new model, to see and demonstrate to myself and friends what things were happening. The results were definite and showed radium had a distinct effect on malignant growths. For instance, I spoke of "bone tumor." There was a young boy with malignant sarcoma of the jaw. I made this little wax model of the jaw. I simply put radium in the tumor and left it alone, and the malignant growth went back to the normal. It has now been 10 years and the boy is perfectly healthy, his teeth are solid, and you would not know the difference in the two sides of the face. [At this point Dr. Abbe exhibited models to the committee.] If you care to pass these models around they will prove convincing. On bone sarcoma, radium uniformly acts as a specific cure.

Mr. BYRNES. How do you apply the radium?

Dr. ABBE. We simply make a little stab wound, put the tube in it and leave it there a number of hours, determined by experience—maybe two or three hours, maybe all night, maybe six or eight hours, according to the way you filter the different rays.

Mr. HAMLIN. What is the composition of the tube, glass?

Dr. ABBE. Formerly glass, but now I have platinum tubes, which are safer. This model [indicating] shows a cancer of the eyelids. The man came to my clinic. I simply laid on a little glass tube like that, and let him sit in the clinic an hour and a quarter. In eight weeks he was perfectly cured. Nothing else was done. That illustrates the type of its influence in a relatively small way, but still, nothing surgery has ever done can touch it.

Here, for instance [exhibiting], is one that has been extremely interesting to me, because it shows a malignant tumor on the lower eyelid. I laid a radium tube against it, to see if anything could be done. After two weeks it grew smaller, in four weeks he was further improved, six weeks better, and in eight weeks perfectly well. After nine years that eye remains perfectly well.

I invite the attention of the Senator from Georgia [Mr. WEST] to that statement as an answer to his question.

That photograph was made nine years afterwards. It illustrates very well the type of persistence of the cure by radium. It is not imaginary; it is the real thing.

Mr. BYRNES. Was radium applied after eight years?

Dr. ABBE. It was never touched after the first day.

Mr. BYRNES. And the disease has never come back?

Dr. ABBE. It has never come back, and you can not tell on which eyelid that tumor grew. I have had him submit it to medical men once or twice and challenged them to say on which eyelid it occurred; they were unable to do so. The hair has returned and everything is normal.

Another class of cases will prove of interest:

Here is the case of the "smoker's tongue." It is a thing that is very horrible. Perhaps out of a hundred cancers of the mouth, tongue, and throat, 99 are in men, and they are all smokers. It does not come unless they smoke very hard for 10 years. After 10 years they may get smoker's tongue, and if they stop then they are all right. If they do not stop, they get little patches of cancer and go on.

Mr. President, inasmuch as I have read here about smoker's tongue, I send to the desk to have read an article which appeared in the Rocky Mountain News of last Sunday, April 5, concerning a man who was treated at Johns Hopkins Hospital for smoker's tongue.

The PRESIDING OFFICER (Mr. MARTINE of New Jersey in the chair). Without objection, the Secretary will read as requested.

The Secretary read as follows:

DENVER VICTIM OF CANCER, BACK FROM JOHNS HOPKINS INSTITUTE, DECLARES METAL IS GREATEST BOON OF AGE.

"Radium, the life-giver, saved me from a slow and gruesome death," declared Franklin Pierce Gelvin, who returned to Denver Friday after undergoing successful treatment at Johns Hopkins Institute for cancer of the tongue.

Gelvin brought back to Denver a remarkable testimonial of the cures effected by radium, and the first authentic story of its powers. Gelvin, who is 62 years old, is the first Colorado man to be cured of cancer and is the first person to have been treated successfully for cancer of the tongue by radium.

CURED OF DEAFNESS.

In addition to being cured of cancer, Gelvin was cured of deafness and catarrh, two ailments which had not been superinduced by his cancer. He declares he returns to his family, a wife and daughter, living at 524 West Eleventh Avenue, as vigorous and healthy as he was when at 25 years of age. He calls radium the "life-giver," and says it is the most wonderful boon of the age.

"I was the first Coloradoan to be cured by the radium treatment," said Gelvin yesterday, as he visited and chatted in the office of the Rocky Mountain News. "I am the first person, say my physicians, to be cured permanently of cancer of the tongue."

HAS BEGUN A NEW LIFE.

"It is as if I have begun a new life instead of being past the threescore mark in life. Radium, the life-giving metal, is without doubt the marvel of the age and the greatest boon given to mankind.

"I went to Baltimore with the intention of trying the metal as a last resort. I never would have consented to have undergone the knife, I had made up my mind fully that if the metal failed to save me I would take my own life. I never would have had my tongue removed by the surgeon.

"I had a cancerous growth on my tongue which was 1¼ inches long by three-quarters of an inch in diameter. It choked me constantly. I ate with the greatest pain. I slept but little and with difficulty. I could scarcely breathe.

"Life two months ago was unbearable. I was prepared to die. Only the love of my wife and daughter led me to undertake the treatment. I had known but little of radium treatments and had but little faith in the heralded cure for cancer.

ALMOST A WRECK WHEN HE BEGAN.

"I was almost a wreck when I was being prepared for the first treatment, which was administered under the supervision of my physician, Dr. Curtis F. Burnham, at the Johns Hopkins Institute. The treatment is simple enough.

"The radium, very small quantities of it, are kept in glass tubes about 1 inch long and one-eighth of an inch in diameter. An attendant placed six of these tubes on my tongue.

"The treatments vary from 30 minutes to 4 hours. I didn't know whether it would kill or cure me; and, to be frank, I didn't much care, although thoughts of my family in Denver led me to accept all that was possible to save me from the dread malady.

"The first treatment consisted of an application of radium for about two hours. After three treatments the cancerous growth had begun to disintegrate.

TOLD HIM HE COULD BE CURED.

"The experts examined me after the third treatment, as is the method when treating cancer patients with radium. They told me that I could be cured. I could scarce believe them, but the pains in my mouth and throat had begun to lessen, and from then on I took a new lease on life.

"For five weeks I took daily treatments of the life-giver. I am confident that there was no trace of the cancer left after the third week, but my physicians wanted to be sure that I had recovered.

"I saw many people treated. Of the entire number of cancer patients who seek a cure, 25 per cent of them are healed. The other 75 per cent come to the life-giver too late, for the advanced stages of cancer can not be coped with in every case as yet.

"Radium will cure hardening of the veins, hardening of the arteries, and hardening of the liver. There is no limit to the possibilities of the life-giver. I have been deaf for years. Yet now I can hear the ticking of a watch and can not stand to have one under my pillow while I sleep, the ticks seem so loud.

"I was a patient at the same time that Dr. E. F. Lake was at the hospital.

"I have gained 24 pounds since leaving the hospital. I am hale and healthy and only a scar on my tongue remains as a reminder that I owe my life and my happiness to radium. And I predict that in a very few years radium will be applied with such a knowledge of its properties that most of the advanced cases of cancer will be cured permanently."

Mr. WALSH. I now read hastily the conclusions of these eminent surgeons concerning the matter, and first as they are stated by Dr. Abbe. I read from page 21, as follows:

When radium was first announced, and the first radium could be gotten in this country in 1903—11 years ago—I cabled over to Mme. Curie's laboratory and succeeded in getting a considerable amount and was able to put it in active use. Just as soon as I satisfied myself of its value I cabled for more. Later, I got a very much higher grade, which was produced in Germany, that was as fine as anything that has ever been made, and I am still using it with the same effectiveness that I did 8 or 10 years ago.

Mr. AUSTIN. Did they give you full weight or cheat you?

Dr. ABBE. No; they gave me full weight. The German radium I procured from the Stahmer Co., in Hamburg, which is not now able to get the material out of which to make it. The radium that I then procured has always worked, and it is superb material. With that I have been able to demonstrate that the effects of radium on malignant cells are such that nothing in surgery has ever been seen like it. Surgery has always expended its utmost force in cutting out tumors far beyond what ordinarily would be seen as a tumor, as in breast cancer, where the growth runs up into the arm and neck. And so in Germany we have had the Wertheim operation for uterine cancer, cutting out far and wide, and by that method cancer has been extensively operated on all over the world. That has been adopted as the Wertheim operation, because in this field of surgery that has been as far as surgery could go. Burning out and the freezing processes for cancer have all had their limits. Now we are going forward from that. Sometimes surgery cures the patient; it never cures the disease; it only removes it. There is the starting point.

At page 27 he gives his conclusions, as follows:

We have in radium an unquestioned new agent, which needs investigation. It must be investigated in the laboratories and large clinics by scientific men of surgical experience who know what they are doing, who keep their records well, and for the next 10 years it

must be sacred to study and use—study most of all—if we are to learn more about it.

Radium is by no means a cure for all cases of cancer, nor for any cases in the advanced stages.

I invite your attention to that particularly because everything that can be said against radium as a cure is embraced in those two sentences of this distinguished surgeon—

Radium is by no means a cure for all cases of cancer, nor for any cases in the advanced stages, but in the early stages it has produced changes somewhat resembling X-ray results, which give the promise of the greatest hope and helpfulness.

As one of those who have helped establish the true value of the usefulness of radium, I urge the immediate production of ample quantity for official research workers and surgeons.

Now I will read you what Dr. Kelly says as to the nature of cancer and the way in which it is attacked by radium:

Dr. KELLY. It is important to recognize the fact that cancer is an anarchistic growth of cells which begins locally. It is not a blood disease at the beginning; in fact, it is not often a blood disease at all. It is not disseminated; it is not a tendency of whole organism to produce cancer, but is local, beginning independently of the vital mechanism which keeps cells in their proper habitation and doing the work of the part in which they are located. The cells run riot; they choke out the other cells, not so much by eating them up as by robbing them of their pabulum and depriving the other tissues of their source of life. So the other tissues die, and so the cancer cells themselves die in the central parts while spreading the peripheral parts, skipping, by metastasis in the parts, to other parts of the body.

And again Dr. Abbe says, at page 22:

Now, let us consider cancer, small or large. With a small cancer we can see and study its effect, and we find on applying a little radium to it, holding the radium over the cancer and letting it bombard it with its peculiar qualities or electrons, that with that bombardment is carried something that reduces that malignant growth and devitalizes it, so the cells are reduced to their normal growth; in other words, we have cured the disease instead of simply removing it. That is only in a limited field at present. We know, too, that the extreme Wertheim operation which originated in Europe is being used much less by Wertheim himself.

Mr. AUSTIN. Doctor, will you please describe that method?

Dr. ABBE. The removal of the entire cancerous uterus and glands running out from it—and they are very extensive—leading from the original source in the pelvis. That is as far as it is possible for surgery to go, and even then the disease usually comes back.

In brief, by using radium we are facing a new method of treating the question of tumor—I will not say malignant growth, and will drop the word "cancer"; let us say "tumor." It is demonstrable that most new growths which the surgeon cuts out are favorably affected and often cured by radium. This includes uterine fibroid tumors or warts or early cancer and central-bone tumors; a tumor is simply an overgrowth of the cells that are normal to the part which it invades. It starts locally as one cell, begins to double, then quadruples, and soon multiplies, so that in a few months it has become an enormous tumor of cells. You reduce those cells by applying radium. Instead of cutting them out, you drive them back, and bone becomes healthy again, an eyelid is restored, and lips are healed. There you have a new phase of work.

Now, Mr. President, just to show that this is not simply a fad of these surgeons, however eminent they may be, I send to the desk two articles, one coming from Berlin and the other from Paris, indicating how this method of treating cancer is regarded by the surgeons of Europe. I ask that the articles be read in the order in which I present them.

The PRESIDING OFFICER. Without objection, the Secretary will read.

The Secretary read as follows:

PRAISES DR. H. A. KELLY—AMONG BEST RADIUM EXPERTS IN THE WORLD, SAYS DR. PAUL DE GRAIS—HE INSISTS CANCER IS CURED—CHIEF DIFFICULTY IN GAUGING THE RIGHT STRENGTH OF THE DOSE, DECLARES PARIS PHYSICIAN.

PARIS, *April 5.*

Dr. Paul de Grais, officer and laureate of the Academy of Medicine and joint founder with the late Dr. Louis Wickham, of the Biological Laboratory of Radium and a pioneer in the use of radium as a curative agent for cancer, has given an interview in which he bestows praise upon the American physicians now using radium and, at the same time, criticizes German operators. He says:

"I regard American physicians, and notably Drs. Abbe and Kelly, to be as good as any in the world in the cure of cancer by radium. They are proceeding on exactly the same line as ourselves. The only claim that we may now have to superiority is that we have had more practice by treating a greater number of cases and have a more accurate knowledge as to the exact doses of radium and the length of time it should be applied.

"Radium gives out three sets of rays—90 per cent alpha, 9 per cent beta, and 1 per cent gamma—of which the last have the greatest curative value, owing to their great penetrant power. They can penetrate a six-inch lead. But the alpha and beta rays are useful for skin troubles and superficial cancer. The alpha and beta rays are radiators of atoms moving with the rapidity of light. The gamma are the vibrations of ether.

SALTS ON ALUMINUM PLATES.

"In addition to applying radium in tubes which are imbedded in cancerous growths, I am now treating patients by the means of plates of aluminum coated with a varnish containing radium salts. In both cases the strength of the penetrating force of the rays is limited to the exact point required by means of screens of lead and of aluminum.

"It is this point, namely, the accurate gauging of the right strength of dose and the right length of time of application, which is of supreme importance in curing cancer by radium.

"I may say that, given this accurate knowledge, the cure of cancer is not only possible but actually attained. Even cancer of the tongue, which at present baffles us almost completely, does so chiefly on account of the difficulty of keeping radium of the required force in position for the right length of time.

"It may be objected that 'cure' is too strong a word, but I have treated cases that were given up as hopeless, and where an operation was quite impossible. Not only has the cancer been eliminated, but there has been no return in a period of three or four years, whereas a cancer nearly always returns after an operation.

DECLARES TREATMENT SUCCESSFUL.

"We have treated successfully all forms of cancer in all parts of the body, internal and external, with the exception only of cancer of the tongue. Even there in most cases we have relieved the patient and prolonged his life.

"As is the case in America, we apply radium in fairly large doses, 80 to 200 centigrammes at a time. Larger doses cause a burning of the healthy tissues. I have had to deal with some horrible wounds caused in this way by German specialists who erred on the side of quantity. We avoid such results by using a number of small doses, and where the cancerous growth is extensive we arrange so as to cross-fire the cancer without injuring the surrounding flesh.

"In such cases we have even injected paraffin wax containing radium, so as to attack a larger area than would be possible with a tube. In some cases also it is impossible to use the varnished plates.

"My most recent efforts have been directed against what is called 'port-wine stains,' disfiguring birthmarks, and similar growths on the head and face, often of malignant nature. With such growths I have had remarkable success, the disfigurement being cleared away as if by magic, often after one or two applications."

—

RADIUM CURES SOME CANCERS, SAYS CZERNY, BUT DOES NOT GUARANTEE AGAINST RECURRENCE NOR ALWAYS PREVENT SPREADING.

BERLIN, *April 8, 1914.*

In his report on 4,000 cases of cancer treated with radium mesothorium, Prof. Vincenz Czerny, the famous surgeon and expert on cancer, formerly of Heidelberg University, says that radium can cure superficial cancer when not deeper than five centimeters, but that even the so-called Y-rays are ineffective in the case of deep growths.

The radium cure does not guarantee against the recurrence of cancer, Prof. Czerny states, nor does it always prevent its spreading to another part. He strongly urges that surgical treatment should not be abandoned where it can be carried out with comparative safety, but after the excision the part should be treated with radium as an aftercure. The professor says it is impossible to state yet whether the large doses of radium now advocated produce dangerous aftereffects.

Last year, on attaining the age of 70, Czerny retired from his position as head of the surgical department of Heidelberg University, but he has not ceased his experimental investigation of cancer. He states that his best results have followed the combination of radium with intravenal injection of enzytol, with which he has completely cured many patients of stomach cancer, which is not treatable surgically; but, he adds, some forms of cancer are unaffected even by colossal doses equivalent to the application of 130,000 milligrams of radium for one hour.

Czerny is the founder of the Institute for the Experimental Investigation of Cancer, at Heidelberg, which was dedicated in 1906 before the International Cancer Congress, after the professor had himself raised $200,000 for an endowment. He is the leader of the world movement to stamp out cancer, and has treated distinguished patients in all parts of the world, including the late Baron Speck von Sternberg, German ambassador to Washington.

Mr. WALSH. Mr. President, I now desire to invite the attention of the Senate to the fact that, relatively speaking, a very considerable quantity of radium is necessary in order to be of any use at all. Dr. Abbe has supplied himself with 350 milligrams and is laboring to get more. He has a contract for an additional quantity, which it will be impossible to fill before the first of August next. Less than 200 milligrams, let me say, would be of practically no value to a surgeon at all, and for general purposes a hospital ought to be supplied with at least 1 gram, which represents an expenditure at the present cost of about $120,000.

Mr. VARDAMAN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Mississippi?

Mr. WALSH. Certainly.

Mr. VARDAMAN. I desire to ask the Senator if after the use of the radium in the tubes which he has described there is any perceptible diminution of that material from the radiation or use?

Mr. WALSH. I will answer the Senator that there is no practical diminution. When radium was first discovered it was supposed to have the property of giving off something and at the same time not diminishing in weight, an apparent contradiction of the laws of nature as we had theretofore understood them. By delicate tests, however, it is found that that is not the case.

Mr. VARDAMAN. I want to ask the Senator another question, following the question I asked a moment ago. Have any casings been discovered which will prevent loss by radiation? I understand that the treatment is given by inserting a glass tube containing the radium. Now, is there any casing which goes over that radium which prevents loss by radiation? Radiation goes on all the time, whether the radium is in the patient or not, does it not?

Mr. WALSH. There is no casing that I know of that will intercept the gamma rays. The alpha and beta rays are intercepted by metallic substances, but the quantity——

Mr. WEST. Mr. President, before the Senator——

Mr. WALSH. If the Senator will pardon me—but the quantity is reduced by the emanations, if we may so speak of them, although the reduction is so small that it has been estimated

that a given quantity will retain its value for a period of 2,000 years.

Mr. WEST. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Georgia?

Mr. WALSH. Certainly.

Mr. WEST. Is the diminution any greater while the radium is being used than when it is not being used?

Mr. WALSH. Not at all, except that when it is not being used it is kept in additional cases. My recollection about it is, however, that none of those cases intercept the passage of the gamma rays. Mr. President, I now conclude the reading of the testimony touching the nature and therapeutic value of radium with these remarks from Dr. Abbe:

He says:

I believe sincerely that we have simply scratched the surface, and that if we have a sufficient amount of it we shall be able to do vastly more, but that is simply my belief. If it is not conserved, it will be sold everywhere by the makers who have the ware to sell, and it will be bought up by doctors all over the country, who would simply want to have a little as a toy, who do not know how to use it, and will not know for 10 years how to use it, because the use has not been standardized. It will open up a fool's paradise. It appears to my mind that the great need for our country is that the use of radium should be put in the hands of the Government laboratories or the Government hospitals or very large institutions of merit. The latter will probably be able to purchase their own material.

As to the source of supply:

The ore from which Mme. Curie first extracted radium came from Joachimstahl in Bohemia, and the Austrian mines providing pitchblende have been, until comparatively recently, the chief source of supply of the world's radium. Fortunately, however, it was discovered in 1906 or thereabouts that the carnotite ores found in the States of Colorado and Utah, which theretofore had been mined for the vanadium which they contained, are productive of radium, and now these ores provide practically three-fourths of the world's supply.

I have here a small specimen of pitchblende and a very attractive specimen of carnotite ore. Pitchblende is not infrequently found as a part of the gangue material in veins of gold, silver, copper, and other metals. It is not infrequently found in combination with them in that way—a fact which will be of some importance in the consideration of a section of the bill to which your attention will be invited later on.

The carnotite ore is never found, so far as experience shows, in connection with other metallic ores. It is found in beds lying between the strata of sandstone, usually quite flat, occurring in pockets or lobes more or less extensive.

In addition to these supplies, the mines of Cornwall produce some pitchblende; some antenite, an ore bearing radium comes from Portugal, and deposits producing it have been discovered in Japan and in Australia.

Mr. THOMAS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Colorado?

Mr. WALSH. I yield.

Mr. THOMAS. I merely wish to remind the Senator that the mines of Gilpin County, in Colorado, also produce radium in the form of pitchblende ores.

Mr. WALSH. Yes; they produce pitchblende. That is correct; and that is an instance in which pitchblende is found in connection and in combination with ores of gold or silver, I do not now recall which.

As to the outlook for the year 1914, careful estimates have been made which show that we may look for a production of practically 48 grams during the current year. It is believed that the laboratories of Europe will produce 12 grams of radium from American ores, 12 grams of radium from ores gathered from other quarters, and that the American reduction works will produce 24 grams.

There are now two companies in this country engaged in the production of radium—the Standard Chemical Co., operating at the city of Pittsburgh, and the Radium Co. of America, whose plant is at Canonsburg, in the same State.

The necessity for preserving their supply of radium has presented itself to many of the countries of the world. Austria furnished the chief supply when this remarkable discovery was first made. A demand immediately developed owing to the interest displayed in the laboratories throughout Europe. The supply was so limited that the Austrian Government prohibited the exportation of either radium or radium ores, and it now has obtained a monopoly of that source of supply.

The Emperor of Germany, recognizing the immense value to his people of having an adequate supply of this great curative agency, has urged upon the municipalities of the empire that they supply themselves with a liberal quantity; and many of them, acting on his suggestion, have secured a considerable quantity, largely from the laboratory of the Standard Chemical Co., of Pittsburgh.

The King of England has interested himself in the remarkable use to which Madam Curie's discovery is being put. He is one of the trustees of an institute established in the city of London for the treatment of cancer cases, which institute is likewise making special efforts to accumulate a liberal supply of radium for use in England.

Our neighbors on the north, the Canadians, recognize the necessity for action to stimulate prospecting for and to conserve whatever deposits of radium their territory may contain. The Province of British Columbia has already passed an act the purpose of which is practically that of the bill before us—to protect their own supply of radium and to promote, so far as possible, prospecting for it. Their act reads as follows:

An act respecting the discovery and conservation of radium.

His Majesty, by and with the advice and consent of the Legislative Assembly of the Province of British Columbia, enacts as follows:

1. This act may be cited as the "radium act."

2. "Radium" means all deposits of carnotite, pitchblendes, or other ores containing radium in sufficient quantity for commercial extraction.

3. The lieutenant governor in council is hereby empowered and authorized to place a reserve on all radium within the public lands of the Province and at pleasure to cancel such reserve.

To the first person proving to the satisfaction of the lieutenant governor of the council that he has discovered radium within the Province the lieutenant governor in council may pay a reward not exceeding $5,000.

4. The lieutenant governor in council may make rules and regulations for the exploration, occupation, and purchase of radium-bearing ore lands, and may apply any or all of the provisions of the "mineral act" to such exploration, occupation, and purchase, with full power to make such other rules and regulations for conserving and developing radium within the lands of the Province as may seem proper, and also to make provision for the retention by the Crown of an interest, not exceeding 50 per cent, in all radium produced from the radium-bearing ore lands of the Province or for the levying and collecting of a royalty on such production of radium.

5. Every order, rule, or regulation made by virtue of the provisions of this act shall have force and effect only after the same has been published for two successive weeks in the Gazette, and such orders, rules, or regulations shall be laid before the legislative assembly within the first 15 days of the session next after the date thereof.

That, however, was the act only of the Provincial Government. The Dominion Government, recognizing the importance of making some special provision respecting lands containing radium-bearing ores, has withdrawn all such by the following order:

AT THE GOVERNMENT HOUSE AT OTTAWA, THURSDAY, THE 12TH DAY OF MARCH, 1914.—PRESENT: HIS ROYAL HIGHNESS THE GOVERNOR GENERAL IN COUNCIL:

Whereas by an order in council, dated the 13th August, 1908, regulations were established for the disposal of quartz-mining claims in Dominion lands in Manitoba, Saskatchewan, Alberta, the Northwest Territories, and the Yukon Territory, which regulations define "mineral" as meaning all valuable deposits of gold, silver, platinum, iridium, or any of the platinum group of metals, mercury, lead, copper, iron, tin, zinc, nickel, aluminum, antimony, arsenic, barium, bismuth, boron, bromine, cadmium, chromium, cobalt, iodine, magnesium, molybdenum, manganese, phosphorus, plumbago, potassium, sodium, strontium, sulphur (or any combination of the aforementioned elements with themselves or with any other elements), asbestos, emery, mica, mineral pigments, corundum, and diamonds, but which declare that limestone, marble, clay, gypsum, or any building stone, when mined for building purposes, shall not be considered as mineral within the meaning of the said regulations; and

Whereas it would appear to be in the public interest that radium, which means and includes all deposits of carnotite, pitchblendes, or other ores containing radium in sufficient quantity for commercial extraction, the property of the Crown, should be for the present withdrawn from disposal: Therefore

His Royal Highness the Governor General in council, under and by virtue of the provisions of section 37 of the acts 7–8, Edward VII, chapter 20, is pleased to authorize the minister of the interior to withdraw from disposal and to reserve to the Crown all rights within the said Provinces and Territories to radium, and to other minerals which may contain radium in sufficient quantity for commercial extraction.

RUDOLPHE BOUDREAU,
Clerk of the Privy Council.

Mr. SMOOT. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Utah?

Mr. WALSH. I do.

Mr. SMOOT. I understood the Senator to say that there were only 2 grams of radium in the United States.

Mr. WALSH. Yes.

Mr. SMOOT. I also heard the testimony of Dr. Kelly at the time he was before the Secretary of the Interior, in which he made the statement that there were only 30 grams in the world to-day.

Mr. WALSH. That is the testimony.

Mr. SMOOT. The Senator has just made the statement that this year, 1914, there would be produced 48 grams, or an increase in one year in the total amount of radium in the world amounting to about 160 per cent. The Senator knows that there are very few radium mines open to-day. I suppose within the last year there have been twenty times as many locations made of

radium-bearing lands as in any previous year; yea, more than that. Does the Senator know the amount of radium that Dr. Kelly thought the United States ought to own and have for medical purposes?

Mr. WALSH. The committee called before it Dr. Anderson, the representative of the Public Health Service, who told us that the hospitals operated by the Government ought to have at least 20 grams of radium.

Mr. SMOOT. If I remember correctly, Dr. Kelly said that we ought to have in the United States not less than 30 grams of radium, and if anything, more. I wish to say that Dr. Kelly admits that the Standard Chemical Co., of Pittsburgh, can easily fulfill their contract for delivering 12 grams this year. The Senator also made the statement that there will be produced in this country this year 24 grams of radium; so it seems to me that it will be very few years, indeed, until enough radium will be produced in this country, if it is allowed to be produced, to take care of every need in the United States.

I simply ask the Senator if the figures I have given and the statements I have made are not in accordance with his understanding as to the amount of radium we have, the amount that will be produced, and the amount that will be required in the United States?

Mr. WALSH. I will say to the Senator that I do not recall any testimony given by Dr. Kelly being an estimate by him of the needs of the country. Dr. Anderson said that the Government hospitals ought to have from 20 to 30 grams. There are 23 hospitals now operated by the Government of the United States—the Naval hospitals, the Army hospitals, and the Public Health Service hospitals.

Mr. SMOOT. I do not want the Senator to misunderstand me. I did not imply that Dr. Kelly had testified before any committee of Congress. I remember well, however, attending a meeting held in the office of the Secretary of the Interior at which Dr. Kelly spoke upon the wonderful properties of radium. I believe the two Senators from Colorado were also at that meeting. I am quite sure that at that time Dr. Kelly made the statement that there were but 30 grams of radium in all the world to-day, and that the United States ought to own that much radium itself. I will ask the Senator from Colorado if he remembers that statement?

Mr. THOMAS. Such is my recollection.

Mr. SMOOT. That is as I remember it.

Mr. SHAFROTH. I think it is repeated in the testimony that is here.

Mr. SMOOT. What I thought was this——

Mr. WALSH. Mr. President, I think there is no question about that. There are about 30 grams of radium in the world, and the Government of the United States, for its own hospitals, ought to have at least that much.

Mr. SMOOT. What I wanted to bring to the attention of the Senator was that if 30 grams of radium is all that is required in the United States, or if twice that amount of radium is all that is required in the United States, with a production of 24 grams this year, and with a possibility of an increase of 100 per cent next year, it will not be very long before the production will be equal to the demand of this country.

Mr. WALSH. Mr. President, I wish to say to the Senator that I do not know of any estimate made by anybody as to what the needs of the people of the United States are. I feel entirely satisfied that 30 grams will be nowhere nearly equal to the necessities of the case, because almost if not quite that much is necessary for the Government hospitals, which are limited by law to treating Government employees or those engaged in the military or naval service and not more than 10 additional patients.

Mr. THOMAS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Colorado?

Mr. WALSH. I do.

Mr. THOMAS. The Senator is better informed than I am about these subjects; so, if I commit an error in what I am about to say, he will correct me.

My information is that cancer is a much more prevalent disease than is generally supposed, and that perhaps 10 per cent of the people are infected with that malady in more or less aggravated form. If that be true, then there are some 10,000,000 people in the United States who may be said to be afflicted with cancer. I do not vouch for that proportion, because my information is second hand; but I have also been told that the mortality of cancer patients is about 75,000 per annum. That being the case, it would seem to me that if radium is a cure for this terrible malady, very much more than the amount produced is essential for use not only in the United States but throughout the world, because of course the disease is not confined to any one country.

Mr. WALSH. Mr. President, I think the number of cases the Senator gives is higher than the testimony leads us to believe.

Mr. THOMAS. I did not hear the testimony, Mr. President.

Mr. WALSH. I think the testimony is that there are probably 300,000 cases of cancer in the United States.

Mr. SHAFROTH. Two hundred thousand, I think.

Mr. THOMAS. The information I have proceeded from another source, and it seemed to me to be absolutely incredible. Of course 200,000 or 300,000 is bad enough. That is a frightful number to be afflicted with this disease.

Mr. WALSH. But, Mr. President, one would be entirely in error if he reached the conclusion that 30 grams of radium is believed by anybody to be sufficient to supply the needs of the people of the United States.

In explanation of the rapid increase in the output of radium, to which reference was made by the senior Senator from Utah [Mr. SMOOT], I ought to say that the production in this country during the ensuing year is going to be unusually large. Both of the institutions of which I speak—the Standard Chemical Co., at Pittsburgh, and the Radium Co. of America—are new in the field. The latter produced no radium at all prior to the present year, and commenced producing only a month or two ago. Prior to the 1st of January the other company, the Standard Chemical Co., had produced, my recollection is, only about 2 grams, but it is contemplating putting out a gram a month from this time on.

Mr. THOMAS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana further yield to the Senator from Colorado?

Mr. WALSH. I do.

Mr. THOMAS. Is not that due to the fact that the processes which they use have only recently been completed and made successful?

Mr. WALSH. That is very largely true.

Mr. SMOOT. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana further yield to the Senator from Utah?

Mr. WALSH. I do.

Mr. SMOOT. In that connection I wish to say that Dr. Kelly himself said in the testimony as follows:

> That is the Standard Chemical Co., of Pittsburgh, and I am quite sure that they are able to live up to that contract—

That is, one gram per month—

> They have been making a splendid quality of radium and delivering full measure.

Then the doctor goes on to say that the foreign manufacturers, in delivering radium to this country, have not delivered full measure. I wish to say further that Dr. Kelly himself said that the Standard Chemical Co., of Pittsburgh, is perfectly able to deliver the 12 grams this year.

Mr. WALSH. I do not think there is any question about that.

Mr. President, I now pass to consider the appropriation of our lands containing radium-bearing ores.

Mr. PITTMAN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Nevada?

Mr. WALSH. I do.

Mr. PITTMAN. Before the Senator passes from that I want to read from the hearing a paragraph which will answer partially the question of the Senator from Utah as to the requirement for radium in this country. The estimate was not that 30 grams of radium would be required in this country, but that 30 grams are required by the Government. The language of the hearings is as follows:

> The Army and Navy surgeons have asked for the hospitals operated by the Army and Navy a supply of 10 grams of radium, and the Public Health Service has asked for 20 grams for its 21 hospitals.

Mr. SMOOT. I wish to say to the Senator——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Utah?

Mr. WALSH. I do.

Mr. SMOOT. I had no reference whatever to the testimony given before the committee of either House. I referred to a statement which was made by Dr. Kelly at a meeting held in the office of the Secretary of the Interior. I do not profess to know whether 30 grams will be sufficient or not. If I were going to express an opinion, I would say that it would not be sufficient for the use of the United States.

Mr. WALSH. Mr. President, we need not concern ourselves particularly with any deposits of pitchblende there may be in this country as a source of radium supply, because practically the entire supply comes from the deposits of carnotite, which, as I said before, so far as they have been worked, lie within the States of Colorado and Utah. That field has been prospected for ores of this character since it was first discovered, in

1902, that they contain radium-bearing ores, but the field has been worked for practically only three years.

In this connection, Mr. President, I send to the desk and ask that it be printed as an appendix to my remarks, without reading, an historical account of the early efforts to secure and reduce these ores, after the discovery of the fact that they are radioactive, by Stephen T. Lockwood, of Buffalo, N. Y. I ask it not only because of the historical value of the contribution, but because it pays a just tribute to a distinguished citizen of the State of Colorado, Mr. Thomas F. Walsh, now deceased, who at an early stage in the development of the industry to which the discovery led, gave it his attention and aided with characteristic liberality in the researches which were necessary to make the deposits available for the relief of the afflicted.

Mr. SHAFROTH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the Senator from Colorado?

Mr. WALSH. I yield.

Mr. SHAFROTH. I will state to the Senator that Mr. Thomas F. Walsh was very much interested in this ore and established a fund with the school of mines at Golden, Colo., and that they extended experimentations and investigations in relation to it with great success.

Mr. WALSH. The article recites the fact to which the Senator from Colorado has now directed our attention.

The PRESIDING OFFICER. Without objection, the matter referred to will be printed in the RECORD.

The matter referred to is as follows:

RADIUM RESEARCH IN AMERICA.

[Statement of Stephen T. Lockwood, 1914.]

Thomas F. Walsh, of Washington, D. C., and Colorado, as everyone doubtless remembers, was a millionaire who had accumulated most of his great fortune from the ownership of the Camp Bird gold mine, of Ouray, Colo. Now, Ouray is not far from the carnotite country of Colorado. He became interested in the production of radium early in the year 1908. On March 23, 1908, he appeared before the House committee in support of the bill providing for the creation of a Government Bureau of Mines. I might say properly that he had a large influence in the ultimate establishment of the present Bureau of Mines, which was subsequently organized and has undertaken the much-needed Government work of assisting in the production of radium since Mr. Walsh's death. In his talk before that committee he mentioned the production of radium particularly as a reason for the establishment of the bureau.

When Walsh became interested in radium, viz, March, 1908, the Rare Metals Reduction Co. had completed its reduction works at Lackawanna, N. Y. (South Buffalo), and had demonstrated the commercial possibilities of the reduction of the so-called carnotite mineral for the production of the uranium oxide and the ferro-vanadium of commerce, and had produced and sold both in a commercial way early in the year 1906. The production of pure radium salts was not, however, undertaken in a commercial way, but the radium by-product was saved and not refined commercially. The writer, however, made many experiments in perfecting himself in the technique of refining radium residues. The cost of refining appeared at first blush to represent the whole commercial value of the radium, and more. At this time it is to be noted that every milligram of radium produced by the so-called Austrian Government monopoly, at Joachimsthal, was produced and sold for scientific purposes at a loss.

The Rare Metals Reduction Co. had also in 1906, continuing in March, 1908, an arrangement with the American Mineral & Alloy Co., of New York City and Denver, to furnish the works with a 30-ton car of carnotite monthly. This arrangement the second company found impossible to fulfill, because of the scarcity of ore and lack of information, and in consequence the two companies had placed in the field in Colorado an organization to explore and locate new deposits.

Mr. James N. McBride, now a member of the Michigan Legislature, of Burton, Mich., and Cashin, Colo., was acting with this organization. A statement of Mr. McBride is appended at the end of this paper.

Mr. McBride was, during the period of 1900 to 1906, the general manager of the La Sal Copper Mining Co., at Cashin, near the Paradox Valley, and as such had been induced to make the first effort to mine, mill, and ship carnotite ores regularly from the carnotite ore field of southwestern Colorado.

Mr. McBride produced at that early date a 17-ton car of carnotite concentrates (15 per cent U_3O_8 and 19 per cent V_2O_5) by the process of milling the ores, sliming out the oxides, drying, and bagging for shipment. This car went to the then well-known chemical firm of John C. Wiarda & Co., of Brooklyn, N. Y., realizing $5,400. At that time radium was not generally known or admitted to exist in carnotite, and the use of vanadium as a steel alloy had not been developed. Wiarda & Co. purchased for the uranium oxide contents alone, and their purchase was sufficient to stock them up for several years. McBride, under these conditions, abandoned his efforts.

The results, however, to March, 1908, were all negative, and the experience of everyone was negative. The united wisdom and effort of everyone, financial and physical, were unable to produce enough ore to keep the plant at Lackawanna running in a commercial way. New deposits of new minerals of vanadium were found in Peru in 1906, enabling Mr. Flannery to engage in the vanadium business on a large scale. The market for uranium oxide was limited, and the production of radium was not to be contemplated as a commercial money-making project.

A week after Mr. Walsh's appearance before the House Committee on Mines and Mining, about April 1, 1908, I received a message from Mr. Walsh asking me to meet him in New York City. He wanted me to advise him concerning the production of radium from American ores, either pitchblende or carnotite. Upon this request I went to New York and gave to Mr. Walsh a complete history of American radium to that date, as well as that of the infant industry of the associated rare metals, uranium and vanadium. At that time our organization for securing information was such that we had the names and correspondence with every person connected, even remotely or slightly, with the production or sale of either carnotite or pitchblende. We also had samples from every known deposit in the United States, as well as from foreign countries, and we had a record of all ores above ground. When Mr. Walsh was told that there was but 1,800 pounds of pitchblende of suitable grade for reduction mined and for sale he could not believe it. When he was told that we must resort to carnotite for the production of radium and that there was no owner or operator of carnotite claims who would contract to deliver or could deliver as much as a carload of low-grade carnotite ore he could not believe that.

He did decide, however, to attempt the production of the equivalent of 250 milligrams of radium bromide, and at once organized a private exploration bureau for the purpose of making a thorough reexamination into rare metals resources of Colorado and adjoining States. The writer, for the purposes of this bureau, became the personal adviser of Mr. Walsh, and continued as such up to the date of his untimely death, just two years later. During these two years Mr. Walsh expended perhaps $20,000 in investigations, the results of which were all either directly or indirectly made public for general use. He established the Vinson Walsh Research Fund, with the trustees of the Colorado School of Mines, Golden, Colo., and the work of the investigators under this fund gave to the public three quarterly reports of the school of mines, viz:

January, 1909, "Rare Metals."

October, 1909, "Preliminary Report on the Radioactivity of the Carnotite in Southwest Colorado."

April, 1910, "Radium and Radioactivity."

Mr. Walsh also commissioned special mining engineers to visit, check up, and report upon known or reported deposits of rare metals, and in many other ways actively encouraged prospecting and research.

During the summer of 1909 Mr. Walsh maintained a summer home at his Colorado estate of Wolhurst, near Denver, and from this point, as a working base, Mr. Walsh and the writer made short trips of investigation and personal exploration to the pitchblende country in Gilpin County, about four hours' ride by rail from Denver. Here we found the 1,800 pounds of pitchblende before mentioned still unsold, and Mr. Walsh purchased it for the Colorado School of Mines.

The most interesting mine was the Kirk mine, which has probably produced more pitchblende than any other in the United States. The then owner or lessee of the mine, Mr. Loring Gale Nesmith, and his wife were in occupation of a summer cabin at the mine, but the mine was not in operation. We were shown some beautiful specimens of high-grade pitchblende, allowed to scramble over a dump of low-grade ore, and delightfully entertained at a noonday luncheon, but no one was allowed to enter the mine and no ore was for sale. This dump of low-grade ore ran about 3 per cent of pitchblende, but Mrs. Nesmith loved it as a little girl loves a rag doll, and even told us that it sparkled with radium in the pitch darkness. As I had never been able to get pure 100 per cent pitchblende to sparkle with radium under like circumstances, I was mutely from Missouri as to the 3 per cent. It may be interesting to know that this dump of low-grade ore was still unsold in April of the following year, at the time of Mr. Walsh's death.

By December, 1909, after nearly two years of extra investigation, Mr. Walsh had practically decided that my original plan of operations was the one which held good. This plan involved sending Mr. Andrew Richardson, of Ouray, Colo., Mr. Walsh's pioneer manager at the Camp Bird mine, and Mr. James N. McBride, of Burton, Mich., the pioneer and best qualified man to mine and concentrate carnotite ores, into the carnotite country to buy ores and operate a concentration mill which he had set up there years before.

Low-grade ores, as in the case of McBride's early 17-ton shipment, were to be concentrated to sufficiently high grade to stand wagon and mule-back shipment to the railway at Placerville, and thence 30 tons of concentrates per month were to go to Buffalo regularly for reduction by the plant of the Rare Metals Reduction Co., at Buffalo (Lackawanna).

But Mr. Walsh was ill in December, 1909; on January 11, 1910, he was very ill and scarcely survived the crisis of pneumonia, and after fighting off death for three months, finally died in April, 1910. Mr. Walsh died with his purposes and wishes relative to the production of radium unrealized.

During all the years, from September, 1902, until the date of the death of Mr. Walsh, in April of 1910, and continuing, but in a lesser degree, from that time to this, the writer has devoted his avocational time and no inconsiderable amount of money in a research concerning radium. The chemical reduction of carnotite ores for the complete and efficient extraction of the radium in the form of either a radium-barium sulphate or a radium-barium carbonate was evolved almost in the first instance.

Pierre Curie, in his correspondence with the writer, suggested—to translate his language—the attack with hydrochloric or nitric acid. The question whether radium barium in carnotite existed in the form of a carbonate or sulphate, or both, was thoroughly considered by Prof. Alexander H. Phillips, of Princeton University, in 1903. Our tests on Richardson ores showed almost complete extraction of radioactivity by a thorough digesting in hydrochloric acid without the boiling first with sodium carbonate. It is to be remembered, in this connection, that the Curies extracted the first radium from the residues of the sulphuric-acid reduction of the Austrian pitchblende, and the radium in these residues was therefore sulphate, so that the Curies were compelled to first boil this sulphate in sodium-carbonate solutions and to wash many times to remove the soluble sodium sulphates in their entirety before the "attack" with hydrochloric acid.

The secret process for the production of radium, if it can be said to exist at all, relates solely and only to the refining of the radium-barium sulphates, or the radium-barium carbonate derived from the previous gross reduction of the carnotite ores.

The process of refining delineated in the original thesis of Mme. Curie, published in the Chemical News of September 18, 1903, states that the sulphates are first converted into carbonate by boiling in sodium carbonate, and freeing the carbonate thus obtained from sodium sulphate; that these carbonates are then converted into chloride salts of radium barium with pure hydrochloric acid. These salts are refined for the elimination of the gross barium chloride by the process of fractional crystallization. This process is described in her language in the thesis as follows: "At the beginning of the fractionation the chloride is dissolved in pure distilled water and the solution is raised to the boiling point and allowed to crystallize by cooling in a covered capsule. Beautiful crystals form at the bottom and the supernatant saturated solution is easily decanted. If a part of this solution—the decanted portion—be evaporated to dryness, the chloride obtained is found to be five times less active than that which has crystallized out in the first instance."

A practical illustration of this process is as follows:

One hundred grams of water, at 40° Fahrenheit, dissolves 32.2 grams of radium barium chloride forming a saturated solution.

One hundred grams of water, at boiling point, 212° Fahrenheit, dissolves 58.8 pounds of barium chloride forming a saturated solution, at that temperature.

Starting, therefore, with the last solution and cooling it to 40° Fahrenheit, 20.6 grams of chloride must crystallize out of the solution, and 38.2 grams will remain in the solution. If the 20.6 grams of crystals are removed by decanting, and the remaining 38.2 grams are evaporated from the decanted solution, it is found that one gram out of the 20.6 grams is five times as active in the radium element as 1 gram of the 38.2-gram portion. As Mme. Curie pointed out in her thesis, the bromide salt of radium might be used and the refining conducted in the same way with considerable more of rapidity, because 100 grams of pure distilled water dissolved 149 grams of radium barium bromide at 212° Fahrenheit, and deposited 52 grams of bromide crystals on cooling to 32° Fahrenheit.

This process of fractional crystallization was, as far as the writer could ever ascertain, the only process of refining radium barium salts for the elimination of the gross barium contents, and for the production of a salt of radium relatively free from barium salts.

In the operation of the reduction works of the Rare Metals Reduction Co., assuming that we had been able to secure at that time sufficient ores to keep the plant in operation, the radium barium carbonate or sulphate residues were a by-product which cost us nothing. As to the cost of refining these by the process of fractional crystallization, some light may be shown by the comparison between the selling price of radium bromide salts of varying degrees of purity in 1908. The following is the price list of Ambrecht, Nelson & Co., at 71–73 Duke Street, Grosvenor Square, London, W. C., England: The price of 5 milligrams of 5 per cent of radium bromide with 95 per cent barium bromide was £4 ($19.464) for a 5 milligram tube. The price of 10 per cent radium bromide with 90 per cent barium bromide was £8 ($38.928) for a 5 milligram tube. The price of 30 per cent radium bromide, with 70 per cent barium bromide was £24 ($116.784) for a 5 milligram tube. The price of 40 per cent radium bromide, with 60 per cent barium bromide was £32 ($155.712) for a 5 milligram tube. The price of 50 per cent of radium bromide, with 50 per cent barium bromide was £40 ($194.640) for a 5 milligram tube.

It will be seen, therefore, that the price of the contained radium bromide in absolute quantities did not increase with the relative purity, but was at the rate of £4 ($19.464) for each 5 per cent increase in purity; so that a milligram of actual radium in a 5 per cent compound costs at the same rate as a milligram in a 50 per cent compound.

Under date of September, 1903, we required some foreign radium bromide of established purity for the purposes of making a comparison of prices and products. Messrs. Harrington Bros., manufacturing chemist, 4 Oliver Yard, City Road, London, E. C., furnished the quotations and the material.

We purchased a gram tube (1,000 milligrams), said to contain radium bromide of 1 per cent purity. Its activity, as compared with a gram of pure uranium metal, free from radium and other radioactives, should have been 20,000 units, and it should have contained the equivalent of 10 milligrams of absolute radium bromide. It cost 110 shillings English money, or $27 American. At the same time Messrs. Harrington Bros. quoted us pure radium bromide crystals in 5 milligram tubes at 55 shillings English money, or $13.50 American money.

William J. Hammer, the electrical expert of New York City, who wrote a book on radium at that early date, arranged the importation, and the tube was sent to Dr. George B. Pegram, of Columbia University, for testing. He unsealed the tube, took out 100 milligrams, which were given to Mr. Hammer, and 10 milligrams for his test sample, and sealed the tube, returning it to the writer. The activity, as determined by Pegram, was 7,000 units instead of 20,000. This tube, containing 890 milligrams, was placed in the custody of Dr. Roswell Park, just deceased, of this city, and there remains to this date.

It will be seen in this instance that the price of 10 milligrams in a 1 per cent compound is the same as 10 milligrams in a 100 per cent compound, being pure radium bromide, assuming that the degree of purity as alleged at the offering was equally in error.

It will be seen, therefore, that in the early days the cost of refining from 1 per cent pure to 100 per cent pure did not more than offset the cost of selling in retail as against wholesale.

Notwithstanding this, the process of fractional crystalization was and is a supertedious process. On cooling the boiling solution the crystals do not immediately commence to form, and it usually requires 24 hours to complete a fractionation.

Early in the technology of refining radium from barium a specific reagent was sought for the separation of radium from barium in one operation, say, in a precipitation operation covering a few moments of time. In this connection alone can a secret process exist, and whoever has taken pains by continued experiment to discover the reagent has the process.

Based on reduction costs, therefore, of crude carnotite ores and upon the cost of refining the radium barium residues the price of $120 per milligram for pure radium bromide is not justified.

The cost of the primary or crude reduction of carnotite ores so as to obtain (1) commercial uranium oxide, (2) vanadium iron oxides suitable for furnacing to ferrovanadium, and (3) the radium-barium residues, is as follows:

Per ton of carnolite 2.37 per cent U_3O_8, and 3.18 per cent V_2O_5:

Labor	$11.40
Soda ash	7.51
Acid	17.61
Minor reagents	1.00
Natural gas	2.29
Coal steam	2.14
Oil	.00
Maintenance, renewal, repair, taxes, plant (cost unit ton plant, $6,000)	3.00
	45.04

Capacity of unit ton plant, 1 ton in 24 hours.

The cost of reduction of a high-grade concentrate, say of 17 per cent U_3O_8, and 21 per cent V_2O_5, in this unit ton plant would be higher. A carefully calculated cost sheet, calculated as of date of April 30, 1907, made it about $80.

A letter covering this entire subject as of that date is illuminative and is appended at the end of this paper.

The business arrangement which the writer had with Mr. Thomas F. Walsh at the time of the latter's death was as follows:

The writer gave to Mr. Walsh, with full authority and intention that it be given to the public, the full sum total of his knowledge and activities concerning the subject of radium to the date of and during the continuance of the arrangement; and continued to act as his advisor, with respect to that research, up to the date of his death. For this service no money compensation was received, and in every respect Mr. Lockwood sustained his own expense account, except that in the instance of the special trip to Colorado, which consumed nearly a month of Mr. Lockwood's time, Mr. Walsh, for that trip, bore his expense.

The actual consideration for this service, however, was that Mr. Walsh undertook to finance the organization of a large business in ferrovanadium, taking in Mr. Lockwood as a partner, provided a deposit of vanadium ores could be found, either in America or elsewhere, which might become the basis of an organization employing at least $1,000,000 of capital. Mr. Walsh did not wish to become identified with a small business unit.

Simultaneously with the radium research work, the writer advised, investigated, and reported concerning supposedly large projects in vanadium.

In this connection, under date of March, 1909, the writer came in contact with T. F. V. Curran, then of 452 Ella Street, Wilkinsburg, Pa., who was seeking to approach Mr. Walsh with his promotion of the "General Vanadium Co. of America."

Mr. Curran had been associated with the American Vanadium Co., of Pittsburgh, Pa., from the date of the inception of that company (about September, 1906) to March 2, 1909, as the confidential man of Mr. Joseph M. Flannery, of that company.

Mr. Curran claimed to have discovered "an immense deposit of vanadium sulphide in southwestern Colorado containing 10 per cent V_2O_5," but upon a thorough examination the writer became satisfied that Mr. Curran was entirely mistaken and was wholly unfamiliar with the then existing situation in Colorado as regards vanadium (Curran's specialty) and absolutely ignorant of any facts concerning uranium and radium products derived from the carnotite ores of that place. I had one interview with Mr. Curran, lasting about four hours, in which he stated his case, he being at the time wholly ignorant that I was the president and active manager of the Rare Metals Reduction Co. After he had finished, I then very frankly told him of the real situation, and told him very many facts about the vanadium resources of southwestern Colorado and the collateral possibilities of the production of uranium oxide and radium in the event that carnotite should be used as a basis of operations instead of the Roscoelite, which was most abundant, and located on the railway, but very difficult of reduction.

This interview and much correspondence with Mr. Curran leads me to conclude that Mr. Curran's activity in carnotite can not antedate March 29, 1909.

The writer has a report of Mr. Eduardo Higginson, Peruvian consul general at New York City, on "A new vanadium deposit in Peru owned by the American Vanadium Co. (Mr. Joseph M. Flannery)." This deposit was visited by the Government engineers of Peru about the middle of 1906. Shortly thereafter it was visited by Mr. Hewitt, engineer for Mr. Flannery, just starting the American Vanadium Co., and purchased by him. It was the basis of the American Vanadium Co.'s development of the vanadium business in the United States. (See Hewett, Foster, Eng. and Min. Jour., vol. 82, 1906, p. 385.)

In 1911 the American Vanadium Co. issued a booklet on "Vanadium steels," and in the introduction on the sources of vanadium does not even mention carnotite, and therefore I must conclude that Mr. Flannery's interest in that mineral could not antedate that date, viz, 1911; and certainly could not antedate March, 1909, at which time his confidential agent, Mr. Curran, left his employ, seemingly wholly ignorant as to the use of carnotite as a source of vanadium.

On January 12, 1906, the Rare Metals Reduction Co. shipped 10 bags of uranium oxide to New York City via Pennsylvania Railroad; price bid, $2 per pound U_3O_8. On January 27, 1906, a ton of vanadium-iron oxides went to Niagara Falls to the Niagara Research Laboratories for a test furnace run on this material.

On July 9, 1906, the ferro-vanadium from this was returned; it was sold to Mitsui & Co., Yokohama, Japan; price, $5 per pound vanadium metal, and a double repeat order was received.

Our conclusions are that Mr. Flannery and Mr. Curran are not pioneers either in the vanadium business or in the use of carnotite as a source of uranium and vanadium and of radium, for the purpose of considering the merits of their opposition to this bill.

STATEMENT MADE, 1906.

The writer, James N. McBride, is 43 years old. A graduate of the University of Michigan. Has spent seven years in the western Colorado country as general manager of La Sal Copper Mining Co. In order to secure some expert chemical operations I secured Charles Poulot, a graduate of Freiburg (Germany) Mining School. Poulot was an experienced rare-metal chemist and has sold uranium ores in Europe, and was the best-posted man in those lines I had ever met. We were practically the pioneer exploiters and explorers of mineral deposits in that section.

Our laboratory gave us opportunity to test samples, then we explored the field. Uranium is found with vanadium, and the latter element was not then a commercial article. Our effort was to produce as high-grade uranium ore for shipment as possible and then make a high-grade, acid, leaching product, to save freight on the waste and on the vanadium, which was waste also. Several hundred tons of uranium was treated at Cashin, Colo., and a larger amount at a mill located in San Miguel County, at Snyders, a local place. The expense of acid in those sections made the work costly. Finally one lot of concentrates were made which was merely finely crushed and washed. The uranium and vanadium contents were, as I recollect, 15 per cent uranium oxide and 19 per cent vanadic acid. This carload, 17 tons, was sold to Jon. C. Wiardi, through Ledoux & Co., bringing $5,400 for the uranium content alone. The vanadium was simply so much waste. Various experiments to separate the vanadium and find a market for it were tried. The various steel companies wanted the material, but not in the shape we were able to offer it, viz, a concentrate carrying uranium and vanadium. Often deposits of low-grade uranium and high-grade vanadium ore could not be handled, for vanadium was no more marketable than so much sand. Finally it was determined to wait until a process was found to cheaply separate the elements and market the vanadium. This Mr. S. T. Lockwood has done, and will make the ores approximately 100 per cent more valuable.

Uranium-vanadium ore is a double potassium salt associated with silica in a soft sandstone and in other places with clay. The oxides of the two elements are lighter than the silica and go off the finely crushed ores as slimes when stirred with water. The slimes are decanted off the washed ore and run into canvas strainers and dried in the sun. The clay deposits offer more difficulties, since the clay is more

soluble and produces a low grade of concentrates, although the ores are usually richer, which offsets the condition in some respects. The original deposits were worked on a basis of a 4 per cent uranium oxide, and this was often shipped crude. In sampling the dumps of workings after the high-grade ore had been sorted my notebook shows:

	U_3O_8	V_2O_5
	Per cent.	*Per cent.*
Low grade, upper group, Snyders (1)	2.34	3.3
Black Rock (rejected material)	Tr.	2.6
Little Sadie (2)	1.23	1.7
Lower claims, low grade (3)	1.92	2.6

These (1, 2, 3) concentrated in laboratory purely mechanical and in no way different from millwork to 11.96 per cent, 20.3 per cent, with an average loss of 20 per cent. The value of these concentrates on the railroad would be at $1.25 per pound for the uranium and 25 cents per pound for the vanadium, would be $496 per ton. Sampling a pile of ore in Roc Creek district from which the high grade had been sorted there measured 23 tons, of an average value of 2.67 per cent U_3 O_8 and V 4.05 per cent. The ores in San Miguel and Paradox divide will average as they stand about 3 per cent U_3 O_8 and 4½ per cent V_2 O_5. The difficulty in sampling is that if the ore is followed to the limit of mineralization the average grade is reduced.

An estimate of the available deposits can not be made with engineering exactness. These deposits are on bluffs of the Dolores, Grand, San Miguel Rivers, Roc Creek and La Sal Creek, over an area of 100 miles in length. A very promising deposit ceases to continue and a small indication opens up a big field. At Snyders probably 1,000 tons have been produced, and there is a vast amount left. Roc Creek has produced probably 500 tons from a single deposit. An engineer can presume that from districts already partially explored that 10,000 tons of ore is extremely probable. A market that would stimulate prospecting would probably discover much more. No one can actually estimate and can only figure probabilities. I have seen promising indications where no work had ever been done.

From experiences of every sort, I regard crude concentration as the only available method. The ore is crushed to 60 mesh or thereabouts in a Krupp ball mill and kept agitated, maybe reground and washed, or possibly run over a "slimer"; whichever process is simply to eliminate the silica, a portion of the alumina, and produce a product as merchantable as possible. This product depends on the grade of the ore in the beginning and its associated elements. There are times when it would be profitable to make a lower-grade product than a minimum standard, since the low-grade ore must often be mined with the high grade, and the ore costs nothing. It is probable that no concentrate would run below 8 per cent U_3 O_8, 15 per cent V_2 O_5. An average would probably be 10–20. An average concentration would be a saving equivalent to U_3–V_4 maximum to $U_{1\text{-}2}$–V_3. Five tons crude into one concentrate. The loss of 20 per cent not being reckoned, since the average of ore includes the deduction. The concentrates then would be 10–20 to 7.5–15 per cent, or approximately $300 per ton. This ore if bought outright or mined on royalty would cost at the mill $20 per ton of crude, or $100 for ore. Labor and mill operation, with freight, wagon to railroad, $50 to the ton of concentrates, all of which operations would be done in 10 hours. The net proceeds would approximate $150 per day. On high-grade ore much more profit would result. If the ore were mined on ground now vacant, which I would locate for the company, the profit would be increased by $50 per day. The average claim owner does not want to mine; he wants to sell his claim. Buying claims is hazardous; yet ore must be had.

The most effective method is to buy under lease with royalty payments, and, while not desirable, you must do your own mining. Pay the royalty as long as the claim is productive, otherwise vacate the lease. When the claim owners become unreasonable go to another part of the district 50 miles away and secure 1,000 tons or more. The nature of the operations demands a knowledge of the deposits and the owners as well. Probably one-half the claims are open to relocation at the present time.

A concentration plant involves power. Steam is cheaper than gasoline, since the latter costs 50 cents per gallon in that section. A boiler and engine equipment costs $600, a ball mill $1,000, tanks and other equipment with buildings for mill, quarters for men, costs approximately $3,000. If a slime table is used, $500 more should be added. A crude assay laboratory, platform scales, etc., are needed. Five men will operate the mill for 8 to 10 hours per day. Colorado statutes compel an eight-hour day in mills and mines. Possibly since the mill is so small in results 10 hours per day might be possible.

RARE METALS REDUCTION CO.,
April 30, 1907.

LOUIS WEILL, Esq.,
770 Ellicott Square, Buffalo, N. Y.

DEAR SIR: You have asked me to tell you something about the above company, and I take pleasure herein in so doing.

The company is organized under the laws of the State of New York with a nominal capitalization of $4,000. The actual replacement value of the real estate, plant, and equipment of the company, located at the Buffalo, Rochester & Pittsburgh Railway crossing of South Side Parkway in the industrial section of West Seneca, is over $6,000. The company has coal and reduction supplies on hand of value of $200 and a cash working capital subscribed of $5,000. Each share of the nominal 400 shares of stock represents an actual cash value of $28.

The company has also all the advantages of all the preliminary work in the investigation of raw materials and ore supplies, reduction processes, and experimental apparatus; and of the markets for finished products heretofore conducted by the Welsh-Lofftus Uranium & Rare Metals Co., and the American Mineral & Alloy Co., the actual cost of which was between $4,500 and $5,000, none of which has been capitalized. The company has its plans and organization completed and is now in the market for a supply of concentrates of the raw material consumed by it, viz, concentrates of uranium-vanadium oxid ores.

There are several possible sources of supply of this material, but the company has been slow to act in entering into a contract by reason of a desire to close a contract only with responsible parties having the organization and the financial ability to deliver the goods. Negotiations are now pending and working to a close for a contract with such parties for the delivery of a full supply of ore at figures considered remunerative by both parties in interest.

These figures are based upon the delivery of—

	Per ton.
(A) 100 tons concentrates per annum containing 17 per cent uranium oxide and 21 per cent vanadium oxide, at $1.25 per pound uranium oxide contents and 25 cents per pound vanadium oxide contents, making total cost (f. o. b. Colorado railway points nearest source of supply)	$520.00
(B) 200 tons concentrates per annum, containing 7 per cent uranium oxide and 19 per cent vanadium oxide, at $1.10 per pound uranium oxide contents and 25 cents per pound vanadium oxide contents, making total cost (f. o. b. Colorado railway points nearest source of supply)	249.00

Proposition (A) would mean to the company the following manipulations and costs based on actual experience and the estimated profits per ton handled, also based on actual transactions in trade:

	Per ton.
Cost ore or concentrates, f. o. b. railway	$520.00
Freights	12.00
Sampling and assaying	3.00
Packages and reloading at sampler	5.00
Total cost of ore or concentrates, f. o. b. Buffalo	540.00
The cost of chemical treatment and reduction at Buffalo works covering all items of superintendence, labor, chemicals, fuel, oils, gas, and the maintenance and repair of the plant is	80.00
The recovery of products from this reduction is 90 per cent of the 340 pounds of uranium oxide contents equals 306 pounds of a sale value of $2 per pound; total	612.00
90 per cent of the 420 pounds of vanadium oxide contents equals 378 pounds of an ultimate sale value computed from experience as follows: 378 pounds of vanadium oxide contains 56 per cent, or 211 pounds, of metallic vanadium and are smelted at a loss of 20 per cent of this metal, leaving 168 pounds of actual metal returned with a smelting charge of $0.60 to $1.60 per pound of metal so returned, viz	268.80
The sale value of the metal returned in the form of a ferro-vanadium containing vanadium, 22 to 25 per cent; carbon 2 per cent or under; silicon, 1 per cent or under; sulphur, 0.05 per cent or under; phosphorus, 0.05 per cent or under; copper, aluminum, and arsenic, trace; iron by difference is $5 per pound of vanadium metal contents, or	840.00

Summary proposition (A).

Cost ore	$540.00	Selling value uranium oxide	$612.00
Cost reduction	80.00	Selling value vanadium metal	840.00
Cost smelting	269.80		
	889.80		
Cost selling, 10 per cent	145.20		1,452.00
	1,034.00		1,034.00
Net profit per ton handled			418.00

Proposition (B) would mean to the company as follows:

	Per ton.
Cost ore concentrates f. o. b. railway	$249.00
Freights	10.00
Sampling and assaying	3.00
Packages and reloading at sampler	5.00
Total cost of ore or concentrates f. o. b. Buffalo works	267.00
Cost of reduction at Buffalo works	60.00
Total	327.00
The recovery of products from this reduction is: 90 per cent of 140 pounds of uranium-oxide contents equals 126 pounds, of a sale value of $2 per pound; total	252.00
90 per cent of 380 pounds of vanadium-oxide contents equals 342 pounds, of an ultimate sale value computed from experience as follows: 342 pounds of vanadium oxide, containing 56 per cent of vanadium metal, or 191.5 pounds, are smelted at a loss of 20 per cent of the metal, leaving 153 pounds of actual metal returned with a smelting charge of 60 cents to $1.60 per pound of metal so returned, viz	244.80
The sale value of the metal so returned in the form of ferro-vanadium is	765.00

Summary proposition (B).

Cost ore	$267.00	Selling value uranium oxide	$252.00
Cost reduction	60.00	Selling value vanadium metal	765.00
Cost smelting	244.80		
	571.80		
Cost selling, 10 per cent	101.70		1,017.00
	673.50		673.50
Net profit per ton handled			334.50

I may say that our reduction plant will easily take care of the tonnage named and that there are two electro-smelting concerns that would be glad to get the smelting work at the price named. This part of the business if taken over would be a nice proposition in itself.

Trusting that this will give you some insight relative to the proposition that we are engaged in, I am,

Yours, very truly,
STEPHEN T. LOCKWOOD.

Mr. SMOOT. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield further to the Senator from Utah?

Mr. WALSH. I yield.

Mr. SMOOT. I should like to ask the Senator if the history of the development of radium as outlined in this article also gives the history of the process of extracting radium from the ore?

Mr. WALSH. No; it does not, but it states in a general way, so much as is known of the processes of extracting radium,

and because some controversy has arisen about that, I desire to say that, of course, Mme. Curie, on making her very famous discovery, at once gave to the world the laboratory process by which she was able to extract this exceedingly rare metal. Now, the process is known to the scientific world, but, of course, when you undertake to extract radium in commercial quantities there are problems which are not confronted in laboratory work. Some of those processes are not entirely known to the scientific world.

Mr. SMOOT. I fully agree with the Senator, and I was only in hopes that in this connection we could have also made public, as far as possible, the history of the development of the processes that have been found for the extraction of radium from the ore. I understand that the Bureau of Mines have a complete process at the present time, and that the Bureau of Mines would not hesitate to let it be known. If that is the case, I thought it would be very enlightening to the American people if we could have that also in the RECORD in connection with the history of this wonderful mineral.

Mr. WALSH. I am very glad the Senator spoke of that, because the process which has been worked out by the Bureau of Mines is now being tried out in a commercial way in reduction works that have been recently completed in the city of Denver. I had intended to speak about that later, and I might as well say now that those works were constructed by an association called the Radium Institute of America. It really consists of Dr. Kelly, of Baltimore, and Dr. James Douglass, of the city of New York. Dr. Douglass is not a surgeon; he is a mining engineer of eminence who is at the head of the engineering corps of the celebrated firm of Phelps, Dodge & Co. Each of these gentlemen has contributed the sum of $75,000 for the construction of these works, and they are utilizing in them the process which has been worked out by the Bureau of Mines. That process is now undergoing a practical test, and it is the purpose of those gentlemen as well as of the Bureau of Mines to give to the world the details of the method followed just as soon as its efficacy shall have been developed and determined.

Mr. SUTHERLAND. Mr. President——

The PRESIDING OFFICER. Does the Senator from Montana yield to the junior Senator from Utah?

Mr. WALSH. I yield.

Mr. SUTHERLAND. The Senator from Montana has said two or three times during the course of this discussion that the carnotite ores are confined to the States of Colorado and Utah. They are found, I understand——

Mr. WALSH. If that was the impression gained, I did not mean to leave it, because I have definite information, fortunately, that valuable deposits have been discovered recently in my own State.

Mr. SUTHERLAND. I was going to say to the Senator that this discussion all through the country seems to have proceeded upon the theory that the mineral is confined to those two States, and that it is necessary for the Government to seize those lands in some form or other, or the ores would be entirely monopolized. I understand these ores occur in the sandstone formation, and that sandstone formation is quite extensive in both those States. Can the Senator tell us whether the same sandstone formation, the same geological structure, is to be found in Arizona, in Wyoming, and in New Mexico?

Mr. WALSH. No; Mr. President, I can not; but I will say to the Senator that no deposits of commercial value, at least of such value as to invite development or even exploration, have been shown to exist in any other States.

Likewise I desire to say, in answer to the question of the Senator, that even though this sandstone should be found in a very extensive area, it has been disclosed that the carnotite deposits, curiously enough, lie simply between beds of one particular class of sandstone and another. Indeed, you can trace through the country that horizon, and it is practically useless to look anywhere else for deposits of carnotite. The contact may be seen the same as you see the cornice about the top of this room and trace it from one side to the other. So the skilled eye directed over the landscape may trace this particular sandstone, and wherever it is exposed mark the line which differentiates it from the underlying sandstone. It is there, and there alone, that the deposits of carnotite have been found. Sandstones might extend over a vast area, and yet unless that particular sandstone is there the promise of finding deposits of carnotite would not be inviting; indeed, so far as we now know, there would be none.

Mr. SUTHERLAND. Mr. President, the Senator from Montana is very familiar with the development of the mining industry in the West. He knows, for example, that 50 or 60 years ago substantially all that was known about the deposits of gold was in California. It was not supposed that gold would be found in any great quantity in Nevada, for example, or in Colorado. That was not supposed until recent years; but as the prospector was given the opportunity, as the demand for gold increased, the prospector went out and found it. Now, does the Senator doubt for one moment that if the prospector is given the same opportunity with reference to this character of metal it will not be discovered in various States of the West?

Mr. WALSH. Mr. President, I was going to answer that inquiry, which is a most natural one, from the testimony here. The Chamber of Commerce of the city of Denver appointed a committee, of which Mr. D. W. Brunton was the chairman. He was long a resident of the State of the Senator from Utah, and I knew him well as an engineer of great capacity in my own State. That committee has answered the question which the Senator from Utah now addresses to me. The committee reports, Mr. President, in that connection—and it was my purpose to read what it says—that the fields of Utah and Colorado have been thoroughly prospected; that the carnotite is of such a character that, where it is exposed, it is readily discerned, so that all exposures are found with reasonable ease. These have been very largely located, so that hereafter explorations of the most careful character must be carried on in order to make discoveries justifying location.

Now, I think it not at all unlikely, answering the Senator frankly, that other deposits will be found. In fact, I do not entertain very much doubt that they will be found, but, Mr. President, I desire to say in the same connection, lest I should be misunderstood, that this is an exceedingly rare metal. You will observe that the fields in Utah and Colorado are now producing three-fourths of all the radium which the world commands. With the whole of Europe being prospected, and Australia, and Japan, this is the field to which the whole world now practically has recourse. Under those circumstances I think it would be exceedingly strange if we did find anywhere in the West anything like the quantity which has been discovered in those States. I hope that we may find it in equal abundance in Montana, but whether we shall or not the future alone can tell.

Mr. SUTHERLAND. And yet, Mr. President, for 40 years the people passed over the land about Goldfield and in other parts of Nevada without discovering any of those numerous gold deposits that were there, but they were discovered within very recent years. Great gold deposits have been discovered in Colorado that the expert did not suspect and that the prospector did not find at once. I know silver and lead mines in my own State, some of the most productive mines there, were discovered at places where the expert insisted that nothing of the kind could possibly exist. I know of one mine that was discovered by a prospector where all the experts and indeed all the other prospectors insisted that it was utterly impossible that any such deposit could be found in that neighborhood. Yet Mr. Jesse Knight, having faith in his own judgment, spent a good many thousands of dollars driving and tunneling into the hillside and finally developed one of the very large deposits in that district. So I do not pay much attention to the prognostications of the average mining expert.

Mr. THOMAS. Mr. President, I should like to add, if the Senator from Montana will permit, to what the Senator from Utah has said, that radium seems to be blended by nature with uranium. There is a very small proportion of radium in uranium wherever found, existing in greater or less quantities. Where uranium can be found to the extent of 2 per cent or more in a ton of ore it is commercially profitable now for the radium contents. Uranium is the element in carnotite and in pitchblende which carries radium; and wherever uranium will be discovered—and the chances are that it will be discovered in other places, perhaps in unexpected places, as the Senator from Utah suggests—there will be also found blended with it this element called radium.

I have profound respect for Mr. Brunton; he is certainly one of the most eminent members of his profession; but it is a fact not confined to any particular locality in the West that most of our large deposits of metallic wealth have been discovered in places and under circumstances which do not appeal to the professional expert. Consequently, while this report is entitled to every consideration, it is by no means conclusive of the proposition that these deposits are not liable to be found elsewhere, especially as prospecting has been stimulated by the use to which radium is now being put.

Regulation of Immigration.

EXTENSION OF REMARKS
OF
HON. JAMES A. REED,
OF MISSOURI,

IN THE SENATE OF THE UNITED STATES,

Wednesday, December 30, 1914.

The Senate had under consideration the bill (H. R. 6060) to regulate the immigration of aliens to and the residence of aliens in the United States.

Mr. REED. Mr. President, the bill excludes all immigrants who are unable to comply with a prescribed literary test. The amendment now under debate proposes to exempt from the literacy test those immigrants who have fled to our shores to escape religious or racial persecution.

I intend to discuss the merits of the amendment, but before doing so I propose offering a preliminary observation. I shall also reply to one or two arguments advanced by those who oppose the amendment.

I have already said, and now repeat, that I desire the passage of a proper immigration bill, but I am appealing for a bill that will work no great injustice; that will be consistent with our ancient policies and yet will exclude from our shores all men who are incapable of adapting themselves to the life, genius, and citizenship of the Republic.

However, I differ radically from some of my associates as to the character of the tests to be applied. Clearly it is our duty to stop the importation of contract labor and the immigration of undesirable races. In some respects I am willing to go further than this bill. I am willing to expressly exclude peoples who are not of the white race, or, being of that race, still belong to that portion of it which has adopted oriental ideals and civilization. At the same time, I insist that no human being otherwise fitted for citizenship in the Republic shall be excluded solely because he can not pass a prescribed literacy test. Especially do I urge that exclusion upon the ground stated should not be applied to a refugee seeking sanctuary from religious or racial persecution.

Before further discussing that question, let me remove, if I can, the false impressions that have been left by the arguments of certain Senators.

Some very singular propositions have been advanced. One is that many immigrants remain here but a short time. It is, therefore, argued that they are bad immigrants. The inference seemingly being that by going away they have injured this country.

In the same breath these gentlemen argue that if the foreigner remains and becomes a voter, he thereby lowers the standard of our electorate and injures the country.

Both of these arguments can not be sound. If by becoming naturalized and taking a part in the elections the voter injures this country, then the sooner he returns to Europe the better for us, because we thereby escape the alleged injury. If, upon the other hand, his failure to become naturalized is just cause for complaint, it must be because the failure of the immigrant to become a voter has deprived this country of a benefit which, of course, concedes that his presence here is desirable. I repeat, both arguments can not be sound.

It is said, however, that large numbers of the people coming to our shores do not intend to become citizens, and that as soon as they have accumulated a small amount of money they return to their European homes, and that by this means they drain our country of its wealth. There are two observations proper to make in answer to this charge:

First, as I have already indicated, if the coming of these people was a curse, their going must constitute a blessing. But if their coming was a blessing and their going was a disadvantage, then we surely ought to be glad because so many remain.

The second observation is this: That even if an immigrant does carry his savings back to Europe with him, it by no means follows that his presence among us has resulted in a financial loss to our country.

Allow me to state my reasons for the statement just made. I affirm that upon the average the wage earner does not receive to exceed 50 per cent of the value of that which he produces. No man ever employs another if he expects to pay him in wages all he has created. If an employer were to pay his man all the man produces, there would be no reason for the employment. Accordingly, when a man hires another he does it because the employee will create more than the wages paid. The difference between the wages paid and the value produced represents the net profit of the employment.

An example will serve to illustrate: If an immigrant employee creates $1,000 of wealth and only receives $500 in wages, all of which he sends or carries to Europe, he has, nevertheless, increased the wealth of this country by $500.

So that if a foreigner comes to this country and sends a part of his wages back home, nevertheless it follows that he has benefited this country by the difference between the wages that were sent home and the wealth he produced. Somebody said if foreigners come here, obtain work upon our railroads, and carry their wages back to Europe, "they nevertheless leave the railroads here." That exactly expresses the case. The claim, therefore, that when these men send a part of their wages out of the country they are draining it of its wealth is not altogether sound.

However, I view with disfavor the custom I am speaking of, not because it drains the country of its wealth, for these men produce more and leave behind more than they can send away, but because the influx of great numbers of people who do not come here intending to remain is injurious to our laboring men. Therefore I am willing to add such restrictions as will effectually prevent temporary immigration. I will go with the committee in that direction as far as it desires to go. But I will do so because I want to protect our own labor from unfair competition.

I call attention to another fallacy. It is urged that the immigrant lacks the independence and assertiveness of the American laborer; that he is subservient, truckling, humble, cringing; that he will work for starvation wages, and hence is an undesirable.

Mr. President, that argument sounds very well stood out by itself, but in the same breath its authors are heard inveighing against the foreign laborer because he strikes for higher wages. If the foreigner does not strike, he is to be condemned, because he is too humble, too subservient, too willing to take a small wage; but if he does strike, as the American citizen strikes for higher wages, immediately he is a villain, an enemy of all law and all order. No matter which way the immigrant turns he is condemned.

The strike at Lawrence, Mass., has been adverted to. It is said that a great number of foreigners were employed in the mills of Lawrence, Mass.; that these foreigners struck for higher wages; and that, because they struck, they were bad and wicked people. Yet the very men who make that argument also insist that foreigners have been working for starvation wages and therefore are bad people. The arguments taken together lead to this: If a foreigner works for starvation wages and continues to starve, he is unworthy of residence here; but if he rises in protest he also is unfit for residence among us. That kind of logic does not even leave to the foreigners the poor privilege of peaceful starvation; it condemns them whether they starve or whether they protest.

But how about the strike in Massachusetts? What was at the bottom of that strike? It is admitted that these people were working for very low wages. It is admitted that their employers were American citizens, and that the American employer fixed the wages. It is admitted that the starving employees rose in a strike, and it may also be admitted that in striking they accepted the advice of extreme and radical men—possibly of very bad men. It may likewise be granted that during the strike they violated the statutes of the land, and that they should not have done so. But I call your attention to three things:

First. That the wages were fixed by American corporations at a point so low that starvation drove these creatures on to desperation.

Second. That the wicked and radical men who advised the immigrant employees were, for the most part, American citizens.

Third. That every act of violence perpetrated by the half-starved foreigners at Lawrence, Mass., has been duplicated hundreds of times by American employees.

The bed of injustice is the birthplace of revolution.

The great railroad strike occurring during the Cleveland administration had for its purpose the tying up of the commerce of the country. Yet who does not know that the railway trainmen, as a class, are Americans. Let me add—a very good kind of Americans. They felt they had a grievance; and so feeling, they struck. The strike seemed to them the only means of redress. There were some acts of lawlessness and violence. In so far as there was lawlessness and violence, I can not approve that strike, but in so far as it was a protest of men having no other weapon I do not disapprove it. And yet these were American citizens.

I was told by one of the Senators who investigated the recent strike in West Virginia that a great proportion of the striking

miners were native-born American citizens. Nevertheless they struck. I do not intend to go into the merits of that contest. We all know there was violence, bloodshed, and homicide. Probably both sides violated the law. Yet, according to the information given to me, at least, that strike was carried on principally by native-born American citizens.

We have strikes in every town and in every city in some trade, some branch of industry, almost every day of the year. They are not confined to foreigners. The strike is peculiarly the weapon of the native-born American artisan and mechanic and laborer. So if there was a strike in Lawrence, Mass., by some foreign-born citizens, if there were some acts of violence, that is no argument against foreign-born people as a class. If you seek to condemn them, you should find some sin which can not with equal justice be laid at the door of the native American.

While I am speaking of the Lawrence strike let me call your attention to the fact that if the laborers violated the statutes of Massachusetts the authorities of Massachusetts violated the Constitution of the United States—the bill of rights of the American people—and the constitution of Massachusetts when they went to the depots and tore from the arms of mothers the children they were sending elsewhere in order that they might be kept from starving during the time the strike was in progress.

But in considering a bill of this kind we gain little by discussing single instances. The truth is that the foreign-born citizen of the United States is not a lawless creature. The statistics will not bear out such a charge.

I challenge the distinguished chairman of the committee to show that there is a greater proportion of crime among our foreign-born citizens than there is among our native population. I challenge him to name a single white race that has a representation in this Republic in which the proportion of criminality is so great as it is among the colored population of his own State. The Senator has said to me, in an aside remark, "I hope you do not call that American." Perhaps it is not American; but the condition exists in the Senator's own State. I remark, in passing, that the Senator seems to prefer the colored brother to the white Belgian, to the white Irishman, to the white Englishman, to the white Welshman, to the white German, provided that white man can not read or write.

Mr. SMITH of South Carolina. Mr. President——

The PRESIDING OFFICER. Does the Senator from Missouri yield to the Senator from South Carolina?

Mr. REED. I do.

Mr. SMITH of South Carolina. The Senator knows very well that the argument he is attempting to make and the parallel he is attempting to draw as to my attitude toward our brother in black is not a good one, for the reason that I certainly do not consider him a desirable citizen; but, owing to conditions over which I have no control, he is here. We find him here. He was thrust upon us, as the Senator from Georgia [Mr. HARDWICK] suggests, and he has proven himself incapable of assimilation into the civilization that characterizes the white race. The racial characteristics of some who are white would be as objectionable. I wish to call the Senator's attention, however, to the fact that this bill simply attempts, without regard to certain nations whose emigrants may come here, to set certain American standards as a test of fitness to come in.

I do not think the committee or any Member of the Senate who is in favor of the restrictions set forth in this bill is open to the charge of inhumanity or any invidious method by which we propose to oppress anyone. What we are attempting to do is to protect Americans. Any man who is worthy of being here, and any man who is worthy to stand in this Chamber and pass laws to control and govern the standard of citizenship, has a right to say what we shall do.

Later on I propose to give the Senate some statistics to show that only five States in the Union have not some form of compulsory education. The others actually go into the home and, in a manner, assume the function of parenthood in order to fit and prepare those we have for the high calling of American citizens in a free country that has to depend upon the will of each individual for the proper maintenance of the law, and not under the *ipse dixit* of a few, such as characterizes imperial governments—monarchical governments. We are simply laying to the foreigner the same test that we are laying to our own children.

Mr. REED. Mr. President, I deny that we "lay the same test to our own children as this bill lays to the foreigner." This bill provides that a foreigner who can not read can not even live upon our soil. No native-born inhabitant is denied the right to live here because he is illiterate. The learned Senator confuses the right to vote with the right of residence; the right to take part in the Government with the right of harbor under a government.

Mr. SMITH of South Carolina. Mr. President——

The PRESIDING OFFICER. Does the Senator from Missouri further yield to the Senator from South Carolina?

Mr. REED. Certainly.

Mr. SMITH of South Carolina. The Senator from Missouri is familiar with the laws governing education in the different States; and he certainly must be aware of the fact that a great many of them have State-wide compulsory educational laws, compelling children over a certain age to attend school and providing the means for their education. I have sent for the statistics, and hope they will be here in a few minutes, at which time, or at the proper time, I shall refer to them.

Mr. REED. Mr. President, that has about as much to do with the question at issue as the story of the flood. I have already pointed out the distinction.

Mr. SMITH of South Carolina. Mr. President——

Mr. REED. True, we have in some of our States compulsory education. I wish to heaven that system obtained in every State. I wish the States would see to it that every child of school age not only goes to school, but, if the parents are impoverished, is furnished by the State with the means to enable it so to do. I would like to see our educational system advanced so that the boys and girls who reside in country districts would have provided the opportunity near at hand to obtain a high-school education. Upon all of such questions there can be no disagreement between the Senator and myself. But that has nothing to do with the proposition before us, which is, Shall we deny refuge to the man who is forced to flee his own country because of his race, simply because the same tyranny which drove him in his maturity from the land of his birth also drove him in his youth from the door of the schoolhouse?

Mr. SMITH of South Carolina. Mr. President——

The PRESIDING OFFICER. Does the Senator from Missouri further yield to the Senator from South Carolina?

Mr. REED. I do.

Mr. SMITH of South Carolina. I was under the impression that the Senator was arguing, and his speech seems to have indicated that he was arguing, largely upon the literacy test. I find now that it is upon the exemption proposed by the Senator from Colorado and the Senator from New York, which is to allow this exemption in the case of religious persecution to extend to political and racial persecution. In other words, the effect of the amendment proposed is simply indirectly to nullify the literacy test, because we have not yet arrived at the point where we can adequately define what may be called political persecution, and Heaven only knows where it would stop if we were to swing wide the door for racial persecution. That includes about all that those who are opposed to the literacy test desire; so that the adoption of those amendments, an indirect method of getting at it simply means the elimination of that test.

If the Senator will permit me a minute further, he says there is no parallel between compulsory education of the native-born child and an educational test for the immigrant. One is brought in through the natural law of God by natives here, and we say to the mother and father, "You can not bring your child into the citizenship of this country, you can not allow it to come to maturity and enter upon the functions of a citizen, without an education; we will compel you by law to educate your child, even though it may be in the earning period of its life," which statistics prove is true. "We will take your children under our own servants and see that they are properly educated, so that when they arrive at the point where they become citizens they shall be educated."

I should like to know if that is not a dead parallel to standing on the shore, where men are born into citizenship by virtue of a corporation or a steamship company or their personal desires, and saying, "Before you shall enter the domain of citizenship you shall stand on an equal footing with the native-born child"?

Mr. REED. No, Mr. President; the parallel is not there, as I shall undertake to show. First, however, I want to say to the Senator, who rather intimates that I have shifted my ground, that he will find in the RECORD of this morning my remarks of yesterday in which I pointedly discussed the pending amendment. That statement I have repeated this morning; I am not in the habit of shifting my position.

I shall now show that the Senator's "parallel" argument fails simply because it does not present a parallel. If the States of this country place upon their statute books a compulsory educational requirement, it applies to all children between certain ages. But it applies only to children. It does not affect adults, whether native or foreign born. It will, however, apply to the children of the foreigner who comes here exactly as it does to the native-born child.

There is not a single State of the Union that deprives any native-born citizen of the right to live upon our soil because he

can not read and write, and I do not think there are many that now deny him the right to vote because he can not read and write. There are some States that have clung to that old rule, but they to-day are in the minority.

Mr. HARDWICK. If the Senator will pardon me, I will state that there are about 20 Commonwealths in the American Republic that require an educational qualification in some form, and instead of being ancient it is new, comparatively.

Mr. REED. I should have made allowance for the fact that statutes have been passed in certain Southern States aimed particularly at the colored man and brother.

Mr. HARDWICK. If the Senator will pardon me, such statutes have been passed by Northern States, New England States, and Western States.

Mr. REED. Not very many Western States. I think none.

Mr. HARDWICK. Yes; two or three.

Mr. LEWIS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Missouri yield to the Senator from Illinois?

Mr. REED. I do.

Mr. LEWIS. Since the able chairman of the committee has called the attention of the Senator from Missouri to a matter which is really very pertinent as a justification for this peculiar limitation, that certain States of the Union have prescribed and enforced a form of education, I take the liberty of asking the Senator from Missouri if he does not feel that there is one distinction that should be observed? As meeting the position of the Senator from South Carolina, so far as it applies to this limitation, it is this: The basic principle, as I understand, and objection to this literacy test is that it deprives the individual of the right of citizenship and opportunity of freedom because the individual has not had the opportunity of sufficient education; that it punishes him by depriving him of the opportunity of liberty because he has been deprived of the opportunity, while I understand the distinction applicable to this measure in instances where States have enforced education is this: The State suggests enforced education, but also provides in the liberality of its institutions the method and means for giving that education to the American, while in the other instance he is being deprived of the opportunity of liberty because he is deprived of the opportunity and means of that education by the country from whence he came. That, I understand, is the real distinction, so far as it applies to this particular measure.

Mr. SMITH of South Carolina. Will the Senator from Missouri allow me to make an observation to the Senator from Illinois?

Mr. REED. Certainly.

Mr. SMITH of South Carolina. Following that line of argument and the logic, if we are to enter this domain of world-wide improvement of illiterates, then it would be our manifest duty by some means to compel the European countries to prepare their children, because, as you say, we do not provide the means to educate the immigrant, but we do provide the means to educate our own native born. Therefore I ask the Senator, would he go so far as to provide the means by which all immigrants coming here unable to read and write shall be sustained as we sustain our native born? Would the Senator go that far?

Mr. LEWIS. In answer to the Senator, I would go so far as to induce each State wherein the individual may locate to adopt any measure among its citizenship or by legislation that would give an opportunity to those who came without education to attain it by night schools or in any other form of restrictive enforcement. But the point I want to urge upon my able friends is this, that from my point of view there is no parallel between the position urged by the junior Senator from Georgia and that of the chairman, the Senator from South Carolina, against the argument of the Senator from Missouri. We—and I use "we"; I say, myself, the Senator from Missouri, and those for whom we may be permitted to speak—we object to the limitation against the human being on the ground that he has no education standing against this opportunity of enjoying freedom according to the basic principles of this, our country, to give freedom to those who have been oppressed and thus denied the opportunities of their liberty of education. In instances where a State enforces public education the parents invariably reside there, the child is in our own community; and where we seek to enforce education upon the theory of providing citizenship we also provide the method by which the child shall have it. We do not lay down a law to compel the child to be educated and deny the liberty and give him no privilege of getting an education; we give the liberty of education. But in the instances suggested by the able Senator from South Carolina we keep the individual out because he has not had the opportunity of getting an education at home, and make no provision whatever by allowing him to come here to rescue him from the conditions, while we are opening our gates on the ground of liberty from oppression.

I beg the pardon of the Senator from Missouri for this long interruption.

Mr. REED. I am much obliged to the Senator from Illinois. He has very clearly covered a question that I later intended to speak of.

Mr. President, referring further to the question of illiteracy, allow me to call attention to a few facts. The State of South Carolina, so ably represented by the Senator who is in charge of this bill, has a foreign-born population of only four-tenths of 1 per cent. Yet of its white inhabitants 10.3 per cent can not read, while the illiteracy of its colored population reaches the alarming figure of 38.7 per cent. In contrast with these lamentable conditions found among the natives of South Carolina is the fact that only 6.8 per cent of its foreign-born population are illiterate. It seems to me that the general average of literacy in South Carolina has been improved by immigration. Neither is there such an influx of foreign population into that State as to constitute ground of complaint.

It is a singular thing that so many Senators who are exercised about the dangers of foreign immigration come from States containing but few people of foreign birth. Let me give a few illustrations. In the State of Georgia there are of foreign-born whites only six-tenths of 1 per cent. In contrast with Georgia is the State of Illinois, with a foreign-born population of 21.4 per cent; and yet the State of Illinois, through both its Senators, is here favoring the amendment which we are now discussing.

The foreign-born population of New York is 30.2 per cent, and at least one of its Senators is protesting against the literacy test.

In the State of Missouri there is a foreign-born population of 7 per cent. Both Missouri Senators favor the amendment now under consideration.

Speaking generally, the protests against foreign immigration for the most part come from the representatives of States in which the percentage of foreign population is very low. There are, I believe, some exceptions to be found in the New England States. It is a thing passing strange that we who live where foreign-born citizens are found in great numbers do not fear them, while those gentlemen who come from States containing but few foreign-born people violently protest. There being no danger in the States of these alarmists, it must follow that they modestly consider themselves qualified to act as guardians ad litem for the rest of the country.

The real explanation, however, lies in the fact that the less a man knows about our foreign-born population the more he is prejudiced against them. The more he knows about them the less he is prejudiced. I have seen the immigrant land in my State clad in his immigrant garb. I have seen him within a few days' time transformed, as to external appearances, into an ordinary American laborer. I have seen him go to work at whatever employment his hand found to do. I have seen him save his money, pinch, and almost starve himself until enough could be accumulated to bring his loved ones from Europe to this land of freedom and equality. I have looked upon the family reunion—the father with tear-filled eyes rushing to the embraces of the wife of his bosom and the children of his loins. I have seen him take out his naturalization papers, attend night schools and public gatherings, striving to become acquainted with our institutions, Government, and laws. I have seen him, upon monthly installments, purchase a humble home, wherein he set up his household goods and, in the light and shadow of the fireside, with wife and children, bow the knee to the great God who made the poor immigrant as he made us. I have seen these immigrants—Irish, Scotch, German, Austrian, French, Greeks, Polacks, Croatians, Bohemians, Hungarians, and Belgians—all pursuing the paths I have described. I have also observed all of them sending their children to the public schools. And let me, in passing, say that these children of misfortune are not unwilling students. They approach the fountain of learning as the thirsty traveler a long-desired fountain of water.

A few years later we find the immigrant children entering every avocation of life, not only aspiring to but achieving every prominence and every eminence.

I talked to-day with a citizen of Missouri, who is himself a distinguished lawyer, and whose brother is, in my opinion, the profoundest legal student in the United States. The father and the mother of those lawyers were German immigrants who could not read or write.

My attention has this moment been called to another citizen of my State—I shall not name him publicly—who has held a

distinguished position in the legal department of the United States. He is perhaps the most learned lawyer in the great Central West, a student, a philosopher, a great citizen, and I am just told that his parents emigrated to this land from Germany and that neither could read nor write.

The test is not what a man was when he had no opportunity, but what will he become when he has opportunity. A child starved from birth should not, because it is emaciated, be condemned to perpetual want. It should be fed. What do these people become after they have arrived here? That is the question. Who dare attack the second generation and say they have not made good citizens? Who shall assert that the first generation born here is a class of undesirables? Who can successfully maintain that those immigrants who arrived here before maturity have not qualified in every walk and vocation of life?

I am not speaking now of a lazzaroni, who may come temporarily, or of those who represent a civilization different from ours. I am referring to races of men who have our color of skin and our character of civilization. What of these men after they come? How do they behave? Are they progressive? Are they patriotic? These are the questions we must answer.

Only last May this country stood with bowed head as a great battleship, its flags at half-mast, swung into one of our ports. It bore the dead bodies of American soldiers who had given up their lives at Vera Cruz. We had tears for the dead. We had sympathy for the fathers and mothers—some of whom voiced the anguish of their hearts in broken speech—but we were also a little proud that "our boys," as we loved to call them, had not flinched; that calmly and resolutely they performed their duty; with high courage had moved forward at the command; with splendid self-restraint controlled the savage instinct of battle; that they violated no law of war or principle of humanity. With military honors we consigned the bodies to the grave. We covered them with a wilderness of flowers moist with a Nation's tears. Committees of Congress, bearing the official tribute of the country's respect to heartbroken parents, found them dwelling in humble homes. In more than one instance they were of foreign birth, some being scarcely able to even speak our tongue.

Why, here is the list published in the Washington Post under the headline, "The heroic dead." Let me call the roll of those who gave their lives for the flag:

George Poinsett, Louis Frank Boswell, Gabriel A. DeFabbio, Francis P. DeLowry, Frank DeVorick, Elzie C. Fisher, Louis Oscar Fried, E. H. Frohlichstein, Dennis J. Lane, John F. Schumacher, Charles Allen Smith, Eric Alvin Stream, Walter L. Watson, Daniel Aloysius Haggerty, Samuel Martin, Edward Rufus Percy, Randolph Summerlin, Clarence E. Hirschberger, Harry Pulliam.

Mr. LEWIS. Samuel Martin was Samuel Meisenberger, a little Jew boy, of Chicago, who left off his last name in order that he might not be prejudiced from enlisting.

Mr. REED. The names speak for themselves. There is the Bohemian; there is the Jew; there is the German; there, of course, is the Irishman; there, if I may judge by the name, is the Polack.

The President laid aside pressing matters of state to pay official and personal tribute. Let me quote:

I listened again to this list with a profound interest at the mixture of the names, for the names bear the marks of the several national stocks from which these men came. But they are not Irishmen or Germans or Frenchmen or Hebrews any more. They were not when they went to Vera Cruz. They were Americans, every one of them, and with no difference in their Americanism because of the stock from which they came. Therefore they were in a peculiar sense of our blood, and they proved it by showing that they were of our spirit; and that no matter what their derivation, no matter where their people came from, they thought and wished and did the things that were American.

How exalted the sentiment! How noble the humanitarianism thus appropriately expressed in polished rhetoric!

Mr. President, it may be that some of these parents could not read or write. "All the same," if I may use a colloquial expression, their boys knew how to gallantly fight and bravely die for the flag of the United States.

There is nothing so hateful as proscription in this land. There is nothing so narrow as the spirit of the man who, having gained the deck and being himself in a position of safety, thrusts back into the flood of waters a struggling fellow man who also seeks refuge from drowning.

It is said we are passing in this country compulsory educational laws. Well and good, but what does that argue? It argues that in this land of the free and home of the brave, where the American resides, there are a portion of the people unwilling to acquire an education, hence the State forces them to attend school. If that be true of our people, we might well look with charity upon those unfortunates who lack learning because the inexorable ukase of a tyrannical government or the brutal decree of fate denied them an education. For these this amendment is offered. It is for them I now appeal.

Mr. President, the chairman of the Committee on Immigration has said a number of times that if we admit immigrants upon the ground that they are victims of race persecution we do not know what races may come to our country. The committee has not yet found out. Well, sir, we are adopting a new test, and if the committee has not ascertained to whom that test will apply they ought not to ask us to accept it. It is incumbent upon the committee to know what the effect of this bill will be or to abandon the air of superior wisdom it has so often exhibited during the course of the debate.

The proposed amendment will, under present conditions, affect to a considerable extent the Polish people, but it will chiefly give relief to the Jewish race.

I say frankly that one reason for my contention that the literacy test should not be applied to those who are driven from their country by race persecution is because I am unwilling to close the doors of this country in the face of those Jews who in order to escape the intolerable condition of certain European countries seek refuge here.

I sympathize with the Jewish people, because their lack of education, whenever it exists, is directly chargeable to lack of opportunity. The failure of the Jew to possess an education springs neither from intellectual sloth nor mental incapacity. Its sole cause is found in that vindictive spirit of persecution which for centuries has driven the Jew from country to country and from clime to clime. He is in one or two countries practically excluded from the public schools and other seminaries of learning. He is almost completely barred from the learned professions. He is not permitted to establish his home in any part of the land, as are other people, but is compelled to live within a restricted area. He is there subjected to every conceivable abuse, to the most intolerable tyranny. Struggling to escape from the oppression of despotic government, seeking to break the shackles of prejudice and race hate forged for him by relentless foes, he turns his eyes toward this land. He approaches our shores with a heart overflowing with love of liberty, a soul inspired with hope for himself and his children.

It is now proposed by this bill to send him back to the land of darkness and despair if, because of the abuses under which he has there suffered, he has been unable to acquire an education.

Mr. President, we ought to be consistent. Only a few months ago a commercial treaty between this country and Russia was by the almost unanimous vote of the two Houses of Congress rescinded. We are to-day without any commercial treaty with that country. The sole and only reason why we rescinded that treaty was because Russia had so mistreated the Jews that we as a nation thus expressed our protest.

Mr. HARDWICK. Mr. President, will the Senator allow me to interrupt him?

The PRESIDING OFFICER. Does the Senator from Missouri yield to the Senator from Georgia?

Mr. REED. I do.

Mr. HARDWICK. Is it not the fact that the real reason, the expressed reason, for the abrogation of that treaty was because the Russian Government refused to honor passports issued by this Government to American citizens who happened to be Jews?

Mr. REED. Oh, yes; the Senator is correct; that was the expressed reason. But the real reason was the general mistreatment of the Jew by the Russian Government. Technically we bottomed our action upon the fact that our naturalized Jews were, upon temporary return to Russia, subjected to hardships; but back of that we all know lay a greater question; that question was the persecution of the Jews in Russia. It was because of that persecution this country made its protest, as I have stated.

Mr. President, may we not without peril to the Republic permit the Jew to find here a spot on earth whereon he may live in contentment and die in peace? Are we compelled to force him back into the arms of his enemies? Shall we become aiders, if not parties, to the tyranny, persecution, and proscription of Russia?

A correct answer to these questions involves an inquiry into the reasons for the persecution of the Jews. At the same time the relation of the Jew to education, his love of learning, and his desire to acquire knowledge are pertinent matters of inquiry.

During the Dark Ages Jewish savants possessed and preserved the ancient learning, especially the knowledge of medicine and surgery. They assisted in maintaining the few educational institutions then existing. Learning was almost universal among

the people of the race. They were students of science and history. They produced great philosophers, poets, and scholars. They also took an active part in all public matters. They were the bankers of the leading nations. They filled positions of honor and trust in the various Governments of Europe.

Suddenly, without assignable cause, that remarkable spiritual and intellectual convulsion known as the Crusades seized upon Europe. In a moment the world was aflame with religious fanaticism. Rushing from every hamlet and home the maddened populace assembled in countless multitudes. They marched forth an undisciplined, half-armed mob, bent upon the recovery of the Holy City. The insanity culminated when 30,000 helpless children, armed only with crosses, sought to invade the Holy Land, lost their way, and, wandering from place to place, miserably perished.

That was a warfare by Christendom to rescue from Moslem rule the Holy City, the home of Judaism. Yet, singularly, just at the time the Christians were pouring out their blood to recover the ancient capital of the Jews, they began a fanatical and merciless persecution of the people who had builded Jerusalem, consecrated its temples, defended its altars, and made it the most sacred spot of earth.

The Jew was driven from France, Spain, and other European countries. He was slaughtered by the hundreds of thousands; his property was confiscated; he was thrown into prison; he was made a beggar, an outcast, and a wanderer upon the face of the earth.

He who seeks the cause of this persecution will find its roots in religious intolerance—that evil spirit which at one time set the Calvinist at the throat of the Catholic and caused the Catholic to wage war upon the Calvinist; that lighted the fires of the auto-da-fé; illumined the night with the flames of martyrdom; invented the rack, the thumbscrew, the collar, the wheel; deluged the world with blood; and filled the caverns of hate with the bones of countless victims. For centuries this fanatical fury sent the Christian forth to slaughter his fellow Christian.

Then came the age of reason. The sun of intelligence rose above the horizon of the night of ignorance. As wild beasts flee from civilization, so did the spirit of intolerance disappear before the light of learning. It lurks only in the jungles of ignorance and caverns of fear. Its home to-day is darkest Russia; its victims the Jewish people herded within the pale.

As a nation rises in intelligence, it grows tolerant, humane, kindly, generous. As it sinks in ignorance, it becomes intolerant, inhumane, unkindly, ungenerous.

The most enlightened nations of to-day accord to the Jew every civil and religious right granted their own people. It has hitherto been our proud boast that in this land of the free every shackle has been broken, every chain severed, every religious prejudice dissolved; that all men of all creeds here stand equal before the law, to be judged only by their character as citizens. This bill is out of harmony with our national traditions.

But I return to a consideration of the Jew in Russia. Driven from land to land, he many years ago took refuge within that empire. For a long time he enjoyed many rights and privileges. But, within a comparatively recent period, restrictive measures began to be adopted against him. The Jew entered Russia as an educated man. The percentage of illiteracy among the Jewish people of that day was probably much less than among the gentile races of Europe. The Jew became a proprietor of land. He engaged in every line of business. The liberal professions opened their doors to him. Industry, thrift, and intelligence brought success. He began to crowd into positions of honor, profit, and trust.

His very prosperity aroused the latent fires of religious and race hatred. Restrictive measures were adopted. He was compelled to live within certain limited areas. Again and again have the cords been tightened, the bonds multiplied, the shackles more tightly riveted, until to-day the Jew is for all practical purposes excluded from twenty-eight twenty-ninths of the territory of Russia.

Within that limited area he is subjected to every abuse, torture, insult, and discrimination which diabolic ingenuity, superstition, and hatred can invent.

He can not own real estate outside of the pale. His right to acquire land within it is circumscribed by numerous harassing limitations. In numerous instances almost the entire taxation for the support of the public schools is wrung from the impoverished Jew. At the same time, by a tyrannical decree, it is provided that only 5 Jews can attend certain schools for every 200 Gentiles. That rule means the denial of education to the Jew. In effect, the Jew is forced from the schoolhouses of Russia by the bayonets of Cossack soldiers.

The whole policy of Russian bureaucracy, the whole force of her police is given over to the task of crushing this people.

In order to escape from this tyranny the Jew has resorted to every conceivable expedient and sacrifice. He has served in the wars of Russia under a solemn pledge that, surviving the conflict, he would be permitted to reside in any part of the Empire and be granted an enlargement of civil rights. And he has seen himself defrauded of the privilege he has purchased with his blood upon the field of battle.

The awful condition of the Russian Jew can not be adequately portrayed were I to stand here until the midnight hour. It beggars speech. It defies description. It shocks the conscience. It appals credulity.

It is now proposed by this bill that we shall drive the Jew who does not possess an education back to the land which denied him an education—to that autocracy which said to him, "We will herd you within the pale. You shall be denied education and civil rights. You shall be barred from the learned and liberal professions. If you possess talent, it shall be suppressed. If you have genius, it shall be denied expression. You must bear the heaviest burdens of the State, but you can not participate in the affairs of Government. You shall be treated as a pariah and an outcast. You shall remain a creature of contempt and contumely. Every man's hand shall be against you, but you may not lift your own hand in self-defense. You shall be made to cringe and cower before authority. You shall be treated as a thing scarcely human. So you shall live within the pale, without opportunity and without hope, until death shall bring a respite from your wrongs."

And now, when this oppressed creature, who for generations has been crucified upon the cross of ignorance by the votaries of religious intolerance, comes to the land of freedom, equality, justice, and religious tolerance it is proposed that we shall say: "America joins with your oppressors and drives you back to the hopeless pale within which Russian autocracy and tyranny have confined you. We make common cause in your persecution. We reject you because you are not able to read and write, although through all the days of your youth and early manhood you stood at the door of the schoolhouse with tearful eyes begging the opportunity of education. We close the door of hope. You shall be denied admission to the land of the free because Russian tyranny denied you admission to the schoolhouse."

I put it hard upon the consciences of men who believe in the fatherhood of God and the brotherhood of man whether we should become the aiders and abetters of Russian persecution.

Mr. President, the proposition is, Shall a human being be denied admission here on account of illiteracy who has been driven from his own country by race persecution? That is the sole question we are about to vote upon. I want to present to you a picture of how the literacy test might operate.

Here come two Russian immigrants. One, a Jew, is fleeing from persecution. In youth he sought admission to the schools and was driven away by Cossack bayonets. Beside him, also asking admission, is the soldier who drove him from the school. The soldier can read the magic 40 words that are to be written on a card. The Jew can not. The man who sought to enter the school is to be driven back into the hopeless night of tyranny under which he was born and reared. The man who forced him from the school is welcomed within our gates. Yet the Jew all his life hated tyrants. The soldier all his life served tyrants. The Jew all his life strove for liberty. The soldier all his life crushed liberty. The Jew would give his all to sustain our liberties. The soldier would assist in destroying the liberties of America as willingly as he served the enemies of freedom in Russia.

I would rather have as a citizen one man who tried in vain to acquire an education—who fled here for a broader liberty—than a million men who, in obedience to the mandate of an autocracy that shames the earth, were willing with guns and bayonets to drive human beings from the door of the schoolhouse.

Here comes another wretch who loved freedom so much that he rose in rebellion against a tyrant. He was, with scarcely the pretense of a trial, condemned to life imprisonment in the mines of Siberia. After infinite torture he escaped to this country. Because he can not read he is delivered to the representatives of the despot, and is dragged back into the hopeless night of the Siberian mines.

Beside the refugee stands one of the butchers who stood guard at the mouth of the mine, who knouted prisoners to death. The butcher can read; he is hence regarded as desirable and is admitted.

Which of the two do you think will make the best American citizen? Which of the two will most love liberty? Which of the two will better sustain and serve a free government? Which of the two? In such a case who dare defend the literacy test?

The Jewish people of Russia have been hounded beyond belief. Recently I read the advertisements of a play called The Yellow Ticket. At the time I regarded the statements of the advertisements as wild exaggerations, but I have here a book which bears out all of the assertions referred to.

The author of this work is Mr. Lucian Wolf, a writer of eminence and care. Let me read you a paragraph. It will stir the blood of every man who reveres his mother, who loves his wife, or respects womanhood. If it does not arouse your anger, then are your veins filled with a very sluggish stream. If the allegations of this book are true, then the horrible conditions of the Jews of Russia can not be overstated.

After commenting upon the fact that the Russian Jew is denied the opportunity of education, that he is immediately arrested if he sets foot outside the pale, that even within the restricted territory he is subject to all kinds of searches, that his home can be invaded at night, and unless certain official papers are constantly on hand the entire household is thrown into prison, after setting forth other oppressive practices, Mr. Wolf states:

The barbaric restrictions imposed upon the Jews in Russia admit, however, in one department a characteristic exception in favor of Jewish women—to Jewish prostitutes the whole Empire stands open. The police, with shameless cynicism, keep strict watch to see that a Jewess who has proclaimed herself a prostitute, and on the strength of this is enjoying the domiciliary right outside the pale, is really following her degrading profession. Jewish girls have been banished on the formal ground that instead of abandoning themselves to vice they were making a living by teaching or were attending lectures, neither of which pursuits earned them the right of domicile. Who can realize the torments of those Jewish girls who, in their despair, have resolved upon such a humiliating line of conduct in order to avoid the persecution of the police, and yet have been discovered and driven forth from their domiciles? Modest and virtuous girls having to label themselves officially as prostitutes in order to have peace and quiet—one might well take this statement to be the fabrication of an overexcited imagination if these diabolic happenings were not confirmed by the authorities themselves. True, only isolated cases of this kind have come to the knowledge of the public, since surely very few Jewish girls can have taken refuge in such sad self-degradation, but these instances suffice to depict the lot of the Russian Jew and to brand the system of Russian bondage to all eternity.

Imagine, now, the character of a despotism which ordains that liberty of residence, liberty to teach, liberty to earn a livelihood, liberty to enjoy God's air and sunshine, can be purchased by a daughter of Rachel only at the price of her honor. Conceive, if you can, a tyranny so diabolic as to place such a premium upon dishonor, as to invent such an inducement to degradation.

Are you prepared to join hands with autocratic Russia by saying to these persecuted people, "You can not enter here. Go back to the pale. If your women desire to live elsewhere, let them secure the 'yellow ticket' of dishonor, and the police of Russia will see to it that they industriously follow the prostitute's loathsome trail; the police will see to it that these women work no fraud upon the Government by remaining virtuous."

Mr. President, down the long centuries the Jews have walked a stony path. They vastly contributed to the greatness of Spain. Their fidelity was requited with torture and murder. It may have been a mere coincidence, but the fact remains that with the expulsion of the Jews Spain began her long period of degeneration. France slaughtered, robbed, and expelled the Jews, but was soon, in self-preservation, compelled to recall the exiles. Many years ago England generously opened her doors to the Jew, and England has ever since waxed in greatness and power.

We welcomed the Jew to our land. Who can justly say he has not demonstrated his capacity for citizenship? In law, medicine, science, literature, art, music, poetry, and oratory he has won his way to the very top.

Devoted to charity, he does not limit his benefactions to his own blood. I cite but one recent example. A few years ago we felt the pinch of hard times. Thousands of the poor in New York City were starving. A great breadline was formed every morning. The hungry came—men, women, and children—of all races and classes, both native and foreign born. The man who stood at the head of the line and, with generous hand, gave bread to assuage the gnawing of want was on old Jew. He never asked a hungry soul, What is your race? What is your religion? Where were you born? Have you an education? It was enough that a human being needed food.

I am unwilling that a single one of God's creature's shall be driven back to the land of persecution, tyranny, and despair simply because he does not possess learning.

I call attention to a matter that is especially pertinent to this educational test. The people who come here of advanced years live only a little while. They do not affect our civilization. The question we ought to turn our attention to is their offspring. How do they rear their children? Measured by that test, the Jew need not be feared.

I read a telegram just received from Mr. David M. Bressler, of New York City, a man who has given much time to the study of this question:

Proportion illiterates among adult Jewish immigrants is as follows: Male, 18 per cent; female, 30 per cent. No data available showing proportion of illiterates among minors, but practically all minors immediately attend public schools for full course; large proportion adults utilize night and immigrant schools. Truancy and child labor practically unknown among Jewish children. Repressive legislation and restrictions, educational facilities, wholly responsible for illiteracy of Jews in Russia and Roumania.

I call attention also to a telegram from Mr. Jacob Billikopf, of Kansas City. This man now possesses a university degree. He fled from Russia to obtain an education. His mother undertook to gain him entrance to the high school and paid a thousand rubles to a Russian official to enter her boy. The money was pocketed and the boy refused admission, whereupon he was sent to this country to secure the learning denied him by the land of his birth. Mr. Billikopf is engaged to-day in maintaining a Jewish eleemosynary institution which devotes itself to receiving Jewish immigrants, attending to their wants, giving them advice with reference to securing homes, procuring situations for them, and generally starting them upon the road to self-maintenance and good citizenship. He conducts both a night and day school. Frequently men and women of mature years are found in this school diligently seeking an education. The younger generation are, along with ordinary school work, taught music and the language of their adopted country. Mr. Billikopf tells me every single Jewish child who has come within the care or under the surveillance of his institution is an attendant at school or has been during the ordinary years of school life. I read his telegram.

Your views on page 373 CONGRESSIONAL RECORD absolutely correct. Took hurried census this afternoon and find nearly 200 Jewish boys and girls attending our high schools. Come from homes, heads of which would have been excluded under proposed literacy test. My own father illiterate, but there never was a time when he would not have sacrificed everything in world to enable six children to obtain education similar to that I possess. Case typical of thousands of others. Criminality among Jews in Colorado, Kansas, Ohio, Kentucky, Missouri, and Indiana 50 per cent less than among native population. Am sending you my printed report on subject.

I have another telegram from this same gentleman, a part of which I read:

Truancy and child labor among immigrant Jewish children unknown. All attend school and are among brightest. Literacy test absolutely no criterion of adult immigrants desirability. Most of our substantial and law-abiding immigrants would have been excluded if literacy test were applied to them. Of 2,400 immigrant men and women who came to Kansas City via Galveston past three years only one family dependent on charities. No criminality whatever. Can not estimate this moment proportion of illiteracy in above group.

Mr. President, I know Mr. Billikopf intimately. He is a man of the highest intelligence who has devoted his life to the service of humanity. What he tells us may be absolutely relied upon.

Let us not join Russia in crushing this people by forcing them to remain under its autocratic rule. Let us not say to poor human beings, "You have been deprived of an education yonder, you shall therefore be deprived of all opportunity in life here."

If these immigrants joined the criminal classes, if they made bad citizens, another question would be presented. In that case the entire race ought to be excluded, not merely those who can not read or write.

And now a final word in regard to this test. We are told that anarchists come to this country, that extremists come to this country, and that they sow the seed of their dangerous doctrines. Mr. President, the literacy test will not exclude one of that class. It may exclude some one who is an anarchist, but it will not exclude the one who is capable of teaching anarchy. However, all anarchists are covered by another clause of this bill. The literacy test is not necessary, and if it were applied it would be worthless.

I say again, taking our foreign-born population as a whole, it can not be justly asserted and can not be proven that they are not, on the average, as law-abiding as the native-born American. It can not be truthfully asserted that they commit even as many crimes in proportion to their numbers as the native-born American. The statistics collected at the doors of our prisons give an answer that is highly favorable to our foreign-born population.

I have taken a great deal of the Senate's time. I wish the committee could accept this amendment. Should it do so, the injustice of the literacy test would be greatly minimized. However, I have but little hope that the committee will concede anything. It seems determined to force the bill through. If time has been consumed, it is because of the gravity of the question presented.

Let me conclude by expressing the hope that the people of the United States are not yet willing to close the door of opportunity in the face of any of God's creatures who have been guided to our shores by the light of the star of liberty, and who are capable of becoming good citizens of the Republic.

Universal Peace.

EXTENSION OF REMARKS

OF

HON. A. W. LAFFERTY,

OF OREGON,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 22, 1915.

Mr. LAFFERTY. Mr. Speaker, I feel my responsibility as a Member of the American Congress in voting for this bill—the Army appropriation bill—which appropriates $101,000,000 for the support of the Army for the coming year. In a few days we shall be called upon to pass the annual Navy appropriation bill which carries $148,000,000 for the coming year, making the total burden we are putting on our country for war purposes for the coming year amount to $249,000,000. That is $2.49 for each man, woman, and child in the United States. It is a tax of $12.45 per year on each family of five.

In time of peace we are appropriating these vast millions for war purposes. Our appropriations are not increased this year from ordinary years. It is our established habit to put this annual burden on our people. And other civilized nations are accustomed in times of peace to put even greater burdens on their people to maintain their armies and navies.

Our annual appropriations in the United States for war purposes would build a trunk line of railroad from New York to San Francisco each year, costing $80,000 per mile, and leave a surplus over of $9,000,000. Let any thoughtful person contemplate what it would mean if our quarter of a billion dollars now going each year for war forces could be used in building railroads, merchant ships, art galleries, and other aids to the advancement of civilization and the happiness of humankind. And how much more would it mean if all the nations of the earth could do likewise. The opportunities that would be ours in a few years under such a change would make our present civilization look crude, indeed, in comparison.

Take this illustration: Our country is now all worked up over the question as to whether we shall appropriate the paltry sum of $30,000,000 toward the purchase of Government merchant ships in order to establish new trade routes for our producers and to protect them from the extortionate rates demanded by the private shipping companies. Yet we are to appropriate in a few days $148,000,000 to maintain war ships for one year only, and no one is raising any complaint whatever. If we could only eliminate the necessity for the war ships, see how easy it would be for us, without the expenditure of any more money than we are now expending, to build the finest fleet of merchant ships in the world. The latter would contribute to the wealth and happiness of every American citizen. They would enable our people to make more money, and they would enable us to travel and see the beauties and the wonders of the world in comfort and at small expense.

Contemplate what it would mean if all the nations of the world would use the money and the energy that are now going to the maintenance of war forces in the building of internal improvements, peaceful merchant ships, art galleries, schools, colleges, and universities. This would then, indeed, be a world worth living in.

As it is to-day the Government must do nothing to promote human happiness and comfort lest its action be denominated "socialistic." I, for one, am getting tired of that aged chestnut. I have found out where it comes from, and I think everyone else has. It is the last argument of the special-privileged few of all nations against the advancement of civilization.

This special-privileged few now own all the private steamships. They send our loved ones to sea in old, dilapidated vessels in order that they may get a few more sordid dollars. It is not safety and comfort that they have uppermost in their minds, but money. This same privileged few own all the railroads in this country, and they own the bonds representing the Government debts of European countries that have taken over the railroads. The money kings are running things in this and every other country.

Why do we have large war forces in all the civilized countries of the world? It is to protect these money kings in their property. Why are wars brought about? They are the result of the greed of the money kings for trade, or jealousy lest great fortunes be reduced by the extension of the trade of the money kings of rival countries. Besides, great wars make great national debts, and these great national debts enslave the peasants—99 per cent of the people—to the 1 per cent represented by the money kings. Therefore a great war once in a while is a good thing for the money kings. We must have one in America before long to set back our civilization or our people are liable to get out of bondage.

Either the conscience or the latent instincts of Mr. Andrew Carnegie have caused him to establish a great peace foundation. Much of the wealth of Mr. Carnegie was made by selling armor plate and other munitions of war. His successors are now making millions by manufacturing and selling such armor plate and munitions of war. About a year ago the Carnegie Peace Foundation franked out at Government expense a half million copies of a certain speech of a United States Senator favoring the repeal of our law providing for free tolls for our coasting vessels at Panama, this supposedly in the interests of peace.

We shall never have world peace until Governments shall be administered in the interest of the general public as distinguished from the interests of the money kings. And when Governments shall be so administered we shall have universal peace. There will no longer be any motive for war. The poor peasants of Europe to-day have no desire for war. They are driven to it by the money kings of London, Paris, Berlin, and St. Petersburg, and the poor boys in the trenches who are having their lives shot out—perhaps by shrapnel from the factories of Mr. Carnegie's successors—do not know what they are fighting about.

A thoroughly authenticated story was printed in the Illustrated London News, which I read last night, and which to me presents one of the most pathetic sides of this war, or any other war, for that matter. At Christmas time, during a lull in the fighting, German boys in the trenches placed a bottle on a stick and raised it in view of the English trenches. This was at once understood as a banter for a target contest, and a given number of shots were fired by the English, a new bottle being hoisted whenever a hit was made. Thereupon the English troops raised a similar target, and the Germans took the same number of shots. It was simply a friendly contest, and the young men, lying in trenches within 100 yards of each other, were following their natural bent. The great surprise came when, at the close of the bottle contest, a young German stepped out unarmed from his trench, and after putting a tomato can on a stick which he drove into the ground, he yelled at his English cousins to try their luck. Not a word had been spoken, but this young German lad had felt the bond of sympathy and knew that he was in no danger. At another place a football game was arranged for Christmas Day, but this was under a flag of truce. Tell me that such men would not settle this war, if it were left to them to do so? Yet this is the bloodiest war in the history of the world. Men are doing what we all predicted would never be done—fighting at close range, and in solid formation, with modern guns.

The explanation of the present war in Europe is simply this: The young men there are the same as our young men here; they are not cowards, and they are willing to obey their country's call. Many peasants, held down to a humdrum life in a small community, grasp with eagerness an opportunity to visit foreign places and to see the world. They do not hesitate to embrace such an opportunity even when it involves the dangers of war. The same is true in America. Thousands of boys, with little opportunity in sight, would gladly enroll at our country's call and go to any part of the globe. I would do so myself. I would rather be in a war any time than to be on the political rack, so far as the pleasures of the two occupations are concerned.

But if we had Government ships, and if we had Government railroads, and if we had Government agricultural asset currency—meaning thereby genuine rural credits—so that we would all have an equal opportunity to satisfy our ambitions to see the world, and to acquire a competence, and to have a home, supplied with art, music, books, athletics, and all that goes to

make up a real life, no man would want war, and the implements of war in a hundred years would be found only in museums. Such will be true when democracy shall rule the countries of the world. God speed the day. My life shall be given to its realization.

I am not a Socialist. But I do pronounce the following essay by Allan L. Benson to be the most powerful argument in favor of universal peace that has ever come to my notice. While our citizens are spending millions for peace conferences at The Hague, and while we are appropriating millions to prepare our country against war, it is certainly an economy to give to Mr. Benson's article space in the CONGRESSIONAL RECORD. Here it is:

"WAR AND SOCIALISM.

[By Allan L. Benson.]

"A man who is not a Socialist wrote a letter to the editor of the Springfield Republican in which he said: 'If Socialism will put an end to war, let us have it, and quickly, too.' The editor of the Springfield Republican, who is not a Socialist, wrote an editorial reply in which he said: 'Socialism never looked more attractive than now.'

"Good sometimes comes as the result of driving iron into the souls of men. This tremendous war in Europe is driving iron into the souls of men as no other event ever did. By the light of gunfire we are seeing our civilization as it is. Gentlemen who in the past have indorsed this civilization may well be asked what they now think of it.

"Let us look facts in the face. This is a civilization rooted upon the private ownership by a few of what everybody must use. It is a civilization of barter and trade, supply and demand, plunder and profit. It is a civilization in which the few always have the supply and the many always have the demand. It is a civilization that gives the greatest possible incentive to selfishness and the least possible incentive to brotherly love. It says to all of us: 'There is but one law in this world and that is the law of get.' It says to all of us: 'Everything that material earth can offer shall be the prize of those who can get.' Which makes it certain that everything that hell can inflict shall be the punishment of those who can not get. From the cradle to the grave they must be clad in a mantle of fear. They must try to wrest a living from an earth they do not own. They must know the tortures of summer heat and the rigors of winter cold. Everything that poverty and ignorance can do to harry and torment human bodies and human souls is done to them. I often wonder why the disinherited, when they look up into the starry heavens and see some of the 20,000,000 suns, each of which is surrounded by several planets—I often wonder why they do not ask: 'Why did God send us here? Is there no place in the universe where men might live without being preyed upon in peace and butchered in war?'

"We who are Socialists ask you who are defenders of the present system to survey what you have wrought. You say your civilization is based upon Christianity. We are compelled to ask you if you know what Christianity is? Does Christianity mean slums? Does Christianity mean ignorance? Does Christianity mean race hatred? Does Christianity mean Gatling guns for those who strike for more wages? Does Christianity mean Homestead, Ludlow, and Louvain? Does Christianity mean Rockefeller, the Rothschilds, and Morgan? Does Christianity mean battleships, battalions, and bombs dropped from the air? And, if Christianity means none of these things, why do you say this civilization is Christian? Why do you taint the name of Christ by mentioning it in the same breath with the existing industrial order?

"LET US LOOK FACTS IN THE FACE; THIS IS A CIVILIZATION OF SUPPLY AND DEMAND. A FEW ALWAYS HAVE THE SUPPLY, YOU ALWAYS HAVE THE DEMAND. YOU GET ONLY WHAT PROFITS THE FEW.

"You oppose Socialism. You say it would destroy the home. You say it would destroy initiative. You say it would introduce chaos into civilization. What is capitalism doing? Is capitalism breaking up any homes in Europe? Is capitalism destroying any initiative? Is it introducing any chaos? If the public prints may be believed, a war is at this moment in progress in Europe that may conceivably destroy civilization. It is desolating hundreds of thousands of homes. Twenty millions of men are fighting each other with every deadly weapon to which they can lay their hands. Fighting each other for what? Fighting each other that the capitalist groups of some countries may hold their trade and their profits or gain the trade and profits of some other countries. For no other reason under the heavens is this war being fought. In no conceivable circumstances can any gain come to the working class of any of the nations, irrespective of which group of nations may be victorious. Such gain as there may be will be only for the group of capitalists who happen to be upon the winning side.

"Are these the acts of a Christian civilization? Do you believe Christ would set 20,000,000 men fighting to determine which group of capitalists should derive profits from the slaughter? Do you believe Christ would sanction slaughter for profit? Then why do you say your civilization is Christian, bottomed as it is upon the private ownership by a few of what all must use; bottomed as it is upon poverty, profit, and plunder?

"If this civilization is Christian, what would be devilish? If a devil were actually in existence and ruling this world as the capitalists are ruling it, would you approve his acts? If America had produced record-breaking crops, as it has this year, and the masses of the people were yet hard put to get bread for their mouths, would you still say: 'We are indeed ruled by a wise and benevolent devil; I shall vote for his candidates at each opportunity?'

"If the devil denied work to millions of Americans, though all about them were the materials with which they might make themselves comfortable, would you still say, 'By no means must we forsake our grand and noble devil. Without him, God knows what we shall do?'

"And if the devil, to increase his profits, were occasionally to set millions of his subjects to slaughtering each other, would you say, 'Do not blame our dear devil. It is not his fault. His heart bleeds to see us murdering each other, but we are just naturally wicked and stupid enough to do so?' Would such actions be 'Christian,' even if performed by the devil? If not, how can they be Christian when performed by capitalists?

"We Socialists lose no opportunity to paint capitalism black. You who support capitalism often accuse us of indulging in too much denunciation. Will you be kind enough to read what the great spokesmen of capitalism say to each other? Emperor William, in his cablegram to President Wilson, declared that—'After the capture of the French fort of Longwy my troops found in that place thousands of dumdum bullets which had been manufactured in special works by the French Government'; that 'the way in which this war is being waged by my opponents is making it one of the most barbarous in history'; and that the Belgians, like the French, had been guilty of enormous atrocities.

"YOU MAY SAY OUR CIVILIZATION IS BASED ON CHRISTIANITY. WHAT IS CHRISTIANITY? DOES IT MEAN SLUMS? DOES IT MEAN IGNORANCE? DOES IT MEAN FIGHT, WHEN MEN WANT GOOD WAGES?

"At the precise moment when this message was coming under the ocean a commission of Belgians were coming over the ocean to make even worse charges against Germany. And within 36 hours the President of France cabled to President Wilson that every word cabled by the Emperor of Germany was a lie; that Germany herself, 'since the beginning of the war,' had used dumdum bullets, and 'violated daily the law of nations.'

"Now, in the German Emperor we have not an irresponsible German soldier babbling about a rumor that some other soldier may have told him. Nor in the Belgian commission or the President of France have we irresponsible men. Nor do these responsible men qualify their charges by saying that 'it is reported' that dumdum bullets were used or other atrocities committed. Each of these men makes the unqualified charge that his country's enemies are outrageously offending against the law of nations, while the German Emperor says that barbarity of his enemies is 'making this one of the most barbarous wars in history.'

"From these statements there can be but three inferences. One inference is that capitalism in Europe is represented in one or more nations by barbarians. One is that it is represented by liars. The other is that it is represented by both barbarians and liars. We who are Socialists leave this to you who are not Socialists for your consideration.

"The fact is that capitalism is barbaric and mendacious at all times—in peace no less than in war. If you want to see barbarism of the most atrocious kind, go to any great industrial center and observe the conditions that capitalism enforces upon the working class. Go to Gary, Ind., and see the shacks covered with tar paper in which the employees of the prosperous Steel Trust live. Go to the coal-mining regions of Pennsylvania, West Virginia, Ohio, or Illinois. Go to the mining towns of Michigan or Colorado. Go to the East Side of New York or the stockyards district of Chicago. Go even to the smallest industrial cities and villages and there you will find patient men and women industriously toiling for enough to keep soul and body together. Belgium mourns for but one loved and lost Louvain, but in the heart of almost every working man and woman more than 40 years old is a blackened, desolated city—the ruins of the City of Hope. Barbaric capitalism, for no other reason than to obtain profits, strikes down this city in millions of breasts

and leaves the workers to live from hand to mouth until death closes their eyes.

"Nor is this all. When barbaric capitalism is threatened with the loss of any considerable part of its prey, barbaric capitalism becomes a liar. If a great strike becomes formidable, press agents are hired to flood the country with lies about the strikers. According to these lies, the labor conditions in the strike regions are always 'the best in any similar territory in the country,' with wages the highest and general working conditions the most satisfactory; the strikers are always declared to have been perfectly satisfied with conditions until 'agitators' invaded the region and by threats and violence actually drove the workers out. If trouble occurs, it is always because the strikers attacked the millionaires.

"But why go on with these familiar facts? It is enough to say that capitalism, both in peace and in war, is a liar. Who would take a capitalist's mere word for any sum of money large enough to make it to his interest to break his word? Certainly not any capitalist. When these gentlemen—who know each other—do business with each other everything of importance must be in writing and, if possible, with some sort of forfeit attached. It is not that they are intrinsically bad men, but the system under which they live is bad. It is this system that makes the monarchs of Europe liars or barbarians, or both.

"Never within the lifetime of anyone now living can the world be what it might have been if the capitalist system had been destroyed before it plunged Europe into war. Europe will bind up its wounds, but for many a year it will be a pale, shaken Europe. The blood of a continent can not be drained from its veins without producing a profound effect, both upon the continent and the world.

* * * * * * *

"A FEW YEARS AGO YOU SAID THAT THE GOVERNMENT COULD NOT DO SEVERAL THINGS IT IS DOING. IF IT CAN DIG THE PANAMA CANAL FOR COMMERCE, WHY CAN IT NOT BUILD HOUSES FOR HUMAN BEINGS?

"Who can go to the battle fields and pick out and bring back to life the dead Marconis, the dead Edisons, and the dead Watts? Genius is so erratic in choosing its parentage that millions of men, even though they be poor, can not be shot down without danger of snuffing out some star that would have developed into first magnitude. Edison, if he had been a year or two older, might have been killed in the Civil War without anyone suspecting that in the death of this poor Michigan boy the world had lost a genius of the first order.

"If it were only in war that capitalism is murderous, if it were only in war that undiscovered genius is snuffed out before it can bloom, the case for capitalism would still be black, but it would not be so black. While 'Peace hath her victories no less renowned than war,' it is also true under capitalism that peace hath her industrial murders, even more numerous than war.

"Every year capitalism by failure to provide safety appliances, the cost of which would reduce dividends, slays the miners who dig our coal and iron.

"Every year capitalism, by enforcing unjustifiable poverty upon the land, kills 150,000 Americans with tuberculosis (see Report on National Vitality, made to President Roosevelt by Prof. Irving Fisher, of the department of political economy, Yale University), though tuberculosis is purely a preventable disease.

"Every year the scourge of typhoid—the disease that killed Wilbur Wright—goes on, though the means of destroying typhoid are well known.

"Year after year millions are compelled to live in squalor in the great cities, often unable to get work, never able to get any of the comforts nor more than the barest necessities of life, always the prey of the diseases to which their declining vitality and their unwholesome surroundings make them subject.

"Every year millions of the children of the poor are taken from the schools before they have obtained any groundwork of education that is adequate to make them able citizens of a great republic.

"Every year the high schools graduate less than 5 per cent of those who entered the elementary grades, the remaining 95 per cent representing—ordinary mortality excepted—those whom poverty compelled to become breadwinners while they were still children.

"All of these evils are upon us because capitalism is upon us.

"After painful research we have learned how to stamp out tuberculosis, only to discover that we can not apply our knowledge because of the fact that to do so would compel some capitalists to destroy their foul tenements and other capitalists to pay enough wages to enable their employees to maintain their physical efficiency.

"We have learned, after painful research, how to destroy the sources of typhoid infection, only to discover that our knowledge can not be applied without the expenditure of more of the capitalists' money than they are willing to contribute in taxes.

"TALK ABOUT WHAT SOCIALISM MIGHT DO! LOOK AT WHAT CAPITALISM IS DOING. GO TO ANY INDUSTRIAL CENTER AND SEE THE LIVING CONDITIONS IMPOSED UPON WOMEN AND CHILDREN.

"We know how to build sanitary houses and we know how to make food that is not poisoned nor vitiated by the substitution of cheaper, though harmful, ingredients, but our knowledge does us little of the good it might. Every city is largely composed of houses that are palpably unfit for human habitation; the forests and the earth abound with materials with which good houses might be made; the streets swarm with idle men who would gladly earn a living for themselves by building the houses we need. But under the capitalist dispensation these men are not permitted to build houses nor to do anything else; and the same class of men who prevent the idle from doing the work that we need done also fight us tooth and nail if we try to compel them to make food that is fit to eat. Anyone who considers the last statement an exaggeration would do well to communicate with Dr. Wiley. The pure-food cause is making progress, but it is doing so only as it fights and defeats the persistent capitalists who, for no other reason than the desire to increase their profits, are eager to rob, starve, and poison their fellow men.

"What shall we say of a class against which such charges can be truly made? Is civilization based upon this class a Christian civilization? If it were not for the 'right of private property,' which carries with it the desire to profit from the labor of others, none of these charges could be made. The institution of private property is the very heart and soul (if there be heart and soul) of capitalism. Yet it is this institution of private property that, in this country alone, annually kills hundreds of thousands and condemns millions of the working class to an existence that is void of hope and full of misery. The Rev. Holden E. Sampson, of Corpus Christi Church, New York City, even went so far as to declare:

> The war in Europe, the most decimating of all wars in history most probably, is more merciful, less cruel, than peace, as times are. To many thousands it is far better, happier, to die on the battle field than to live in our present "civilization." The death roll of "civilization" is vastly greater than the death roll of all the battle fields the world has ever witnessed.

"All that this gentleman says about the death roll of civilization is true. All of it is important. What are you going to do about it? Do you want it to continue? Are you going to call it 'Christian'? Do you doubt that it will continue so long as the underlying cause continues? Do you doubt that the underlying cause of inadequate wages is the private ownership of the industries that pay the inadequate wages?

"What are you going to do about the school question? You believe in free schools. Why don't you also believe in free school children? Are you willing that nine-tenths of our children shall forever be driven out of school by poverty while they are still in the grammar grades? What kind of citizenship do you expect from ignorance? A republic can be no wiser than its people. What kind of a republic do you expect to rear upon education that is stopped in the grammar grades? How monstrous is a civilization that denies to millions of adults the right to work while compelling children to leave school to work!

"We Socialists tell you that this might be a Nation of happiness in so far as a sufficiency of needed material things can create happiness.

"We tell you that the natural resources of this country, if developed solely for the country's good and without thought of private profit, are sufficient to care for a population of 500,000,000.

"We tell you there is no reason except capitalism why all the men in this country can not be employed all of the time, as we tell you there is no reason except capitalism why any of the children should be hired out to wage slavery any of the time.

"We tell you there is no reason except capitalism why great military establishments should be maintained at the expense of the people or wars fought by the people at their own expense.

"NOW, TAKE THIS HOME TO YOURSELF, COULD SOCIALISM BE WORSE THAN THIS? THE PROFIT SYSTEM HAS PLUNGED THE WORLD, AT CIVILIZATION'S HEIGHT, INTO ITS WORST WAR. COULD ANYTHING BE WORSE?

"By voting against us, you challenge every statement that we make.

"But in the white light of war will you kindly take paper and pencil and point out our errors?

"We want beef. Is there any reason except capitalism why the United States Government could not raise cattle in sufficient numbers and market the beef at the cost of operations? The United States Government is carrying parcels, though a few years ago you said it could not. The United States Government, at an expenditure of $400,000,000, is carrying steamships across the Isthmus of Panama. Why can not the United States Government raise and market beef, dig and market coal, grind wheat and market flour, dig iron and market steel, weave and market cloth, own and operate railways?

"Why can not the United States Government build houses and rent them for a sum that represents only the annual depreciation? Little New Zealand is doing it. The United States can build floating fortresses that cost $10,000,000 each—fortresses in which death is dealt out to human beings. Why can not the United States Government as well build houses in which life and comfort are dealt out to human beings?

"Why can not the United States Government take this tremendous army of unemployed that is now going to worse than waste and set it to work raising beef, weaving cloth, operating trains, and producing those things of which we stand so much in need?

"To say that the United States Government, if permitted to do so, could not do all of these things and more is to say that the United States Government is administered by fools. Such is not the fact. The United States Government is administered by men far above the average in intelligence. But the United States Government is also administered by men who are pledged to the support of the capitalist system. If these gentlemen did not so believe they would not have the Government in their charge.

"It is no answer to the foregoing questions to say that Mr. Wilson and his associates are wise men and that, if it were well to perform the acts herein suggested, they would perform them. The administrators of every system have always supported the system. The leading savages supported head-hunting. The leading barbarians supported barbarism. The nobles and the kings supported feudalism. But such civilization as we now have is due to the fact that, one after another, savagry, barbarism, and feudalism were banished from our part of the world. Moreover, they were banished not by the leaders—they were banished by the people who refused longer to be led by such leaders. They were banished and the world was made better by lowly men who, to the marrow of their bones, felt that the things the wise men indorsed were evils of the vilest sort.

"We Socialists make a practice of taking nothing for granted. We accept nothing merely because it is. We have some sort of knowledge of the route by which humanity has emerged from the jungle, and we know that the thing that is impossible can be done. The thing that is impossible has always been done. Only by the doing of things declared to be impossible has the human race advanced a foot. Edison himself told me that when he set out to make a dynamo that Ohm's law—a formula laid down by a great German electrician—made the creation of a dynamo for commercial purposes impossible, or, at least, so he was informed by electricians, who advised him to save his time. Edison had no respect whatever for Ohm's law. He determined to prove it no law. He did it. You tell us that the people of the United States, acting through their Government, can not feed, clothe, and house themselves. We frankly say we do not believe you. By the power of our press and the men in our trenches we are going to drive you from your position. We are strong in the sense that we have right on our side and the needs of humanity upon our side. We will not be denied. By constant reiteration, by constant agitation, we will yet make the reasonableness of our demands so apparent that no well-disposed man or woman will think of challenging us.

"YOU SAY THAT WE, ACTING THROUGH OUR GOVERNMENT CAN NOT FEED, CLOTHE, AND HOUSE OURSELVES UNLESS SOMEBODY MAKES MONEY OUT OF IT. WHY? ANSWER THAT HONESTLY AND SATISFACTORILY TO YOURSELF.

"We are in this fight to stay—every one of us—and we are going to stay until the undertaker puts us away. In our fight against needless poverty and the capitalist power that makes needless poverty we feel that we are engaged in as holy an undertaking as ever called men to action. We are resolved to be true to the end.

"We hope the end will not be too long delayed. The human race has within it possibilities altogether too splendid to be wasted in the wars and woes of capitalism. We ask you to help us realize those possibilities. We ask you to come into counsel with us. We ask you to come with an open mind. We ask you to bristle with interrogation points as we ourselves bristle with interrogation points. We are eager to defend and explain. But, above all, we ask you to consider the God of things as they are, as Edison considered Ohm's law. Don't come incrusted in the past. Be willing to look out and look up. Whether you help or not, the world is going to move on. With your help it will move on more quickly, but without your help it will move on. The processes of evolution have not stopped. The world is not finished. Indeed, it is hardly begun.

"In a little while at longest you will be dead. The gentle rain at night will patter down upon your earthen roof and the morning sun will seek you out in vain. In a little while nothing that you have done will remain to show that you ever lived.

"Before that time comes do something for humanity!"

First Message of Gov. James E. Ferguson to the Texas Legislature.

EXTENSION OF REMARKS

OF

HON. MARTIN DIES,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 25, 1915.

Mr. DIES. Mr. Speaker, I have just read the first message of Gov. James E. Ferguson to the Texas Legislature, and it contains some observations that are so sensible, so practical, and so timely that I venture to ask unanimous consent to extend my remarks in the RECORD by having an extract from the message printed in the CONGRESSIONAL RECORD.

The message is as follows:

"The government of Texas was, in the wisdom of the fathers, divided into three branches—the executive, the legislative, the judicial. It was wisely intended by those early pioneer statesmen that these three departments should be separate and supreme, and the rights and privileges of one should never be invaded by the others. Before we enter upon the momentous duties before us I deem it well for us at this time to again revive, renew, and reconsecrate our belief and respect for these sacred provisions of our organic law.

"I pledge myself to a strict observance of the rule. Acting only under the constitutional duty resting on the governor of the State, do I transmit for your consideration those matters which pertain to the condition of the State, necessary legislation, and the expenditure of the public money.

"No previous legislature has ever assembled under just such peculiar conditions and environments.

"The country is confronted with grave problems arising at home and abroad. We are to-day face to face with the mysterious spectacle of our people having raised and gathered a bounteous harvest, and yet distressing disasters disturb and deter us. In other words, we are broke with a pocket full of money. What are the causes? At once you say the low price of cotton. To a great degree this is true. But that is not all. Then you say the high cost of living. To a great degree this is true. But that is not all. Then you say the foreign war, and this is true. But that is not all.

"There are evils the cause of which is not to be found in the low price of cotton, the high cost of living, or the horrors of war.

LIVING BEYOND OUR MEANS.

"Let us again turn to first principles. Can the average man to-day, who finds his troubles enveloping him, conscientiously say to himself, 'I have spent less than I have made. I have bought less than I could pay for. I have lived within my means. I have been frugal and economical. I have been free from wasteful and riotous living. I have made investments in reasonable proportion to my own worth'?

"No people who do not recognize and respect these simple truths can ever survive misfortune, let alone rise to prosperity and affluence.

"We must start again and start aright. As a lawmaking body, you will be beset and besieged by persons and petitions seeking in different forms and ways to cure these simple evils by legislation.

"No law can be passed that will provide against wasteful extravagance, excessive expenditure, or incorrect living.

"The Government can do much to protect property, but only the individual can produce property. The Government can do much to aid in the marketing of crops. But the individual must produce the crop. The Government can do much to see that

there is a fair division between those who labor and those who do not, but the Government can produce no actual values. You, as a legislature, can regulate many things, but you can not produce wealth by statute.

"The public must sooner or later learn that the Government is not an apple tree whose fruit can be plucked at will and resupplied by nature. The Government is the people, and whatever burdens the Government must in the last analysis burden the people.

"I have great respect for your knowledge of these principles, and I am sure you will not consume your time in the consideration of legislation which is impractical or extravagant or beyond the province of your function."

Carl Schurz on Peace and War.

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 26, 1915.

Mr. BARKLEY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a speech delivered by Carl Schurz on "Peace and war."

The speech is as follows:

CARL SCHURZ ON PEACE AND WAR.

Carl Schurz, a distinguished American of German birth and education, a revolutionist at home, a soldier in America, addressed a meeting favorable to arbitration April 22, 1896, immediately following our difficulties with England following Cleveland's Venezuelan message. In that address Mr. Schurz said:

"As an American citizen I can not contemplate this noble peace mission of my country without a thrill of pride. And, I must confess, it touches me like an attack upon the dignity of this Republic when I hear Americans repudiate that peace mission upon the ground of supposed interests of the United States requiring for their protection or furtherance preparation for war-like action and the incitement of a fighting spirit among our people. To judge from the utterances of some men having the public ear, we are constantly threatened by the evil designs of rival or secretly hostile powers that are eagerly watching every chance to humiliate our self-esteem, to insult our flag, to balk our policies, to harass our commerce, and even to threaten our very independence, and putting us in imminent danger of discomfiture of all sorts, unless we stand with sword in hand in sleepless watch and cover the seas with warships and picket the islands of every ocean with garrisoned outposts, and surround ourselves far and near with impregnable fortresses. What a poor idea those indulging in such talk have of the true position of their country among the nations of the world!

"A little calm reflection will convince every unprejudiced mind that there is not a single power, nor even an imaginable combination of powers, on the face of the globe that can wish—I might almost say that can afford—a serious quarrel with the United States. There are very simple reasons for this. A war in our days is not a mere matter of military skill, nor even—as it would certainly not be in our case—a mere matter of preparation for the first onset. It is a matter of material resources, of reserves, of staying power. Now, considering that in all these respects our means are substantially inexhaustible and that the patriotic spirit and the extraordinary ingenuity of our people would greatly aid their development in the progress of a conflict; considering that, however grievous the injuries a strong hostile navy might inflict upon us at the beginning of a war, it could not touch a vital point, as on land we would be immensely superior to any army that could be brought upon our shores; considering that thus a war with the United States, as a test of endurance, would, so far as our staying power is concerned, be a war of indefinite duration; considering all these things, I am justified in saying that no European power can engage in such a conflict with us without presenting to its rivals in the Old World the most tempting opportunity for hostile action. And no European power will do this unless forced by extreme necessity. For the same reason no European power will, even if it were so inclined, insist upon doing anything injurious to our interests that might lead to a war with the United States. We may, therefore, depend upon it with absolute assurance that, whether we are armed or not, no European power will seek a quarrel with us; that, on the contrary, they will avoid such a quarrel with the utmost care; that we can not have a war with any of them unless we wantonly and persistently seek such a war; and that they will respect our rights and comply with all our demands, if just and proper, in the way of friendly agreement.

* * * * * * *

"In the face of these indisputable facts we hear the hysterical cries of alarmists who scent behind every rock or bush a foreign foe standing, with dagger in hand, ready to spring upon us and to rob us of our valuables, if not to kill us outright, or at least making faces at us and insulting the Stars and Stripes. Is not this constant and eager looking for danger or insult where neither exists very like that melancholy form of insanity called persecution mania, which is so extremely distressing to the sufferers and their friends? We may heartily commiserate the unfortunate victims of so dreadful an affliction; but surely the American people should not take such morbid hallucinations as a reason for giving up that inestimable blessing of not being burdened with large armaments and for embarking upon a policy of warlike preparation and bellicose bluster.

* * * * * * *

"I have seen war; I have seen it with its glories and its horrors; with its noble emotions and its bestialities; with its exaltations and triumphs and its unspeakable miseries and baneful corruptions; and I say to you, I feel my blood tingle with indignation when I hear the flippant talk of war as if it were only a holiday pastime or an athletic sport. We are often told that there are things worse than war. Yes; but not many. He deserves the curse of mankind who, in the exercise of power, forgets that war should be only the very last resort, even in contending for a just and beneficent end, after all the resources of peaceful methods are thoroughly exhausted. As an American, proud of his country and anxious that this Republic should prove itself equal to the most glorious of its opportunities, I can not but denounce as a wretched fatuity that so-called patriotism which will not remember that we are the envy of the whole world for the priceless privilege of being exempt from the oppressive burden of warlike preparations, which, when it sees other nations groaning under that load, tauntingly asks, 'Why do you not disarm?' and then insists that the American people, too, shall put the incubus of heavy armament on their backs, and which would drag this Republic down from its high degree of the championship of peace among nations and degrade it to the vulgar level of the bully, ready and eager for a fight.

"We hear much of the necessity of an elaborate system of coast fortifications to protect our seaports from assault. How far such a system may be desirable I will not here discuss. But I am confident our strongest, most effective, most trustworthy, and infinitely the cheapest coast defense will consist in 'Fort Justice,' 'Fort Good Sense,' 'Fort Self-respect,' 'Fort Good Will,' and, if international differences really do arise, 'Fort Arbitration.'

"Let no one accuse me of resorting to the clap-trap of the stump speech in discussing this grave subject. I mean exactly what I say, and am solemnly in earnest. This Republic can have no other armament as effective as the weapons of peace. Its security, its influence, its happiness, and its glory will be the greater the less it thinks of war. Its moral authority will be far more potent than the heavy squadrons and the big guns of others. And this authority will, in its intercourse with foreign nations, be best maintained by that justice which is the duty of all; by that generous regard not only for the rights but also the self-respect of others, which is the distinguishing mark of the true gentleman; and by that patient forbearance which is the most gracious virtue of the strong."

Army Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. WARREN WORTH BAILEY,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 23, 1915.

Mr. BAILEY. Mr. Speaker, this bill is a great disappointment to me. It carries recognitions which it had been my earnest hope it would not present. It is not so much the money which it appropriates, though this is far in excess of any real need; it is the implications which run through almost every paragraph—implications of militaristic expansion, of wider military activities, of preparation against some need which all of us should pray God may never arise.

Nor are its implications its most unfortunate feature. What grieves me most and most alarms is the yielding it shows to the warlike spirit which animates the jingo press and the jingo propaganda which is fanning the country into a flame over the "unpreparedness" of the Republic. Instead of presenting a determined front to the men who would force the people of the United States into a sort of armed camp, it so far defers to their clamor that on practically every controverted point the argument is surrendered to the advocates of martial aggrandizement. It is to be lamented and most deeply deplored that these evangels of darkness were not given an answer which they would have understood and which the country and the world would have interpreted as a high assurance that the United States is not to repeat the monstrous blunder which was responsible for the immitigable horror which now enshrouds our brethren across the sea.

Mr. Speaker, I said on this floor some months ago, soon after the conflagration broke out in Europe, that it was the inevitable climax to an era of preparation. For 40 years the activities of European nations had tended irresistibly toward war. Great fighting machines had been laboriously built up at staggering cost. The people had been sedulously filled with thoughts of bloodshed. From infancy to manhood there had been instilled into all lives the poison which we here and now are instilling into the lives of our sons. In the name of patriotism, in the name of king or kaiser, in the name of motherland or fatherland, the warlike spirit had been invoked. It was in terms of battle and sudden death that youth was taught. Patriotism came to mean in the common mind a bloody conflict with some enemy. In the perverted fancy of misguided peoples it became sweeter and nobler to die for one's country than to live for it and serve it in the quiet walks of peace.

Mr. Speaker, how many people in the United States stop to realize with what rapid strides we have been progressing

toward the very precipice from which Europe has leaped into a caldron of blood and fire? It was only a few years ago when our standing Army numbered but 25,000 men. To-day it numbers 100,000; and the tendency is toward a further augmentation of this fighting force. In addition to the standing Army we have a militia force of 120,000 men at the command of a hotspur President, if there were one in the White House, which, thank God, there is not. Our Navy has grown in even greater and more menacing proportions, and its cost has reached almost unbelievable figures. But is jingoism content? Has it been in the least satiated in its appetite for preparedness by the hundreds of millions which have been poured out in profligate measure to meet its demands? Not at all. Its hunger is keener than ever. It is more rapacious, more insistent, more callous to all pleadings of moderation. The horse leech's daughter was no match for jingoism. She was a princess of modest abstinence by comparison.

This bill carries appropriations of more than $100,000,000. It adds just $1 to the tax burden of every living soul in this Republic. To every family it means an outgo of $5. For what? What is the present or the prospective return? What service to the man on the farm, in the mill, in the factory, in the forest, in the mine is to be rendered for this huge expenditure? Can *anyone tell*? We are taking 100,000 men, the flower of our young manhood, from gainful occupations and herding them in camp and barrack to rust in something worse than idleness, to pursue rounds of duty, to be sure, but to what useful end? At the close of the year who is the richer, by how much is the wealth of the world increased, to what extent has society been really benefited? These 100,000 men in gainful employments at the end of the year would have to their credit a wealth production of more than $60,000,000. As it is they represent to society an unrequited outgo of an equal or greater sum. The country is $60,000,000 or perhaps $100,000,000 poorer by reason of their withdrawal from the productive channels from which they were recruited and in which they would have remained but for the glaring and deceptive posters which challenge the eye in every city and almost every town of the land.

But we are told that this Army of unemployed men is a guaranty of peace. It is likened to the police force of the city. But who is roaming about with burglarious intent through our domain while we slumber in peace under the domestic roof? Who is robbing our henroosts or invading our cellars? Who is hiding at dark corners to pounce upon us as we wend our way homeward by night? Where is the marauder who would disturb our rest and terrorize our little ones but for the watchful guardian of the peace whom we have armed with a rifle and clothed in a uniform? As a matter of fact, the standing army has little likeness to our police. Since the civil conflict of 50 years ago it has been employed very little except in wanton acts of aggression, for we now see that even the excursion to free Cuba had an ulterior aim. Beyond Cuba lay the Philippines and the Orient.

The propaganda which inflamed the people of this country with a passionate zeal to break the clutch of decrepit Spain on the Queen of the Antilles permitted no pent-up Utica to confine its vision. It had nothing more modest than the exploitation of the untouched Chinese Empire as the goal of its ambition. There were 400,000,000 of people in that Flowery Kingdom without a street car, without a telephone, without an electric light, without a modern water supply, and almost without a railroad. Was it not worthy of a Whitney and his associates that they should have planned far ahead with the thought in *their minds of* the illimitable possibilities there awaiting development? But it was clear to them, as it must be clear to us now in the retrospect, that some such event as the Boxer uprising of 1900 would have to be encountered, and that if exploitation was to succeed it must have adequate forces to defend their interest. A Philippine base was essential to the success of their dream of industrial and economic empire.

However, this is of the past. Jingoism since that day has shifted its ground. It is thinking less in 1915 of exploiting the Orient than it was prior to 1898. Mexico and the islands of the sea are perhaps more alluring. But the pretense is maintained that we have some foe to fear, some enemy with savage designs upon our soil, some commercial antagonist who is plotting in the dark to destroy us when the opportune moment shall arrive. And all this militaristic preparation is justified on this shadowy ground. Of course we shall get into only such trouble as we may invite. No one is hungering for our land as we seem to have hungered for the land of the Filipino. No one is challenging us by land or by sea. The whole world is on neighborly terms with us. There is not a power on earth which would dream of conquest where we are concerned, cut off from every one of them by thousands of miles of salt water. Yet we are spending more money in preparation than any other country on earth and maintaining an evangel of "preparedness," which has been extended to every town and village and through the schools into every home in the land.

Mr. Speaker, it is reassuring to find, however, that in some of the schools at least this evangel is meeting with a challenge. I have in mind that body of students in Columbia University led by my young friend and constituent, John H. Cover, '15. Early in December last this young patriot joined with other young men in the great university of equal patriotism in a movement which culminated in a mass meeting called to protest against the growing spirit of militarism manifest in the country. This protest was evoked more particularly by propositions lately put forth looking to military instruction in all the colleges and schools of the country. At the Columbia mass meeting the resolution which follows was unanimously adopted:

Resolved, That we, the students of Columbia University, in mass meeting assembled, hereby go on record before Congress and the people of the United States as opposed to militarism in general and an increase in our Army and Navy in particular.

These young patriots of Columbia were not content, however, with meeting and resolving. They set about with all the zeal and energy of youth to enlist the young men in other like institutions in the movement for disarmament and peace. The work of organizing to this end is already in progress, and there is a response to the call of Columbia from other seats of learning which may well encourage John Cover and his colaborers in a worthy cause. At another mass meeting of Columbia students held January 15 the following was adopted, also by unanimous vote:

Whereas the futility of armed peace as a preventive for war has been clearly demonstrated by the present war in Europe; and
Whereas it is especially desirable at this time that the United States should adopt a friendly, rather than a hostile, attitude toward all nations: Therefore be it

Resolved, That we, students of Columbia University, in mass meeting assembled January 15, 1915, while not opposing any movement to increase the efficiency of our present military force, do hereby declare ourselves to be in favor of the follow proposals:

1. Limitation of the country's naval and military armament to its present size.
2. Discontinuance of drill duty and summer drill camps for college men.
3. Abandonment of the proposed citizen army.
4. Government ownership of all factories making munitions of war.
5. Prohibition of the exportation of munitions of war having as their ultimate destination warring nations.
6. Prohibition of the granting of war loans by American capital.
7. Approval of President Wilson's stand in resisting American militarism.
8. Direction of human energies into channels of constructive citizenship instead of war.

To this program we invite the cooperation of all college students and of all persons who are in sympathy with the movement against militarism.

Resolutions were also adopted indorsing President Wilson's Mexican policy, "because we believe he has worked to preserve American lives rather than to make profitable Mexican property owned by American capitalists," and urging our Government "to call a conference of representative delegates from other nations to discuss possible measures for the promotion of international interests and the prevention of warfare."

How much better engaged are these young men, Mr. Speaker, who are thinking and acting in terms of peace, than those in school and out who are thinking and acting in terms of warfare! These are finer and truer patriots by far than those who devote their light and their learning to thoughts of strife and to preparation for troubles invited by the preparation. I take heart of hope from this brave work of really brave young men in Columbia and elsewhere who are preaching the gospel of amity and who are helping to bring about that era of which the poet sings:

When the armies of earth are disbanded,
And their trappings are coated with dust;
When the musket forever is silenced,
And the cannon is cankered with rust;
When the sword and the helmet lie tarnished,
'Mid the rubbish of pomp and display—
We shall 'wake to the glorious dawning,
Of the promised millennial day.

And that day shall bring joy to the nations;
And the glow of its generous light
Shall invade the morasses of darkness
And dispel the miasmas of night.
And the empire of right shall be founded
And the sway of its scepter increased,
Till mankind shall stand shoulder to shoulder
In the ranks, not of war, but of peace.

And the throne of oppression shall crumble,
And the heart of the tyrant shall quake;
And the haughty shall learn to be humble,
And the mighty their mockings forsake.
And the spirit of truth shall reign o'er us,
And humanity's banner float free,
Till Immanuel's message be wafted
To the uttermost isles of the sea.

Army Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. LUTHER W. MOTT,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Friday, January 22, 1915,

On the bill (H. R. 20347) making appropriations for the support of the Army for the fiscal year ending June 30, 1916.

Mr. MOTT. Mr. Speaker, a large military force will, I hope, never be needed in the United States. Our geographical position should count for a million armed men who would otherwise be needed, and our traditional foreign policy, though I believe this is now menaced by the proposal to violate the neutrality laws, in spirit, at least, by buying ships from the nations at war, is a source of protection. But we must have trained soldiers, guns, and ammunition enough to protect ourselves. The peace propagandists are honestly and faithfully endeavoring to do a great work, but we know how much it availed in Europe. I hoped the Army appropriation bill this year would in some way reflect the growing feeling that we should take some heed of the lessons we can learn from the European war—the lesson that we must always have the fear of war in times of peace—but apparently there is no change in the policy of those responsible for the maintenance of the Army.

Four thousand miles of border between this country and the Dominion of Canada have been practically undefended for a hundred years, and show that two great nations can live in neighborly friendliness; but for months and years we have had camps and forts on our southern frontier, and there has been many a night in the last two years when we have expected the order to go out for our troops to cross the boundary for one purpose or another. We have grown accustomed to thinking that our Regular Army was inadequate in numbers for an emergency, and we have been hoping against hope that the emergency might never come. We can never expect with our American ideals to have a Regular Army large enough for the purpose of defense. Under our present system of recruiting we could never get a great army in times of peace, and conscription would never do in our free country. There are bills pending to increase various branches, such as the Coast Artillery, but the increases proposed are comparatively small, and it is safe to say that our Regular Army must remain as it is now, with but little change.

If our Regular Army is not to be greatly increased, then it is obvious we must depend on our citizen soldiers. This we have done in the past with good success, but it has been because they have fought against enemies with but little, if any, more training than our men have had. Our training of volunteers has been done after war was declared. We can never do this again. It is true, as an eminent speaker on peace has said, that a million men would instantly answer a call for volunteers if that number should be demanded, but they would be almost useless when we contrast them with the soldiers of the countries we might contend against. Their soldiers would be ready when war was declared. While we were thinking of war, the armed battalions of our possible enemies would be waiting for the word to march or entrain. The position of Great Britain at the outbreak of the present war should carry its lesson to us. With all the immense resources of that great country four months after war was declared Great Britain had only in the field her regular army with small bodies of her trained militia. But had Great Britain been invaded, and it is only because of her navy that she has not been, she would have been as helpless as we would be could a foreign power land an invading army on either coast.

Many plans have been suggested as to how we can have a trained force ready for defense and yet not keep them under arms all the time as a part of the Regular Army. Some plan we should adopt now. We should not wait as we did in the case of the War with Spain. The public demands a plan which will be the most effective and the least expensive. With this in view, I have introduced a bill which I believe is warthy of study and discussion. The bill is H. R. 21095 and is as follows:

A bill (H. R. 21095) to increase the military strength of the United States.

Be it enacted, etc., That hereafter the land forces of the United States shall consist of the Regular Army, the National Army, the Organized Land Militia when in the service of the United States, and the Volunteer Army when authorized by Congress.

SEC. 2. That the President may organize a corps, to be known as the "ensign corps," to consist of not greater than two companies of Infantry, two troops of Cavalry, one company of Coast Artillery, and one battery of Field Artillery; said companies, troops, and battery to be organized as is now provided by law, except that the President may authorize not exceeding 10 additional privates of the first class in each company, troop, or battery to be used as laborers or cooks' assistants; that all enlisted men above the rank of private shall be enlisted as prescribed by law, except that the privates of the companies, troops, or battery of said ensign corps shall be enlisted for one year, unmarried, and be between the ages of 21 and 27 years, said privates to be graduates of some standard college or university, or be able to pass an examination which may be prescribed by the President; that the officers shall be detailed from the corresponding grades, arm, and corps of the Regular Army: *Provided*, That at the end of one year's enlistment such privates of the ensign corps who are recommended by their superior officers and who so desire will be examined. Those found qualified may be commissioned by the President, with the advice and consent of the Senate, as third lieutenants in the Regular Army for the term of one year: *Provided further*, That at the end of one year such third lieutenants as may be recommended by their commanding officer and who so desire will be examined. Those found qualified may be commissioned by the President, with the advice and consent of the Senate, as second lieutenants in the Regular Army to fill such vacancies as may exist after the West Point graduating class of that year have been commissioned: *And provided further*, That such third lieutenants that have qualified as second lieutenants in the Regular Army and are not commissioned as second lieutenants may be commissioned as officers in the National Army or in the Volunteer Army: *And provided further*, That the commissions as third lieutenants may be terminated at will by the President: *And provided further*, That no person shall be enlisted as a private in the ensign corps for more than one enlistment or be commissioned more than once as a third lieutenant: *And provided further*, That the pay of a third lieutenant shall be $1,200 per annum, with the allowances of a second lieutenant.

SEC. 3. That the National Army shall be raised, organized, and maintained as is hereinafter provided; that in time of peace the National Army shall consist of not more than 600 enlisted men in any one congressional district or 2,000 enlisted men in the District of Columbia or in the Territory of Hawaii; that the term of enlistment in said National Army shall be the same as the Regular Army, exclusive of the reserve period; that the qualifications of members of the National Army shall be prescribed by the President; that the members of the National Army shall be assigned to the different arms, corps, or departments as may be prescribed by the President; that the different arms, corps, or departments shall be organized with units, the same as is now provided by law for the units of the same arm, corps, or departments of the Regular Army, except that the companies of the Coast Artillery shall be organized into regiments corresponding to an Infantry regiment; that, when the military conditions so require, the President may organize the Regular Army and the National Army, together or separately, into brigades, divisions, and such higher units as he may deem necessary, and the composition of units higher than a regiment shall be as he may prescribe; that when brigades, divisions, and other higher units are organized the officers required to command such organizations will be detailed by the President from the general officers of the line of the Regular Army or the colonels of the line of the Regular Army or of the National Army, to serve four years, unless sooner relieved by the President, and while so serving shall receive the rank, pay, and allowances of the grade to which they are detailed; that the President, with the advice and consent of the Senate, shall commission all officers of the National Army; that the President may appoint staff officers in the various staff corps or departments, the proportionate strength of regular officers of the corresponding grade as established by law for the corresponding staff corps or departments of the Regular Army; that the President may appoint a chaplain, not exceeding one for each regiment of Infantry, Cavalry, Coast and Field Artillery, with the rank to correspond to that established by law for chaplains of the Regular Army; that the President may appoint not exceeding five line officers of the Regular Army not below the rank of captain as field officers in the different regiments of the National Army; that the officers of the Regular Army commissioned as field officers in the National Army shall have the same rank, pay, and allowances of corresponding grades of the Regular Army; that the line officers so appointed shall be from the same arm or corps of the Regular Army to which they are appointed in the National Army; that the officers of the Regular Army may be appointed in time of peace for four years, unless sooner relieved by the President; that no officer of the Regular Army shall serve in the National Army in time of peace more than four years out of the preceding six years; that officers appointed under this act as field officers in the National Army shall be subject to the provisions of section 27 of the act approved February 2, 1901, with reference to details to the staff corps; that the officers of the Regular Army appointed field officers in the regiments of the National Army shall be in addition to the 200 extra officers authorized by the act of Congress approved March 11, 1911: *Provided*, That not more than 1,000 officers of the Regular Army may be detailed in time of peace on duty with the National Army at one time; that the pay of the enlisted men serving in the National Army shall be 20 per cent of the pay of enlisted men holding the same grade in the Regular Army; that at maneuvers or when in the service of the United States his pay shall be the same as the pay of the enlisted men holding the same grade and length of service in the Regular Army; that when in the service of the United States his allowances will be the same as is provided for the enlisted men of the Regular Army: *Provided further*, That in time of peace his allowance for clothing shall not exceed the value of $15 annually; that when any enlisted man of the National Army qualifies as marksman or better he shall be paid an additional $2 a month; that whenever in the opinion of the War Department any first sergeant, quartermaster sergeants, or cooks belonging to the National Army are deemed qualified for their positions, and will devote such time to their duties as may be prescribed by the Secretary of War, they shall receive the pay and allowances allowed by law for the same grade in the Regular Army; that the pay of officers serving in the National Army shall be 15 per cent of the pay of officers holding the same grade and length of service in the Regular Army; that at maneuvers, or when in the service of the United States, their pay and allowances shall be the same as for the same grade in the Regular Army; that all service in the Regular Army, National Army, the Volunteer Service, and Organized Militia shall be counted when computing the length of service of enlisted men in the National Army; that all service as officers of the Regular Army, National Army, the Volunteer Service, and the Organized Militia shall be counted when computing the length of service of officers of the National Army; that any member of the National Army furnishing any suitable mount, artillery horse, or draft animal to be used by the National Army during maneuvers shall receive $2 per day for the use of each animal furnished;

that in case of injury, damage, or death of any animal caused while in the service of the United States the owner shall be duly compensated therefor; that any officer or soldier belonging to an organization mounted upon motor cycles who shall furnish his own motor cycle while at maneuvers shall receive $2 a day for the use of said motor cycle; that the United States shall furnish the necessary oil and gasoline for the use of said motor cycle during maneuvers: *And provided further*, That when the Organized Militia of any State has reached a standard of efficiency as may be prescribed by the President, and the total enlisted strength of said Organized Militia is equal to or greater than 75 per cent of the number of enlisted men required to be raised in said State under this act the President may, upon the application of the governor thereof, exempt the said State from the provisions of this section of this act.

SEC. 4. That the National Army may be called into the service of the United States when deemed necessary by the President: *Provided*, That the restrictions placed by law for use of the Regular Army shall apply to the National Army: *Provided further*, That the National Army shall not be called out to suppress insurrection or rebellion or to enforce the law unless the available forces of the Regular Army are deemed insufficient: *Provided further*, That for the purpose of training the President may call out the National Army not to exceed 21 days of each calendar year.

SEC. 5. That the Organized Militia shall be as is now constituted by law: *Provided*, That when any company, troop, or battery, or other organization authorized by law reaches a standard of efficiency as may be prescribed by the President, such men and officers of said company, troop, battery, or other organization authorized by law shall receive the pay and allowances authorized by this act to the National Army.

SEC. 6. That the Volunteer Army shall be as now constituted by law: *Provided*, That any person in time of peace who passes an examination as may be prescribed by the President, or who has as a third lieutenant been found qualified as a second lieutenant in the Army, may be commissioned in time of peace in any grade below the rank of major for which he is qualified in the Volunteer Army: *Provided further*, That no pay or allowances will be paid to said officers unless they are called into active service by an act of Congress.

SEC. 7. That the National Army, Organized Land Militia, when in the service of the United States, and the Volunteer Army, when authorized by Congress, shall be subject to the laws, orders, and regulations governing the Regular Army, in so far as such laws, orders, and regulations are applicable to officers or enlisted men whose permanent retention in the military service, either on the active list or on the retired list, is not contemplated by existing laws; and no distinction shall be made between the Regular, National Army, Organized Land Militia when in the service of the United States, and the Volunteer Army in respect of promotion or to the conferring upon officers or enlisted men of brevet rank medals of honor, certificates of merit, or other rewards for distinguished service; nor in respect to the eligibility of any officer of said armies or militia for service upon any court-martial, court of inquiry, or military commission.

NEW METHOD OF TRAINING OFFICERS.

It is not men to fight we would need in time of war so much as it would be officers to train and lead them. We would have untrained men by the thousands, but no leaders. In section 2 of this bill an ensign corps is provided. This is made up of unmarried men between the ages of 21 and 27. They are only enlisted for a year, and must be graduates of a standard college or university or able to pass an examination prescribed by the President. They will be trained by officers detailed from the Regular Army, and at the end of the year those who have done satisfactory work and are qualified will be examined. If they pass this examination satisfactorily, they will be commissioned for a year as third lieutenants in the Army. At the end of this second year they may be examined to fill vacancies in the list of second lieutenants, just as candidates from civil life are now. If there are not enough vacancies to go around, they may be commissioned in the National Army, for which provision is made later. This system gives a much better method of working for a commission than does the present habit of enlisting in the ranks of a regular company, where 95 per cent of the privates never hope or expect to rise above the grade of noncommissioned officer.

DEFECTS OF THE PRESENT VOLUNTEER SYSTEM.

Should Congress authorize the calling of volunteers at the present time there would be few outside of the service who could recruit them, much less train and organize them, and it would be weeks before anything could be done, as officers would have to be selected and instructed in what to do. The task of selecting officers would alone be stupendous, and there would be little chance of knowing whether the men selected were competent until it would be too late.

It can easily be shown there is no comparison between the two methods. Take an example: Under the system prepared we will assume that in every community there are many men capable of leading troops, and that some of them have been sought out in time of peace, commissioned and instructed in examining and determining the qualifications of recruits, also in organizing and training them. When Congress calls for volunteers the War Department issues the necessary orders and the work begins.

Take the system we now have. Again we will assume that in every community there are many men capable of leading troops, but few know who they are; certainly not the War Department, for it has had no reason to seek them out. When Congress calls for volunteers the War Department is at sea, for it knows no one to call upon to recruit and train them. Of course thousands will offer their services, but much time will be lost determining the fitness of the different applicants. After a time the officers needed will be chosen. We will assume they are the same men chosen under the first method; yet though the need may be great, little can be accomplished, as the officers will not have been instructed in their duties. It will be noticed that in both cases we have chosen the same men, yet the difference is marked because in the first case they know what to do, and in the second case they do not, which is only natural, for why should a man keep up with military training when he has no reason to believe that his services will ever be needed or even desired?

NEED OF A TRAINED FORCE.

States are friendly just so long as their interests do not conflict, and no country is justified in determining the size of its military force because of these relations. The size of an army should be fixed by a country's foreign policy, geographical position, and its vulnerability to attack. A nation that is not aggressive and its position is such that an attack is improbable does not need an army the size of one which is trying to extend its domain or whose boundaries are open to invasion. We are not an aggressive Nation, and are so situated that our neighbors both north and south are weak, while the ocean lies between us and the other great powers. Yet we can easily be invaded on account of the enormous extent of our coast line. The Navy will be our chief protection; but it may be swept from the seas by a combination of two or more great countries.

In modern times battles are often fought before war is declared. If we are ever attacked, plans will be completed in every detail long before hostilities have begun. Transports will be loaded and ready to sail the instant the sea is clear of our ships; and when it is, it will not be long before an invasion will be attempted. The place selected will naturally be near one or more of our great coast cities, but out of range of the forts guarding them, where, if a landing is made, the fortifications can easily be taken, as there is no protection from the rear. With a coast city in the hands of the enemy and the harbor and docks at their disposal, a large army can be landed without hindrance or delay.

To prevent such a catastrophe we must have a trained mobile army of sufficient size. As I have shown, a regular army large enough for this purpose is impracticable, and therefore we must depend upon trained citizen soldiers to supply the deficiency. To do this we can either use the militia or create a new force under that section of the Constitution that gives Congress the power to raise and support armies.

THE PRESENT ORGANIZED MILITIA.

In framing the Constitution of the United States the makers evidently intended that there should be but one naval force, and that to be controlled by the Federal Government. The land forces were of two kinds, one to be organized and controlled by Congress and the other, called militia, to be raised by the several States. At this time most of the States were sparsely settled, and many contained bands of hostile Indians. Due to the slowness of transportation, it was necessary to have a force at their disposal to meet any emergency that might arise. The use of the militia by the Federal Government was also allowed, for the Constitution provides that Congress may call them out to enforce the law, suppress insurrections and rebellion, and to repel invasion. To insure uniformity, it also provides for its training and organization, and also to make laws governing it when called into the service of the United States.

It will be noticed that while Congress may prescribe the training, the training itself is left to the State. That this is often neglected is shown by the last report of the head of the Division of Militia Affairs. From the wording of the Constitution it can be easily seen that the States have supreme power over the militia when it is not in the service of the United States, and Congress has no power to enforce them to train or even appoint the necessary officers.

In the War of 1812 Congress did not avail itself of the power given it by the Constitution to raise and support armies, except in a limited extent, but decided to use the State militia instead. This decision was most unfortunate, as is shown by the history of that time. The militia of that period was composed of the best men of the land, and their failure can only be charged to the lack of training given them by the States and the dual control exercised over them by their State and the Federal Government. An order given by one was often revoked by the other, and on one occasion Massachusetts and Connecticut refused to furnish any militia, while Vermont would not allow them to leave its boundaries. At another time they refused to enter Canada, claiming that they could only be used for repelling invasion and not for the purpose of invading.

Due to our experiences in this war and the various Indian wars of that period Congress decided at the outbreak of the Mexican War to use only such troops as it raised, and the army

sent to Mexico was composed of Volunteers and Regulars. The contrast between these two wars is startling. In the War of 1812 we practically lost every battle, although we usually fought on our own soil and often outnumbered the enemy, while in the Mexican War we won every battle, although the fighting was done in a foreign land and where we were outnumbered on every occasion. Strange as it may seem, the experience gained in the two wars mentioned was soon forgotten, for at the outbreak of the Civil War another attempt was made to use the militia, which ended in the disaster at Bull Run. Since that time the militia has not been used by the Federal Government, the Regulars and the Volunteer Armies being used in its stead.
